Meanwhile the Khédive's master, the Grand Turk, has just passed another dangerous crisis, owing to the intrigues of his court and the rival and pitiless ambition of Turkish politicians. All things foreshadow, indeed, the speedy dissolution of the Ottoman Empire. The Turks appear to have learned nothing from defeat, or from the severe schooling they have got from the high tribunal of the Powers. A revolution at Constantinople would not be surprising at any moment. It is said that the reformer, Midhat Pasha, who has been an exile for several years, will be allowed to return to the Turkish capital; but Mahmoud, the evil genius of Turkish politics, and the supposed paid agent of Russia, is, it is believed, also about to arrive there, which is an omen of the worst sort; though this last news is contradicted.

The French Parliament will, after all, desert Versailles and return to Paris. The Monarchists, when they held the power several years ago, made Versailles the political capital by an article of the Constitution. They were afraid that the Paris mob would repeat, some day, the popular invasions of the Chambers that occurred in 1792, and again in 1848 and 1870; they wished to be at a safe distance from Jacobin effusiveness and Communistic zeal. The Republicans fear these things less, and the two Chambers, meeting in Constitutional Congress, have resolved, by a majority of 549 to 262, that the real metropolis of France shall also be its political centre. Of course, the Chambers will return to the handsome Palais Bourbon, on the Quai D'Orsay. The irrepressible De Cassagnac has been making more violent scenes in the Deputies, and, after calling the Ministry "the scum of cowards and wretches," was excluded from the House for three days. Having apologized, however, he will not be prosecuted. The French are having trouble in Algiers, and are busy suppressing a revolt in that uneasy colony.

A dissolution of the English Parliament is believed to be at hand. The Ministers have been hinting this in their Whitsuntide speeches; and the approaching fulfillment of the Berlin Treaty, and the successful close of the Afghan War, seem to bring the moment near when Lord Beaconsfield may advantageously appeal to the country. The present Parliament was chosen in 1874, and is five years old—that is, venerable, as Parliaments go. The general election will be a very hard-fought one. The Liberals are tired to death of the cold shade of the Opposition benches, and Lord Beaconsfield, is naturally anxious to be indorsed by the country on his spirited foreign policy.

Henry Bessemer, the inventor, has been knighted, which is a rare tribute to industrial genius, that sort of talent having been very seldom honored in England by titular distinctions. Another new knight is Sir Rowland Hill, the originator of the penny postage, who has also been presented with the freedom of the City of London in a gold box. There are labor troubles in the mining districts of England, 170,000 miners having combined for higher wages.

The German statesmen are having lively debates over Bismarck's tariff, and over bimetalism. Bismarck declared that the Government had not considered the question of altering the gold-standard law. Minister White has been officially received by the Emperor William. The railway connecting Berlin with Metz has been completed, which adds materially to the facility with which Germany—should occasion arise—would resume war with France.

Prince Frederick Charles, the hero of two wars, and certainly one of Germany's greatest generals, is credited with a somewhat cynical view of the present army system of the Empire. He says that the recruit usually passes most of his first military year in the hospital, a victim to home-sickness; the second year he begins to forget parents, friends, sweethearts and home ties, and in the third, has become a thorough soldier, a drunkard and a brawler. The Prince has an idea that this is not the way, at least, to create good citizenship.

Mexico is once more politically volcanic, and President Diaz is threatened with another insurrection, headed by General Courdy, who is said to have left Mexico City with three thousand adherents. Congress has "disbanded," a significant term as a substitute for "adjourned." Diaz is in pursuit of Courdy. Meanwhile, the South American war drags a weary length along, with some advantage to the Chilians; who, however, have risked a collision with England by burning the British consul's house at Pisagua. Nothing seems so easy as to depose a South American President. The President of Paraguay has just met with this very common mishap at the hands of an ambitious general.

THE war between Chili and Peru is having a disastrous effect upon neutral commerce. The guano and nitrate trade has been destroyed, inflicting serious loss upon both British and American ship-owners. In Peru there has been a ruinous depreciation of the currency. It is probable that the revolution in the United States of Colombia will still further injure our commerce, and generally it may be said that our commercial relations with the Spanish-American countries are anything but encouraging or satisfactory.

MR. BENNETT'S expedition to the Arctic seas will sail from San Francisco about the first of July. The *Jeannette*, which has been fitted out in the completest manner, has a picked crew, composed in part of men who have tasted of the rigors of the Northern latitudes, and if the Pole can be reached by way of Behring Strait, Lieutenant De Long will exhaust every resource to attain that goal. Should that result be accomplished, the achievement will rank as by no means the least of the many triumphs which mark the record of American enterprise and exploration.

A GRATIFYING announcement was made by President M'Cosh at the recent commencement of Princeton College. After referring to the prosperity of the institution, the growth of the library, the enlargement of the museum, the addition of many costly instruments to the scientific school, etc., he added: "The college does not owe a single cent, and it has signed an agreement not to contract any debts hereafter." The friends of this venerable college will find peculiar cause for gratification in this statement, but it has an interest for the general public as well, and presents an example of prudence and sagacity in administration, as well as liberality in the support of the higher forms of education on the part of persons of means, from which other institutions should be able to derive very considerable profit.

ANOTHER "grab" has appeared in the House of Representatives in the shape of a Bill authorizing the Secretary of the Treasury to repay to certain States money advanced by them to sustain the Government in the war of 1812. The Bill is opposed very properly on the ground that it will compel States which have been admitted into the Union since 1812 to reimburse the older States for expenditures with which the former had nothing to do. The amount which the Bill would take out of the Treasury is stated at seven millions of dollars—one-fifth of which would go to the State of Virginia. It is said that an effort will be made to amend the Bill so as to provide that money amounting to nearly the same sum, due from the Southern States as a direct tax during the late war, shall be held by the Secretary of the Treasury to offset the claims of those States growing out of the war of 1812.

THE bale of cotton purchased last Autumn by a fund collected in Memphis and given in charge of the Cotton Exchange of that city to be sold for the benefit of the widow and children of Lieutenant Hiram H. Benner, who died of yellow fever while in charge of the relief steamer *John M. Chambers*, on the Mississippi River, is still on its travels. It was first bought in by Memphis merchants for $520, was then re-donated and shipped to New Orleans, where it netted $1,310, and was forwarded thence to Galveston, from Galveston to Houston, from thence to St. Louis, thence to Vicksburg, thence to Mobile, and from there to Montgomery, Augusta and Savannah. Each of the places named has helped to swell the contribution, and the traveled bale has not yet filled the measure of its usefulness. New York would no doubt make a very substantial addition to the fund if opportunity should be offered.

THERE is a grim humor in some of the more audacious acts of the Nihilists which must be appreciated by everybody outside of Russia. It is said, for instance, that all the members of the Imperial family are supplied, with touching regularity, with the productions of the revolutionary press, and that no small portion of the Czar's time is spent in keeping the insidious sheets out of the hands of his younger boys. The other day, according to a London paper, the Czar, on retiring, found a batch of copies of a leading revolutionary journal under his bedclothes, and while the search was still hot against the offender, they discovered a proclamation posted up inside the Emperor's cabinet! It is apparent, from the audacity of these acts, that the Nihilists have an agent living inside the palace, and two of the cleverest detectives in the Government employ have been detailed to discover the guilty party.

THE Government of Panama has been overturned again. This time it appears to have been done very easily; one General Rafael Aizpuru, with a hundred men and boys, captured the President, run him off in a hand-car, and then installed a Provisional administration, which at last accounts was still in possession. An immense force of 230 officers and men, however, had started out in search of the revolutionists, and the latter has before this, probably, been vanquished. Indeed, the account which supplies these facts, dated June 10th, says: "Undoubtedly this attempt at revolution will cease to-morrow or the next day." The basis of this confidence is that "it lacks the sinews of war, money and beef," and this, it must be admitted, is a tolerably good ground for anticipating its failure. But a revolution which employs hand-cars as a weapon of offense is not, after all, to be laughed at.

SENATOR GORDON of Georgia did the country a real service in his speech before the Democratic Senatorial caucus, June 17th, protesting against any action on the Silver Bill that would compel Mr. Bayard to resign the Chairmanship of the Finance Committee, of which he has been a member ever since he entered the Senate ten years ago. Senator Bayard has been, during his whole public career, one of the ablest and sturdiest supporters of sound finance, and to have disbonored him at the demand of the silver maniacs would have been to put an affront upon the cause which he represents, and commit the Democratic Party to a policy full of menace to the public interests. The protest of Senator Gordon was the more notable from the fact that he is himself a believer in the silver idea. He seems to be able, however, to respect the honest convictions of men who do not agree with him, and in that respect he enjoys a happy eminence over some of his Democratic associates.

IN reply to an invitation from leading business men of this city to address them on "The decay of American commerce, and the means for promoting its revival," Senator Blaine has written a letter giving his views at considerable length on the subject named. In his opinion the way to recover our foreign trade and promote our commerce, is to lighten the burden of taxation on vessels, and, instead of granting special subsidies, to enact a general subsidy law, which would give a certain prescribed sum for mail carriage to any man who builds an iron steamship with American material, employing American mechanics, and runs that steamship from any American to any foreign port. He believes that, as a result of such a policy, "lines of American steamers would begin to sail, not only from New York, Philadelphia, Boston and Baltimore, our large Atlantic ports, from New Orleans on the Gulf, and from San Francisco on the Pacific, but from Portland, Oregon, as well as from Portland, Me., from Providence, New Haven, Norfolk, Wilmington, Charleston, Savannah, Mobile and Galveston. Three or even four millions per annum might possibly be called for, and that would imply 25 or 30 lines of steamers running from ports of the United States to Western Europe, to the Mediterranean, and to Africa, to Asia, to Australia and to South America, to the West Indies and to Mexico." He adds:

"Such a trade as those lines would develop would give remunerative employment to idle capital, and, what is far better, would give work at good wages to idle hands. It would build up great ship-yards on the tidal rivers of the Atlantic, and would soon demonstrate to the most skeptical that we should find, as England has found, that such expenditure of money comes back to us in profit, both direct and indirect, in the saving of cost in naval outlay, in the education of the best class of American seamen, in the large and generous employment of American mechanics, in the active and honorable and profitable employment of American capital. The Athenian maxim has taught us that we do not feed hay to sheep in order to get back hay, but to get back wool. In the present case the smallest of herbage would return to us the Golden Fleece."

NEWS OF THE WEEK.

Domestic.

GENERAL GRANT will reach San Francisco about the 16th of September.

THE Republicans of Wisconsin will hold their State Convention at Madison, July 23d.

THE President has approved the Legislative and Executive Appropriation Bill, and vetoed the Judicial Bill.

SIX men were killed and seven others injured by a boiler explosion at the Ore Mines, near Emma, Pa., June 21st.

THE National Eclectic Medical Association met in Cleveland, Ohio, June 18th, and were welcomed by Mayor Herrick.

BISHOPS LATHER, Stevens and Richardson, of the Reformed Episcopal Church, were consecrated in Philadelphia June 22d.

LYNN, Mass., celebrated the two hundred and fiftieth anniversary of its settlement with appropriate demonstrations June 18th.

GEORGE C. PERKINS, of San Francisco, was nominated for Governor in the California State Republican Convention on June 18th.

THE nomination of Secretary McCrary to a place on the Bench has been withdrawn on account of the legal obstacles to confirmation.

THE Democratic Senatorial caucus last week abandoned the attempt to compel the Finance Committee to report the Warner Silver Bill.

MRS. A. ROLLAND, aged about twenty-five years, the wife of A. Rolland, of Liege, Belgium, was swept over Niagara Falls, June 20th, and drowned.

PATRICK O'BRIEN, of San Francisco, a brother of the late William O'Brien, the "Bonanza King" has been paid $660,000 to release all claim to the Coleman estate.

REV. ISAAC S. KALLOCH, pastor of the Metropolitan Baptist Church, San Francisco, received the nomination for Mayor of the city in the Workingmen's Convention, June 18th.

MR. GEORGE F. ROBINSON, of Maine, who assisted in saving Secretary Seward's life from the attack of the assassin Payne, has been been made a paymaster in the army.

A SMALL riot occurred at Chicago, June 22d, in which an armed company of Socialists fired upon a crowd of roughs and inflicted serious injuries upon several of them. The entire company was arrested.

THE trial of Indian Commissioner Hayt, Charles M. Field and Francis D. Kerr, President and Directors of the International Trust Company of Jersey City, before a struck jury, resulted in a verdict of acquittal on June 17th.

GENERAL SHERMAN, in stating the result of the recent Hazen-Stanley court-martial, admonishes both parties that they must abstain from further controversy, and that General Stanley's criticism of Hazen was indefensible.

A NEGRO, named Chastine Cox, was arrested in Boston, June 23d, for the murder of Mrs. Dr. Hall. He confesses the crime. He was detected by means of some of the jewelry of the murdered woman which he had sold in Boston.

HENRY W. BLAIR, Republican, was elected United States Senator from New Hampshire on June 17th, and the House and Senate, in joint convention, elected A. B. Thompson, of Concord, Secretary of State, and Solon A. Carter, of Keene, State Treasurer.

THE jury in the case of Miss Lilian Duer, charged with the murder of Miss Ella Beers at Pokomoke, Md., rendered a verdict of guilty of manslaughter on June 19th. The court sentenced her to pay a fine of $500. As soon as this was done she was released.

GENERAL NELSON A. MILES has received orders to organize and put in motion as soon as possible a strong column for the purpose of driving back across the line of the Northern Missouri the detachments of Sitting Bull's camp that have left Canada to hunt buffalo.

DURING an all-night session of the United States Senate, June 18th, a disgraceful exchange of personalities occurred between Messrs. Lamar and Conkling. A duel was anticipated by some as a result of the collision, but nothing of the kind seems likely to occur. The Senate passed the Army Bill June 21st.

AMONG recent deaths are those of Professor Johann Rosenkranz, eminent philosopher and author at Königsberg, aged seventy-four; Hon. Franklin Corwin, ex-Member of Congress from Illinois, June 15th, aged sixty one; Hon. Frederick W. Green, ex Member of Congress from Maryland, June 18th, aged sixty-three.

A CONVENTION of delegates to discuss the World's Fair in 1883 met in this city last week, and appointed a committee to confer with Judge Hilton's committee, which represents the substantial interests of the metropolis, as to the proposed Exposition. Judge Hilton declined to convene his committee for a conference, owing to the absence of many of its members.

THE Maryland Democrats will hold a State Convention in Baltimore, August 7th, to nominate candidates for Governor, Attorney General, Comptroller and Clerk of the Court of Appeals.

GOVERNOR ROBINSON of this State declines to sign the Bill providing for a commission to revise the tax laws, and the Bills relative to the criminal code and the punishment of tramps.

Foreign.

THREE French cruisers will be sent to the Pacific Ocean to protect French subjects in Chile and Peru.

THE will of Baron Lionel de Rothschild disposes of personality to the amount of £2,700,000 ($12,500,000).

PRINCE BISMARCK has intimated in the Reichstag that the adoption of the double coin standard is not contemplated by Germany.

A VIOLENT earthquake in the island of Sicily, June 17th, almost totally destroyed five villages, killing ten persons and injuring several others.

A SOCIALIST conspiracy has been discovered at San Miguel, Spain. Seven of the conspirators have been imprisoned and a list of their accomplices has been seized.

PREMIER CANOVAS has stated in the Spanish Cortes that the Government fully intends to settle the Cuban question and will pursue a conciliatory policy towards Cuba. He considered it impossible to abolish slavery immediately.

THE British forces in Zululand are preparing for a formidable advance against the large military kraals of Cetewayo.

A DISPATCH from Rome says that the Pope is endeavoring to bring about the restoration of diplomatic relations between England and Mexico.

ANNUAL REGATTA OF THE NEW YORK YACHT CLUB.

THE annual regatta of the New York Yacht Club, on Thursday, June 19th, was characterized by smooth water and light winds. Much disappointment was experienced in consequence, as the reverse of these conditions, usually prevalent, give to this contest the fullest excitement. Promptly at 11:24 the yachts got away, the sloop *Vixen* crossing the line first, followed by the *Regina*, *Rambler*, *Estelle*, *Vision*, *Nereid*, *Volante*, *Peerless*, *Psyche*, *Glance*, *Intrepid* and *Tidal Wave*. This being the maiden race of the *Intrepid*, which sailed against the *Rambler*, her movements were watched with close interest. Great interest was also manifested in the race between the *Regina* and *Vixen*, as these two boats had been entered to sail an ocean match race on June 24th, for the Bennett Cup. The course was laid direct for Southwest Spit, and before their arrival the several excursion steamers had collected there, ready to give their deadening salutes, which they did with a will. The *Rambler* was first to round the Spit, at 12:32:10, followed by the *Vixen*, *Regina*, *Intrepid*, *Tidal Wave*, *Peerless*, *Estelle*, *Vision*, *Volante*, *Psyche* and *Glance*, the difference in time between the first and last boats being only seventeen minutes. From this point to the Lightship the wind was dead ahead, and the yachts found it necessary to make long tacks. The sloops were able to sail closer to the wind than the schooners, and consequently were first at the turning-point. The *Vixen* rounded the Lightship at 2:19:57, followed by the *Regina*, *Peerless*, *Vision*, *Tidal Wave*, *Intrepid*, *Volante*, *Rambler*, *Estelle* and *Glance*.

ANNUAL REGATTA OF THE NEW YORK YACHT CLUB, JUNE 19TH—THE "VIXEN" ROUNDING THE LIGHTSHIP AND LEADING THE FLEET.

Digitized by Google

After rounding the lightship the yachts had a free wind, and sheets were eased off, balloon jibs and staysails set. In fact, the yachts were completely enveloped in canvas. The same course was taken on the return as in going out, and while the *Intrepid* was ten minutes in advance of the *Rambler* at the Lightship, the latter soon overtook her competitor, and won the race by 4 minutes 42 seconds. The *Heylon* and *Vixen* kept well together, and although the former beat the latter by actual time 22 seconds, the *Vixen* was the winner on time allowance by 21 seconds. The other winners were the *Peerless*, *Volante*, *Tidal Wave* and *Vision*.

The steamer for the club's guests was the *Adelphi*; the judges' boat was the *William Fletcher*, and crowds of spectators were taken over the course in the steamers *Plymouth Rock*, *Columbia*, *Magenta*, *Adelaide*, *Sylvester*, *Elm City*, and in a number of tugs.

HER LANDLADY'S NEPHEW.

MRS. LAURA AUSTIN was an agreeable widow of six-and-twenty, and her friend, Miss Lynn Wode, was a lovely and blooming girl of eighteen. They had no ties to bind them to one place more than another, and so it came about one Spring day, when Laura was restless and Lynn was bored, that they proposed to do something entirely new. They took a map, and after an hour's search picked out a desirable-looking spot which they determined to explore in hope of finding a charming Summer retreat. Success attended them in a wonderful degree; for the next day, after a three hours' railway journey, they found themselves in a pretty town. Then they looked at each other in dismay.

"Can we ring a bell at random?" asked Lynn, "and say, 'Do they take boarders here?' Maybe they might answer, 'No, we don't; but Mrs. So-and-so does.'"

"That won't do," said Mrs. Austin. "The post-office would be better. We might inquire there, and perhaps get a list of places."

So they did, and the postmaster proved obliging. He mentioned several places; but said that if the ladies did not object to going a little out of town they would find the residence of Mr. William Mount the best-kept and the pleasantest. Thanking him, they started, and a fifteen minutes' walk brought them to a long, acacia hedge, already green and carefully trimmed. Looking up an English lawn through shade-trees, they saw a large, square house, built of irregular stone. Both exclaimed with delight.

"It must be the wrong place," said Lynn. "See how that croquet-lawn is kept. They will never take boarders here."

But they did. Mrs. Mount received them pleasantly. She was ladylike and quiet. She said that her husband had been unfortunate in business, and so she took boarders rather than give up the house, to which they were all attached. Terms suiting, they took communicating rooms, and moved into them the very next week.

"Just the place for a romance to happen," said Mrs. Austin, as she glanced around her apartment with satisfaction, and then looked out of the north window at the pretty hills, and after that went over to the west window and looked out over the fields, over the pretty brook with its rustic bridge, and far out to where the sunset clouds were glorious in the western sky. "Isn't it a niceplace, my dear?"

But Lynn only sank back in her rocking-chair and groaned.

"Don't you like it?" asked Mrs. Austin.

"I may, can, shall and will, Laura, but I don't."

"Why not? Is not it all that we could wish?"

"Yes, I know; it is a beautiful house, and everything seems agreeable. The table is faultless, the people nice—but oh, it is mortally dull!"

"But I tell you it is exactly the place for a romance to happen. Have you seen the little western porch beneath my window? The most enticing place it would be for lovers to watch the sunset, the new moon, or the evening star."

"My dear," said Lynn, laxily, "you have been through all that and you ought to know."

"I do know," said Laura, half sadly; and then they talked of other things."

The dullness, however, was not long to last. One day Lynn came in hurriedly, and exclaimed, with more animation than she had shown for weeks: "Laura mine, I have seen the handsomest man in the world! A king, my dear, a god, a——"

"Spare me your raptures, and tell me his name!" cried Laura.

"That can I do, *chérie*. His name is Charlie, and he is a nephew of Mrs. Mount."

"You seem intimate. Pray was he introduced as Charlie, and is Mount his last name?"

"Oh, no. I heard his aunt call him by that most captivating of names, but his last name is Stuart."

Mrs. Austin sat down before the pretty cottage piano and began to play "Charlie is my darling," laughing over her shoulder at Lynn.

But Lynn wanted to talk. "Isn't it agreeable to have the prospect of some amusement," she said. "Of course he'll be here a great deal for croquet and all that, and he will fall in love with one or both of us, and we shall have no end of pleasant times. And I have another piece of news for you. Mrs. Mount expects a houseful of Summer boarders to-morrow, and there is a tremendous tearing up and putting down going on in the bedrooms, and there are ovens full of pie and things in the kitchen. I wish it were to-morrow!"

Mrs. Austin stopped playing and sighed. "Good-by to quiet and peace," she said.

"Oh, no; good-by to the long dull days," cried Lynn. "But I must beautify," she added; "for the beau chevalier is going to drink tea here."

Lynn's beautifying was done to some purpose. Her brown braids were piled high upon her lovely head, and her long black dress was only relieved by one white rose. Two peculiarities she affected in her dress. She always wore black and white, and she always wore natural flowers. Her rare coloring needed no set-off, and the very severity of the style showed her magnificent figure to the best.

Mrs. Austin found Mr. Stuart agreeable, but not so handsome as she had expected from her friend's account. He was very tall and powerfully built, and his eyes were pretty; but his features were irregular, though pleasing. He talked well, and the tea-table was pleasanter than it had ever been.

After tea, as they went into the drawing-room, he said to Lynn: "You sing, of course."

"Not I," she replied, "I have no accomplishments whatever."

"One," he said.

"And that is——?"

"Pardon me for saying so, but you dress to perfection."

She laughed and blushed. "Well, I ought to," she answered, "for I make it my special study."

"In that you are so kind," he murmured, gallantly, "for you thereby give us so much pleasure."

She laughed as she crossed the room. "Laura, *ma fée*, sing us the sad little song that I like."

Laura rose and seated herself before the piano. There was a moment's pause, then a few loud chords, a passionate prelude, and the low, sweet tones of "Tanto Amor."

Lynn meanwhile settled herself comfortably in an easy-chair, and leaned back her head in indolent grace. Mr. Stuart sat beside her trifling with her fan; but he looked startled when Laura began to sing.

When the song was ended Mrs. Austin rose and picked up a bit of fancy-work.

Mr. Stuart said: "Mrs. Austin, the last time I heard that air it was under singular circumstances. From 'Favorita,' is not it?"

"Yes; and the sweetest air of that opera," she replied.

"It is, indeed," he said, absently.

Lynn looked impatient. "Won't you tell us where you heard it before?" she asked.

"Certainly; but you will only be amused, I fear, at what seems very strange to me. Listen: Two years ago I was traveling abroad with a friend. While at Paris he became much interested in a woman who was at that time attracting general attention by her pretensions to tell the past and predict the future. To convince my friend that there was nothing in such matters, I consented to visit the woman. She told me some things, oddly enough, about the past; but that, I concluded, was 'mind-reading.' Then she predicted a number of events for the future, which would not interest you, and which have never come true, although the time set for their accomplishment is long past. But, strange to say, she described this room, also you two ladies, and she said one of you would sing a song which would tangle itself about me in a curious way; and, with Mrs. Austin's voice and manner, she sang that air from 'Favorita'."

"Anything more?" asked Lynn, curiously.

"There was something more; but, pardon me, I cannot tell it."

"I insist," said Lynn, laughing.

"Well, then," he replied, reddening, "if you will, you must, I suppose. She said I should marry you!"

"Oh, good gracious!" cried Lynn, beginning to fan herself.

Laura Austin looked amused. "You made him tell you, Linnet," she said, "so you must not find fault with him."

Lynn rose. "I have letters to write," she said. "Mr. Stuart will excuse me, I am sure," and she swept out of the room.

"Have I offended her?" he asked, anxiously.

"Oh, no," replied Mrs. Austin. "She only felt embarrassed and wanted to get away."

"I trust——" he began, but just then Mrs. Mount entered the room, and Mrs. Austin rose to follow her friend.

She found Lynn sitting before the looking-glass. "Marry him, indeed!" she exclaimed. "Like his impudence! Have I refused seven good offers before I was eighteen to come to this wilderness to marry my landlady's nephew? I think not!"

In spite of her scorn, however, Lynn continued strangely civil to Mr. Stuart.

The houseful of boarders arrived duly, and the people proved pleasant. There was a stately papa and a handsome mamma, by name Colonel and Mrs. Vernier. Their two pretty daughters, Lucia and Helen, were lively and agreeable. Their son, Maurice, was rather good-looking and sang love-songs with a delightful tenor voice. Then a Mr. Dumont, engaged to Helen, was often of the party, so that Lynn no longer had need to complain of dullness. Croquet, archery, music and dancing occupied the long, sweet Summer days, and of late there had been a rage for picnics. Mrs. Mount was driven wild by sudden preparations and demands for impossible quantities of biscuit and hard eggs on the shortest notice.

Lucia Vernier one morning came down to breakfast looking unusually bright. Her fluffy golden hair was tied back with a blue ribbon matching her eyes, and her blue and white cambric dress was fresh as the Summer sky. "Congratulate me!" she cried; "for I have a new proposition to make. Let's play at camping, and go for a whole day to the woods and sleep all night by the blazing fire, rolled up in blankets and shawls. And let's never reveal our sufferings, but come back and amaze the villagers!"

"It would be a new thing to do," said Lynn, "but a dreadfully uncomfortable one. Little bugs pervade the 'forest primeval,' and the ant there maketh her lively home."

"Also there dwelleth the spider," added Mrs. Austin.

"And you would catch colds," suggested practical Mrs. Vernier.

"Rather a good idea of Lucia's, *I* think," said her sister Helen. "How say you, papa and Maurice, you have camped; is it feasible?"

"Nothing easier if you want to do it," replied the colonel. And from that the matter was discussed fully and determined on.

It took all day to plan and prepare, and the next morning found them starting merrily in a long wagon with straw to sit on. Mr. Stuart was of the party and had managed, as usual, to sit by Lynn. But Maurice Vernier was on the other side, and she divided her attentions between them.

Lynn had fallen into her usual place in this group. She was queen of all, admired and loved by the men, loved and imitated by the women. A rare sort of girl, for, while spoiled and exacting, she yet retained an amiable unselfishness that won all hearts to her.

After a long drive over a dusty road which would have been a punishment if they had been obliged to submit to it, but which was voted high fun since it was voluntary, they reached a cool, green forest where, in a little ravine, a pretty brook was flowing. The wagon was unloaded, and the party camped near a clear spring. The day passed as do most picnic days. Dinner was the first great event. After that some rested and some wandered off for ferns and flowers.

Mrs. Austin, who had brought a book, settled herself at a little distance from the camp-fire, under a spreading tree. Lynn said she was sleepy and lay down with her head in Laura's lap.

"You ought to save all sleep for the night, Miss Wode," said the colonel, laughing; "for I fear you will all find in the sleeping arrangements more of novelty than comfort."

"Oh, never fear for me," cried Lynn. "I can sleep anywhere and on anything. But," she added, in a low tone to Laura, "that's not the cause of my resting now. I could not shake off my two admirers in any other way. The beau *chevalier* has been regarding me in a melancholy manner, which is provoking, to say the least; and on the other hand Maurice is assuming a gay, hopeful expression, which I find quite as bad."

"But Lynn, really, don't you think you encourage Mr. Maurice too much, considering that you like the chevalier best?"

"But, who said I liked him at all? And Maurice is nothing but a college boy who imagines himself a man!"

"Well, be careful," sighed Laura. "It does not do to play fast and loose with a man like Mr. Stuart. He will drop you entirely and go, if you flirt much more with the college boy."

"Let him, then," said Lynn, carelessly, and soon the camp-fire seemed to her an immense way off, and the wind through the tree above her seemed to be singing "Tanto Amor," then she went off into dreamland.

Evening came on and still she slept. All the stragglers had gotten together again, and Maurice Vernier came over to ask Laura to help about getting tea. She raised the sleeping head and with his assistance slipped a shawl under so gently that Lynn never stirred.

"Such a chance for a pair of gloves," said the mischievous fellow, his eyes dancing with fun.

"But you must not," said Laura. "I forbid it. Miss Wode would be extremely displeased." And she left.

Maurice hesitated a moment, and then finding that he could not resist the temptation, he bent down and pressed a light kiss on the lovely mouth. Lynn opened her eyes quietly with no wonder in them, until she saw the laughing face looking into her own. Then the camp-fire, now blazing brightly, seemed near again, the picturesque figures disposed around it recalled her to herself and she started up.

"Fairly won, Miss Lynn!" cried Maurice. "My number is seven, and my favorite shade is invisible brown—please remember."

A burning blush came to her cheek. "How could you dare?" she said, angrily. "I thought you were——" she was about to add "a gentleman," when she saw Mr. Stuart standing not far away, looking at them both in wondering surprise. The glance of disapproval which he cast at her roused a bad spirit in the girl, usually so amiable. "He is acting mentor rather openly," she thought. "I must let him know that I am free as yet, in spite of his fortune-telling Frenchwoman." So changing her tone she turned to Maurice and said, lightly: "I suppose it was fair enough, since I exposed myself to danger. Number seven, dark brown, I shall remember. Give me your hand, please, to help me up."

Mr. Stuart turned away quietly, and, leaning on Maurice's arm, Lynn joined the group by the fire and began to assist with a cheerfulness that seemed perfectly natural.

While she slept the gentlemen had constructed for the ladies, with poles and shawls, a rude tent, and branches of evergreen were thrown inside to make a softer bed. Helen, Lucia and Mr. Dumont had brought back loads of ferns and wild-flowers, and had garlanded them from tree to tree over the place where the cloth was spread. The girls had thrown aside their fern-wreathed hats, and had bright flowers in their hair. They rushed up to Lynn together, with a lovely rope of flowers for her waist and a pretty bunch for her hair.

"We stood over you while you slept, *ma belle*," said Helen, "making all sorts of remarks until Mrs. Austin sent us away for fear of waking you. Doesn't Lynn mean a brook in some ancient language or other? Welsh, Anglo-Saxon, or something? Well, whether or not, I tried to get up a poetical speech about a sleeping brook, and Dumont here spoiled it by asking what like was a sleeping brook, 'Anything like a frozen one?' Lucia flew at him and said no one could say you were ever cold, and he said he didn't mean to insinuate such a thing, but merely to quash my flight of fancy, and we were getting into a regular wrangle, when Mrs. Austin dispatched us to have it out by the fire, which we should have done, if there had not been too much else to do. Tea is ready. Oh, happy hour! come!"

They sat long over the evening meal, and afterwards they sang songs and told stories, so it was late before they went to rest. But Lynn could not sleep. She turned restlessly from side to side, and finally lifted the shawl and wandered out into the night. She walked on and on until she reached the brookside, where she sat down on a mossy rock and began to sing "Tanto Amor" very softly to herself. The moon shone dimly through the trees and fantastic shadows surrounded her. Her eyes became attracted to one spot opposite, where she felt sure something moved.

Lynn had plenty of courage. "Who is there?" she called, with a steady voice.

"Only I, Miss Lynn," answered Mr. Stuart, as he sprang over to her side. "Like you, I was unable to sleep, and I have been wandering around for the last hour. I thought it was something unearthly when you began to sing, and when I recognized you I did not dare to speak for fear of startling you too much."

"I must return now," she said, rising.

He offered his hand to assist her, but she missed her footing and would have fallen forward into the stream, but for his quick, strong arm.

Bending, he whispered, "Are you hurt, my darling?"

"I have only wet my feet," she laughed. "And now I shall have to catch cold and be detected in my moonlight straying besides. I am always caught when I do anything wrong."

"As, for instance," he said, still keeping his arm about her, "this afternoon when Maurice kissed you."

"That was not my fault," she pouted, "and you looked as if you thought it was. Indeed I could not help it."

"I'll forgive you," he said, "on condition that I may do the same. Only it must be freely given. I do not wish to steal it."

She held up her lovely face, and he kissed her. What he whispered afterwards belongs to them alone.

After a while they went back to the camp. Lynn crept under the shawl again, and, forgetting her wet feet and the uncomfortable pillow, she was soon lost in happy dreams.

In the morning there was a universally expressed desire to get home as fast as possible, and luckily for them all, sensible Mrs. Mount foresaw this ending, and had a bountiful breakfast awaiting them.

Lynn made her confidences to Laura when they were again settled in their own room. "To think," said her friend, mischievously, "that you should have received seven good offers before you were eighteen, and after all to come here and accept your landlady's nephew!"

THE LATE MRS. DR. HULL.

OPENING OF THE CORONER'S INQUEST INTO THE MYSTERY.

(Continued from front page.)

Dr. Hull was subjected to a most thorough examination, and if there was any apparent line of questioning, it was to elucidate the much-talked-of "inside theory." As long as he was in the witness-chair he was closely watched by Captains Williams and Kealy, and Detectives Golden, Price, Schmittberger, and others. His narrative was in effect that which he gave at the preliminary examination, and with which the public are familiar. He described the share borne by himself and his wife in the management of their household affairs; his own nervousness and restlessness; the habits of the people residing in the house; his own feeling when informed of the death of his wife, and the condition in which he found the body. The second witness was Samuel N. Chittenden, who spoke of the Hull mansion as his social home, gave a clear account of his visit there on the last evening of Mrs. Hull's life, when the time was passed in card-playing and conversation, and described the appearance of the house when he reached it after the tragedy. He detailed his business relations with the deceased in reference to the investment of her money, and pronounced her the purest, grandest woman he had ever known.

Nancy Francis, the colored cook, was next examined. She is short, stout, and very black, and wore a linen wrapper, embroidered in front. From the facts that she slept alone in the basement and was the first one who saw the remains bound on the bed, her appearance and testimony were more intently regarded than those of Dr. Hull; and the testimony, like that of the preceding witnesses, was simply a repetition under oath of the account given the day the tragedy was made known.

On Friday morning Nancy was recalled, but gave no additional testimony of importance. She was followed by Dr. Robert M. Fuller, one of the physicians summoned to the house after the discovery of the murder. His testimony was simply descriptive of the appearance of the body and the bedroom on his arrival. Nellie West, the housemaid, was next questioned particularly concerning the kind of candles and matches used in the house. The deposition of Mrs. Boetjer, who lived on the second floor of the Hull mansion, was taken by the coroner in private, owing to her being sick. With this the inquest was adjourned until Monday, June 23d.

Bristow Francis, husband of the colored cook, was arrested on the 20th, at Bedfield, N. J. The police say that they can simplify the case by proving that he had nothing to do with the murder.

DEATH OF THE PRINCE IMPERIAL OF FRANCE.

BOTH continents were shocked on Friday morning, June 20th, by the announcement that the Prince Imperial of France had been killed while out on a reconnoissance in Zululand, where he held a staff appointment in the British army. It seems that the Prince, with Lieutenant Carey, of the Ninety-eighth Regiment, six men and one friendly Zulu, left the camp at Kelezi Mountain, seven miles beyond the Blood River, on June 1st, for a reconnoissance. The party halted and unsaddled when ten miles from camp. Just as the Prince gave the order to remount, a volley was fired from an ambush in long grass. Lieutenant Carey and four of the troopers returned to the camp and reported that the Prince and two troopers were missing. From

Digitized by Google

their statements there could be no doubt that the Prince was killed. At daybreak on the 2d, a cavalry patrol under General Marshall left to search for the Prince and went to the kraals, ten miles further on. His body was discovered among long grass, three hundred yards from a kraal, lying on its back. There were eighteen assegai stabs in it, two of them piercing the body from the chest to the back, two in the side, and one destroying the right eye. A locket with hair medallions and a reliquary were found around the neck. The face wore a placid expression. He had evidently ineffectually tried to mount, and, the leather of the flap tearing, he ran along the path to where he was found. Two troopers lay near the body, both having been assegaied.

The body was placed on a stretcher formed of lances, and was borne by General Marshall and Officers Drury, Lour and Stewart, lancers, until they met the ambulance, on which it was brought into camp accompanied by a military escort. In the afternoon there was a military parade. Deep sorrow prevailed throughout the column. The corpse was to be sent with an escort for transportation to England.

In February last the Prince Imperial offered his services as a volunteer to go to South Africa with a body of recruits for Lord Chelmsford, who had suffered severe losses in the battles with the Zulus at Isandula and elsewhere. The Prince proposed to go with one of the columns invading the Zulu country to study the habits of the English troops in active warfare, and render service either as an aid or as a private in the ranks. His offer of service was accepted, and permission was granted him to join the staff of the Royal Artillery. He sailed with his retinue from Southampton on February 27th. Before leaving England the Prince wrote a letter to M. Rouher, announcing his purpose, and stating his reasons for enlisting in the British ranks.

"For the last eight years I have been the guest of England. My education was completed in the English Military School. I have strengthened my ties of friendship with the English Army by taking part in its annual manœuvres. The war at the Cape having assumed a more serious character, I have wished to follow the campaign. I could not refrain from sharing the dangers and fatigues of the troops among whom I have so many friends. Moreover, the time spent in witnessing this struggle of civilization against barbarism will not be wasted for me."

On his arrival at the Cape the Prince Imperial was recommended to Lord Chelmsford, Commander-in-chief of the British forces in Southern Africa, as an extra aide-de-camp. He was gazetted with the local rank of captain unattached. He took part in all the movements of the forces under the immediate command of Lord Chelmsford, and was a faithful and efficient officer and a close observer of the customs of the British army in its warfare with the savages.

The news of the death of the prince reached London at a late hour on the night of the 19th. At about 1 o'clock the next morning it was circulated in the lobbies of the House of Commons, when, in reply to inquiries, Colonel Stanley, Secretary of State for War, read an official telegram. Lord Sidney, an old and tried friend of the Imperial family, was sent to Chiselhurst to break the news to the ex-Empress Eugénie. He informed her as gently as possible, and, after a cry of agony, she fainted.

London journals, while deeply deploring the prince's death, regard it as the end of Imperialism in France. Prince Napoleon, who has become the head of the line, is a Democrat in politics, and is distasteful to the entire Bonapartist following. He has two sons, aged seventeen and fifteen years, respectively. Party loyalty may fasten around the name of these sons, but for a long time Imperial counsels must be distracted, and the possibility of a return of the Empire appears more shadowy than ever.

The *Gazette de France* says that before starting for Zululand the Prince Imperial made a will appointing Prince Victor, eldest son of Prince Napoleon, his heir.

The *Standard*'s Paris correspondent hears that the ex-Empress Eugénie has summoned all the Bonapartist leaders to Chiselhurst.

Napoleon Eugène Louis Jean Joseph, Prince Imperial, was the only child of Napoleon III. and Eugénie. He was born in the Tuileries, March 16th, 1856, and his age at his death was accordingly twenty-three years and three months. The Prince received a careful education, and almost in babyhood was dressed in military clothes and familiarized with the art of gunnery, and in various ways given the idea that soldiering was the chief business of an emperor. The disastrous campaign precipitated with Prussia gave the boyish Prince an unusually early opportunity for becoming familiar with the stern realities of active warfare, for his father took him to the field, and at Saarbruck, according to the Emperor's proud dispatch to Eugénie, he received his baptism of fire. The boy was carried about from battlefield to battlefield, surrounded by a guard, and kept in total ignorance of the real state of affairs, as is proved by his perpetual inquiry when the army would reach Berlin. The disastrous issue of the Emperor's campaign, his sudden fall from the throne of France, his imprisonment by the Prussians, and final release, followed by his exile with his Empress at Chiselhurst, are matters of recent history. When the military situation became critical the safety of young Louis was provided for by his being sent to Belgium, and subsequently he joined his mother in England.

The Prince joined the Royal Military Academy at Woolwich as a gentleman cadet, and pursued his studies without intermission (save for a brief period at the death of his father in February, 1873) till February, 1875, when he passed his final examination, standing seventh in a class of thirty-four, a position which would have entitled him, had he desired to enter the British Army, to elect service in the engineers or artillery.

THIRD CONTEST FOR THE ASTLEY BELT.

THE fourth contest for the long-distance championship of the world and its emblem, the belt presented by Sir J. D. Astley, Bart., of England, was opened in Agricultural Hall, London, on the morning of Monday, June 16th, and closed on the night of Saturday, 21st. The entries were "Blower" Brown, of Turnham Green, England; Edward Payson Weston, of Providence, Rhode Island; John Ennis, of Chicago, and H. Harding, of Blackwell, England. Charles Rowell, who had entered, was obliged by an injured foot to withdraw his name before the walking began; Ennis, who had strained his loin in rescuing some women during an accident, stuck to the track, with long interruptions, until Wednesday, when he gave up, short of 200 miles and Harding retired the same day, leaving Brown and Weston on the track alone. At three o'clock on Thursday morning Brown had covered 318 miles and Weston 313 and 1¼ laps. Then, to the surprise of every one, Weston began forging ahead, and by three o'clock on Friday morning he had made 330 miles and Brown 324. The excitement was increased by Weston's acceptance of a wager with Sir John Astley of $2,500 to $500, that he would not cover 550 miles. At three o'clock on Saturday morning the record stood: Weston, 473 miles; Brown, 420.

From this time the crowd of spectators increased. Weston ran and walked faster than ever, appearing to be a bundle of springs. His 501st mile was reeled off in 7m. 39s.; the 520th in 7m. 37s., the fastest during the contest. At 9:13 Weston passed Brown's previous record of 542 miles and 2 laps.

The last two miles (549th and 550th) were made in in 11m. 24s. and 11m. 21s. As Weston passed his tent for the final lap he was given the British and the American flags, which he carried around the ring, waving them amid deafening cheering and the din of the music. The band first played "Yankee Doodle" and ended with "Rule Britannia." He finished the 550 miles at 10h. 55m. 10s., when he marched to the entrance and took a cab home. Brown made 453 miles.

The winner of the champion belt and the wager with Sir John Astley, was born in Providence, R. I., March 15th, 1839. He stands five feet eight inches and weighs about 140 pounds. From early boyhood he has displayed remarkable speed in long walks. In 1874 Weston went into walking as a profession. On May 11th, 1874, he started at the rink on a six-day walk and did 430 miles. He tried it again at the Hippodrome, September 11th, making 326 miles, and again on the 5th of October, making 346 miles. In a walk beginning December 14th he made over 500 miles in twenty-five and two-third minutes less than the six days. He met O'Leary for the first time at Chicago, November 15th, 1875. O'Leary covered 503 miles and Weston 451. On March 1st, 1875, he met J. R. Judd and made 431 miles. In 1870 he visited England, and on September 3d, 1876, started on an exhibition walk at Liverpool, covering 500¼ miles in the six days. December 18-23d he met O'Leary in London and was defeated by ten miles, making 510. He gave many exhibition walks in England, and grew to be a favorite there. He entered for the first Astley-belt contest, but, when at the last moment O'Leary was admitted, was taken suddenly ill and did not walk. Last Winter he tried a long walk over English soil generally, lecturing when he stopped. Since the failure of this attempt, after a very good record, he has been keeping comparatively quiet, his last appearance being in the All-England belt match, in March last, where he came in fourth with a score of 450 miles. At that time Brown made the then best recorded score—542 miles and two laps.

A GRAND BENEFICENCE.

THE STEWART MEMORIAL SCHOOLS AT GARDEN CITY, L. I.

A SECOND step towards the end the late A. T. Stewart had in view of making Garden City, Long Island, a university town, was taken on June 18th, when some 5,000 persons assembled to witness the ceremony of laying the corner-stone of the Cathedral School of St. Paul. This school is designed by Mrs. Stewart as a memorial of her late husband, and is one of two which are to be erected in connection with the Cathedral. This one will be devoted expressly to the education of boys. The second, which is to be known as the Cathedral School of St. Mary, will be devoted exclusively to girls. It is expected that the St. Paul School will be completed and ready for occupancy by the 1st of September, 1880, and the Cathedral will also be finished by that time.

In preparation for the ceremonies, tents had been erected on the grounds, and on the foundations already laid was a platform on which were chairs for about 300 persons, while just outside, and with seats nearer to the corner-stone, was another platform. Nearest of all to the stone, Judge Hilton, Mrs. A. T. Stewart and John P. Cinch, Mrs. Stewart's brother, with friends and relatives who had been brought to Garden City by a special train from Hunter's Point, took seats before the throng had begun to assemble. Mrs. Stewart was dressed in black silk, plainly trimmed, and with black buttons in front. A black bonnet of Parisian make sat upon her brown hair, that curled profusely around her temples. A very thin veil that covered her face did not conceal her features. Shortly after noon a procession was formed at the tents which served as dressing-rooms for the clergy, and moved slowly to the stand, a band playing and the choristers singing:

"Christ is made the sure foundation,
Christ the head and corner-stone."

The Rev. Dr. Turner, of St. Matthew's Church, Brooklyn, led the march, followed by the Eighth Regiment Band, Bishop Littlejohn of the Diocese of Long Island, the Lord Bishop of Rupert's Land, the Rev. Dr. Browne, the local Rector at Garden City, all the clergy of the Diocese of Long Island, fifty-six in number, and the trustees of the corporation. As the procession entered the inclosure, the congregation rose, and remained standing. At the conclusion of the processional hymn, the tenth selection from the Psalter in the Book of Common Prayer, was chanted by the choristers and clergy. The chant was followed by the lesson, read by Dr. Johnson, of St. Mary's Church, Brooklyn. Dr. Snively, of Grace Church, Brooklyn, then read the prayer for the occasion, calling upon Almighty God to bless the stone which was about to be laid, and imploring divine blessings upon her, "who, to the furtherance of this work, has faithfully offered to Thee of her substance." The Rev. Dr. T. Stafford Browne read aloud the inscription on the brown corner-stone: "Pro Christo et Ecclesia et Humanis Litteris," or, "For Christ and the Church and for Human Letters." On one end of the stone was a monogram of the Holy Name, and on the other the date of the present year. In the copper box that was laid under the stone were a Bible and prayer-book, the canons of the General Convention, a church almanac, records of the proceedings of the Diocesan Convention, History of the Church in Long Island, History of Queens County, History of Hempstead and of Garden City, the copy of Ovid's "Metamorphoses" that the late A. T. Stewart was fond of reading, photographs of the proposed school and of the Cathedral, etc.

Then Contractor Lyon spread cement on the foundation, and the stone was settled in its place by the lowering of the rope from the pulley overhead, and Bishop Littlejohn struck the top of it three times with a wooden mallet and made the sign of the cross, saying that he, as bishop, laid the corner-stone. Then a "Te Deum" was sung and the bishop prayed, after which an anthem was sung, "Send out Thy Light." Then Bishop Littlejohn, in an admirable address, spoke of the laying of the corner-stone of the Cathedral two years before as the first step in the development of a "great plan of Christian beneficence which has already challenged the admiration of the American people. The second step, now taken, will be followed by others. St. Mary's School will soon be begun. The Bishop's House, the Divinity House, the house for the Deaconesses of the Diocese, and the Asylum for Overworked and Worn-out Clergymen, will follow in a short time. And our patroness will complete the work that she has begun. There will be no halting and no neglect which may endanger the perpetuity of the institutions about to be reared. All will be endowed so liberally and with such precaution and business judgment, that there will be enough to preserve them for ever. Our widowed friend is raising the grandest monument ever reared to commemorate the virtues and character of an American citizen. The inscription on this stone simply explains the object and scope of the ends to be attained by the edifice which we are rearing. It is 'for Christ,' because we believe that it is only through Christ that we can get light. It is for 'knowledge,' because an educated and disciplined intellect is the foundation of all true character. We are determined that this school shall build up character and produce men who will recognize the duties as well as clamor for the rights of freemen. Before all else, this is our avowed and steadfast purpose."

In conclusion, Bishop Littlejohn paid a glowing tribute to Judge Hilton, which, he said, was required by truth, and dictated by his sense of justice. Judge Hilton's motives had been impugned in this as in other schemes, but he had already stamped the impress of his organizing genius upon this plan of beneficence. His aims and motives showed him to be worthy of the magnificent trust committed to his hands. "God grant," said the Bishop, "that he may be spared to see the completion of what he has begun, and that both he and the lady whom he represents may live to reap the harvest of gratitude which will grow up in the hearts of this people in the future."

Upon the close of the ceremonies, at two o'clock, the clergy were entertained in the chapel, the friends of Mrs. Stewart and Judge Hilton in the hotel, and the throng of visitors in the park. The arrangements for the pleasure and comfort of strangers was most thoughtful and complete throughout.

The School of St. Paul will be, not only in size, but in arrangement and finish as well, the most perfect building of its kind in the country, and in many features it will be original. Its frontage is nearly 300 feet, and its general shape is that of the letter E. Healthfulness has been one of the chief aims in the plans for its construction. Besides class-rooms and dormitories, there will be a chapel, library and laboratory, and a large swimming-bath, with marble dressing-rooms surrounding it, the water of which will be heated in Winter. The table will be equal to that of a first-class hotel.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

With the British in Zululand.

There is a curious point of ceremonial etiquette observed by the servants of the Zulu royal household. The royal cook may never tell the King or any of his family that the meat is cooked; he must convey the intelligence by saying that he is tired of roasting. Probably, however, the cook always takes care to do complete justice to the culinary preparation of the meat before presuming to announce his own indisposition to continue his appointed task; but it seems a whimsical and unaccountable scruple to avoid making any direct report of the condition of the meat itself. The national superstition of witchcraft is doubtless at the bottom of this and many other peculiar Zulu customs. Colonel Pearson, in his official dispatch, dated April 9th, thus describes the destruction of Dabulamanzi's kraal: "The Chief Dabulamanzi—a half-brother to Cetewayo—had a military kraal near Ekowe which I thought it would be desirable to destroy; but it being seven miles distant, and unapproachable except over country more or less covered with bush, I considered it would not be right to attempt it, except with a comparatively large force. Accordingly, on March 1st, I started at 2 A. M., with 450 men, and one gun Royal Artillery, and reached the vicinity of the kraal a little before daylight. The Zulus were completely surprised, and ran off to the neighboring hills. The military kraal, consisting of upwards of fifty huts, was completely destroyed. Returning, we were followed by the enemy, but at long distances and in no great numbers. Our casualties were nil, but, as far as I could observe, we killed or wounded about a dozen of the enemy." Our views "Inside Ekowe" are a continuation of those published last week, illustrating some of the humorous phases of life at Colonel Pearson's camp during the siege. The sketch of military life on board a troop ship has a special interest now that the British troop-ships are more than usually busy conveying soldiers to South Africa and elsewhere. It shows the morning bath, to which all have to submit, no matter what the state of the thermometer may be. At daybreak (4 A. M.) the sail-cloth tank is got out and filled with sea-water, and in obedience to the signal the men leave their snug hammocks below, and come shivering on deck to take the disagreeable plunge. There are but few "malingerers," for all who report themselves "sick" have their beer stopped for the day, an alternative by no means agreeable to the tastes of the average British soldier.

Swiss Demonstration in Favor of the Death Penalty.

Throughout Switzerland the people voted on the question of the death penalty on the 18th of May, and a large majority being in favor of its re-establishment as the extreme punishment, the Constitution of the Republic will be amended in accordance with the popular will. On the day preceding the general voting, a great demonstration was held in Berne, at which free expressions of opinion were made by eminent citizens, particular stress being laid on the assertion that the number of crimes had increased since the abolition of the punishment by death. The meeting was in favor of the return to ancient custom, and was a type of the feeling displayed by the popular vote on the day following.

Close of the Afghan War.

According to the treaty of peace with the Ameer Yakoob Khan, the Afghan chief will improve the high roads along which trade passes from and to India, and also protect these lines. For the improvement of the present system, under which taxes and transit duties are levied, the Ameer agrees to enter into a commercial treaty within the year. A full amnesty is promised to the Sirdars and to all who have had intercourse with the British authorities during the war. An annual subsidy of £60,000 is promised, and will probably be increased. Really good commercial advantages to British traders have been secured. Our illustration of the late war, thus happily concluded, represents a conflict in Khoorum Valley between combined squadrons of the First Punjab Cavalry and Fifteenth Hussars, and a party of the Afghan cavalry.

Burning of Orenburg, Russia.

The City of Orenburg, burned on the 18th of April last by supposed Nihilist agents, was the chief place in the Government of that name, and was situated on the right bank of the Oral, at the confines of Russia in Europe. It was a city of 30,000 inhabitants, and the centre of an active commerce between Asia and Europe. One mosque, two churches, four mills, 292 shops, several tar, coal and firewood stores, timber yards, the meat market, fruit market, women's gymnasium, the club house, workhouse, police-station, justice's court, and other public buildings, besides 949 dwellings, were burned. The loss was enormous, and great suffering resulted, fully one-half of the population being made destitute of food and shelter.

AT HOME AND ABROAD.

—MIDDLE TENNESSEE has 300 brandy distilleries in operation.

—PROHIBITION is now on trial in 140 communities in Georgia.

—NOTWITHSTANDING the prevalence of violence in Texas, the sale of liquor is strictly prohibited in many counties of that State.

—A PARIS newspaper asserts that those Egyptians who will not or can not pay taxes are hanged to palm trees, and unless they pay or are paid for, are left to die.

—IN China the Government has been obliged to issue new orders to insure a more strict enforcement of the laws against the growth of poppies, and the use of opium by the official classes.

—THE Old Colony Railroad Company have paid damages to over 600 persons injured by the Wellaston disaster, amounting to about $250,000. No dividends will be paid this year in consequence.

—THE Russian Government have hired a number of steamships to convey Nihilist exiles from Odessa to Saghalieu, and the first will depart on July 1st with 700 prisoners, of all ages and rank, and of both sexes.

—THE entire faculty of the Williamette University, Portland, Oregon, have resigned on account of the effort to rigidly enforce sectarian doctrines regarding the control of the University by the Methodist Church, which has the management of the institution.

—IT is now reported that the terrible famine in Cashmere is caused by the cruel action of the Maharajah. He prevented his subjects from saving their crops at the proper time; then collected all the grain he could lay his hands on, and, having made the corner in corn, he and his agents are taking advantage of the rise in the price of food to enrich themselves.

—ON the 20th of April last the Georgian town of Jelisawetpol, near Tiflis, was invaded by a horde of locusts, and for over a week the utmost consternation prevailed. The inhabitants, regarding the visitation as a divine punishment, refused to obey the order of the authorities to kill the pest, and it was only through the energetic measures taken by the police that the destructive nuisance was abated.

—AN international industrial exhibition was opened at Arnheim, in Holland, on the 15th of June, and will continue till the 1st of October. It comprises brick-making machinery, building materials of artificial stone, water-power engines of two and three-horse power, fire-proof safes, machines for working iron and wood, hempen cables, carriages, silver ware, water-motors, sewing machines and apparatus for electric light.

—THE Swiss watch industry has received another blow in the death at Neuchatel of M. Henry Grandjean, founder of the celebrated chronometer establishment at Locle. No one during the last thirty years has contributed so much to the development of the manufacturing of chronometers, watches, and instruments of precision as he. He has also played an important part in the politics of his country as a member of the Cantonal and Confederate Governments. He was greatly respected, and his death is looked upon as a national calamity.

—SINCE January 1st over sixty-seven companies have been incorporated in Connecticut, the majority of them being nominally located in Hartford, while the stock in most of them, over $20,000,000, is owned outside the State. Many of these corporations are of a questionable character, speculators having taken advantage of faulty State laws, but a commission appointed by the last Legislature is now investigating the matter, and it will probably be remedied. There are between two thousand and three thousand chartered stock corporations in the State.

—IN Italy, the guard and defense of the principal passages of the mountains which form the northern boundary of the kingdom are confided to a special corps known under the name of "Alpine companies." This body, exclusively recruited among the mountaineers, inured to every fatigue, and having a perfect knowledge of the country, would, doubtless, render the greatest services in time of war. The question is now under consideration in France of forming an analogous corps to be called "chasseurs de montagne," intended to serve on the Alpine and Pyrenean frontiers.

—A SILK "famine" is likely to prevail this Summer by reason of the failure of the crops in France and Italy. Already raw silks have advanced twenty to thirty per cent. The excitement and speculation in the markets of Lyons and Milan have been very great, and have not yet ceased. Manufactured goods on hand have not advanced, although orders for future delivery command prices some ten or fifteen per cent. higher than heretofore. The American Consul in Lyons says that he has never known a season so unfavorable to growing crops of all kinds, the temperature this year being very much like that of 1878.

—SIAM rejoices in a "first" King and a "second" King; these personages are respectively named Tiaou Fa Tiaoula Langkorn (who is assisted in the government by the ex-Minister Tiaou Phraya—that is, counselor of the first class)—Suri Wongsi, the Regent; and Kromamoun Bawarawichai Tiaou, son of the deceased second King. Both have reigned since October 1st, 1868. These monarchs rule over 6,300,000 persons—mostly Buddhists; the army is officered by Europeans, and in war time every male must fight; the fleet consists of seven war-ships, and Bangkok is the capital, with 500,000 inhabitants.

—THE late Legislature of Illinois enacted a law that should have the most general application. It provides that any banker or broker, or person doing a banking business, or any officer of any banking company, who shall receive a deposit when insolvent, whereby the deposit so made shall be lost to the depositor, shall be deemed guilty of embezzlement, and shall be fined in double the amount of the sum fraudulently taken, and also imprisoned in the penitentiary for not less than one nor more than three years. The failure, suspension or involuntary liquidation of the banker, broker or banking company within thirty days after receiving the deposit is to be deemed *prima facie* evidence of an intent to defraud.

—THE most costly school building in the world is probably the new Polytechnic Institute in Hanover. The late King of Hanover commenced the construction of a magnificent palace, upon which he expended several million dollars—the exact amount is not known, but it is commonly stated at about five millions. When his Government was overthrown, and the Kingdom of Hanover became a province of Prussia, the building was found in a half-finished condition. For several years the windows were boarded up and the empty rooms became the residence of bats and birds. At last the German Government resolved to alter the building and adapt it to the uses of the Polytechnic School. The work of alteration and completion has been going forward for several years and is now nearly ended. It has required more time and money to make the necessary changes than a new building would have cost, and the total outlay from first to last amounts to more millions than the architect is willing to make known. It is a magnificent pile, and is likely to attract much notice on account of the history attached to the place. A palace changed to a school may be taken as a good omen.

A PARTING.

I.

HIS MESSAGE.

STILL love me—but leave me, and let not
Thy love give thee longing or pain;
Clasp me only in dreaming; forget not
My kisses, nor seek them again.

I loved thee indeed; but no longer
May love quicken pulses and breath.
I know that ambition is stronger
Than loving—unyielding as death.

Love courts me to lie by its fountains,
In blissful yet idle repose;
Ambition's star shines from the mountains,
From regions of crags and of snows.

Away! I must follow its leading;
It beckons me on to my fate.
Take back to thy heart its fond pleading
And keep back the tears at their gate.

Seek not to reproach or to grieve me,
Cling not in the vows of the past,
Nor think they were meant to deceive thee;
They were only—too loving to last.

It is better to part while the gladness
Of youth lights for each one a way,
Than to wait until hours of sadness
Are darkened by age and decay.

II.

HER ANSWER.

Your message lies open; its meaning
I read through the dimness of tears,
And see in a moment the ending
Of hopes that I treasured for years.

You loved me, you say; yet with scorning
You fling back the love which I gave.
True love could not cease without warning—
Even flowers, cut down in the morning,
Fade not until noon—
Love could not so soon
Have buried itself in its grave.

We will part, as you say, but forgive me
One word of reproach, and the last:
'Twas unkind of you ever to cherish
A passion so frail as to perish,
When touched by ambition's chill blast.

True love is ever the same;
It bends not to blame;
It yields not to shame;
It breaks not, nor will it be broken.
There is always remaining some token
Of love in a heart once aflame.

As gold, in the crucible mingled,
Will mellow the tones of the bell,
So love in a sad heart will soften
The pang of a bitter farewell.

A. M. ESSOK.

THE FALLEN LEAVES.

BY WILKIE COLLINS.

CHAPTER XXXIX.

"WHERE has he been found?" Amelius asked, snatching up his hat.

"There's no hurry, sir." Morcross answered quietly. "When I had the honor of seeing you yesterday you said you meant to make Jervy suffer for what he had done. Somebody else has saved you the trouble. He was found this evening in the river."

"Drowned?"

"Stabbed in three places, sir; and put out of the way in the river—that's the surgeon's report. Robbed of everything he possessed—that's the police report, after searching his pockets."

Amelius was silent. It had not entered into his calculations that crime breeds crime, and that the criminal might escape him under *that* law. For the moment, he was conscious of a sense of disappointment, revealing plainly that the desire for vengeance had mingled with the higher motives which animated him. He felt uneasy and ashamed, and longed as usual to take refuge in action from his own unwelcome thoughts. "Are you sure it is the man?" he asked. "My description may have misled the police—I should like to see him myself."

"Certainly, sir. While we are about it, if you feel any curiosity to trace the stolen money, there's a chance (from what I have heard) of getting at the man with the squint. The people at our place think it's likely he may have been concerned in the robbery, if he hasn't committed the murder."

In an hour after, under the guidance of Morcross, Amelius passed through the dreary doors of a deadhouse, situated on the southern bank of the Thames, and saw the body of Jervy stretched out on a stone slab. The guardian who held the lantern, inured to such horrible sights, declared that the corpse could not have been in the water more than two days. To any one who had seen the murdered man, the face, undisfigured by injuries of any kind, was perfectly recognizable. Amelius knew him again, dead, as certainly as he had known him again, living, when he was waiting for Phœbe in the street.

"If you're satisfied, sir," said Morcross, "the inspector at the police-station is sending a sergeant to look after 'Wall-Eyes'—the name they give hereabouts to the man suspected of the robbery. We can take the sergeant with us in the cab, if you like."

Still keeping on the southern bank of the river, they drove for a quarter of an hour in a westerly direction, and stopped at a public-house. The sergeant of police went in by himself to make the first inquiries.

"We are a day too late, sir," he said to Amelius, on returning to the cab. "Wall-Eyes was here last night, and Mother Sowler with him, judging by the description. Both of them drunk—and the woman the worse of the two. The landlord knows nothing more about it; but there's a man at the bar tells me he heard of them this morning (still drinking) at the Dairy."

"The Dairy?" Amelius repeated.

Morcross interposed with the necessary explanation. "An old house, sir, which once stood by itself in the fields. It was a dairy a hundred years ago, and it has kept the name ever since, though it's nothing but a low lodging-house now."

"One of the worst places on this side of the river," the sergeant added. "The landlord's a returned convict. Sly as he is, we shall have him again yet, for receiving stolen goods. There's every sort of thief among his lodgers, from a pickpocket to a housebreaker. It's my duty to continue the inquiry, sir; but a gentleman like you will be better, I should say, out of such a place as that."

Still disquieted by the sight that he had seen in the deadhouse, and by the associations which that sight had recalled, Amelius was ready for any adventure which might relieve his mind. Even the prospect of a visit to a thieves' lodging-house was more welcome to him than the prospect of going home alone. "If there's no serious objection to it," he said, "I own I should like to see the place."

"You'll be safe enough with us," the sergeant replied. "If you don't mind filthy people and bad language—all right, sir! Cabman, drive to the Dairy."

Their direction was now towards the south, through a perfect labyrinth of mean and dirty streets. Twice the driver was obliged to ask his way. On the second occasion the sergeant, putting his head out of the window to stop the cab, cried, "Hullo, there's something up!"

They got out in front of a long, low rambling house, a complete contrast to the modern buildings about it. Late as the hour was, a mob had assembled in front of the door. The police were on the spot keeping the people in order.

Morcross and the sergeant pushed their way through the crowd, leading Amelius between them. "Something wrong, sir, in the back kitchen," said one of the policemen, answering the sergeant, while he opened the street-door. A few yards down the passage there was a second door, with a man on the watch by it. "There's a nice to-do down-stairs," the man announced, recognizing the sergeant, and unlocking the door with a key which he took from his pocket. "The landlord at the Dairy knows his lodgers, sir," Morcross whispered to Amelius; "the place is kept like a prison." As they passed through the second door, a frantic voice startled them, shouting inarticulately from below. An old man came hobbling up the kitchen-stairs, his eyes wild with fear, his long, gray hair all tumbled over his face. "Oh, Lord! have you got the tools for breaking open the door?" he asked, wringing his dirty hands in an agony of supplication. "She'll set the house on fire! she'll kill my wife and daughter!" The sergeant pushed him contemptuously out of the way, and looked round for Amelius. "It's only the landlord, sir; keep near Morcross, and follow me."

They descended the kitchen-stairs, the frantic cries below growing louder and louder at every step they took, and made their way through the thieves and vagabonds crowding together in the passage. Passing on their right hand a solid old oaken door, fast closed, they reached an open wicket-gate of iron which led into a stone-paved yard. A heavily-barred window was now visible in the back wall of the house, raised three or four feet from the pavement of the yard. The room within was illuminated by a blaze of gaslight. More policemen were here, keeping back more inquisitive lodgers. Among the spectators was a man with a hideous outward squint, holding by the window-bars in a state of drunken terror. The sergeant looked at him, and beckoned to one of the policemen. "Take him to the station; I shall have something to say to Wall-Eyes when he's sober. Now then! stand back, all of you, and let's see what's going on in the kitchen."

He took Amelius by the arm, and led him to the window. Even the sergeant started when the scene inside met his view. "By God!" he cried, "it's Mother Sowler herself!"

It was Mother Sowler. The horrible woman was trampling round and round in the middle of the kitchen, like a beast in a cage, raving in the dreadful drink-madness called delirium tremens. In the furthest corner of the room, barricaded behind the table, the landlord's wife and daughter crouched in terror of their lives. The gas, turned full on, blazed high enough to blacken the ceiling, and showed the heavy bolts shot at the top and bottom of the solid door. Nothing less than a battering-ram could have burst that door in from the outer side; an hour's work with the file would have failed to break a passage through the bars over the window. "How did she get there?" the sergeant asked. "Run down-stairs and bolted herself in, while the missus and the young 'un were cooking," was the answering cry from the people in the yard. As they spoke, another vain attempt was made to break in the door from the passage. The noise of the heavy blows redoubled the frenzy of the terrible creature in the kitchen, still trampling round and round under the blazing gaslight. Suddenly she made a dart at the window, and confronted the men looking in from the yard. Her staring eyes were bloodshot; a purple-red flush was over her face; her hair waved wildly about her, torn away in places by her own hands. "Cats!" she screamed, glaring out of the window, "millions of cats! and all their mouths wide-open spitting at me! Fire! fire to scare away the cats!" She searched furiously in her pocket and tore out a handful of loose papers. One of them escaped and fluttered downward to a wooden press under the window. Amelius was nearest, and saw it plainly as it fell. "Good heavens!" he exclaimed, "it's a bank-note!" "Wall-Eyes's money!" shouted the thieves in the yard; "she's going to burn Wall-Eyes's money!" The madwoman turned back to the middle of the kitchen, leaped up at the gas-burner, and set fire to the bank-notes. She scattered them flaming all round her on the kitchen floor. "Away with you!" she shouted, shaking her fists at the visionary multitude of cats. "Away with you, up the chimney! Away with you, out of the window!" She sprang back to the window, with her crooked fingers twisted in her hair. "The snakes!" she shrieked; "the snakes are hissing again in my hair! the beetles are crawling over my face!" She tore at her hair; she scraped her face with long black nails that lacerated the flesh. Amelius turned away, unable to endure the sight of her. Morcross took his place, eyed her steadily for a moment, and saw the way to end it. "A quartern of gin!" he shouted. "Quick! before she leaves the window!" In a minute he had the pewter measure in his hand, and tapped at the window. "Gin, Mother Sowler! Break the window and have a drop of gin!" For a moment the drunkard mastered her own dreadful visions at the sight of the liquor. She broke a pane of glass with her clinched fist. "The door!" cried Morcross to the panic-stricken women barricaded behind the table. "The door!" he reiterated, as he handed the gin in through the bars. The elder woman was too terrified to understand him; her bolder daughter crawled under the table, rushed across the kitchen and drew the bolts. As the madwoman turned to attack her the room was filled with men, headed by the sergeant. Three of them were barely enough to control the frantic wretch and bind her hand and foot. When Amelius entered the kitchen, after she had been conveyed to the hospital, a five-pound note on the press (secured by one of the police) and a few frail, black ashes scattered thinly on the kitchen floor were the only relics left of the stolen money.

* * * * *

After inquiry, patiently pursued in more than one direction, failed to throw any light on the mystery of Jervy's death. Morcross's report to Amelius, towards the close of the investigation, was little more than ingenious guess-work.

"It seems pretty clear, sir, in the first place, that Mother Sowler must have overtaken Wall-Eyes, after he had left the letter at Mrs. Farnaby's lodgings. In the second place, we are justified (as I shall show you directly) in assuming that she told him of the money in Jervy's possession, and that the two succeeded in discovering Jervy—no doubt through Wall-Eyes's superior knowledge of his master's movements. The evidence concerning the bank-notes proves this. We know, by the examination of the people at the Dairy, that Wall-Eyes took from his pocket a handful of notes, when they refused to send for liquor without having the money first. We are also informed that the breaking-out of the drink-madness in Mother Sowler showed itself in her snatching the notes out of his hand and trying to strangle him—before she ran down into the kitchen and bolted herself in. Lastly, Mrs. Farnaby's bankers have identified the note saved from the burning as one of forty five-pound notes paid to her check. So much for the tracing of the money.

"I wish I could give an equally satisfactory account of the tracing of the crime. We can make nothing of Wall-Eyes. He declares that he didn't even know Jervy was dead, till we told him; and he swears he found the money dropped in the street. It is needless to say that this last assertion is a lie. Opinions are divided among us as to whether he is answerable for the murder as well as the robbery, or whether there was a third person concerned in it. My own belief is that Jervy was drugged by the old woman (with a young woman very likely used as a decoy), in some house by the riverside, and then murdered by Wall-Eyes in cold blood. We have done our best to clear the matter up, and we have not succeeded. The doctors give us no hope of any assistance from Mother Sowler. If she gets over the attack (which is doubtful), they say she will die to a certainty of liver-disease. In short, my own fear is that this will prove to be one more of those murders which are mysteries to the police as well as the public."

The report of the case excited some interest, published in the newspapers in conspicuous type. Meddlesome readers wrote letters, offering complacently-stupid suggestions to the police. After a while, another crime attracted general attention, and the murder of Jervy disappeared from the public memory, among other forgotten murders of the bygone time.

CHAPTER XL.

THE last dreary days of November came to their end.

No longer darkened by the shadows of crime and torment and death, the life of Amelius glided insensibly into the peaceful byways of seclusion, brightened by the companionship of Sally. The Winter days followed one another in a happy uniformity of occupations and amusements. There were lessons to fill up the morning, and walks to occupy the afternoon and, in the evenings, sometimes reading, sometimes singing, sometimes nothing but the lazy luxury of talk. In the vast world of London, with its monstrous extremes of wealth and poverty, and its all-permeating malady of life at fever-heat, there was one supremely innocent and supremely happy creature, Sally had heard of Heaven, attainable on the hard condition of first paying the debt of death. "I have found a kinder Heaven," she said, one day. "It is here in the cottage; and Amelius has shown me the way to it."

Their social isolation was at this time complete; they were two friendless people, perfectly insensible to all that was perilous and pitiable in their own position. They parted with a kiss at night, and they met again with a kiss in the morning—and they were as happily free from all mistrust of the future as a pair of birds. No visitors came to the house; the few friends and acquaintances of Amelius, forgotten by him, forgot him in return. Now and then, Toff's wife came to the cottage, and exhibited the "cherubim-baby." Now and then, Toff himself (a musician among his other accomplishments) brought his fiddle up stairs, and said, modestly, "A little music helps to pass the time;" and played to the young master and mistress the cheerful tinkling tunes of the old vaudevilles of France. They were pleased with these small interruptions when they came, and they were not disappointed when the days passed, and the baby and the vaudevilles were hushed in absence and silence. So the happy Winter days went by; and the howling winds brought no rheumatism with them, and even the tax-gatherer himself, looking in at this earthly paradise, departed without a curse when he left his little paper behind him.

Now and then, at long intervals, the outer world intruded itself in the form of a letter.

Regina wrote, always with the same placid affection; always entering into the same minute narrative of the slow progress of "dear uncle's return to health." He was forbidden to exert himself in any way. His nerves were in a state of lamentable irritability. "I dare not even mention your name to him, dear Amelius; it seems, I cannot think why, to make him—oh, so unreasonably angry. I can only submit, and pray that he may soon be himself again." Amelius wrote back, always in the same considerate and gentle tone; always laying the blame of his dull letters on the studious uniformity of his life. He preserved, with a perfectly easy conscience, the most absolute silence on the subject of Sally. While he was faithful to Regina, what reason had he to reproach himself with the protection that he offered to a poor motherless girl? When he was married, he might safely confide the secret to his wife, and then Sally would live with them as his wife's sister.

One morning, the letters with the Paris post-mark were varied by a few lines from Rufus.

"Every morning, my bright boy, I get up and say to myself, 'Well! I reckon it's about time to take the route for London;' and every morning, if you'll believe me, I put it off till next day. Whether it's in the good feeding (expensive, I admit; but when your cook helps you to digest instead of hindering you, a man of my dyspeptic nation is too grateful to complain), or whether it's in the air, which reminds me, I do assure you, of our native atmosphere at Coolspring, Mass., is more than I can say, with a hard steel pen on a leaf of flimsy paper. You have heard the saying, 'When a good American dies, he goes to Paris.' Maybe, sometimes, he's smart enough to discount his own death, and rationally enjoy the future time in the present. This, you see, is a poetic flight. But, mercy be praised, the moral of my residence in Paris is plain: If I can't go to Amelius, Amelius must come to me. Note the address, Grand Hotel; and pack up, like a good boy, on receipt of this. Memorandum: The brown Miss is here. I saw her taking the air in a carriage, and raised my hat. She looked the other way. British—eminently British! But, there, I bear no malice; I am her most obedient servant, and yours affectionately, RUFUS.—Postscript: I want you to see some of our girls at this hotel. The genuine American material, sir, perfected by Worth."

Another morning brought with it a few sad lines from Phœbe. "After what had happened, she was quite unable to face her friends; she had no heart to seek employment in her own country—her present life was too dreary and too hopeless to be endured. A benevolent lady had made her an offer to accompany a party of emigrants to New Zealand, and she had accepted the proposal. Perhaps, among the new people, she might recover her self-respect and her spirits, and live to be a better woman. Meanwhile, she bade Mr. Goldenheart farewell, and asked his pardon for taking the liberty of wishing him happy with Miss Regina."

Amelius wrote a few kind lines to Phœbe, and a cordial reply to Rufus, making the pursuit of his studies his excuse for remaining in London. After this, there was no further correspondence. The mornings succeeded each other, and the postman brought no more news from the world outside.

But the lessons went on; and teacher and pupil were as inconsiderately happy as ever in each other's society. Observing with inexhaustible interest the progress of the mental development in Sally, Amelius was slow to perceive the physical development which was unobtrusively keeping pace with it. He was absolutely ignorant of the part which his own influence was taking in the gradual and delicate process of change. Ere long, the first forewarnings of the coming disturbance in their harmless relations towards each other began to show themselves. Ere long, there were signs of a troubled mind in Sally, which were mysteries to Amelius, and subjects of wonderment, sometimes even trials of temper, to the girl herself.

One day she looked in from the door of her room, in her white dressing-gown, and asked to be forgiven if she kept the lessons of the morning waiting for a little while.

"Come in," said Amelius, "and tell me why."

She hesitated. "You won't think me lazy, if you see me in my dressing-gown?"

"Of course not! Your dressing-gown, my dear, is as good as any other gown. A young girl like you looks best in white."

She came in with her work-basket, and her indoor dress over her arm.

Amelius laughed. "Why haven't you put it on?" he asked.

She sat down in a corner, and looked at her work-basket instead of looking at Amelius. "It doesn't fit me as well as it did," she answered. "I am obliged to alter it."

Digitized by Google

Amelius looked at her—at the charming youthful figure that had filled out, at the softly-rounded outline of the face with no angles and hollows in it now. "Is it the dress-maker's fault?" he asked, slyly.

Her eyes were still on the basket. "It's my fault," she said. "You remember what a poor little skinny creature I was, when you first saw me. I—you won't like me the worse for it, will you?—I am getting fat. I don't know why. They say happy people get fat. Perhaps that's why. I'm never hungry, and never frightened, and never miserable now—" She stopped; her dress slipped from her lap to the floor. "Don't look at me!" she said—and suddenly put her hands over her face. Amelius saw the tears finding their way through the pretty plump fingers, which he remembered so shapeless and so thin. He crossed the room, and touched her gently on the shoulder. "My dear child! have I said anything to distress you?"

"Nothing."

"Then why are you crying?"

"I don't know." She hesitated, looked at him, and made a desperate effort to tell him what was in her mind. "I'm afraid you'll get tired of me. There's nothing about me to make you pity me now. You seem to be—not quite the same—no! it isn't that—I don't know what's come to me—I'm a greater fool than ever. Give me my lesson, Amelius! please give me my lesson!"

(To be continued.)

ANNUAL ENCAMPMENT OF THE GRAND ARMY OF THE REPUBLIC.

THE annual encampment of the Grand Army of the Republic was held at Albany, N. Y., and opened on Tuesday, June 17th, with a parade of military organizations, divided into six divisions. In the line of the procession there were delegations from nearly all the Northern States, and a vast gathering of spectators rewarded with profuse cheers the visiting veterans. The city was gayly decorated, and the weather as fine as could be desired.

The parade began promptly at eleven o'clock, the line of march being through State, Eagle, Lancaster, Dove and Knox Streets, and thence through Washington, Lexington and Clinton Avenues to North Pearl Street. The stand from which Governor Robinson, surrounded by his staff, reviewed the line was located on the north side of State Street, above Pearl. The battalion, composed of the Old Guard of New York City, attired in white coats, the Burgesses Corps of Albany, in red, and the Citizens Corps of Utica, in blue, attracted general attention; while the guard of sixteen men, each bearing a corps-flag of the late Union Army, was viewed with the greatest interest by the veterans. One of our illustrations shows this detachment passing the Kenmore Hotel.

At the close of the parade the various organizations separated for special observances. The delegates from State Encampments met in Tweddle Hall, where, after a formal welcome by Mayor Nolan, and addresses by the Grand Commander, General John C. Robinson, Attorney-General Devens and Assemblyman Knowles, the Grand Encampment went into secret session for the transaction of business. The annual meeting of the Society of the Burnside Expedition and the Ninth Army Corps was held in the afternoon. In the evening the National Encampment dined at the Martin Opera House, and the Society of the Ninth Army Corps at the Delevan House. Spirited addresses were made at each banquet in response to patriotic toasts.

Many of the visiting organizations left the city in the evening. On Wednesday the Albany Burgesses Corps, the Old Guard of New York, and the Citizens, Corps of Utica, joined in a parade to escort the Society of the Army of the Potomac to Tweddle Hall, where the annual business meeting was held, and in the evening dined in the Armory of the Albany Corps.

The Society of the Army of the James met in Tweddle Hall, Attorney-General Devens presiding. General N. M. Curtis, of New York, was elected President for the ensuing year. The Fifth Army Corps re-elected General James McQuade, President; the Sixth Army Corps elected General M. T. MacMahon; the Ninth Army Corps, General A. E. Burnside; the Cavalry Corps Association of the United States, General Mackintosh; and the Society of the Army of the Potomac, General D. E. Sickles.

The session of the National Encampment was resumed in the afternoon, when the following officers were elected: Commander-in-Chief, William Earnshaw, of Ohio; Senior Vice-Commander-in-Chief, John Palmer, of Albany; Junior Vice-Commander-in-Chief, Harrison Dingman, of Washington; Surgeon-General, William B. Jones, of Pennsylvania; Chaplain, Joseph F. Lovering, of Massachusetts. A council of administration, consisting of eighteen, was also elected. Resolutions of thanks to the State authorities, to the City of Albany, to comrades and to the military bodies present, were adopted, and it was decided to hold the next encampment at the Soldiers' Home, Dayton, O.

In the evening the dinner of the Army of the Potomac was served at the Delevan House, and was in all respects a most picturesque and memorable reunion of the veterans.

NEW RAPID TRANSIT ROUTES IN NEW YORK.

THE Commissioners of Rapid Transit, appointed by the Mayor in April last to lay out routes for rapid transit railways in the annexed district, recently presented a report of the result of their labors to Mayor Cooper. The board consists of Henry G. Stebbins, Henry F. Spaulding, Benjamin G. Arnold, Lewis G. Morris and Samuel B. Filley. When appointed it was generally understood that their sole duty would be to determine the routes in Westchester County, but they have laid out in addition a new and independent route through the centre of the city from the City Hall to the Forty-second Street Depot, and on to the Harlem River by the line of the New York and Harlem Railroad. This deviation from their original instructions was made in compliance with a letter addressed to them by Edwards Pierrepont, Augustus Schell and H. J. Jewett, calling attention to the great need of a rapid transit route between the two lines now established, and asking the commissioners to designate a route for the same. The following route is specified:

Beginning at the intersection of the New York and Harlem Railroad at the line of the City of New York at Bronx River; thence along the line of the New York and Harlem Railroad, and coincident with said railroad to the north shore of the Harlem River, and thence across Harlem River coincident with said New York and Harlem Railroad to the south side of Harlem River. And also commencing at a point on the northerly side of Forty-second Street, below the grade of said street; thence under, through and across Forty-second Street; and thence southerly under, through and along the easterly side of Fourth Avenue or Park

MAP OF THE PROPOSED VANDERBILT ELEVATED RAILROAD ROUTE

Avenue, and below the surface of said avenue to the south side of Thirty-fourth Street, ascending to the surface of Fourth Avenue; then by an elevated road over, through and along Fourth Avenue, southerly to a point between Eighth Street and Ninth Street; thence through the block on the west side of Fourth Avenue, across Eighth Street and Astor Place, through Lafayette Place; through the block to Bond Street, to Crosby Street, and along Crosby Street to Grand Street; thence through the block diagonally to a point in Elm Street, near Howard Street; thence across Howard Street, along Elm to Pearl Street; thence diagonally across the block to Duane Street; thence along Duane Street to Centre Street; thence along Centre Street and Park Row to a line drawn easterly and westerly across the city at the south line of the City Hall.

The magnitude of this grant will be perceived at a glance by those familiar with the city. It is through the very centre of the island, and practically runs parallel with Broadway and Fifth Avenue, through some of the richest trade districts, some of the most beautiful localities for residences, and past some of the finest churches, hotels and public buildings in the city.

It runs under ground only where the present tunnel beneath Park Avenue exists. It emerges from the ground and springs upon stilts in the air at Thirty-fourth Street, directly in front of the Park Avenue Hotel. It runs in front of the Academy of Design, the Young Men's Christian Association Building, the Astor and Mercantile Libraries, through Union Square, in the rear of the Washington Monument.

At the proposed southern terminus it will have a depot directly in front of French's Hotel, and several hundred feet south of the present depot of the Chatham Street Branch of the New York Elevated Road. There are no restrictions as to continuing it through Park Row to Broadway, and even down Broadway; and as the Chatham Square branch of the New York line was abandoned because it did not run far enough south to be profitable, it is not likely that Mr. Vanderbilt (who is at the head of the enterprise) would long delay in getting an extension to Broadway and further.

SCIENTIFIC INTELLIGENCE.

A Zoological Society of New South Wales has been formed at Sydney; one of its chief objects is the acclimatization of foreign animals.

One of the New Cardinals. Haynald, Archbishop of Kalocsa in Hungary, is eminent as a botanist, and is probably the first botanist who has ever held so exalted a rank.

An Effort is being made to found in Liverpool an institution similar to Owen's College, Manchester, to be called "University College." Seventy-five thousand pounds is asked for as a fund to commence with, and an influential committee has been formed to further the object.

The Administration of the scientific exhibition, to be held at Paris from July to November next, is desirous to establish a special section of electricity if agreeable to intending exhibitors, consequently all the electricians who have subscribed already are requested to state their opinion.

The English Parliamentary Committee on electric lighting advise that municipal authorities should receive all possible help for public lighting by electricity, and that the Legislature should be willing to give all reasonable facilities for extending the use of the electric light where proper demand for it shall arise.

The Chemical Society of London has made the following grants from its research fund: £10 for investigating the constitution of Topaz; £30 for investigating the organic carbon in the air; £15 for a study of practical distillation; £20 for examining boron hydride; £15 for a research on the hydrocarbon of the nut-pine.

Dufour, Jegou and Baronnet, the three French engineers who have for six months been taking soundings with Commandant Roudaire to test the possibility of converting the Shotts of Tunis into an arm of the sea, have just returned to Marseilles. Their report is favorable, but they have suffered from the aridity of the district, where no rain has fallen for twenty-three years.

The Carrier-Pigeon Service is now in full operation in France, and has been placed under the direction of the head of aërial communication. The number of birds fed by the Government is 6,000. These pigeons are located in Paris and twelve other large fortified towns. A number of soldiers and officers have been taught the art of pigeon-breeding, and carriers are constantly sent from place to place. The Minister of Public Instruction and the Minister of Agriculture have established prizes for pigeon-races.

The Select Committee to investigate into the explosion on board Her Majesty's armor-plated turret-ship *Thunderer* propose to make their experiments in the most public manner, in order fully to establish the stability of the guns constructed on the Woolwich system under all the conditions of the service, and the liability of any gun to be destroyed by unfair means. The burst gun has been taken into the inspection department for examination, and the sister thirty-eight-ton gun will be taken to the proof-butts in the marshes to be fired.

The Paris Anthropological Society has recently awarded prizes as follows: The Godard Prize (500 francs and a silver-gilt medal) to Dr. Le Bon, for a work on the development of the cranium according to civilization, age and sex; two honorable mentions (with bronze medals) to M. Ujfalvy, for the first volume of his "Journey in Turkestan," and M. Zaborowski, for his "Manual of Prehistoric Archæology"; the prize in French Ethnology to Dr. Chervin, for his statistical works; and honorable mention to M. Rivière for his prehistoric researches.

The Long Sojourn of the Russian troops in Bulgaria and Roumelia has been fruitful of results to geographical knowledge. The Russian staff have been active in carrying out a series of astronomical and geodetic observations, so that a fairly complete network of triangulation has been accomplished, which will enable cartographers to lay down with fair accuracy a very considerable number of places in our maps. Something like 1,000 points have been thus taken, most of them geodetically, but a considerable number astronomically. The chief results are expected to be published by 1880.

A Famous Skeleton.—The historical skeleton of a whale which has been an object of wonder to generations of nurses and infants in the Garden of Plants in Paris is about to be removed. For many years past it has been much injured by the effects of the weather, and had been patched and repaired so often that M. de Quatrefages declared that it no longer resembled anything on the earth or in the waters under the earth, and he has consequently ordered it to be demolished. The fine skeleton of a whale presented to the American Museum of Natural History in New York is not likely to be so much injured, as it is kept under cover.

Investigations by Geological Experts render it probable, it would seem, that Central Russia rests upon enough phosphate of lime to supply all Europe. Around the boundary of the cretaceous basin of that country the phosphate beds, it is said, appear to be at or near the surface, but in the central regions they dip to a depth too great to permit of their being worked economically. The result of the chemical examinations of this remarkable rock shows the average quantity of phosphoric acid is about twenty per cent. (varying from twelve to thirty-three per cent.), while the proportion of lime varies from eighteen to fifty per cent. These great deposits were scarcely discovered when their development commenced. At present there are two establishments for this purpose in the Government of Kursk and one at Riga; this last receives the raw material from Smolensk, reduces it to powder, and supplies a large quantity of the article in this form to the Baltic provinces.

PERSONAL GOSSIP.

THE Duke of Edinburgh will succeed Admiral Phillimore as Admiral Superintendent of the English Naval Reserves in November.

THE will of William Lloyd Garrison, after giving $300 to each of his grandchildren, bequeaths the balance of his property to his five children to be equally divided.

RICHARD DOYLE, the painter, and a Roman Catholic, is reported by Mr. Conway to be a believer in the veritable existence of the queer, uncanny fairies, sprites and elves he paints so beautifully.

COUNT JULIEN ROCHECHOUART, French Minister to Hayti, his private secretary and first secretary of legation, have all died of yellow fever at Port au Prince. His second secretary was also attacked by the fever.

MR. PLIMSOLL, the famous Liberal Member of Parliament, has had so much trouble with his eyes of late that the doctors have advised the removal of his right eye, in the hope that by this operation the left may be cured and strengthened.

REV. FRANCIS L. PATTON has resigned his professorship in the Presbyterian Theological Seminary of the Northwest in Chicago, to take effect April 14th, 1880. He will then take the professorship of the Theological College of London, England.

TWO OF the companions of Count Antinori in the Italian African Expedition have been taken prisoners and placed in chains by a tribe hostile to the King of Shoa. The tribe demand a very heavy ransom. The King of Shoa declares his inability to pay it.

THE Queen of England presented to the King of Siam last year the Order of St. Michael and the Cross of St. George. An embassy is now on the way to England from the King to invest the Queen with the Order of the White Elephant in return for her compliment.

VANDERBILT UNIVERSITY, at Nashville, has conferred upon Miss Lupton the degree of Master of Arts, "Because," the president said, "she won it in a masterly manner; she passed most satisfactorily all the examinations which the young men were subjected to, and won it fairly and squarely.

MRS. ALICE SEYMOUR ("Octavio Hensel"), who is daughter of George R. Ives, of Great Barrington, Mass., has been appointed to attend Carl Ludwig, archduke, and Maria Therèse, archduchess, of Austria. Mrs. Seymour will instruct a nephew of Francis Joseph in the English language the coming Summer.

THE much-vexed question of the reception of M. Henri Martin by the French Academy has been settled. It is decided to allow the addresses of MM. Henri Martin and Emile Ollivier to be read without insisting upon any changes. The date fixed for the formal reception of M. Martin is the 28th of next November.

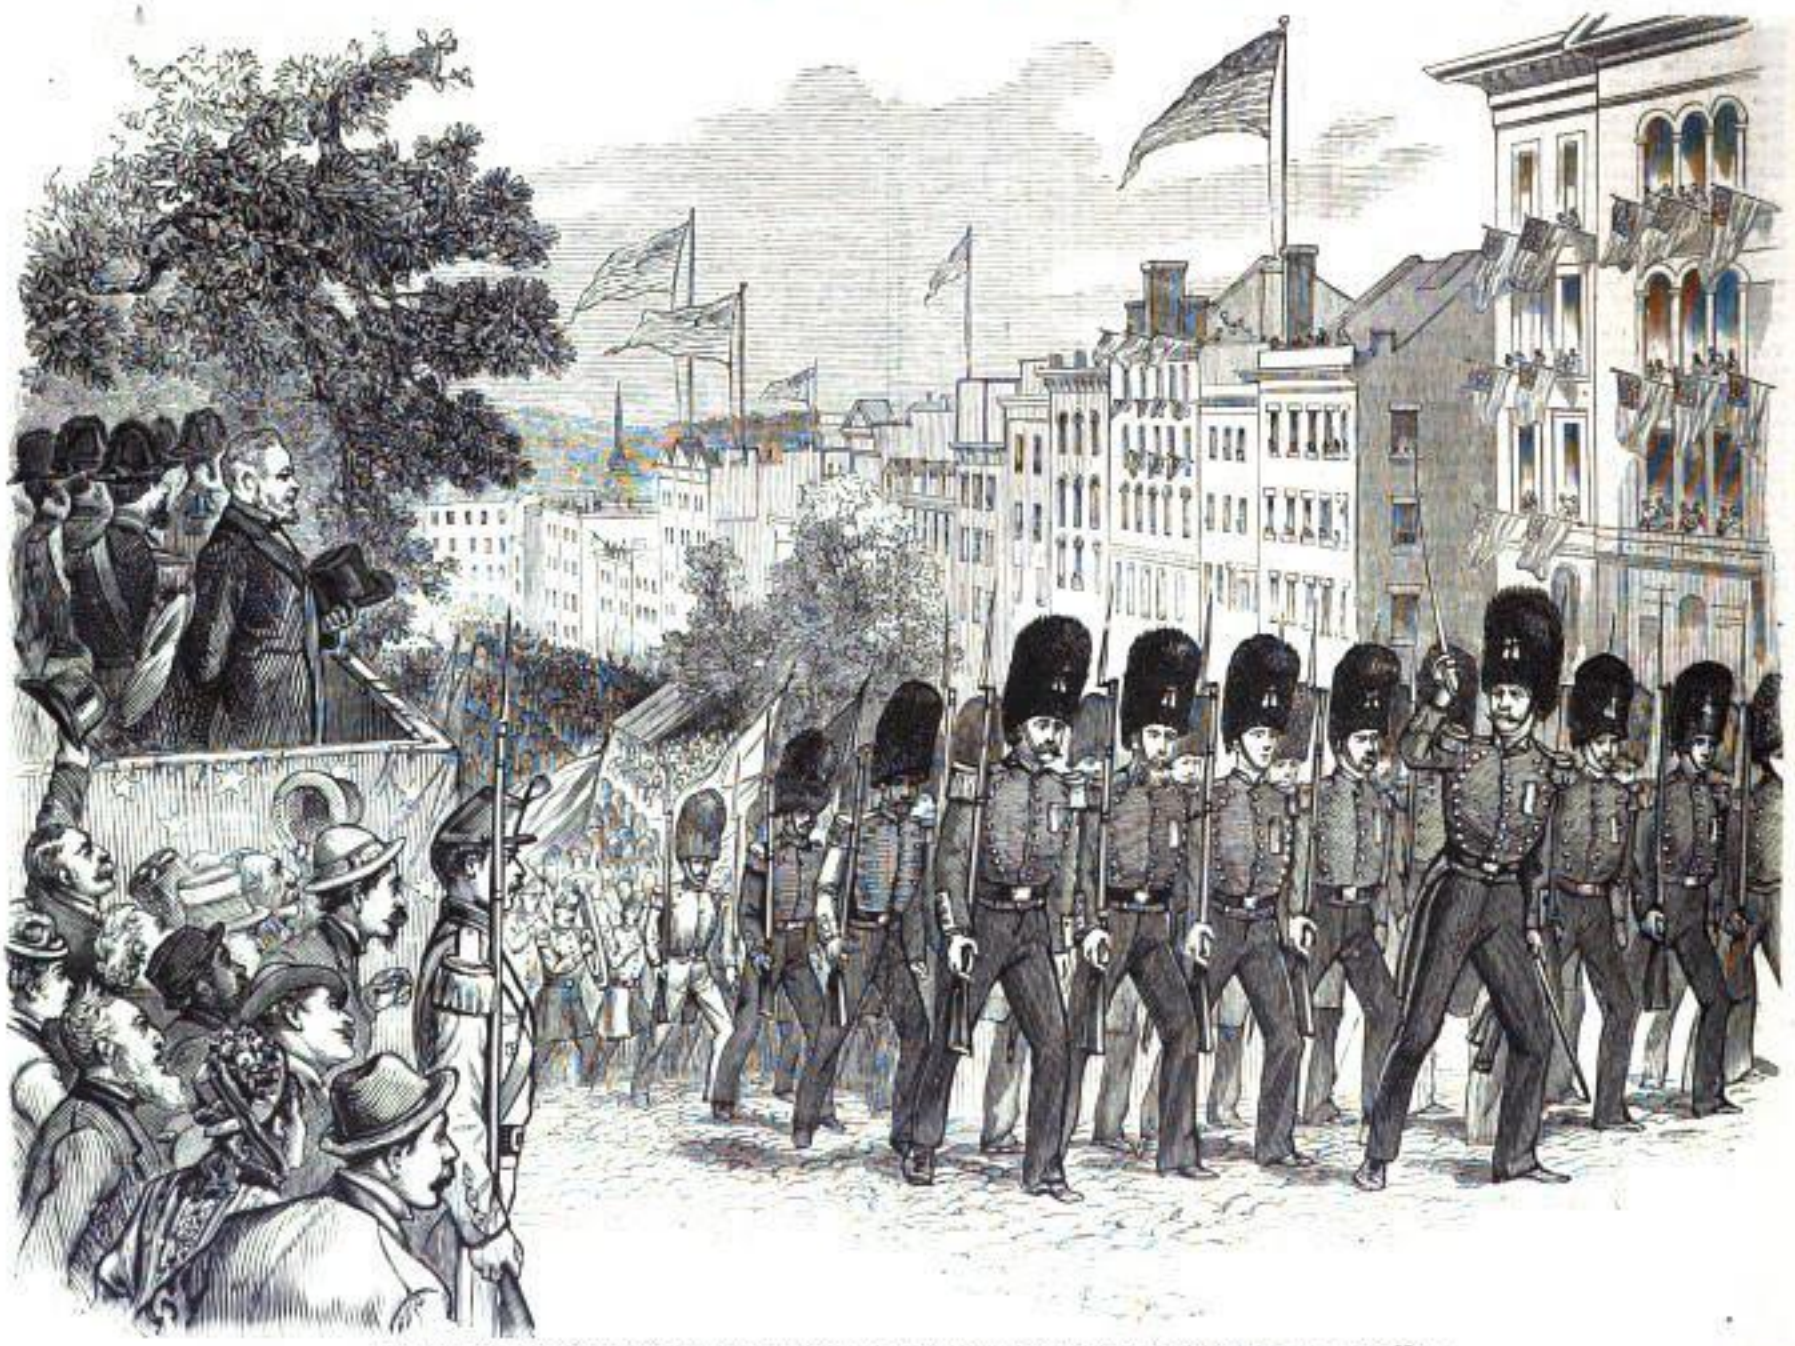
THE Crown Prince of Sweden and Norway, the descendant of Bernadotte, is reported to be a suitor for the hand of the German Emperor's granddaughter, Princess Victoria of Baden. The mother of the Grand Duke of Baden having been a daughter of King Gustavus Adolphus IV. of Sweden, such a marriage would unite the lines of Vasa and Bernadotte.

FRANZ VON SUPPÉ, the author of "Fatinitza," was born in Spalatro, in Dalmatia, in 1820, and is thus an Italian by birth, but an Austrian subject. He was sent to the University of Vienna in 1839, but preferring art to letters, he became a musician; has made quite a reputation by his light overtures and vaudevilles, and even has written, with distinction, music for the church, symphonies, and quartets for strings.

QUEEN VICTORIA has just instituted a new Order which is to be bestowed upon those trained female nurses who, by their skill and conduct, deserve high recognition, and they will be called, from the Order, "St. Katharine's Nurses." Each St. Katharine's Nurse will hold her appointment for three years, receiving during that time $250 a year in addition to the salary paid her by the institution to which she belongs, and she will be permitted to wear for life the Royal Badge or armlet of the Order.

WILLIAM FRANCIS WHITE, the Workingmen's candidate for Governor of California, is a native of Limerick County, Ireland, but was brought to this country when but eighteen months old. His youth was passed in Pennsylvania and New York. He went to California in 1849, was a shopkeeper in San Francisco three years, and then removed to Santa Cruz, where he has since been a farmer. He is fifty-six years old, a Democrat, and was elected to the Constitutional Convention on the Workingmen's ticket.

PRESIDENT HAYES is to be presented by the Admiralty with some ornaments and pieces of furniture made from the timbers of the ship *Resolute*, which is to be broken up. The *Resolute* was one of five ships sent out in 1850, under Sir Edward Belcher, in search of Sir John Franklin. Three of the ships were abandoned in 1853, and when the *Resolute* was found, in Davis's Strait, in 1855, she had drifted 1,200 miles. The United States Government then had her repaired and refitted, and presented her to the British Admiralty.



TWO YOUNG Americans, named Clark and Bacon, are making a voyage which has plenty of the spice of adventure in it without being at all foolhardy. They bought a large sailboat in London, last Winter, crossed in it to Holland, pushed their way up the Rhine to Mayence, and there, finding the canal leading to the Danube frozen, put their craft on a railway truck and had it carried to Ratisbon. In March they resumed their voyage, descending the Danube to the Black Sea, and sailing from Varna to Constantinople. Their next course will be to Greece and the Archipelago.

WHEN Prince Alexander, newly of Bulgaria, called upon the Emperor at Berlin, he naturally wore the uniform of his rank—second lieutenant in the Prussian Army. It was, of course, unreasonable that a mere second lieutenant should be cordially received by an Emperor, so that potentate dubbed the young man "major" on the spot. The Prince had guessed what the Emperor might do, and accordingly had a major's uniform ready at his hotel. He dashed out of the palace and to the hotel, changed his lieutenant's for his major's uniform, and dashed out again to finish his round of state and official calls.

OVER 500 cabin passengers sailed from New York for Europe in the steamers of Saturday, June 21st. Among the prominent pleasure and health-seekers were the Rev. Dr. John Hall, of the Fifth Avenue Presbyterian Church; the Rev. Dr. W. M. Taylor, of the Broadway Tabernacle; the Hon. Edwards Pierrepont, ex-Minister to England; the Hon. George M. Robeson, ex-Secretary of the Navy; General James Grant Wilson, Mr. Clarence Seward, Professor Willard Fiske, of Cornell University; the Rev. George Z. Gray, Carl Ross, Dr. William Campbell, Professor H. P. Cornwall, of Princeton; ex-Governor Salomon, Captain Samuel Harding, Madame Melita Otto-Alvsleben, the singer; E. O. Perrin, Clerk of the Court of Appeals; Professor A. N. Prentiss, the Rev. J. G. Townsend, the Rev. Dr. P. V. Harvard, Professor L. C. Loomis, Professor Charles Babcock, the Rev. John Henry Watson, the Rev. Samuel Upjohn, the Rev. and Mrs. F. A. Reed, of Concord, Mass.; the Rev. C. H. P. Nason, the Rev. John Evans, the Rev. W. G. Starr, the Rev. R. M. Manly, the Rev. S. D. Thomas, the Rev. J. Phillip, Dr. B. Larimer, and Dr. G. L. B. Rousseville.

COLORADO.—GENERAL VIEW OF THE NEW MINING TOWN OF LEADVILLE.—FROM A DRAWING FURNISHED BY THE LEADVILLE "REVEILLE."—SEE PAGE 302.

Digitized by Google

THE NEW MINING REGION.

WONDERS OF THE TOWN OF LEADVILLE, COLORADO.

WE have from time to time illustrated the peculiarities and incidents of life in the new mining region of Colorado. This week we give a general view of the town of Leadville, the mining centre, and the focus of all the activities of that region. In some respects Leadville is one of the most wonderful of all the wonderful places which have been developed by the spirit of adventure and the lust for gain. Never before—not even in the days of pioneer mining in California and Colorado—did a city so quickly rise in the forest depths. Fourteen months ago it was a mere hamlet: now it has 3,000 houses and 15,000 population. It has three daily papers, three banks, two theatres, hundreds of saloons, a paid police department, a volunteer fire department, a municipal form of government, and local politics—and, as an almost natural consequence, its jobberies and rings. The town is situated in a basin of the Rocky Mountains, made by the Continental Divide on one side, and the Musquito range on the other. To the west, three miles away, flows the Arkansas River, which rises not far away, and which, opposite Leadville, is scarcely more than three feet wide in Winter. Beyond the Arkansas is the main range of the Rockies, the "continental divide," the range that "divides" the continent in two. On its summits is snow which never melts and which has laid there for centuries. Town lots command from $50 to $6,000 each, and real estate, to use a Western phrase, is "booming." All along the mountain side and in the valley are hundreds of log huts and slab cabins. Wood is the prevailing building material, and is not a cheap one when green lumber sells for $90 a thousand and Chicago lumber for $150. The streets, despite their pasty condition, are as busy as Broadway.

It was about the middle of last Summer that the value of Leadville as a "carbonate camp" was discovered. California Gulch, on which the present town stands, was an old mining-camp, having been worked for gold from 1859 to 1867, the yield running down from $3,000,000 in 1860 to about $150,000 in 1866, when the diggings were abandoned. In those days, it is said, the gold miners caulked their log-cabins with what they supposed was mud, but was really carbonate, worth $400 a ton. In January last there were about twenty paying mines in this neighborhood; there are now over fifty. Last January there were ten smelters at work: there are now twenty-eight at work and under way. These establishments cost from $20,000 to $125,000. There are three lines of railroads aiming at Leadville—the Colorado Central from Georgetown, the Denver and South Park from Webster, and the Atchison and Santa Fé from Cañon. Each of these three companies expects to blast its way through miles of solid rock, to climb grades of one hundred and fifty feet and more to the mile, to surmount frightful precipices, and each of them has thousands of men at work at $2 and $3 a day.

In view of what has already been achieved in discovery and development in the Leadville region, it is difficult to conjecture what great results the future may disclose. In his address to the Legislature, the Governor of the Territory estimated the silver products of 1879 at $11,000,000, against $2,700,000 in 1878. The general estimate of miners at present is nearer $35,000,000 than $11,000,000. Up to this time the smelters have taken no account of ores which carried only forty ounces or less of silver to the ton. But when all the new smelting works are in operation it will be found pretty profitable to reduce ores which yield $40 to the ton. A correspondent, who has inspected the principal mines in company with an old mining expert, gives it as his opinion that rich deposits of mineral will be found in those that are undeveloped that will surprise the country. He says, "While there are scores of intelligent, experienced miners—men who have spent the better portions of their lives in mining camps—who express the opinion 'that Leadville has seen its best days,' there are hundreds of others, equally intelligent and experienced, who are as firm in their convictions that the new camp is only in its swaddling-clothes, so to speak, and that before six months more have passed, such developments of mineral will be made as will astonish the world. I can see no indications of failure in any of the older mines, and judging from all the surrounding circumstances, I can see no reason why Colorado should not be as rich in her silver mines as Nevada has been, nor can I see why the mines should not be as permanent and lasting."

While there are miles upon miles of territory to the east and south of Leadville that are covered with the cabins of adventurous miners, there are scores of miles to the north and west of this camp and but a few miles distant, where the foot of the prospector never yet trod, all lying in the same mineral belt, and as promising of future wealth as this camp was one year ago.

Dr. Dollinger, the Old Catholic Leader.

THE denial by Dr. Dollinger, the chief of the Old Catholics, that he has given in his adherence to the Pope, has already been mentioned in our columns. A correspondent, referring to the matter, says: "There seems no doubt but that the new Pope, moved by an impulse alike generous and politic, and natural to one in his circumstances, made guarded and confidential approaches to some leaders, looking to their return to the papal fold, and intimating that under the new administration of the Vatican, the way would be open. It was the natural instinct of good policy, for nothing could have redounded more quickly to the reputation of the new Pontiff, or given greater evidence of his strength and statesmanship, than the happy and peaceful solution of this problem, which was left him by his predecessor in such unfortunate and dangerous shape.

"I believe I am authorized in stating that to Dr. Dollinger such a proposition was made over a year ago—the messenger bearing it being a high and responsible dignitary of the Roman Catholic Church, himself a German. It was promptly declined, Dollinger thanking the envoy and returning the good wishes of the Pope, but declaring that while the Pope was changed the papacy was not."

Dr. Dollinger has written a letter to the Rector of the opening church in Rome which very effectually defines his position. He says: "I have neither written nor done anything which could have given occasion to such a rumor (that he had submitted to the Vatican decrees). The circumstances which are mentioned in some papers are gratuitous inventions. I have only three weeks ago published a lecture (*Allgemeine Zeitung*, 6, 7, 8, April) in which I state in so many words that nobody possessing a scientific mind can ever accept the decrees of the Vatican Council. Having devoted, during the last nine years, my time principally to the renewed study of all the questions connected with the history of the Popes and the Councils, and I may say gone again over the whole ground of ecclesiastical history, the result is that the proofs of the falsehood of the Vatican decrees amount to demonstration. When I am told that I must swear to the truth of these doctrines my feeling is just as if I were asked to swear that two and two make five, and not four."

An Arithmetical Wonder.

STAFFEL has invented an arithmetical machine in which three cylinders are so arranged that they can work all the simple rules of arithmetic, carrying multiplication up to millions by millions; if the machine is required to solve an impossible sum—such as subtracting a larger number from a smaller, or dividing a smaller sum by a greater, it refuses, and rings a bell as an admonition. Colmar invented an arithmometer in which the action is rather by plates sliding in groves than by rotating cylinders: like Staffel's, it can perform addition, subtraction, multiplication, division and evolution. Wertheimer, by means of a metal plate with indexes, notches, teeth and holes, has contrived an apparatus for adding and subtracting sums of money. Baranowski's invention is for calculating wages, prices, interest, and other sums of money: it is known as the Ready Reckoner, and is worked by means of a handle which reveals figures or numerals in openings in a brass plate. Schort, Lalanne, Roget, Maurel, Roth, Slowinski and Schentz have in like manner invented machines for solving arithmetical problems. Of these, Schentz's excites great admiration among scientific men; Mr. Babbage highly extolled it, and deplored that it had found a purchaser in America instead of in England. It can compute mathematical tables, calculate to sixteen places of figures, and stamp on a plate of lead the result up to eight places, producing a matrix or mold from which a *cliché* cast in type-metal can be obtained, suitable for printing from; it does its work at the rate of twenty-five figures or numerals per minute, calculated, recorded, and stamped in metal—an error either in the calculating or in printing being almost impossible.

FUN.

WHAT the country wants—Summer boarders.

"IRONY" of the law—Sentencing a blacksmith or "forgery."

"WE cannot teach, as a revelation of science, that man descends from any other animal."—*Hume.* Has no one ever seen a man get off a horse?

THE elephant is one of the few travelers who succeeds in going through the country without getting his trunk pasted all over with hotel cards.

IRISH drill-sergeant (to a squad of militiamen): "Fe'a'nt'rms?"—(astonishing result.) "Hivens! what a 'prisint!' Just stip out here now, and look at yoursilves!"

PETE, of Memphis, was a great exhorter in camp-meeting, and always concluded his exhortation by saying that whenever the Lord called for him he was ready to go. So darkey Sam, to prove Pete's insincerity, called one night and knocked at Pete's door. "Who dat?" shouted Pete. "The Lord," responded Sam. "What de Lord want?" asked Pete. "Come for Pete," answered Sam. "Oh!" returned Pete, "dat darkey moved from Memphis nigh on free years ago."

CHAM has two successful little croquis, apropos of affairs in Russia. One of them represents an officer pointing excitedly at his shadow on the wall, while a soldier stands by: "Arrest him!" "But, general, it's your shadow!" "That makes no difference! I am sure of myself—but I'm not sure of him!" Another represents the Russian eagle with one of his heads inside the railing of a prison window, while the other, wearing a military cap, is outside the railing. Legend: The Russian eagle's present situation. One of his heads guarding the other, which has been put in prison for Nihilism!

A COMICAL trait of Russian manners is sketched in a Russian journal called the *Molos*. In some parts of Russia it is the custom to ornament wedding festivities with retired generals in full parade uniform. This custom is particularly favored by the burgoise, who like to make a display of their relations with high dignitaries. The retired generals are paid for their attendance a sum ranging from five silver roubles upward, according to the number of decorations they wear. The hired general comes early and stays late, and appears to be on terms of intimacy with the family. At the close of the *fete* he receives his fee and usually goes home in a state of advanced intoxication, if, indeed, he is able to get home at all.

SCENE—A Bavarian court. The judge orders the court-officer to send in the next witness. A moment later a man enters and advances to the bench. The judge asks, "What's your name?" "Jacob Larch." "How old are you?" "I don't know what that has to do here, your honor." "Answer me at once. How old are you?" "Thirty-three years." "Are you a Catholic or a Lutheran?" "But, your honor——" "Quick, sir, or I'll put you on bread-and-water!" "Oh, well, then," resignedly, "I'm a Lutheran!" "Are you in any way related to the prisoners?"—pointing to the three ruffians in the dock. "I related to them!"—indignantly. "What is your honor thinking about?" Amid thunderous laughter and under strenuous protest from the witness the judge administers the oath. Jacob swears to tell the truth, the whole truth, and nothing but the truth, and is then asked what he has to tell. "To tell you that the venison the colonel expected yesterday has arrived, your honor, and to present my master's compliments and ask you to join him at dinner. I got to your house too late to find you, and came to look for you here."

TRUTH IS MIGHTY.

AS THE little leaven hid in the measure of meal made all leaven, so truth gradually overcomes all doubt and disbelief. When Dr. Pierce, of Buffalo, N. Y., announced that his Favorite Prescription would positively cure the many diseases and weaknesses peculiar to women, some doubted, and continued to employ the harsh and caustic local treatment. But the mighty truth gradually became acknowledged. Thousands of ladies who had uselessly undergone untold tortures at the hands of different physicians employed the Favorite Prescription, and were speedily cured. Many physicians now prescribe it in their practice. So sanguine is Dr. Pierce of its power to cure, that he now sells it through druggists under a positive guarantee.

THE Coney Island *Daily News* furnishes a sprightly, gossipy record of daily events at that popular resort, together with a guide to all important points, which must be of real value to visitors who are strangers.

OH, why will you let that invalid friend suffer that Hop Bitters will so certainly cure.

THAT the ST. NICHOLAS HOTEL has reduced its rates to *ante-bellum* prices is another example of the enterprise and understanding of public wants which have made this house so distinguished among the New York houses of public entertainment. This great hotel more than sustains the rank won by a quarter of a century of judicious and able catering for the tastes of the public.

THERE are many perfumes which, when applied to the handkerchief, have a very agreeable odor for a few moments and then die away, leaving only a sickly, disagreeable smell. Not so with MURRAY & LANMAN'S FLORIDA WATER: the longer it is exposed the more delicate and delightful becomes its rich aroma.

PREMATURE LOSS OF THE HAIR, which is so common nowadays, may be entirely prevented by the use of BURNETT'S COCOAINE. No other Compound possesses the peculiar properties which so exactly suit the various conditions of the human hair. *It softens the hair when harsh and dry. It soothes the irritated scalp. It affords the richest lustre. It prevents the hair from falling off. It promotes its healthy, vigorous growth. It is not greasy nor sticky. It leaves no disagreeable odor. It kills dandruff.*

FOR sinking spells, fits, dizziness, palpitation and low spirits, rely on Hop Bitters.

THE H. W. JOHNS M'F'G. CO., 87 Maiden Lane, N. Y., are sole manufacturers of Genuine Asbestos Liquid Paint, Boiler Coverings, Fire-proof Coatings, etc.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast-tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—See article in the *Civil Service Gazette.*

Sold only in soldered tins, labeled,

JAMES EPPS & CO., Homœopathic Chemists, London, England.

$10 to $1,000 Invested in Wall St. Stocks makes fortunes every month. Book sent free explaining everything. Address, BAXTER & CO., Bankers, 17 Wall St., N. Y.

ANGOSTURA BITTERS

An excellent appetizing tonic, of exquisite flavor, now used over the whole civilized world, cures dyspepsia, diarrhœa, fever and ague, colics, and all disorders of the digestive organs.

Try it, but beware of counterfeits. Ask your grocer or druggist for the genuine article, manufactured by DR. J. G. B. SIEGERT & SONS.

J. W. HANCOCK, U. S. Sole Agent, 51 Broadway, New York. P. O. Box 2,610, N. Y.

A Skin of Beauty is a Joy Forever!

Dr. T. Felix Gouraud's

ORIENTAL CREAM,

Or Magical Beautifier, removes every blemish on beauty; it elicits a clear, transparent complexion, free from tan, freckles, or moth-patches. The most popular for the skin ever invented; accept no cream of similar name. Indorsement of GOURAUD'S ORIENTAL CREAM by the distinguished Dr. L. A. Sayre: A lady of the Aout fort, a patient of Dr. Sayre, discoursing on the use of cosmetics, he remarked to the lady: "*As you ladies will use them, I recommend 'Gouraud's Oriental' as the least harmful of all the skin preparations.*'" "Praise from Sir Hubert is praise indeed." Indorsed by the fashionable world.

MME. M. B. T. GOURAUD, Sole Proprietor, 48 Bond Street, New York.

FOR SALE BY ALL DRUGGISTS AND FANCY GOODS DEALERS.

Attractive, Useful & Instructive Reading for Everybody.

Frank Leslie's
SUNDAY MAGAZINE.
CONDUCTED BY
REV. CHARLES F. DEEMS, D.D., LL.D.

OPINIONS OF THE PRESS:

"The best, cheapest and most attractive magazine ever published in this country."—*Christian Advocate, Buffalo.*

"It is capitally and profusely illustrated throughout, and contains interesting matter upon almost every conceivable subject. . . . We cordially commend the SUNDAY MAGAZINE to the favor of our readers. No publication conducted by Dr. Deems can fail to amuse, interest, instruct and improve its readers. More we cannot say."—*The Observer, Raleigh, N. C.*

". . . Contains much reading matter for a low price, each number having considerably over one hundred pages. It is very fully illustrated, and the articles are many and miscellaneous in their character. Religious matter, plenty of stories, sketches of travel and adventure, articles concerning strange nations, and curious and interesting odds and ends of all kinds, are found between its covers."—*Courier, Ct. Barrington, Mass.*

"FRANK LESLIE'S SUNDAY MAGAZINE is again in hand. The present number is up to the very high standard of all its predecessors."—*Wilmington (N. C.) Presbyterian.*

". . . It has been constantly growing in public favor, and each number has been an improvement on its predecessor. It should be introduced to every family, for the pure and healthful literature cannot fail to exercise a highly beneficial influence."—*Kansas City (Mo.) Times.*

". . . Deserves all the encomiums pronounced upon its predecessors, with the additional remark that wherein it differs from them, it is in the sense of being still nearer the mark of perfection. Profusely and elegantly illustrated, printed on fine paper, and containing the choicest matter from all available sources, it offers to the reader an investment extraordinary for his three dollars, which is the low subscription price for a year."—*Central Protestant (Greensboro, N. C.)*

The July Number Now Ready,

WITH THE FOLLOWING RICH TABLE OF CONTENTS:

Articles, Descriptive, etc.—"The Ten Primitive Persecutions" (under Nero, Domitian, Trajan and Hadrian, Marcus Aurelius, Septimius Severus, Maximilian, Decius, Valerian, Diocletian and Galerius), by Alfred H. THE AMENITIES OF SENATORIAL DEBATE.

SENATOR CONKLING—"*You're a blackguard, a coward and a liar; and if it wasn't for this cord which restrains me, I'd——*"
SENATOR LAMAR—"*Oh, never mind that cord; here's my shears to cut it with. There are no 'rules or proprieties' outside that will prevent a 'brave man' resenting an insult.*"

Important to Mothers.

MRS. WINSLOW'S SOOTHING SYRUP is the only thing that mothers can rely upon for their children. It corrects acidity of the stomach, cures wind colic, regulates the bowels, and gives rest, health and comfort to mother and child. During the process of teething its value is incalculable. It softens the gums, reduces inflammation and allays all pain, thereby giving rest to the child and comfort to the mother.

25 CENTS A BOTTLE.

ERYTHROXYLINE,
Or Spirits of Coca.
The best nervous sedative known. Cures Neuralgia, Sick Headache, etc. For sale by all druggists.

AND NOT WEAR OUT.
SOLD by Watchmakers. By mail, 30 cents. Circulars free. J. Busch & Co., 38 Dey St., N.Y.

Pain is a Blessing. It locates disease. Whenever the bowels become irregular, use
Tarrant's Seltzer Aperient
It will save much pain and danger. Nature sometimes is so outraged by the burden she is made to carry, through the heedlessness of her children, that she openly rebels, and punishes fearfully. Don't neglect the proper treatment when the symptoms first appear. Resort to the aperient, and get well speedily.
SOLD BY ALL DRUGGISTS.

Subscribers, in ordering our publications, should be careful to write the name of FRANK LESLIE *in full, and direct their letters to 53, 55 and 57 Park Place, New York, from which address all our publications are issued.*

BREAKDOWN OF "STALWART" POLITICS.

IF "stalwart" Democrats had purposely combined with "stalwart" Republicans to erect a pedestal on which to display the superiority of moderation and calmness over partisan importunity and violence, they could not have wrought more effectively to the credit of President Hayes than they have been doing for the last fortnight and longer in Washington. When the Democrats sought by the pressure of a physical majority in both Houses of Congress, and by the menace of "withholding the supplies," to coerce him into a renunciation of his rightful prerogatives as a co-ordinate department of the Government, he redressed the balance of the Constitution by mildly interposing a veto against the passage of the Army Bill. When this Bill had been so amended as to guard against all encroachment on the Presidential office in the discharge of its executive functions, while properly prohibiting at the same time the employment of the army as an ordinary police force to keep the peace at the polls, an attempt was made by the Republicans of the Senate to coerce the President into an involuntary complicity with them in their extreme and factious opposition to the passage of the revised Army Bill. This moral coercion on the part of the "Senatorial Group" who assumed to speak for the Republican party in the premises was as insulting to the President's sense of consistency and independence as the physical coercion of the Democrats was derogatory to the constitutional place of his office; and Blaine did but give a coarse expression to this attempted domination over the President's conscience when he said that whoever should counsel the Executive to sign the pending Army Bill, or the Judicial Expenses Bill, would commit the folly of virtually counseling the President "to write himself down an ass."

Leaving the Democrats to feed on the thistles which they had prepared for his provender, and leaving Mr. Blaine and his brother harlequins to wear the asses' ears in which they had sought to make him masquerade as a "stalwart" Republican, President Hayes has justified his repute for candor and self-control by quietly affixing his signature to the Army Appropriation Bill, and has also vindicated the consistency of his position by returning the Judicial Expenses Bill to the House of Representatives with a few brief but telling objections to its passage. These latter objections are such as have been already intimated in our columns, and in view of the ample discussion we have given to the point on which the President hangs his dissent, we need not further enlarge on a topic with which, in its present belittled proportions, the people are growing weary — outside of the gladiatorial arena at Washington.

We have already avowed the conviction that the present election laws are objectionable in the partisan features which they embody and in the partisan partiality which attends their administration. This conviction seems to be shared by the President, for while reaffirming in his latest veto message that he cannot consent to their absolute and entire repeal, or approve legislation that seeks to prevent their enforcement, he again expresses a willingness to concur in suitable amendments for their improvement. It is difficult to understand why, under these circumstances, the majority in Congress did not address themselves to the task of making such a thorough revision of these statutes as the importance of the subject seems to demand. Their failure to do so will be sure to provoke widespread indignation and regret.

Considered in all its bearings, this most extraordinary session cannot be otherwise than memorable for its displays of violent partisanship and political "manœuvering." Neither party can felicitate itself upon the record it has made. Calm and moderate Republicans, in view of the intemperate language held by Republican Senators, are already beginning to fear for the advantages supposed to have been gained by their party from the untoward issue joined by the Democrats; while calm and moderate Democrats in all parts of the land are pained at the results of a session which has brought so little prestige to their party leaders. It is still fresh in the memory of the public that one of the most eminent of these leaders barely escaped degradation, within the last two weeks, from the high place he holds at the head of an important committee in the Senate, and this because he remains true to the hereditary faith of the old Democratic Party with regard to a sound and honest currency. Some malign star must surely be resting on the counsels of our public men at Washington when the political confederates of a statesman like Senator Bayard do not scruple to affront his steadfastness with the menace of a public insult in the presence of the country, and when Republican Senators like Conkling and Blaine and Carpenter seek to frighten the President from his propriety, and to convert him from the President of the whole land into the facile and pliant minister of the Republican Party, sitting on the stool prepared for him by the "Senatorial Group."

It did not escape the penetration of a political philosopher like Burke that partisan dissensions are apt to be bitter and venomous precisely in proportion to the degree in which they are petty and factitious in the objects around which they are waged. Such dissensions borrow from personal animosity and from the dogged obstinacy of political pride the semblance of an earnestness which refuses to be justified by the real nature or gravity of the issues seen to be at stake, and the parties in such a mimic contest must needs make up in sound and fury what they lack in honest and deep conviction. There *are* real, grave and vital issues now pending before the people, and issues calling imperatively for wise and statesmanly treatment; but the men who are beating political tomtoms at Washington are only publishing to the world their admitted incapacity for the handling of serious questions.

CIRCUMSTANTIAL EVIDENCE.

THE confession of Chastine Cox of the murder of Mrs. Hull flings a lurid light over the perils of circumstantial evidence, perils so appalling that the mind involuntarily shrinks from their contemplation. The very supremity of injustice is the conviction of an innocent person for the misdoing of a guilty one; and yet, with Justice seated majestically in our midst ready to mete out punishment to the transgressor, with every engine and appliance for the detection of the true offenders at command that human ingenuity can conceive, with every form of protection for the blameless—so strangely woven are the chances of life, so mysteriously and unaccountably shaped—that at any moment circumstances may arise which may sully our name, tarnish our reputation, nay, more, bring us to the hideous and shameful death ordained by the solemn requirements of the law, while in thought, word or deed we may be as innocent of the crime imputed to us, and of its revolting surroundings, as the babe yet unborn.

The human imagination can conceive nothing more disastrous than that of a person's being accused of a crime of which he or she may be entirely, absolutely innocent. And how horrible when that crime is written on the criminal calendar in letters of blood! The murder of Mrs. Hull for the moment baffled the keenest scent of the officers of justice. Disconcerted, balked, paralyzed, they were finally brought to bay. They had followed shadows and had chased but *ignes fatui*. An indignant public clamored for a victim, and, in its lust for retaliation, seized upon the already distracted husband of the dead woman, and insinuated that he was the guilty one. Even some of our leading journals seemed determined to fix the guilt upon him alone. Theories of all sorts were set up, and evidence freely manufactured, in support of the mere suspicion, and where the facts pointed in an opposite direction they were deliberately perverted or "adapted" to suit the case. The police were put upon his track; he was shadowed, subjected to a maddening surveillance, and had it not been for the practical shrewdness of a member of the Boston press, and had Cox been more cunning and less brutal, and retained the stolen jewelry in his possession instead of pawning it, the unfortunate Dr. Hull would ere now, probably, have been arrested, and brought within the ghastly shadow of the gallows. There was not a particle of direct evidence that could have convicted him, but he had to brave the perils of circumstantial evidence before which many a man as innocent as he has before now gone down to a felon's grave.

The deed was a commonplace theft, culminating in murder. There is no special motive for the murder. It was the result of the cupidity of an ignorant negro who had no intention of shedding blood, and who came to his dark night's work wholly unprepared for the commission of the supreme horror. The robbery, if commonplace, was in the direct path to murder. A burglar risks much in his devilish greed for plunder; he will risk all sooner than be recognized or captured. Hence every midnight robber is an embryo assassin, and although his original idea is treasure, behind it lurk death and blood. The Hull murder is a terrible case in point, and one which may well cause alarm to those possessing portable securities. And it shows with unmistakable emphasis that the law should be so changed that no man can be hanged upon other than direct evidence, or, at least, that fully a year's time should elapse between the date of conviction for a capital offense upon circumstantial evidence and the final execution, in order that ample opportunity may be given the accused to establish his innocence, if that be within the range of possibility.

THE CITY HEALTH.

NEW YORK should be the cleanest city in the world. Washed on either side by a tide-water stream, high in its central ridge, sloping gradually on each side to the river, nature has afforded every facility for keeping it clean and healthy. The sanitary regulations of the Board of Health, which has ample power in this regard, are in the main excellent, and if they were carried out and rigidly adhered to or enforced, no cause for complaint would exist. But these regulations are willfully disregarded by a portion of the people, and the police often display an indifference as to their violation which practically deprives them of all force. The corps of inspectors of the Health Board can, of course, owing to their meagre numbers, do but very little to compel general compliance with necessary sanitary regulations. At present there are only fourteen inspectors in the employ of the Board, and in one week recently these inspectors were obliged to investigate more than two hundred and fifty complaints. For five or six weeks during the time of greatest heat the corps of inspectors numbers between forty and fifty, but even this force is entirely too small for the proper performance of the work required to be done. A special duty of these inspectors is to visit and explore the tenement districts of the city, in which two-thirds of the deaths of the city occur. Each inspector is assigned a district and is required personally to visit each house within its limits. He reports all evasions or infringements of sanitary laws to the board; a complaint is made out, and the owner of the premises notified to make the necessary alterations or repairs. If this is not done the attorney of the board brings suit to enforce compliance with the order. The inspectors also report all cases of sickness. Where there is no physician in attendance he prescribes for persons who are sick, and sees that the medicines are supplied.

The mortality among infants in the hot Summer months, especially during the thirtieth, thirty-first and thirty-second weeks of the year, is always peculiarly great in the tenement districts. It is to be hoped that every possible means of prevention and relief for this class may this year be supplied by public and private beneficence, and that, to the same end, the authorities will see to it that all needed sanitary laws are resolutely and sternly enforced as against all who may resist or stand in their way.

IS HOME RULE DEAD?

A VERY astute and able article entitled "Is Home Rule Dead?" appears in the current number of *Time*. It is from the pen of the versatile journalist who has recently vaulted from the Reporters' Gallery into the midst of the "Commons of England," Mr. Justin McCarthy, M.P., and is, if we mistake not, a very pronounced bid for the leadership of the Home Rule Party, inside and outside of St. Stephen's, vacant by the death of Mr. Butt. Mr. McCarthy handles the subject in a delicate but masterful way, forcing the hand of Mr. Gladstone, who waits like a hound in the leash to leap into power at the forthcoming general election. The great Liberal Party cannot afford to throw over the Irish vote, and in order to secure it, must declare in favor of some scheme for local self-government for Ireland. A more opportune moment for launching his essay could not have been selected, and Mr. McCarthy, by the manner in which he treats the subject, places the Opposition on the horns of a dilemma.

The difficulty that hedges the Home Rule question arises from the fact that Ireland alone demands it. If Scotland and Wales were anxious for self-government, we would see a National Legislature sitting in College Green in the year 1880, and it is not easy to suggest any scheme by which Ireland shall not for the present seem to have more than her share of governing work. This was the difficulty which stood in the way of Mr. Butt's devising a perfectly satisfactory scheme some years ago, when he first laid his proposals before the House of Commons. There is in any case much difficulty in presenting a satisfactory piece of legislation of any kind except from the seat of authority. Mr. McCarthy boldly faces the lion in the path by calling on Scotch and Welsh members to join the Irish party in a demand for local self-government. He goes even further, and argues that England herself is sorely in need of local government. He advocates separate legislation for each country, and an Imperial Parliament to represent all. "We shall assuredly soon hear from some of the colonies a demand for a share in the Imperial representation," says Mr. McCarthy, "and, unless the colonies are one by one to drop away from us and set up as independent nations, something of this kind must be arranged." This is a home-thrust. The British Colonial rule is a gigantic failure, principally from the fact of endeavoring to govern from Downing Street. India is some twenty-five millions sterling to the bad in four years, and shows an increasing expenditure and a stationary revenue. Is Canada loyal? Africa is speaking for herself. Australia insists upon local government, and undutifully snaps her fingers in the face of the Mother Country. Mr. McCarthy deftly points to this alarming condition of things and asks, "Is Home Rule Dead?" The great Liberal triumphs of the past have been won by the cordial co-operation of all sections of the party. The moderate men have worked in their own way and have done excellent service; to them have usually been conceded the positions of honor. The extreme men have fought in the ranks, and are willing to fight there still. The judgment of the moderate men has always received a measure of consideration which has been, at least, equal to their strength at the polls; from the extreme men has to come the fire, the energy, without which the most prudent councils could never win a victory. There must be some combination of resources at the next election if the Liberal Party is to recover its supremacy, and to that election must the Home Rule Party look forward with a stern determination to assert itself *à outrance*. There is plenty of time for the responsible leaders to declare that the advanced members of the party must have fair play, and that concessions are not all to be on one side.

We shall be enabled to reply to Mr. McCarthy's query, "Is Home Rule Dead?" when the result of the coming general election shall be made known.

EVENTS ABROAD.

ISMAIL PASHA, Viceroy of Egypt, has reluctantly been induced to join the increasing company of monarchs out of business. With the ex-royalties of Naples, Hanover, Nassau, Tuscany and Parma, and the would-be royalties of France and Spain, he will find plenty of congenial spirits in Europe to sympathize with his loss of the sweets of power. An income of $250,000 a year, however, may do much to console so lazy and luxurious a prince, not yet fifty, and endowed, despite a long life of self-indulgence, with a strong physique. Ismail has been deposed by the Sultan, of whom it was his chief hope to become independent; but nobody will believe that he would have yielded to the Sultan's command, had not the Sultan been backed by united Europe. Indeed, the Sultan was probably coerced into the action he has taken by the Great Powers. Meanwhile, he has seized the occasion to withdraw the privileges granted to the Egyptian ruler of forty years ago, and resumes full sway as suzerain — a very shrewd stroke for the stolid Moslem. The new Khédive, Tewfik, is a rather promising young man of twenty-seven, who married and settled six years ago, and who is likely to be obedient to his new masters. Egypt has now practically become a dependency of England and France, enforcing their pleasure through the pliant medium of the Commander of the Faithful. Her finances will again be managed by an Englishman, and her public works by a Frenchman, as they were before Ismail made his recent *coup d'état*, and justice will be meted out by English wearers of the ermine. The creditors of Egypt are jubilant, for they see a prospect of getting the interest, at least, on their bonds; but we are much mistaken if the "Egyptian question" does not become one of increasing perplexity to European statesmanship, and of danger to European peace.

No dynastic party was ever more suddenly or thoroughly demoralized than the French Bonapartists as a consequence of Prince Louis Napoleon's death. The leaders, hurrying to and from Chiselhurst, are in a state of woful incoherence and confusion. They find it impossible to agree upon a new chief, with the sacred blood in his veins. There is the hated Napoleon Jerome, who has surprised and shocked them by declining to abdicate his rights, after swearing an eternal fidelity to republican sentiments; and, worse still, he will not consent to be set aside in favor of his young son, Victor, who might be an eligible candidate. As for the other Bonapartes, the descendants of Lucien alone offer a choice; but unfortunately Lucien and his family was excluded from the succession by the first Napoleon's will. Already time-serving Bonapartists are beginning to rat over to

Digitized by Google

the Republic, Janvier de la Motte, one of the most notorious and least reputable henchmen of the Second Empire, having led off the deserters.

France is deeply stirred by the Education question, since it assumes, necessarily, a religious phase. Jules Ferry, the Minister of Public Instruction, some time ago introduced a Bill, excluding the Jesuits and certain other religious "congregations" from the right to teach. This was a fell blow at an object very dear to the French hierarchy, and the Bill was incontinently denounced by archbishops and lay champions of the Church. It will probably, however, become a law, and the effect will be to shut up some ninety colleges and *lycées*, containing two thousand clerical teachers. The Republican idea is that the congregations teach their pupils to detest the Republic; but the policy of intolerance in such a matter is a mistake for a free government. History proves that the schools of one generation do not manufacture the politics of the next. The Chambers will return to Paris, under many restrictions. The Deputies will occupy the Palais Bourbon, and the Senate the Luxembourg; but the buildings at Versailles will be kept ready for their return to the haunts of the magnificent Louis, in case they are molested on the Seine. The Chambers will meet at Paris for the first time on November 3d.

There is really some reason to fear that agrarianism is reviving in Ireland. Landlord-shooting, an ancient pastime in Erin, seems likely to be revived. The last noted instance was the assassination of the tyrannical and half-mad old Earl of Leitrim, two years ago. The authorities are busily taking precautions, and the West of Ireland is being furnished with extraordinary contingents of constables. The Irish University Bill introduced by The O'Conor Don is opposed by the Cabinet, and will be thrown out of the House of Commons.

There is a rumor, to which but scant credence need be given, that Russia is seeking an alliance with France and Turkey against England, Austria, and Germany. It might look plausible, were not Germany included among the objects of Russian hostility, for France would like nothing better than to become Russia's ally, and England and Austria are enormous stumbling-blocks in the way of the Czar's ambition. But Russia will not, because, if for no other reason, she dares not offend Germany; and this fact would make a French alliance abortive.

There is far more danger of a war between Turkey and Greece; and such a war, if it proceeded far, might easily embroil England with both France and Italy, which nations are just now actively championing the Hellenes. It is said that the Turkish forces are massing on the frontiers of Epirus and Thessaly. Anarchy is said to prevail in Southern Epirus. The Italians have been celebrating the anniversary of the only battle—that of Custozza—in which they have won signal distinction for many years. The Austrians magnanimously assisted at the festival.

The Russian Nihilists seem to have entered upon a general policy of arson. Fires are constantly breaking out in St. Petersburg, and one town on the Volga has been almost destroyed by incendiaries. Thus fire is added to the pistol and the sword as an instrument of terrorism and secret revolt. Spain proposes to spend 28,000,000 more roubles than she expects to get by revenue next year, and will perhaps justify Micawber's theory by suffering for it. The twelfth International telegraph conference has been sitting in London. It is announced that Geneva will hold, in 1881, an international exhibition, devoted exclusively to watches, jewelry, snuff-boxes and musical-boxes.

ANOTHER proposition to subsidize three lines of steamers between this country and Brazil has been introduced in Congress. The Bill provides that these lines shall ply monthly between New York and Rio Janeiro, New Orleans and Rio, and San Francisco and Valparaiso, and shall carry the mails, receiving for this service not more than twenty dollars per mile per annum, reckoning the distance one way only and by the shortest course.

IMPERIALISM in France is not by any means dead. The fact that M. Pietre, who was chamberlain of the Empress Eugénie, has been elected a Senator from Corsica over a Republican, affords a significant illustration of the strength of the Bonapartist tendency. The death of the Prince Imperial is no doubt a great disaster to the Imperial cause, but it will not abate the rancor of the partisans of the Emperor towards the Republic and the ideas it represents.

IN an interview with a San Francisco journalist, ex Secretary Boric, who has been General Grant's companion in his travels abroad, stated that the latter is fully aware of the movement looking to his nomination for the Presidency in 1880, but that he has no sympathy with it, and does not desire the nomination. If he accepts it, in the event that it shall be tendered, Mr. Boric believes that it will be at the sacrifice of his personal wishes and his personal comfort. It is yet to be seen whether, with Secretary Sherman actively in the field as a candidate for the Executive chair, and able to use the power of a great office in promoting his ambition, General Grant will have the opportunity to decline a re-election to the place which he has twice filled.

THE silver fanatics in Congress have met another rebuff. The Bill providing for the exchange of trade dollars for legal-tender silver dollars was on June 26th postponed by the Senate Finance Committee until next December, after having been amended in some important particulars. This decision was arrived at by the co-operation of the Republicans of the committee with Messrs. Bayard and Kernan, the two honest-money Democratic members of the committee who have resisted throughout the mad schemes of the silverites.

IT is given out that General Butler means to make another effort to secure the Governorship of Massachusetts. He has been quietly arranging his plans during the past six months, and it is believed that he will be able to seize, without difficulty, both the Labor and the Democratic nominations. It is quite likely, however, that he will again discover that a nomination is not equivalent to an election, though the chances are somewhat more favorable this year than last, owing to some elements of disintegration in the Republican ranks.

THE strike of the spinners in the mills at Fall River, Mass., is likely to be a very serious affair. While many of the mills are still running, only a few hands are employed, and none of them are skilled workmen. The corporations declare that they will never submit to the demands of the strikers, and as the latter seem to be equally resolute, the struggle can scarcely be otherwise than a desperate and costly one. In several instances the wives and children of spinners working in other departments have been discharged, and a number of corporations have notified tenants, who were regarded as likely to shelter the strikers, to vacate tenements. One of the corporations has taken a still more rigorous measure than this, and has discharged all of its spinners, adding that not one of them could ever get employment in the mill again. If the war shall go on in this spirit, there must soon be great distress among the operatives, and great loss to the industries of Fall River.

REVOLUTIONS in Panama are not only gotten up with so much ease that almost any person with an ounce of audacity can start one at will, but they appear to be profitable, sometimes, as mere pecuniary speculations. We referred last week to the fact that one General Aizpuru had temporarily overturned the Government by running off the President in a hand-car, and, at the head of a force of one hundred men and boys, proclaiming himself the chief of the administration. Later advices inform us that the revolt lasted six days, at the end of which period of perplexity and suspense, Aizpuru opened negotiations with Government representatives, and two days after surrendered—the Government agreeing to pay the expenses of the revolution. It is naively added that this arrangment "was a very good thing for Aizpuru"—a statement which no one will be likely to dispute. It remains to be seen whether other impecunious adventurers will not be encouraged by Aizpuru's good fortune to emulate his method of replenishing their impoverished exchequers.

WENDELL PHILLIPS is scolding again. This time his wrath is directed against the National Administration because it does not "tear down the fence," which, as he says, "Southern planters have put across the Mississippi" to prevent the negro exodus. He demands that the Government shall settle the question that the flag "does rule from the Lakes to the Gulf" by sending a vessel down the great river for the rescue of the blacks "camped houseless on its banks," and heaps all sorts of maledictions on the Republican leaders because they do not rise to the height of the great "emergency." All this is eminently characteristic, but it is none the less the baldest rodomontade. Mr. Phillips's habit of exaggeration, or, to put it mildly, his extravagance of speech, in dealing with public questions, not unfrequently injures the cause he seeks to promote; and it is quite certain that in the present case he is altogether unjust in his allusions both to the Administration and the great body of Southern employers.

M. FERDINAND DE LESSEPS persists in the statement that the "first sod" of the Panama Canal will be turned on the first day of the year 1880. He says some 50,000 laborers will be employed in the work, which can be completed in eight years. The canal is likely to cost a great deal more money than was at first supposed. In the telegraphic report of the Paris Congress which resolved on the Panama line, the estimated cost was put at $80,000,000. But the reports thus published were incomplete and in some respects misleading. This original estimate had to undergo revision. It was pointed out to the projectors of the scheme that they had made an insufficient provision for carrying off the water-courses which must be diverted from their natural beds by the cutting of the canal. The plan is to drain away the overflow by a tunnel, but calculations were gone into which showed that the drainage to be provided for largely exceeded the capacity of the proposed tunnel. An enlargement of the tunnel and the estimated cost of the canal was the natural result of this criticism, entailing, of course, a large increase in the cost. M. de Lesseps is, however, quite confident that he will find all the money that may be needed.

WE referred last week to the success of the co-operative system in Great Britain, and pointed out the desirableness of its introduction here in the interest of the industrial classes. We find in the London *Week* the following testimony as to the growing popularity of the system in that great capital:

"As an instance of the effect which is being produced on retail traders by the co-operative store system, we may mention that a well-known mercantile house at the West End of London will close its doors on the expiration of its present lease. The carriages which used to stand thickly before it are now to be seen in the Haymarket, waiting to get near the Civil Service stores. People are always talking about the "signs of the times"—this is one of them which will bear a little thinking over. Opposition to the store system can do no good now unless it tends to supplant the system itself by offering something better. A large firm has just attempted this experiment, thus showing a true comprehension of the actual conditions under which retail business must henceforth be carried on. The firm in question sell everything at, or a trifle under, the Civil Service store prices, and send the articles home into the bargain. In this way alone can the majority of retail tradesmen hold their ground."

THE estate of Brigham Young promises to be a bone of lively contention among his heirs. A suit has already been instituted by some of the dissatisfied parties in interest, the complaint charging the executors with fraud and collusion with the new Mormon President, with a view of robbing the heirs of a portion of the property and money alleged to belong lawfully to them. The amount sued for and claimed to have been fraudulently taken from the heirs "is not less than $1,000,000." By way of restraining the executors from further performance of their functions, application was at the same time made for the appointment of receivers to take charge of the property pending the trial of the suit, and this application having been granted, the prize will be preserved intact, awaiting the final decision of the courts. A Salt Lake paper appeals to the contesting heirs to adjust their differences outside of the courts, indulging in this somewhat curious comment: "It frequently happens in *post-mortem* quarrels of this kind that actions that were all right and proper, and could be so shown were the persons alive to explain them, are, by courts and lawyers, made to look very dark when the parties and means for giving correct explanations have passed away. It is hoped that this will not prove such a case, and that no attempt will be made to throw mud or wash dirty linen for the delectation of anybody."

THE growth of municipal indebtedness in this country during the last decade and a half illustrates more strikingly than any other financial fact the extravagant and wasteful tendencies in local administrations which were induced in part by the unnatural and inflated conditions of the period of civil war. Statistics recently compiled show that the municipal debt of 130 cities in 1876 was $644,378,663, as against $221,312,009 in 1866—an increase of two hundred per cent. In the same cities, representing a population of only 8,576,249, the municipal debt alone exceeded in 1876 by over $128,000,000 the county, town and city indebtedness of the entire country in 1870. In six years the indebtedness of these cities had exceeded by over $316,000,000 the bonded and floating indebtedness of all the towns and cities (counties not included) in the United States in 1870, which, according to the census, amounted to $515,810,000. Complete returns from the States of New York, Massachusetts, Illinois, Ohio, Wisconsin, Minnesota, Kansas, Missouri, Connecticut, Georgia, and Rhode Island show that the total aggregate local debt in 1878 was $546,285,528, while in 1870 it was $286,179,060. The assessed valuation of property in these States was $7,172,148,179 in 1870, and $9,333,696,515 in 1878. The chief increase has been in the cities rather than in the counties and towns. The increase in the cities was at the rate of two hundred per cent., and, by adding the county and town debts, the increase is less than one hundred per cent. The total local debt of the country at the close of the year 1878 was $1,051,106,112, exclusive of State debts.

THE decision of the Supreme Court affirming the constitutionality of the Thurman Act requiring all bond and land-grant railroads to report to the Auditor of Railroad Accounts everything relating to their financial condition, is likely to be followed by the unconditional surrender of the corporations which have heretofore defied the authority and claims of the Government. The books of the Central Pacific Company are now undergoing an exhaustive examination, and those of the Union Pacific will at once be subjected to the same process—neither offering any serious opposition. The exact truth as to the condition of these roads will now, in all probability, be discovered, and if the Government has been defrauded in any way or degree, a way will be opened for the correction of the abuse. It is stated in this connection that these companies propose to make an appeal to Congress for relief from the requirements imposed upon them by the Thurman Act, alleging that strict compliance with its exactions will almost certainly compel them to go into liquidation, and that in that event the Government will lose its entire interest. In can scarcely be supposed that such an appeal, should it be made, will command the serious consideration of Congress. These companies, starting with a magnificent dowry from the Government, and enjoying a monopoly of the transcontinental traffic, unquestionably have it in their power, if they choose to do so, to carry out all their contracts, and any attempt to release them from their honest obligations after they have realized the enormous benefits accruing under them, would be sure to expose the legislator engaged in it to damaging suspicions.

NEWS OF THE WEEK.

Domestic.

NEARLY 600 saloon passengers sailed from this port for Europe June 28th.

ADVICES from Hong Kong state that General Grant will probably visit Australia.

THE graduating class at Yale College this year numbered 131, including one Chinaman.

THREE hundred and three young ladies graduated from the Normal College in this city June 26th.

JAMES F. EDMUNDS, of Newton, Mass., has been arrested for forgeries amounting to about $80,000.

THE town of Cumnington, Mass., celebrated its centennial anniversary June 26th. Senator Dawes made the historical address.

HOG-CHOLERA is committing great ravages in Southern Wisconsin and part of Illinois. Whole droves of hogs are swept off by the disease.

THE Ohio Democrats will formally open the campaign early in August with speeches by Messrs. Pendleton, Thurman, Ewing, Steedman and others.

THE Senate Committee on Privileges and Elections has decided to begin the Ingalls investigation in Kansas by a sub-committee of five, in September next.

FIVE persons were killed and one injured, and several buildings demolished, by the explosion of a boiler in Welt & Son's planing mill, in Philadelphia, June 27th.

THE Ninth Regiment of Massachusetts, 600 strong, visited this city and were received by the Sixty-ninth Regiment, and were reviewed by Mayor Cooper at the City Hall.

IN the college race at New London, Ct., June 27th, the Harvard boat crew beat the Yale crew with the greatest ease by one minute and forty-three seconds in a distance of four miles.

THE New York Board of Aldermen have referred the report of the Rapid Transit Commission to a committee, which is regarded as an indication of hostility to the proposed new routes.

THE President has pardoned the "first batch" of Chicago whisky men, indicted and convicted under the last Administration for defrauding the Government, and who became witnesses for the Government.

IN a preliminary examination Police Officer Nugent has been held to answer a charge of complicity in the burglary at the Manhattan Savings Bank of New York City, and John Hope has been found guilty.

MR. BURNSIDE has introduced in the United States Senate a joint resolution protesting against the establishment of a ship-canal across the Isthmus of Darien under foreign protection and domination as a violation of the Monroe doctrine.

TWO persons were killed and four others dangerously injured by the explosion of the boiler of a tug-boat on the Missouri River, near Nebraska City, June 27th. On the same day, at Youngstown, Ohio, eight men were badly if not fatally scalded by the explosion of a boiler in an iron mill.

THE steamship *City of New York*, from this port for Havana, came into collision in a fog, on the night of June 28th, with the Scotch bark *Helen* of Dundee, about fifteen miles south of Barnegat. The *Helen* sank almost immediately, and the captain, Robert Barclay and four of the crew were lost. The *City of New York* returned to this port disabled.

AMONG the deaths announced on June 28th were those of Lord John Lawrence, formerly Viceroy and Governor-General of India, aged sixty-eight; Richard H. Anderson, formerly a Lieutenant General in the Confederate Army, aged sixty-three, and ex-Paymaster General John G. Bradford, of the United States Navy, aged sixty-four. Cyrus Curtis, President of the Washington Life Insurance Company, likewise President of St. Luke's Hospital, New York, died on the 25th, aged eighty-two.

THE supplemental Judicial Expenses Bill and a Bill relating to United States Marshals, both prepared by a Democratic caucus, passed both Houses of Congress last week. The first of these Bills provides for all judicial expenses except the pay of the marshals and their deputies, and the second makes an appropriation for the marshals, with a partisan rider forbidding the expenditure of any part of the money for services in connection with elections. The President vetoed the Marshals' Bill June 30th.

THE Republicans of Maine, June 26th, nominated D. F. Davis, a lawyer, for Governor, on a fair election, hard money and temperance platform. The Democratic State Committee of Ohio met at Columbus June 26th, and chose John G. Thompson for its chairman, and Frank McKinney for chairman of the Executive Committee, and thus manager of the campaign. The workingmen of California, or New Constitution Party, have held a convention and nominated Dr. Hugh J. Glenn, a large wheat-raiser, for Governor.

Foreign.

THE British troops in Afghanistan are suffering from the cholera.

G. W. M. REYNOLDS, the well-known English novel-writer, is dead.

QUEEN VICTORIA paid a visit of condolence to the ex-Empress Eugénie at Chiselhurst, June 23rd.

IT has been decided that Hanlan shall not be allowed to take the Challenge Cup away from England.

IT is said the officers of the French army will be compelled to take the oath of allegiance to the republic.

A PROTESTANT school-house in Connaught, Ireland, has been sacked by a mob, and the Bibles thrown into the sea.

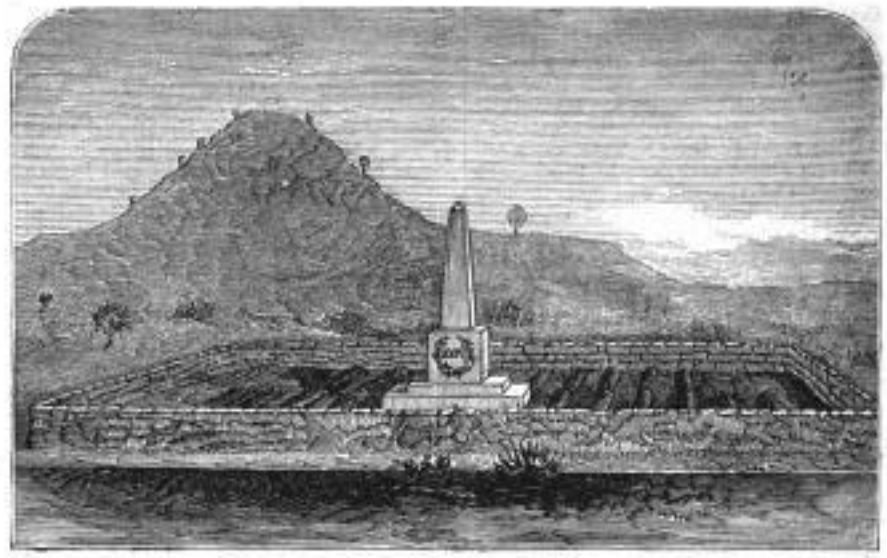
THE will of the late Prince Imperial of France contained no political allusions. His whole property is left to his mother.

A MASS in memory of the late Prince Imperial was celebrated at the Church of St. Augustine in Paris, June 26th. The ceremonies were very imposing.

SPAIN has gone so far in her quarrel with Santo Domingo as to order two war vessels to blockade the coast of that island in case her demands are resisted.

ADVICES from Buenos Ayres to June 1st report that Chili had concluded a treaty with the Argentine States containing a clause which gives the whole of Patagonia to the Argentine Republic.

LORD CHELMSFORD has informed King Cetewayo of the terms of peace. He stipulates that the King shall not assemble an army for five years, and that a British Resident shall be permitted to remain in Zululand.



THE Turks have prepared for war with Greece in the event of the coming negotiations proving fruitless. Large numbers of irregular troops are being massed in Albania, so that they may sweep down on Epirus and Thessaly.

THE LATE ALBERT WEBER.

ALBERT WEBER, the well-known manufacturer of pianofortes, died at his residence in New York City, June 25th, in the fiftieth year of his age. He had been ill a long time, but did not give up until a few weeks before his death. He was a son of Dr. John Weber, of Heiligenstadt, Bavaria, where he was born in August, 1829. He early evinced musical talent, and at the remarkably early age of four years was able to play on the organ of the church in his native place. When only sixteen years old he came to this country, and, settling in New York, began to earn his living by playing on the violin or violoncello, or harp, or organ, or piano, as occasion served. He soon turned his attention to the trade of piano-maker, practically apprenticing himself, but with liberty while he worked in the daytime to teach music in the evening and to play the organ at church on Sundays. When he had fully learned the trade, he set up for himself in White Street as a repairer of pianos. Finally, in 1852, he began in the full business of piano-making at No. 103 West Broadway. After being there for several years, and while building up a prosperous business, his little shop was destroyed by fire, and he lost everything except some comparatively insignificant insurance money. He, however, at once recommenced business at No. 155 West Broadway, where he remained until 1865, and then moved to the corner of Broome and Crosby Streets, at which time he was making about four pianos a week. In 1869 he moved his warerooms to their present location at the corner of Sixteenth Street and Fifth Avenue, having previously established his factory at the corner of Seventeenth Street and Seventh Avenue. About 400 men are regularly employed in the factory, and the yearly product is now between 1,800 and 2,000 instruments. Mr. Weber gave his personal supervision to the manufacture of 14,500 pianos. Besides being his business headquarters, the new warerooms were also places of social gathering for musicians and singers, and several reunions were held there. Mr. Weber belonged to the Lotos, Manhattan (Arcadian, while it existed,) and Palette Clubs, and was also a member of the Liederkranz and Arion Societies.

THE LATE ALBERT WEBER.

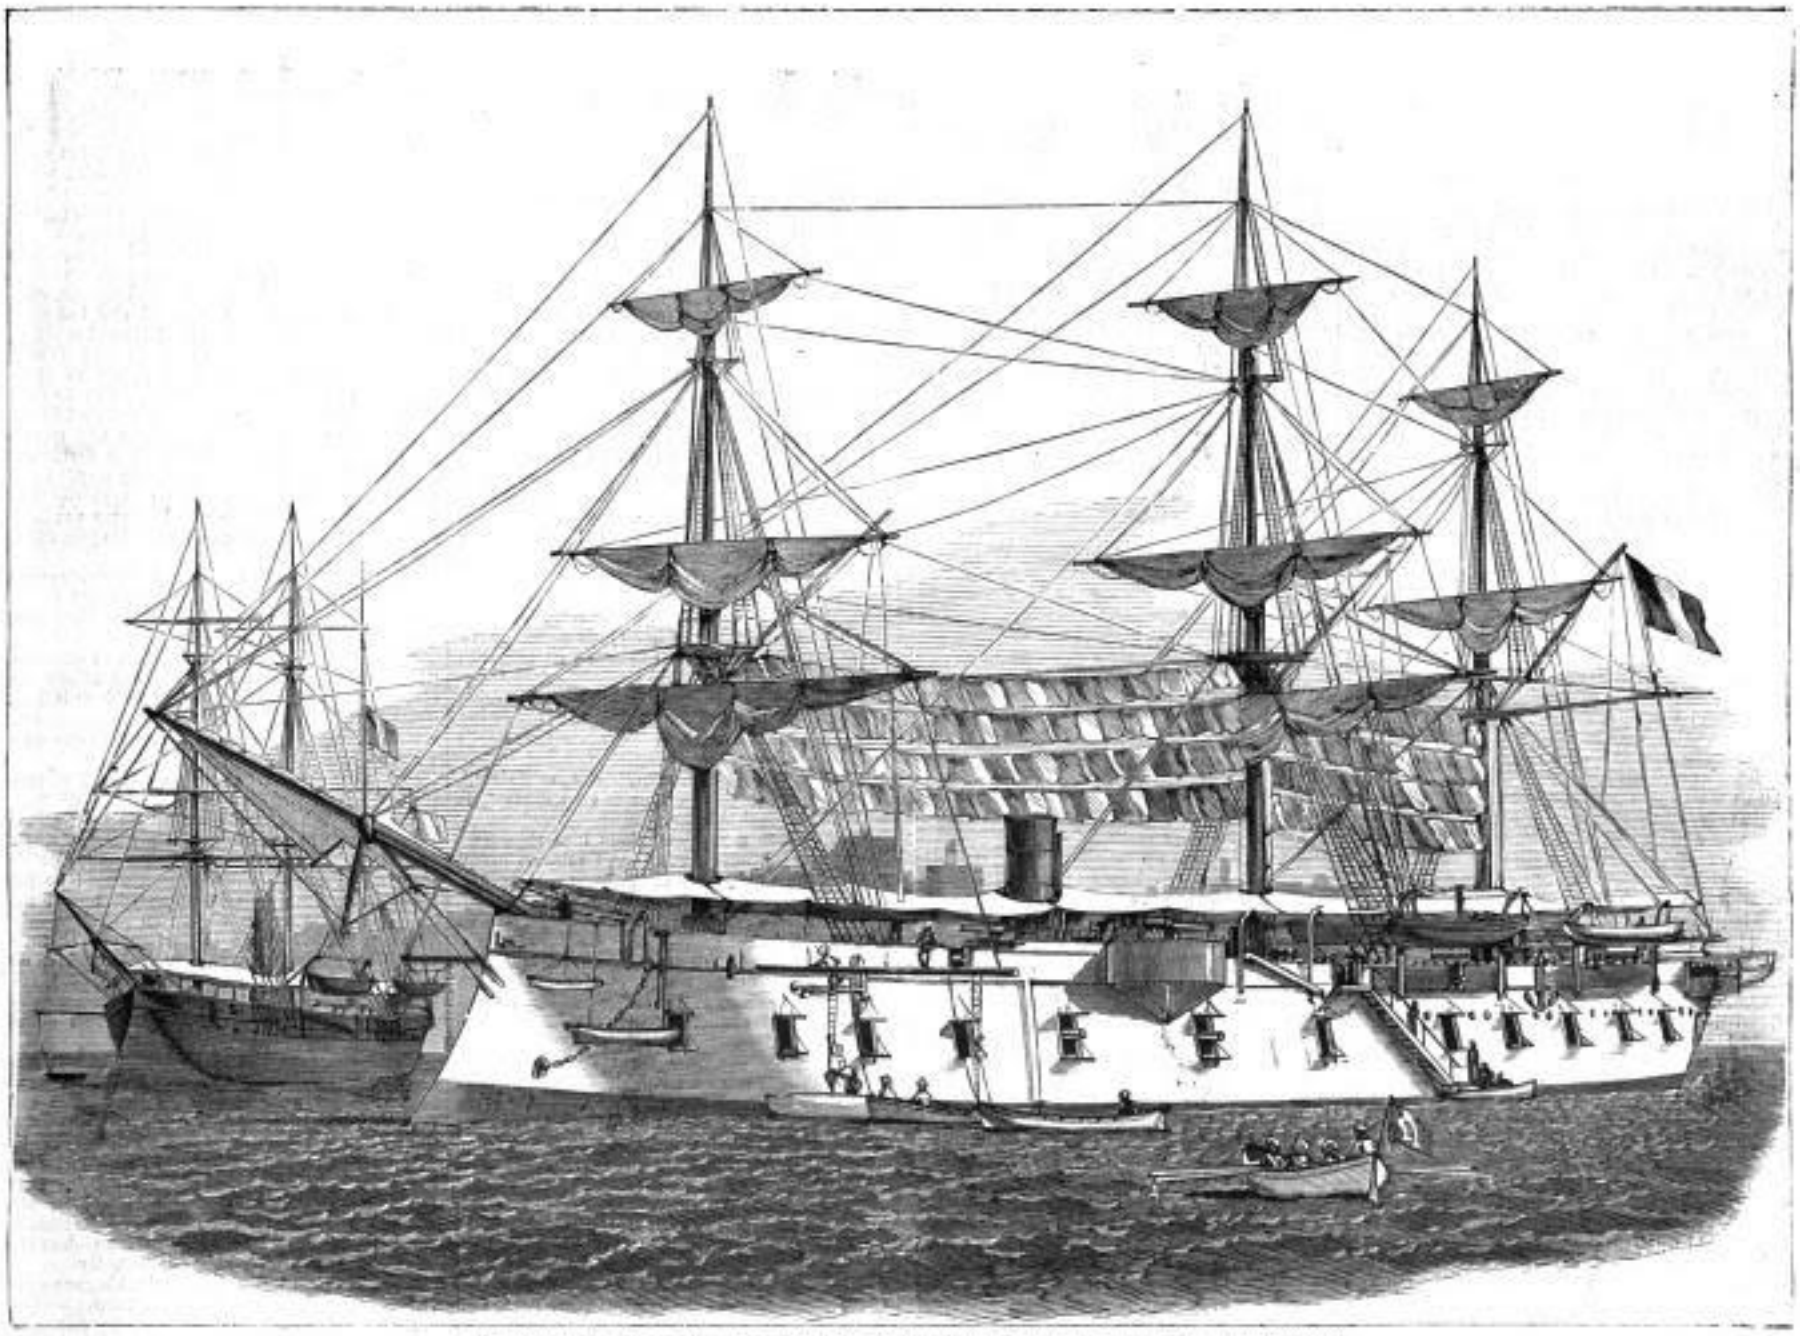
THE VISITING FRENCH IRONCLADS.

THE French ironclad *La Galissonnière* and her consort, *La Bourdonnais*, are now lying in the harbor on a short visit to this city. These two vessels belong to the West Indian Squadron of the French Navy, under the command of Admiral Peyron. They will remain here until about July 8th, and then proceed to Newport, remaining there about eight days, thence to Halifax, thence to Quebec, and finally, when the cooler weather sets in, returning to Martinique.

The *La Galissonnière* is one of a class of vessels which has met with great favor with the French naval architects. She was begun in 1868 and launched in 1872. She is 230 feet long, 45 feet 9 inches in breadth, and 4,654 tons displacement. She is of the type described as having a central battery and two fixed turrets, with guns fired *en barbette* and a ram bow. The central battery comprises four breech-loading rifles of 24 centimetres calibre, two on each side, and each turret contains one gun of the same calibre. The weight of the shell and shot fired by them is 144 kilogrammes. In addition to these, there are four Hotchkiss revolving guns, and six small brass howitzers, the latter for firing salutes, etc. She also carries two torpedoes. Her engines were built by Mazeline, of Indret. There are two, each independent of the other. They work together up to 500 horse-power, but usually only one is worked at a time. Each engine connects with its own shaft and screw, the screws being on each side of the rudder. In case of a fight both engines are worked together. Each engine has three cylinders, and a speed of fourteen knots an hour is attained.

The engines are below the water-line, and are protected also by a cuirass of iron, 15 centimetres in thickness. The plating on her sides is 15 centimetres at the water-line, backed with about 14 inches of teak. The turrets are solid iron, 12 centimetres thick. The platform on which the guns stand revolves, but the turrets themselves are fixed. The guns can be fired ahead or astern, or at any angle between these two extremes.

The *La Galissonnière* has three masts, full ship-rigged. She is handsomely fitted up, the officers' quarters being models of excellence. The crew are well quartered, and all the different compartments of the vessel are well lighted and ventilated. The crew are every day put through gymnastic exercises, and also have to attend a school of instruction, including navigation and mathematics. Every part of the ship is kept clean and neat, as vessels of war always are. The crew number 386 men. Admiral Peyron is the commander of the fleet. The Captain is M. Delassasse. There are ten midshipmen, and the usual complement of lieutenants, engineers, etc.



France being now at peace with all the world, there is not much occasion for the presence of an armed fleet at any especial point. These two vessels, therefore, are making a cruise in the temperate latitudes to escape the high Summer heat of the West Indies, where they are stationed.

THE NEW KHEDIVE OF EGYPT.

IN accordance with the Sultan's decree, Ismail I., Khédive of Egypt, abdicated, June 26th, in favor of his eldest son, Prince Mahomet Tewfik, who promptly assumed the viceregal authority. The new Khédive held a grand reception, June 26th, which was attended by Egyptian officials and the principal Europeans in Cairo. The Sultan has issued another decree revoking the authority formerly granted the Khédive to make treaties and maintain a standing army. The Porte promises to exert its influence to put the Egyptian finances in a good condition, and reform the abuses to which the country is subject.

Mahomet Tewfik, who succeeds his father as Khédive, was born November 19th, 1852. He married (January 10th, 1873) Princess Emmely, daughter of El Hamy Pasha, who has borne him a son, Prince Abbas, now in his fifth year. The new Khédive is the sixth ruler of the dynasty of Mehemet Ali, appointed Governor of Egypt in 1806, who made himself in 1811 absolute master of the country by force of arms. His position was recognized by the Imperial decree of 1841, issued under the guarantee of the five great European Powers, which established the hereditary succession to the throne of Egypt under the same rules as those of the throne of Turkey. In 1866 the Sultan agreed to make the succession to the throne direct from father to son, instead of descending, after the Turkish law, to the eldest heir. In consideration of this favor the Khédive agreed to raise the annual tribute to the Sultan's civil list from $1,880,000 to $3,600,000.

Ismail I., who has retired from the throne, is the son of Ibrahim Pasha, and grandson of the celebrated Mehemet Ali. He was born at Cairo in 1830, educated at Paris, and returned to Egypt soon after his father's death in 1848. On the death of Said (January 18th, 1863), he succeeded him as Viceroy. In 1867 he received the title of Khédive, with important additions to his authority. In 1868-'69 he extended his sway over the Upper and White Nile, increased his army, proposed the neutralization of the Suez Canal, and conducted himself as an independent monarch. The Sultan strove to curtail his power, but by bribery in 1873 he succeeded in obtaining concessions from the Sublime Porte which rendered him virtually independent. Early in 1874 he gained a decided victory over the Sultan of Darfur, and continued to extend his authority over the barbarous tribes lying around him. Ismail owned great tracts of land in Egypt, which his subjects cultivated on terms prescribed by him. He was also largely engaged in manufacturing enterprises. He almost rebuilt Cairo, and constructed immense public works throughout his dominion. In accomplishing these projects he contracted a public and private debt amounting to about $420,000,000, the greater part of which he received from France and England. On finding, in 1878, that he could not meet the interest on this debt, he sought to satisfy his creditors by placing the finances and public works under control of English and French Ministers. Last April he revoked this arrangement, and thus occasioned the quarrels with the Powers which have resulted in his deposition.

NEW YORK CITY.—THE FRENCH IRONCLAD "LA GALISSONNIÈRE" AND HER CONSORT "LA BOURDONNAIS."

POSTPONING AND LOSING.

WE mean to do it. Some day, some day,
We mean to slacken this fevered rush
That is wearing our very souls away,
And grant to our goaded hearts a hush
That is holy enough to let them hear
The footsteps of angels drawing near.

We mean to do it. Oh, never doubt,
When the burden of daytime droil is o'er,
We'll sit and muse, while the stars come out,
As the patriarch sat at the open door
Of his tent, with a heavenward gazing eye,
To watch for the angels passing by.

We see them afar at high noontide,
When fiercely the world's hot flashings beat;
Yet never have bidden them turn aside,
And tarry awhile in converse sweet;
Nor prayed them to hallow the cheer we spread,
To drink of our wine and break our bread.

We promised our hearts that when the stress
Of the life-work reaches the longed-for close,
When the weight that we groan with binders less,
We'll loosen our thoughts to such repose
As banishes care's disturbing din,
And then—we'll call the angels in.

The day that we dreamed of comes at length,
When, tired of every mocking quest,
And, broken in spirit and shorn of strength,
We drop, indeed, at the door of rest,
And wait and watch as the day wanes on;
But the angels we meant to call are gone!

OF HIGH DEGREE.

THERE it was, spread out before her again in all its dreariness. To Margaret Janrith's tired eyes the oozy stretch of Bateman's Swamp never seemed more dank and dismal than it did this calm evening in May. The muddy highway along which she was slowly walking was bordered with slimy pools, alive with piping toads. She was in a mood to see only the ugly aspect of the scene. Her eyes were blinded to the brown alder clumps, touched with emerald sprays, on which sung red-wings, answering with their mellow whistle the noisy toads. The pale-green islets, dotted here and there over the marsh, were lit up with the last reflections of the gorgeous sunset, but she never heeded the quiet beauty.

"Bateman's Swamp," she murmured, with a curl of her red lip. "Bateman, Bateman, everything is Bateman! 'Lord Bateman was a noble lord, a noble lord of high degree.' I wonder if Mrs. Bateman thinks there is a degree higher than hers, or if Launce believes he is a direct descendant of the noble Bateman who 'sailed east and sailed west.' Well, it's one thing to be a Bateman and another to be a Janrith."

The girl's dark Spanish features and moody eyes brightened as she turned a bend in the road. Just beyond, facing the reeking slough of road and swamp, stood a faded, yellow house, huge and dilapidated. It had once been the home of the Batemans, and fronted a smiling meadow, where tall grass waved in the June sun, and bobolinks flitted to and fro with tinkling song. Once graveled walks led up to the granite steps, and bright parterres of flowers girted the way. Plump Miss Bateman gave gay entertainments, and the great house shook with music and mirth, while fat old Grandfather Bateman quaffed hard cider, told questionable stories, and guffawed loudest of all.

But that was years ago. Now the Batemans lived in a grander house, a quarter of a mile out of the valley. The back-water from the dam at the Bateman factory had flooded the green meadow. Turtles and frogs succeeded the bobolinks. Plump Miss Bateman was now a withered old crone, and the fat grandsire had slept his first half-century in the grave. When Meg Janrith went up the walk she saw an unkempt yard littered with rubbish; and a hen sheltered for the night in a barrel turned on its side in the main walk cu-r-r-d in warning to her chicks as she went by.

Margaret passed around to the back door; the front door was there, and the broad, granite steps, green with moss, were there, but it always made her shiver to even look into the great, deserted rooms given up to decay. The twilight had deepened into dusk as she stepped into what had once been the servants' kitchen.

The room was large, low-ceiled and dimly lit up by a lamp off in one corner. The yellowish gleam of the light was clouded with poor tobacco-smoke, proceeding in steady puffs from the lips of two young men tipped back in chairs, side by side, against the wall.

Meg gave a shiver of disgust as she threw off her hat and cape.

"How can you breathe here, mother? It's positively stifling!" She said this without deigning a glance at the offenders.

"Oh, I can git used to stifling. If you'd lived in smoke an' dirt for thirty year you wouldn't mind it," remarked a sallow-faced, weary-looking woman of fifty, washing dishes at the sink by a window.

One of the young men, with a slight flush, knocked the ashes out of his pipe and put it in his pocket. The other, thick set, round-shouldered and heavy-faced, smoked on in dogged persistency.

For a few moments it was so still that the piping of the toads came clear and shrill from the marsh.

Meg drew up a chair to the window, and, leaning her shapely head on the pane, looked wistfully out into the night. The young man who had put aside his pipe so quickly, now rose to his feet, crossed the room lightly, and placed his hand on the young girl's shoulder. She looked up with dark, troubled eyes.

"What do you see, Meg?" he said, softly, in a half-deprecating way, but with a sunny smile.

"I see nothing but darkness," replied Meg, bitterly. Seward Walden's face clouded suddenly, but before he could answer, Hank Janrith broke in gruffly with: "I say, Meg, how's the ghost? Seen it agin?"

"Oh," returned Meg, quickly, "I forgot. I have seen it."

"Yer have?" answered Hank, sourly; "well, I'm glad you've seen suthin' 'sides that city swell, an' silks an' satin—they ain't good fer ye—too much on 'em."

"Perhaps yer'n Seward Walden air suthin' better," joined Mrs. Janrith, sharply, drying her hands on her apron.

"Don't think I'm any wuss fer living in the old Bateman house 'stid of the new," said Hank, roughly. "If I'd hed the backin' thet——"

"Backing!" exclaimed Mrs. Janrith, with intense disgust, "dragging, you mean. 'Twould take a steam engine to push yer ahead—or some others I know of."

Hank wriggled a trifle at this, and Walden flushed up again.

"Well," said Meg, calmly, "suppose I tell what I was going to, before we all get into ill-temper. Last night the ghost came again, just as it did the night before. I was so tired after all their grand party, and the work it brought, that I couldn't sleep a wink in the strange room, just as I was the other night. I heard the clock, away off in the kitchen, answering the one in the drawing-room every hour, and it must have been nearly daylight when, just as I did the night before, I saw something white go by my window. I was not so scared this time, but looked out, all of a shiver, to see where it went. It passed quickly out towards the stables, with something flashing and shining beside it. I went over to the end window and saw that it had stopped at the dog-kennel. The big Newfoundland never offered to touch it, but ran round and round it, and rolled over before it as it he was delighted with the visit. I saw the figure, all in white from head to foot, stoop down and look into the kennel. Then it got up and came back towards the house. When it passed the window, though my teeth were now chattering with fright, I would look at it, and I saw a white face, held up queer and fixed, as though it were dead, and gray hair streaming out from beneath a lace cap, and it it wasn't old Mrs. Bateman in her night-dress, and barefooted!"

There was a long-drawn sigh, and then a wondering exclamation from Mrs. Janrith at this outcome of Meg's story, and Hank checked the course of a small but highly-colored rivulet of tobacco-juice which had been trickling down the stubby corners of his mouth ever since Meg began.

"And," resumed Meg, quietly enjoying the sensation she had created, "I saw nothing this morning, but as I came out to-night by the kennel I looked into it, and what do you think I saw? Well, among the old bones, and boots, and straw, there glittered gold chains, rings, and bracelets, all flashing with gems; they must be worth thousands of dollars, and all lying there unprotected in the rubbish of the kennel. I ought to have gone back and told them, but I came away and have been dreaming ever since."

"Hooray!" yelled Hank, jumping and thumping with his heavy boots about the room like a madman. "Hooray!" he shouted again, hilariously. "It's ours, Meg. I'll go for it to-night. We'll show 'em a trick or two. Lemme see," he added, calming down somewhat, and trying to assume a shrewd business-like air. "How much'll there be apiece—two—four of us, Meg?"

"Why, Hank," said Mrs. Janrith, faintly, her sallow face glowing with excitement, "it ain't ours."

"Ain't ours!" echoed Hank, with a snort of contempt. "It ain't ours if we're fools enough to lose it. Who's a better right to it? There was old Bateman cheated father right and left. Here's Seward, here, what's an own nephew to the old woman, an' she won't look at him. Here's Meg, has slaved night an' day fer her, and never got the rappin' of her nail fer it, outside her wages. There she is likely to pop up an' die any day, and the hull thing'll go to that young Launce; an' he'll spend it, an' that'll be the end on't. What do you say, Seward?"

Seward was not in a hurry to reply. He did not like the look in Meg's dusky eyes, fixed with a queer expression on him, waiting for his answer. In a vague way he felt as if she had put the question instead of Hank.

"Well," he replied, slowly, "you might get more, Hank, by going into the house than you could find in the kennel, but in either place I don't see how we can lay claim to her property. She has a perfect right, I suppose, to put it where she pleases, and give it to any one she sees fit."

Hank's sodden face grew sullen.

"All right," he growled; "the fewer to divide with the more there'll be for me."

"Hank!" spoke up Meg, sharply, "don't be foolish. I shall tell Mrs. Bateman to-morrow of her sleep-walking, and where she can find her jewelry. It's no concern of ours after that."

Mrs. Janrith sighed; and feeling that the evening had turned out very uncomfortably, young Walden made his adieus, and was out along the marsh-road, when he heard a light, swift step behind him. It was Meg, and he sat down on a boulder by the roadside, and waited for her. She came up breathless. "Seward!" she cried, passionately, standing before him in the dusk with clasped hands, the sweet breath of Spring kissing her fair round throat and flushed cheeks, as it played over her regal young head and raven hair. She looked like a young tragedy queen, standing there, full of passion and fire, with the quiet stars o'er head, and the dreary swamp stretching back of all.

"Yes!" said Walden, with a feeble laugh, pulling at his blonde mustache, nervously. "I've been expecting it. You want to lecture, with 'Drunkards and Sloths' for a subject, and me for a point to your moral—a 'living illustration,' and so forth. Well?"

"Want to lecture?" said Meg, with a dash of scorn in her clear voice. "Seward, is there no man in you after all? Are you Hank with another name but the same nature, the same 'degree'? Oh, Seward! Seward!" her full tones breaking piteously; "have mercy on me if you care nothing for yourself."

He sprang to his feet, his arms open, his eyes glowing.

"No!" she said, waving him back. "never again—God helping me—till you shake off the shackles of a slave, till you stand before me a man of high degree—not in station or wealth, but in manhood. Why is it thus?" she cried, fiercely. "Is it not enough that I am a Janrith, that my father was and my brother is a sot? Why need you wallow in the mire with the rest—or why was I not like them, and content with the lowest level? Why should I dream dreams, and imagine that some day—ever so far off, but some day, I shall see the beautiful lands, and paintings, and sights I read of; that some are enjoying every day, that they—the Batemans—tell about so often. They, who don't look at me twice after they learn that I am not 'of high degree,' have all they fancy, while I am starving. Oh, Seward, why is it that 'to them that hath shall be given, and to them that hath not shall be taken away even that which they hath'? I only had you, and you are stumbling along here by the swamp, when you might be walking on the hill-tops."

Throughout her passionate burst of feeling young Walden had stood in abject silence. Though shaken in every fibre with emotion, Meg's eyes were dry, her voice husky. She seemed wailing to the powers of the night rather than talking to him.

"But it is over between us now," she went on, absently. "It might have been wholly good, and it is wholly bad. It is better to part now than later. I see what the end would be. I should seek for heaven and find hell. So, good-night, Seward—once for all, good night."

She held out her hand, not dainty and white, but fair, though it and toil were rarely strangers. There was a beauty about her now which was glorious, Seward thought. Heaw what he was giving up. What was he exchanging her for? In a strange, solemn voice, which Meg had never heard before, he said:

"So be it, Meg. But not for good. I've promised many times, but now it will be a battle to the death. Will you wait to see which side wins, darling, the beast or the man? And, if the beast is slain, will you crown the victor?"

"If the dragon is slain, not merely wounded, yes," returned Meg, tears for the first time moistening the feverish eyes.

Without another word he pressed her hand once to his lips, then turned and left her.

Just then a horse came splashing along the road at a rapid pace. The young man driving came so near to Meg in passing that the wheels of the flashing buggy spattered her with mud.

"Launce Bateman," murmured Meg. "I wonder if I had better tell him of Mrs. Bateman's freak of somnambulism. I think I would as soon trust Hank as him."

Nevertheless she disliked to confront the sharp eyes and wizened face of old Mrs. Bateman herself and explain the affair. Sometimes she had fancied that the old woman, somewhere in the shallow depths of her avaricious nature, cared for her handsome sewing-girl who was quick to heed every whim and caprice. But Mrs. Bateman was noted for keeping her affairs to herself. The mills, the tenants of the houses and farms, all acknowledged and obeyed the wrinkled old hand at the helm. When the property passed into her possession at her husband's death, many thought it would speedily go to the dogs. But in reality she had cleverly managed both husband and business for thirty years, so that the loss of one did not seriously embarrass her in her guidance of the other.

Early the following morning, Meg, tripping lightly along the valley road and drinking in the fresh, exhilarating air, felt that, after all, life was worth the living. The sweet, clear breath, sweeping over the valley from the far-off hills, brought a flush to her cheek, a sparkle to her eye, and, with unrestrained joyousness, she began trilling a gay song.

If she could always feel like this; if the atmosphere never grew thick and fetid with toil and discouragement; if her plans would never go awry, the morning never ripen into hot noontide and sink in night!

As she came out of the lowlands, looking down the rough highway, over the brow of the hill, she saw a man walking slowly towards her.

"It's Launce Bateman," she exclaimed, softly; "what brings him out so early? It isn't a fashionable hour."

"Are there many mornings like this, Miss Janrith? If there are, I shan't miss so many in the future as I have in the past. It's glorious!"

He turned as she came up, as though he had come out to meet her.

"It isn't always pleasant," replied Meg quietly, slightly taken aback at the deep, rich voice, the keen gray eyes, long, auburn mustache and tall, graceful figure of the prospective heir to the Bateman estate.

"I suppose not," he went on, cutting the yellow crown from a roadside dandelion with his dainty cane; "but I imagine the birds hereabout rarely miss seeing beauty of some sort, each morning, rain or shine."

Meg quickened her pace without replying.

"Let's walk slower, please," he said, almost stopping. "I don't want to get there too quick—I've something to tell you. It's what I came out for."

Meg looked up quickly, inquiringly. "Aunt is very ill," he pursued, hesitatingly. "You know she has been feeble for some time, and last night she discovered that some one had been robbing her—had taken from her the old family jewels and costly trinkets that have belonged to the Batemans for a century. They were abstracted from her private secretary, in her room, which only herself and—er—you will excuse me, Miss Janrith, but she accuses——"

"Me of taking them?" finished Meg.

"Yes," said he softly, looking down into the beautiful eyes, flashing and dusky. "I did my best for you, but she was dreadfully excited and talked about sending an officer after you. But I put that down."

"Thank you," said Meg, calmly, he thought. "I did not take her jewels—but I know who did."

"Ah!" said Launce, with some surprise, and Meg thought his face had grown very sallow all at once, and he did not look so handsome as he had a few moments before.

They were going up the broad walk leading to the stately mansion. Suddenly Meg stepped into a cross-path. "This way," she said to him, over her shoulder, "and I'll show you where the thief hid the plunder." There was a bitter ring to her tones, and Launce had to walk sharply to keep up with the lithe form before him as it passed swiftly out towards the stables.

When she reached the dog-kennel, Meg turned and faced him.

Young Bateman's face was twitching strangely, though one gloved hand calmly stroked his tawny mustache. Strange she had never noticed before what unpleasant eyes he had.

"There," she said, pulling open the door; "gather up the treasure and carry it to Mrs. Bateman. I'll tell her how it came here."

Launce smiled queerly; and then got down on his knees and peered into the kennel.

"I don't see any 'treasure,'" he said.

"Look sharp!" cried Meg, impatiently "Isn't it there? there among the old bones and boots?"

"The old boots are here, and the bones and a little moldy straw—but nothing else," said Launce coldly, rising to his feet.

"What!" it was almost a scream. Meg sank down with white face. The glittering rings, the chains, the necklaces, the old fashioned jewels in their antique settings—all were gone! Had *she* been walking in her sleep, and never seen them, after all? Then came a sickening rush of feeling. *Hush!* She had talked and pleaded with him, and tried to beat into his stolid brain a comprehension of the wrong of a theft such as he contemplated, and the certain failure and punishment sure to ensue if he attempted to carry out his plans. She thought she had put the idea out of his head. But he was only a Janrith. He had deceived her.

She got up, her dark eyes filled with despair.

"They were there," she said huskily. "Mrs. Bateman put them there. I saw her do it."

Jove! but this girl was not what he had thought her, Launce Bateman said to himself. She was something more than a pretty servant-maid. A few years of fashionable polish added to her beauty would make her—well—he'd do it? He looked quickly around. A hostler was drawing water for his horses by the stable; the doctor's carriage stood by the door up at the house, but he and the girl were alone. He began rapidly and clearly:

"Miss Janrith, let this pass, there's something wrong about it, but never mind it now. My aunt up yonder is very near death; when she dies her property will go to one of two persons—either you or me. Of this I am certain, but I am not certain which. If it had not been for this affair there would have been no doubt you would have been the lucky one. As it is, I am not sure how it will turn. This surprises you, but my aunt is not blind, she has seen what you were, that you had thoughts above the drudgery and fancies of a servant. It is in my power, or rather it is in yours, to place you where you belong. Either you or I in the next week will be rich; either you or I in the next week will be just where we are now—poor—and poor for good and all. A fortune is not to be had for the asking every day. I can never make a fortune, nor can you. Why should we not join hands and enter a partnership which will secure us *both*? Do you catch my meaning?"

"I think I do," answered Meg, stepping back, and paling a trifle. "You want me to enter into a compact which will secure Mrs. Bateman's wealth to us both."

"Precisely," replied Launce, earnestly. "Neither of us, as I look at it, can afford the risk of 'going it alone.' Don't look at it in a sentimental light. If, after we get the property, we find we can enjoy it better each in our own way, so be it."

"What sort of an arrangement do you propose?" asked Meg, faintly.

"There is but one that would hold," said Launce, smiling; "though it's pure business now, it might ripen into something else in time, and I don't think the time would be far away in my case. Yes, Miss Janrith, before my aunt breathes her last we two must be one. Then, whichever way the wheel of fortune turns, we can smile at its revolutions. There's nothing dishonorable about my proposal, and I am thankful I make it to one possessed of solid common sense, instead of girlish sentimentality."

Meg leaned her head on the kennel. It was all so bewildering, so unheard of. Here, at last, was the wealth she had coveted at her feet, and the enjoyments that wealth could bring could be hers; no more drudgery, no more pinching economy, but dreams realized, longings satisfied. Then there was Hank sure to be brought to punishment for his theft—she ought to save him; and how preposterous to think of handsome Launce Bateman—but she couldn't think of anything connectedly.

"Come," said Launce, eagerly, his gray eyes shining, and his white hand held out. "Shall we call it a bargain?"

"Not yet," answered Meg, in a dazed way. "We had better go up to the house now"

Digitized by Google

"Very well," replied Launce, "only remember time is precious. It will be too late after death takes a hand in the game. If I win I shall offer nothing. If you win I shall expect nothing. But unless we join hands one only will win."

As they came up to the grand house, a distracted-looking maid met them at the door. "Oh!" she cried, in a hysterical way to Meg, "the old lady is near gone. She wants to see you, quick!"

Meg and Launce hurried to the chamber where old Mrs. Bateman lay, the rarely welcome visitor whom doors cannot shut out, who passes with the same noiseless tread into dungeons, palaces and cottages, giving to all the same ghastly greeting.

Old grizzly-faced Squire Gath sat at a little table by the bedside, with pen in hand. The doctor stood at one side dropping out a cordial, gravely.

The shriveled, yellow face of Mrs. Bateman was raised from the pillow, her small eyes glittered in their sunken caverns with their usual fire, but her voice had lost its shrill tone.

"I've been looking over my will," she said, feebly but rapidly, "because, Margaret Janrith, I think I want to alter it. I've changed it a good many times, but I never thought I should have to again. Margaret, I want to ask you a question, and I want you to answer it as you would one who in a few hours may know whether your answer was true or false. Doctor, the cordial." The physician came forward quickly. Mrs. Bateman swallowed the potion with feverish haste, and went on. "Do you know who took the Bateman jewels from the secretary yonder?" The old lady pointed with one skinny finger to a massive mahogany affair in one corner. Squire Gath ran his fingers through his scant, gray beard, and fixed his sharp eyes expectantly on the girl's face. In the midst of the oppressive silence, "Yes," said Meg, her voice trembling in spite of herself, "I do."

"Oh," cried the old lady, leaning forward eagerly, "you do! Well, who was it?"

"It was you," returned Meg, quietly.

"Me?" exclaimed Mrs. Bateman, with a shade of grim contempt. "Me! How so?"

And Meg went on and told the whole improbable story; how she had seen the jewels hidden; how she had gone and left them; how she had returned and they had been spirited away. When she finished she glanced at Launce.

He was smiling queerly at her—a smile that brought a hot flush to her cheek. The old lawyer murmured audibly, "A fair story—very fair; better than the average."

Mrs. Bateman's face grew stern.

"It's the story of a Janrith," she said, sneeringly. "I thought she was different from the rest. If she had honestly denied it or confessed, I might—bah! She may keep them; put it down, Gath, the jewels to Margaret Janrith, nothing else. She's missed more than she has gained; but let it go, the rest are no better. You can go."

Meg went out, her face burning. So that was all her word was worth. She turned in the corridor on Launce, who had followed her.

"I'm ready to plot with you now,' she said, passionately; "ready to do anything."

He laughed lightly.

"Are you?" he said, with a smile of triumph, "I'm not. The dice are thrown—you have lost, my dear; I have won. If you had agreed then, I'd have stood by you. You are no longer a possible, probable heiress. So it's too late to carry out *that* arrangement. Perhaps, though, we can form another that would suit both of us just as well."

He looked at her inquiringly, his gray eyes glowing with admiration.

"Come," he added, under his breath, his voice full of smothered passion. "It's not too late for that—I love you, Margaret." He held her by the arm for one brief moment, then, with a sudden shock, Meg came to herself.

"Mr. Bateman," she said, with superb scorn, "I'm going home. Good-morning."

And she swept by him, down the stairs, leaving him cursing his stupidity.

Within the hour Mrs. Bateman died.

* * * * * *

"What a turn things do take," sighed Mrs. Janrith, as she and Meg quietly sewed away the long Summer afternoon. "What now?" asked Meg, dropping her work and looking dreamily out over the swamp simmering greenly in the sun.

"Well," pursued her mother, "for one, there's Hank don't seem like the same boy; hain't been so stiddy for years. I know he never set eyes on them old jewels. Then there's Seward Walden, he's changed more'n Hank has. They say he works like a nigger slave over to Millville, and the new manager has took a great fancy to him. You know, Meg, he allers was rather shiftless—good-natured, but shiftless. Ain't you'n he ever going to make up? And there's old Mrs. Bateman's nephew, Launce, he's cleared out; and they say he hain't goin' to get a cent for fighting the will as he has—the seminary'll get every copper of the Bateman property. Well, well, what a queer old woman she was, and how things change. I wonder what'll come next?"

The next that came happened to be two letters for Meg.

She read them under the cool shade of the elms back of the house, alone by herself.

The first she went over quickly and then tore into fifty fragments.

It ran thusly:

"MY DEAR MISS JANRITH: I lost the game, after all. That was a nice conceit of mine, likening that little affair of ours to a game at dice; but I never reckoned, as I should, on who threw them. My premises were false, and so, of course, my conclusions came to grief. It seems that it lay between you and the seminary, and I was counted out altogether. To-day I should be penniless were it not for those precious Bateman jewels, which I found—you know where, but how I happened to run across them is of no moment. I have them, and if they don't net me a nice little sum in Europe your humble servant is very much mistaken. Thus virtue is always rewarded. The only consolation I can suggest to you is the frequent perusal of 'The Pleasures of Poverty.' Read it and be happy—if you can. By-by, LAUNCE JANRITH."

The other she tarried longer over, though it was very brief:

"MILLVILLE, August 18th.

"MARGARET: The dragon is dead. Can I come and claim the princess? SEWARD."

And Meg sent back for answer one little gladsome word. It was "Yes."

A Million of Frenchmen under Arms.

THIS year nearly 800,000 Frenchmen will actually serve the colors for a longer or shorter period. Of these 470,100 belong to the active army, 144,570 men and 2,850 officers to the reserve of the active army, and 117,600 men and 6,820 officers to the territorial army. The armed forces of the country consist of the active army, in which a man serves nominally for five years; of the reserve of the active army, into which the soldier passes on the completion of his five years' service in the active army, and in which he remains for four years; of the territorial army, into which men pass after completing their service in the reserve, and in which they serve for five years; and of the reserve of the territorial army, into which men are passed for six years after serving their five years in the territorial army. The active army, consequently, comprises five classes or yearly contingents of recruits; the reserve, four; the territorial army, five; and the reserve of the latter, six classes. Of the five classes of the active army, four are actually present with the colors; of the four classes of the reserve, the class composed of the recruits who joined the active army in 1878 will be called out for twenty-eight days' training, during which time they will take part in the annual Autumn manœuvres, while a portion of two classes of the territorial army, the classes composed of the recruits who joined the active army in 1866 and 1867, are at the present time embodied for thirteen days' training. The reserve of the territorial army is therefore the only component of the armed forces of France of which no portion will be exercised this year; and, as none of its members have ever been called out, it must for the present be regarded as a paper force only. Next year, and every year afterwards, two classes of the reserve of the active army and two classes of the territorial army will be required to temporarily rejoin the colors; so that every year nearly a million men will be actually drilled and exercised in France.

Boston's First Theatre.

THE first theatre in Boston was established in 1792, under difficulties. It was erected in Board Alley, now Hawley Street, and opened August 10th, 1792, under the management of J. Harper. The opening performance consisted of exercises on the tight rope and ballet-dancing. Later in the year a company of comedians arrived from London, under the management of Mr. Powell, and commenced a theatrical season. To evade the statute against theatrical performances, they called the plays "moral lectures"; but Hancock was governor, and was not disposed to suffer such barefaced evasions of the law. They were playing the "moral lecture of 'Richard the Third,'" one evening, and proceeded as far as "Bosworth field," when the sheriff came unceremoniously upon the stage, and made prisoner of the humpbacked tyrant. Great uproar followed, and the portrait of Hancock, that hung in front of the stage-box, was taken down and trodden under foot. The next night every man went armed with a bludgeon, but there was no more interference, and the next season the Boston Theatre in Federal Street was built, a large majority of the town being in favor of it.

The Cost of War.

THE St. Petersburg *Gazette* calculates that, in the past twenty-five years, the Crimean, Italian, Schleswig-Holstein, Prusso-Austrian, Mexican, Franco-Prussian, Russo-Turkish and the American Wars have cost 2,548,000 lives. This does not include deaths from disease, inseparable from war, nor the thousands of mangled and disabled men. Total cost in money, £2,473,000,000. Even then, says an English paper, the estimate falls under the actual figures, for the services of the millions of men engaged in these conflicts were lost to their countries and to the world while they were employed in cutting each other's throats, and, of course, the dead men produced nothing more for the benefit of their native land which put them to so bad a use. If that money so brutally wasted, and the services of these men so badly employed—*scarcely one, and at most only one, of the wars mentioned being justifiable, and some of them being open robberies*—had been utilized for the benefit of the world in some great national enterprises, what a different state of matters we might now have to record! Africa might now be surveyed as perfectly as England, and lines of railway penetrate it in every direction; the Dover submarine tunnel would have been bored, and the Panama Canal dug, and yet the two and a half thousand millions scarcely touched!

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

The New Ruler of Afghanistan.

Mahomed Yakoob Khan is about thirty-three years of age, and is the eldest surviving son of Ameer Shere Ali, by the daughter of a Momund chief. When Mahomed Ali, the eldest son of Shere Ali, was killed by his uncle, Ameer Khan, in 1864, it was generally understood in the Cabul Durbar that the Ameer had really nominated Yakoob Khan as his heir to the throne. Believing himself to be thus in favor, Yakoob fought valiantly in his father's cause. At an early age he was placed in charge of the important province of Herat, where he became a popular ruler. He succeeded in keeping Herat loyal to his father, even during the successive reigns of the rival Ameers, Afzul and Azim, and it was owing to the generalship of Yakoob Khan and his young cousin, Ishmael Khan, that Shere Ali once more regained his throne, in the year 1868. He was Governor of Cabul when his father visited India in 1869. The following year he was posted to Candahar, and afterwards to his old province, Herat, which he ruled for his father until his growing power and influence with the Afghan nation excited the worst fears of Ameer Shere Ali, who had in the meantime nominated his youngest son, Abdullah Jan, as his heir. In order to prejudice the British Government against Yakoob, the Ameer always represented him as hostile to British interests, but it is believed that such was not the case; on the contrary, he assured Captain H. Marsh, who visited him at Herat in 1872, that he cherished very friendly feelings towards England. At an early age he commenced the study of English, and his old tutor, who died in the service of the English Government, always spoke of his former pupil as exceedingly friendly to the English. In 1873 Ameer Shere Ali recalled his son Yakoob from Herat, but Yakoob refused to obey, and for about a year was in open rebellion against his father. Under the most sacred pledges of safety, Yakoob at last proceeded to Cabul and tendered his submission to his father, who cruelly consigned him to the solitary confinement from which he has lately been released. Yakoob Khan's uncle was Feroze Khan, the influential chief of Laipore, who died about three years ago.

The Heroes of Rorke's Drift.

In the little cemetery at Rorke's Drift lie the remains of the brave men who were killed in the defense of the post on January 22d and of those who have succumbed to fever or other disease. It is situated half-way between the now famous "store" and the hill at the back called "Oosenberg." The monument consists of an obelisk, standing on a massive square base, and these on two solid stone steps, all of the hardest white freestone, and is ten feet high. The whole work has been done by the men of the second battalion, Twenty-fourth Regiment, under the superintendence of Lieutenant Gonville Bromhead, and is to replace a rustic wooden cross previously erected by Lieutenant Chard, R. E. The design and ornamental inscriptions, as well as the sketch, are the work of Private Mellish. On one face is a wreath of laurel, inclosing the number of the Regiment (XXIV.), who furnish the greater part of the graves; on the other side are the names of the dead, twenty-seven in number.

Close of the Afghan War.

The visit of the new Ameer to the British camp at Gundamuk, on May 8th, has been already spoken of, and this week we give a view of the procession conducting Yakoob Khan, with Sir Samuel Browne on his right hand, and Major Cavagnari on his left, from the hill above the Khoja stream at Gundamuk along the road to the camp, a distance of three miles. The two conspicuous mounted Afghans, riding close behind the Ameer and his newfound English friends, are Daood Shah, who is the Sipah Salar or Commander-in-Chief of the Afghan army, and Habib Ullah Khan, the Finance Minister or Chancellor of the Exchequer in the Cabul Government. Another is Mahomed Hashim Khan, a son-in-law of the late Ameer Shere Ali. The gentleman seen through the space between Sir Samuel Browne and Yakoob Khan, at the further side of the roadway, is Mr. Jenkyns, second Political Officer. The guard of honor in the rear is formed of a detachment of the Tenth Hussars, under Major Wood.

The Hertford British Hospital in Paris.

In the Rue de Villiers, five minutes' walk beyond the fortifications, where Levallois-Perret forms a junction with the well-known suburb of Neuilly, Sir Richard Wallace has erected and endowed this fine hospital to the memory of the late Marquis of Hertford, and for the service of British poor persons resident in Paris. Apart from the permanent endowment fund, Sir Richard Wallace has spent a sum exceeding £40,000 on the establishment. In the interior ample space, lofty and skillfully ventilated wards, and a variety of hygienic appliances, are provided to aid the physician in the cure of disease. Everything needful for the patients is provided, including suits of clothes to wear while in the institution. The hospital was formally inaugurated on May 16th, by Sir Richard and Lady Wallace, receiving the British Ambassador and a select number of invited guests, when, in a short speech, Sir Richard, dedicating it to the memory of the generosity and noble qualities of the late Lord Hertford, explained its origin and purpose. He said it had grown up of the necessities arising during the two sieges of Paris, when there was urgent need of help to the British sick poor, and it was to its beginning a kind of appendix to his "Ambulance Anglaise."

Four Hundredth Commencement of the University of Copenhagen.

The University of Copenhagen, Denmark, celebrated its four hundredth birthday with much ceremony, June 24th, conferring the degree of doctor on seventy-one persons in the Scandinavian Kingdoms, which is the subject of our illustration. The university was popular only with the poor for the first hundred years. At the time of the Reformation its income was less than $200 a year. Its property and various endowments amount at the present day to $2,500,000. In the siege of Copenhagen by the Swedes in 1658 and 1659, the patriotism of the students saved the city and the country. The university was destroyed in the great fire of 1728, and in the bombardment of the city by the English in 1807. The present buildings were erected in 1836. The University of Copenhagen stands high among European institutions of learning, and its influence on the life of the nation has always been strongly exerted for freedom and progress. It boasts a library of 260,000 volumes and 4,000 manuscripts, extensive museums and four large institutions for the free maintenance of poor students.

The South American War.

Our view of the town and harbor of Iquique, Peru, was taken on April 5th, just after the establishment of the blockade by the naval squadron of Chili. This blockade was raised for a few days in May by the hurried withdrawal of the *Cavadonga* and *Lamar*, and the destruction of the *Esmeralda*. The fight between these vessels and the Peruvian monitors *Huascar* and *Independencia* occurred on the 21st, in the harbor. The *Huascar* rammed the *Esmeralda* three times, the last taking the ship fairly amidships with such violence as to send her to the bottom in a few moments. The commander of the *Esmeralda*, Captain Prats, leaped upon the *Huascar*, followed by some of his crew, but was almost instantly killed. While the struggle between these vessels was in progress, the *Cavadonga* managed to escape from the bay and was proceeding southward at full speed when the *Independencia* started in pursuit. The latter overtook the Chilian vessel when some eleven miles south of Iquique, and began manœuvring for a ram when she struck a sunken, unknown rock, and was immediately wrecked. Then the *Huascar*, having finished the *Esmeralda*, went to the assistance of the *Independencia*, and on seeing the wrecking of that splendid ironclad frigate, started off at her highest speed after the *Cavadonga*, which escaped in the darkness, after a race of two hours.

Burning of a Grand Stand at the Auteuil Races.

The running of the Grand Steeplechase de Paris, at Auteuil, on June 2d, was signalized by an accident which will render "Wild Monarch's Year" a memorable date in the calendar of French turfites. In the Grand Race the horses have to pass the grand stand three times, and the horses were passing for the second time an alarm of fire was raised in the end tribune known as the fire-frame stand, which was crammed with spectators, men being even perched upon the roof and cornices, and as the smoke quickly rose there was at once a stampede for the various staircases. Everybody was fortunately able to make his escape. The flames rose with astonishing rapidity, and, in spite of the efforts of the firemen, consumed every particle of the woodwork. For some time the molten zinc, with the red-hot iron girders, made the stand look like the set piece of some monster display of fireworks.

AT HOME AND ABROAD.

—GENERAL MANTEUFFEL assumes the Governorship of Alsace-Lorraine on August 1st.

—THE corner-stone of the new custom house in Memphis, Tenn., was laid on June 26th.

—A FIFTEEN thousand dollar church is being built by the colored Baptists of Lynchburg, Va.

—AN anti-landlord agitation has sprung up in the west of Ireland, and is causing grave apprehension.

—MORMON missionaries are endeavoring to get up a huge colony in Alabama to go to Utah in October.

—IT is now expected that the piercing of the St. Gothard Tunnel will be completed about the end of November.

—THE French have subdued the insurrectionists in Algeria, and captured 4,000 of the most active ones.

—IT has been decided that all judges in Germany, while administering justice, shall wear a black gown and a black cap.

—EX-JUDGE GEORGE W. BISHOP and ISAAC V. L. HEIN, of Baltimore, were convicted on the charge of forgery on June 24th.

—A FRENCH Legislative Committee, to whom a Bill on the subject was referred, have reported in favor of re-establishing divorce.

—IT is claimed in London that the English Church Association has spent $200,000 in prosecuting the Ritualists, and all to no purpose.

—A MONUMENT erected to the memory of General John B. Woodward, at Springville, N. Y., was unveiled June 26th by the Masonic fraternity.

—A PROJECT to rebuild Carthage upon the site of the ancient city has been laid before the Bey of Tunis, and is being urged by the French and German Consuls.

—LEPROSY has broken out in several parts of the Spanish province of Alicante, and is spreading so rapidly that the authorities have begun the erection of Lazar hospitals.

—MONSIGNOR CAPEL, of England, is in the same pecuniary difficulty as Archbishop Purcell of Cincinnati, but, unlike him, receives no aid from his superiors in the church.

—JOHN HALLIARD, ex-President of the State Fire Insurance Company, of Jersey City, has been acquitted on the charge of embezzling $6,000 worth of bonds belonging to the company.

—TWELVE sets of telephones have been sent out to Sir Garnet Wolseley for use at the seat of war in Zululand. This will be the first time the apparatus has been used as an instrument of warfare.

—MR. ALEXANDER NICOLSON, a poet, and sheriff of the County of Kirkcudbright, Scotland, is mentioned as likely to be the first occupant of the new Celtic chair in the University of Edinburgh.

—A NEW Swiss railway has been completed in time for Summer tourists. The line runs through the picturesque valley of the Linth, from Glarus to the baths of Stachelborg, at the foot of the Toedi.

—A MONUMENT was inaugurated on June 24th, on the battle field of Custozza, in memory of the slain in the battle between the Italians and the Austrians on June 24th, 1866. Representatives of both Governments were present.

—THE inter-collegiate boat-race on the Schuylkill at Philadelphia, on June 24th, was won by the crew of the University of Pennsylvania, with that of Columbia College of New York second, and Princeton College of New Jersey third.

—A FEW days ago the Society for the Prevention of Cruelty to Animals made their annual distribution of prizes to drivers who have taken good care of their horses or mules during the past year, in front of the City Hall, Augusta, Ga.

—THE remarkable collection of Indian portraits and curiosities painted and gathered by the late George Catlin has been presented to the United States Government by Mrs. Joseph Harrison, whose late husband bought the articles in Berlin, where they had been seized for debt some years ago.

—WHEN the Zulu war is over, not the least interesting among the statistics of the campaign will be the value of the commissions of the officers who have perished or may still be lost. No less than $67,500 were lost by eight officers of the Twenty-fourth Regiment alone, who were killed at Isandula.

—THE present tour of the Comédie Française is the fourth of the kind undertaken since the formation of the society. The first took place in 1746, when the artistes went to London; the second in 1863, when they starred through the South of France, and the third was to England during the disastrous days of 1871.

—A VAST retrospective art exhibition of Tuscany is to be opened in the famous Pitti Palace, Florence, in November. It will contain as many portable art treasures as can be brought together, representing ancient Italian art, that of the middle ages and of the Renaissance down to the seventeenth century, inclusive.

—THE Ragged School Union of London expends about $650,000 a year in endeavoring to elevate the lowest and poorest classes. In its Sunday-schools there are 39,500 children, in the day-schools 5,480, and in the night-schools 9,267. Seventy-five churches, eighty-two lending libraries and seventy-five penny banks are maintained by the Union.

—THE Island of Saghalien, to which Nihilists are being deported, lies off the mouth of the Amoor, and was first occupied by Russia in 1853, Japan holding possession of a portion, which was released to Russia in 1875. The island is valuable for its vast deposits of coal, but is unsuitable for human habitation, so much so that all attempts made to colonize it have failed.

—CAPTAIN EADS, the eminent engineer who constructed the jetties at the mouths of the Mississippi, proposes to substitute for the contemplated ship canal at Panama a railroad by which the largest vessels may be conveyed across the Isthmus. He claims that this project is entirely practicable, that it would cost considerably less than a canal, and may be completed in three or four years.

—A DISPATCH from Yokohama, dated June 10th, says General Grant is en route from Tientsin to Peking. The latest advices indicate considerable change in the programme of his future movements. It is now believed probable that he may return to China after visiting Japan and proceed to Australia. His plans are subject to so many sudden alterations, however, that nothing absolutely certain is known a month in advance. Prince Henry of Germany continues to be the object of lavish hospitality and incessant festivities night and day in Japan. The most notable manifestations of respect are, however, reserved for General Grant, who will be greeted with honors never before vouchsafed to any guest of Japan.

cases which have successfully baffled police investigation. While in certain quarters there was a very evident determination to fasten the guilt of Mrs. Hull's murder upon one very near to her in life, and while the various theories upon which the police and press were working were tending towards this person, a newspaper reporter in Boston recognized on the street a negro who was supposed to know considerable of the tragedy, and through a friend on the local detective force secured his arrest. The search of the prisoner, the discovery of the stolen watch upon him, and his confession of the robbery, fixed his guilt so strongly, that Coroner Woltman adjourned the inquest. Captain Williams and Detective Schmittberger went from New York to Boston, secured the prisoner, and brought him to New York, where he was examined and committed.

The solution of this mystery is due to accident, precipitated by the stupidity of the prisoner, and had this discovery not been made in Boston, an innocent person in New York would have stood a poor chance of escaping the charge of murder.

On Monday, June 23d, Mr. W. H. Balch, a reporter on the Boston *Herald*, asked permission of his friend, Detective Wood, to publish some facts that had come into his possession touching the pawning of a number of articles of jewelry with John Sternberg a few days previous by a negro. While in conversation with him, Mr. Wood gave a minute description of the man who had brought the goods to the pawnshop. About half-past seven in the evening the same reporter, after having been referred to Superintendent Adams for further information, walked up Shawmut Avenue, and while thinking of the case, suddenly ran across a tall, good-looking negro, who bore a striking resemblance to the man who had pawned the jewelry. The amateur detective passed and repassed him, took a front and profile view, examined his form and figure, and determined to find out whether he was the right man or not. The presence of another man on the scene helped the matter along, and a closer examination showed a very striking resemblance to the man who was missing from New York, and whose description Officer Wood had given. The man who had offered the cameo set for sale, and who had actually sold it, was known to have possessed a watch with the initials, "Mrs. De F. H.," and as this inscription was known to have been on the watch that was taken from Mrs. Hull's house, the case seemed to be coming very close to a conclusion.

Mr. Balch accosted him with the question, "What is the way to Monmouth Street?" to which the negro replied that he was a stranger and did not know. Mr. Balch watched until he saw him enter the Ebenezer Baptist Church and then hastened to inform the police authorities. Detective Wood and Balch went up-stairs to obtain a look at the suspected person, who, with a companion, was listening intently to a sermon on the "Horrors of Hell," and, feeling sure of the man, he was called out from the pew, and as he was passing out into the vestibule he was seized.

Wood quietly passed his arm in that of his prisoner and both walked down to the station, the newly-arrested negro offering no resistance. The party was soon increased by the Division Five Squad, and, together, all the interested parties were brought to the station-house. When the negro got in front of the desk in Station Five, the lieutenant in charge questioned him, and he was as cool as could be imagined. He was submitted to the usual search, and the contents of his pockets were laid on the table very promptly. The first article examined was the watch. It was a lady's gold watch, and he said that he had bought it of a friend. It was opened, and at either side pasted in the corner was found a little chromo, covering about half the circumference of the cover.

A letter from his mother dropped out of a pocket-book. There was a policy receipt on a life insurance in a New York company and a schedule of its premiums. Various other papers also fell out, including a letter from his mother, dated Richmond, Va. There was a five-barreled revolver, which Cox said was loaded only with blank cartridges. The memorandum-book was next examined, and here was found the entry, "161," and others, which were seen by the pawnbroker when Cox as William Francis entered the pawnshop, a week previous. The watch was next handed over for inspection. It bore the following inscription: "Henry Beguelin, maker, Locle: No. 59,857." Wood drew out the card issued by Superintendent Walling. He compared the inscription on the watch with that on the ticket and exclaimed, "It is the watch." The number was exact. The little chromo (a dog's face), that covered the case at the back, was torn off, while all the spectators stood around in breathless anxiety. The case-maker's name only was read. A still further examination found another chromo, and when that was torn off the officer read aloud the following inscription: "Mrs. De F. H., Christmas, 1878." Every eye was turned to Cox, who stood there without the slightest evidence of weakness or trepidation. His face was as calm as a Summer lake, and yet he stood apparently convicted of one of the darkest crimes ever committed.

Detective Wood looked him squarely in the face and said, "Where is the rest of Mrs. Hull's jewelry?"

"I don't know anything about Mrs. Hull's jewelry," Cox replied, without the slightest emotion.

"Don't you?"

"No."

With this denial on his lips, Cox with the detectives, the officers and the newspaper men, went into the private room of the station.

"Now," said Detective Wood, "tell us where the rest of Mrs. Hull's jewelry is."

Cox was silent a moment. He seemed to be lost in thought, and did not appear determined as to the best course to pursue. At last he spoke, and for the first time there was a tremor in his voice. A consciousness that he was at last brought to bay crept over him and he weakened. A tear stole down his cheek.

"Well, will you do me a favor?"

"Certainly," said the detective; "anything I can do for you I will, cheerfully."

"Well, I want my things sent for. I don't want my mother to know anything bad has happened to me. It will kill her."

"Now, about the jewelry," continued the detective, with the persistence of his tribe; "where are the diamond earrings?"

"I don't know," he replied, "they were not real diamonds. They were pawned by a girl in New York. The ring I have here," and with some difficulty he drew it from his little finger. It was a handsome ring, enamel painted, set with pearls, and having a handsome hand of red enamel around the centre medallion. "The diamond ring I pawned at a German pawnbroker's, here in the city. He gave me $10 for it. At the other pawnbroker's I sold the cameo pin and the earrings and the long chain for $1.50."

"Well, tell us about the murder," said the reporter. "I don't suppose you intended to murder Mrs. Hull?"

"No," he replied, "I don't know what made me do it. I suppose the devil must have taken hold of me."

"Well, how did you get in?"

"I went there just before twelve o'clock. I knew the house. I had worked for Mrs. Hull, washing windows, taking care of the furnace and carrying coal up-stairs for $2 a week. I worked permanently across the street. I knew the cook slightly. I did not know the people up-stairs. I did not know Mr. Coleman, but I knew a German who lived on the third floor and for whom I carried coal. Well, I went to the house and tried to get in at the front door. I had a key belonging to my other house which I thought would fit, but it would not, so I opened a window that was not bolted and stepped in. I bolted the window after me, and then listened. I could hear Mrs. Hull snoring. She snored very loud. I went up to her room and entered it, lighting a candle I had in my pocket. I saw she was fast asleep on her back. Then I tied her hands and feet and blew out the candle. She cried out, 'Who is there?' I answered, 'The doctor.' She put her hand up to feel my face, but I drew back so she could not reach it. This was before I tied her hands. As she wanted to holler, I stuffed some pieces of the sheet into her mouth. I did not kneel on her, but just bent the weight of my body over her so as to hold her down. Then I pulled the rings off and got her jewelry. I thought she had fainted, so I poured some cologne over her face, thinking to bring her to, but I could not feel her breathing."

He then said that in trying to ascertain if she was alive he held a lighted candle to her face, which caused the cologne to ignite and flash up.

Intelligence of the arrest was telegraphed to New York. Captain Williams organized an expedition of search for a girl, Bella Johnson, who was found in No. 126 Bleecker Street. She was taken to the station-house and examined. On her neck was the topaz necklace stolen from the murdered lady; in her ears glistened what had been described as the diamond rings, and which were really good imitations; and on either hand she wore one of the stolen rings. She stated that a negro, John Cox, had called on her with a friend on June 18th, and handed her the five-stone diamond ring. "I can't give you this," said he, "but I want you to keep it for me till I call for it." He then left in company with his friend (who, by-the-way, is not suspected of any knowledge of the crime committed by Cox). On the following day he returned alone, and asked her to raise some money on the ring. She knew of no pawnshop, she said, but placed it in the hands of an old colored woman, who obtained a loan of $30 on it. Bella produced a ticket on a Bleecker Street pawn-office. She added, that as soon as Cox received the money he went away, and she had not seen or heard from him since. The garnet ring had been given by her to another negro, George Taylor, who was found wearing it around his scarf. As soon as these negroes were safe in the station-house Captain Williams started for Boston. Cox, waiving his right to a warrant of extradition, agreed to accompany the officers to New York. Having been given the recovered jewelry, Captain Williams had himself handcuffed to Cox, and, accompanied by Detective Schmittberger, took the Fall River boat for New York, sleeping with his prisoner in the bridal saloon.

Upon their arrival at New York the party took a carriage and were driven at once to the Twenty-ninth Precinct Station House, where Cox was searched, asked the usual questions, and put in a cell. A half-hour later he was taken to Police Headquarters, then sent to the coroner's office and a moment later taken back, as the coroner was not in. Presently Coroner Woltman appeared at Headquarters, and committing the prisoner to the care of Superintendent Walling, that officer had him searched and then locked up in the strongest cell.

At 10:30 on Thursday morning Cox was taken to the trial room, where the inquest was resumed. The recovered articles of jewelry were identified; Bella Johnson narrated how Cox had handed her the jewelry; Captain Williams testified to the confession in Boston, and Coroner Woltman then called Cox up and interrogated him. He said: "My name is Chastine Cox; I am thirty-two years of age; I was born in Powhatan County, Virginia; I work as a waiter, cook, or do most anything. All I have to say about this matter is that I did not intend to injure a hair of the lady's head. It was my intention to go there and get what I wanted and come away. It was not my intention to do anything disorderly." He then made his mark on the record.

Brisnow Francis was then discharged, and Bella Johnson and George Taylor were removed to the House of Detention as witnesses. The jury was discharged, after announcing the following verdict: "That the said Jane L. DeForest Hull came to her death by violence, causing shock and asphyxia, at the hands of Chastine Cox, at her residence, No. 140 West Forty-second Street, on the night of June 10th or the morning of June 11th."

Cox was then removed to the Tombs and placed in cell No. 38, pending the action of the Grand Jury.

He acknowledged that he had a wife living in the South, but had no desire to hear from her.

An indictment for murder in the first degree has been ordered against him, and he has called upon Messrs. Howe & Hummel to appear as counsel in his behalf.

THE FALLEN LEAVES.

BY WILKIE COLLINS.

CHAPTER XL.—(CONTINUED).

AMELIUS produced the books, in some little surprise at Sally's extraordinary anxiety to begin her lessons, while the unaltered dress lay neglected on the carpet at her feet. A discreet abstract of the history of England, published for the use of young persons, happened to be at the top of the books. The system of education under Amelius recognized the laws of chance; they began with history, because it turned up first. Sally read aloud; and Sally's master explained obscure passages, and corrected occasional errors of pronunciation as she went on. On that particular morning, there was little to explain and nothing to correct. "Am I doing it well to-day?" Sally inquired, on reaching the end of her task.

"Very well, indeed."

She shut the book and looked at her teacher. "I wonder how it is," she resumed, "that I get on so much better with my lessons here than I did at the Home? And yet, it's foolish of me to wonder. I get on better, because you are teaching me, of course. But I don't feel satisfied with myself. I'm the same helpless creature—I feel your kindness, and can't make any return to you—for all my learning. I should like ——" She left the thought in her unexpressed, and opened her copy-book. "I'll do my writing now," she said, in a quiet, resigned way. "Perhaps I may improve enough, some day, to keep your accounts and write your letters for you." She chose her pen a little absently, and began to write. Amelius looked over her shoulder, and laughed; she was writing his name. He pointed to the copper-plate copy on the top line, presenting an undeniable moral maxim, in characters beyond the reach of criticism: "Change is a Law of Nature." "There, my dear, you are to copy that till you're tired of it," said the easy master; "and then we'll try overleaf, another copy beginning with letter D."

Sally laid down her pen. "I don't like 'Change is a Law of Nature,'" she said, knitting her pretty eyebrows into a frown. "I looked at those words yesterday, and they made me miserable at night. I was foolish enough to think that we should always go on together as we go on now, till I saw that copy. I hate the copy! It came to my mind when I was awake in the dark, and it seemed to tell me that we were going to change some day. That's the worst of learning—one knows too much, and then there's an end of one's happiness. Thoughts come to you when you don't want them. I thought of the young lady we saw last week in the park."

She spoke gravely and sadly. The bright contentment which had given a new charm to her eyes since she had been at the cottage died out of them as Amelius looked at her. What had become of her childish manner and her artless smile? He drew his chair nearer to her. "What young lady do you mean?" he asked.

Sally shook her head, and traced lines with her pen on the blotting-paper. "Oh, you can't have forgotten her! A young lady, riding on a grand white horse. All the people were admiring her. I wonder you cared to look at me, after that beautiful creature had gone by. Ah, she knows all sorts of things that I don't—she doesn't sound a note at a time on the piano, and as often as not the wrong one; she can say her multiplication table, and knows all the cities in the world. I dare say she's almost as learned as you are. If you had her living here with you, wouldn't you like it better than only having me?" She dropped her arms on the table, and laid her head on them wearily. "The dreadful streets!" she murmured, in low tones of despair. "Why did I think of the dreadful streets, and the night I met with you—after I had seen the young lady? Oh, Amelius, are you tired of me? Are you ashamed of me?" She lifted her head again, before he could answer, and controlled herself by a sudden effort of resolution. "I don't know what's the matter with me this morning," she said, looking at him with a pleading fear in her eyes. "Never mind my nonsense—I'll do the copy!" She began to write the unendurable assertion that Change is a law of Nature, with trembling fingers and fast-heaving breath. Amelius took the pen gently out of her hand. His voice faltered as he spoke to her.

"We will give up the lessons for to-day, Sally. You have had a bad night's rest, my dear, and you are feeling it—that's all. Do you think you are well enough to come out with me, and try if the air will revive you a little?"

She arose, and took his hand, and kissed it. "I believe if I was dying I should get well enough to go out with you! May I ask one little favor? Do you mind not going into the park to-day?"

"What has made you take a dislike to the park, Sally?"

"We might meet the beautiful young lady again," she answered, with her head down. "I don't want to do that."

"We will go wherever you like, my child. You shall decide—not I."

She gathered up her dress from the floor, and hurried away to her room—without looking back at him, as usual, when she opened the door.

Left by himself, Amelius sat at the table, mechanically turning over the lesson-books. Sally had perplexed and even distressed him. His capacity to preserve the harmless relations between them depended mainly on the mute appeal which the girl's ignorant innocence unconsciously addressed to him. He felt this vaguely, without absolutely realizing it. By some mysterious process of association which he was unable to follow, a saying of the wise Elder Brother at Tadmor revived in his memory, while he was trying to see his way through the difficulties that beset him. "You will meet with many temptations, Amelius, when you leave our Community," the old man had said at parting; "and most of them will come to you through women. Be especially on your guard, my son, if you meet with a woman who makes you feel truly sorry for her. She is on the high road to your passions, through the open door of your sympathies—and all the more certainly if she is not aware of it herself." Amelius felt the truth expressed in those words as he had never felt it yet. There had been signs of a changing nature in Sally for some time past. But they had expressed themselves too delicately to attract the attention of a man unprepared to be on the watch. Only on that morning, they had been marked enough to force themselves on his notice. Only on that morning, she had looked at him, and spoken to him, as she had never looked or spoken before. He began dimly to see the danger to which he had shut his eyes thus far. Where was the remedy? What ought he to do? Those questions came naturally into his mind—and yet, his mind shrank from pursuing them.

He got up impatiently, and busied himself in putting away the lesson-books—a small duty hitherto always left to Toff.

It was useless; his mind dwelt persistently on Sally.

While he moved about the room, he still saw the look in her eyes, he still heard the tone of her voice, when she spoke of the young lady in the park. The words of the good physician whom he had consulted about her recurred to his memory now. "The natural growth of her senses has been stunted, like the natural growth of her body, by starvation, terror, exposure to cold, and other influences inherent in the life that she had led." And then the doctor had spoken of nourishing food, pure air, and kind and careful treatment—of the life, in short, which she had led at the cottage—and had predicted she would develop into "an intelligent and healthy young woman." Again he asked himself, "What ought I to do?"

He turned aside to the window, and looked out. An idea occurred to him. How would it be if he summoned courage enough to tell her that he was engaged to be married?

No! Setting aside his natural dread of the shock that he might inflict on the poor grateful girl who had only known happiness under his care, the detestable obstacle of Mr. Farnaby stood immovably in his way. Sally would be sure to ask questions about his engagement, and would never rest until they were answered. It had been necessarily impossible to conceal her mother's name from her. The discovery of her father, if she heard of Regina and Regina's uncle, would be simply a question of time. What might such a man be not capable of doing; what new act of treachery might he not commit, if he found himself claimed by the daughter whom he had deserted? Even if the expression of Mrs. Farnaby's last wishes had not been sacred to Amelius, this consideration alone would have kept him silent for Sally's sake.

He now doubted for the first time if he had calculated wisely in planning to trust Sally's sad story, after his marriage, to the sympathies of his wife. The jealousy that she might naturally feel of a young girl, who was an object of interest to her husband, did not present the worst difficulty to contend with. She believed in her uncle's integrity as she believed in her religion. What would she say, what would she do, if the innocent witness to Farnaby's infamy was presented to her? if Amelius asked the protection for Sally which her own father had refused to her in her infancy; and if he said (as he must say): "Your uncle is the man"? And yet what prospect could he see but the prospect of making the disclosure when he looked to his own interests next, and thought of his wedding-day? Again the sinister figure of Farnaby confronted him. How could he receive the wretch whom Regina would innocently welcome to the house? There would be no longer a choice left; it would be his duty to himself to tell his wife the terrible truth. And what would be the result? He recalled the whole course of his courtship, and saw Farnaby always on a level with himself in Regina's estimation. In spite of his natural cheerfulness, in spite of his inbred courage, his heart failed him, when he thought of the time to come.

As he turned away from the window, Sally's door opened; she joined him dressed for a walk. Her spirits had rallied, assisted by the cheering influence of dressing to go out. Her charming smile brightened her face. In sheer desperation, reckless of what he did or said, Amelius held out both hands to welcome her. "That's right, Sally!" he cried. "Look pleased and pretty, my dear; let's be happy while we can—and let the future take care of itself."

CHAPTER XLI.

THE capricious influences which combine to make us happy are never so certain to be absent influences as when we are foolish enough to talk about them. Amelius had talked about them. When he and Sally left the cottage, the road which led them away from the park was also the road which led them past a church. The influence of happiness left them at the church-door.

Rows of carriages were in waiting; hundreds of idle people were assembled about the church-steps; the thunderous music of the organ rolled out through the open doors—a grand wedding, with choral service, was in course of celebration. Sally begged Amelius to take her in to see it. They tried the front entrance, and found it impossible to get through the crowd. A side entrance, and a fee to a verger, succeeded better. They obtained space enough to stand on, with a view of the altar.

The bride was a tall, buxom girl, splendidly dressed; she performed her part of the ceremony with the most unruffled composure. The bridegroom exhibited an instructive spectacle of aged nature sustained by art. His hair, his complexion, his teeth, his breast, his shoulders, and his legs, showed what the wig-maker, the dentist, the tailor, and the hosier can do for a rich old man, who wishes to present a juvenile appearance while he is buying a young wife. No less than three clergymen were present conducting the sale. The demeanor of the rich congregation was worthy of the glorious bygone days of the Golden Calf. So far as could be judged by appearances, one old lady, in a pew close to the place at which Amelius and Sally were standing, appeared to be the only person present who was not favorably impressed by the ceremony.

"I call it disgraceful," the old lady whispered to a charming young person seated next to her.

But the charming young person—being the legitimate product of the present time—had no more sympathy with questions of sentiment than a Hottentot. "How can you talk so, grandmamma?" she whispered back. "He has twenty thousand a year—and that lucky girl will be mistress of the most splendid house in London."

"I don't care," the old lady persisted, "it's not the less a disgrace to everybody concerned in it. There is many a poor friendless creature, driven by hunger to the streets, who has a

Digitized by Google

better claim to our sympathy than that shameless girl, selling herself in the house of God! I'll wait for you in the carriage—I won't see any more of it."

Sally touched Amelius. "Take me out!" she whispered faintly.

He supposed that the heat in the church had been too much for her. "Are you better now?" he asked, when they got into the open air.

She held fast by his arm. "Let's get further away," she said. "That lady is coming after us—I don't want her to see that I am one of the creatures she talked about. Is the mark of the streets on me, after all you have done to rub it out?"

The wild misery in her words presented another development of her character which was entirely new to Amelius. "My dear child," he remonstrated, "you distress me when you talk in that way. God knows the life you were leading when I met with you was through no fault of yours. Forget it in the life you are leading now."

But Sally's mind was still full of its own acutely painful sense of what the lady had said. "I saw her," she burst out—"I saw her look at me while she spoke!"

"And she thought you better worth looking at than the bride—and quite right, too!" Amelius rejoined. "Come, come, Sally! be like yourself again. You don't want to make me unhappy about you, I am sure?"

He had taken the right way with her; she felt that simple appeal, and asked his pardon with all the old charm in her manner and her voice. For the moment she was "Simple Sally" again. They walked on in silence. When they had lost sight of the church Amelius felt her hand beginning to tremble on his arm. A mingled expression of tenderness and anxiety showed itself in her blue eyes as they looked up at him. "I am thinking of something else now," she said; "I am thinking of you. May I ask you something?"

Amelius smiled. The smile was not reflected as usual in Sally's face. "It's nothing particular," she explained, in an odd, hurried way; "the church put it into my head. You——" she hesitated, and tried it under another form. "Will you be married yourself, Amelius, one of these days?"

He did his best to evade the question. "I am not rich, Sally, like the old gentleman we have just seen."

Her eyes turned away from him; she sighed softly to herself. "You will be married some day," she said. "Will you do one kind thing more for me, Amelius, when I die? You remember my reading in the newspaper of the new invention for burning the dead, and my asking you about it. You said you thought it was better than burying, and you had a good mind to leave instructions to be burnt instead of buried, when your time came. When my time has come will you leave other directions about yourself, if I ask you?"

"My dear, you are talking in a very strange way! If you will have it that I am to be married some day, what has that to do with your death?"

"It doesn't matter, Amelius. When I have nothing left to live for, I suppose it's as likely as not I may die. Will you tell them to bury me in some quiet place, away from London, where there are very few graves? And when you leave your directions don't say you are to be burnt. Say—when you have lived a long, long life, and enjoyed all the happiness you have deserved so well—say you are to be buried, and your grave is to be near mine. I should like to think of the same trees shading us and the same flowers growing over us. No! don't tell me I am talking strangely again—I can't bear it; I want you to humor me and be kind to me about this. Do you mind going home? I'm feeling a little tired—and I know I'm poor company for you to-day."

The talk flagged at dinner-time, though Toff did his best to keep it going.

In the evening the excellent Frenchman made an effort to cheer the two dull young people. He came in confidentially with his fiddle and said he had a favor to ask. "I possess some knowledge, sir, of the delightful art of dancing. Might I teach young miss to dance? You see, if I may venture to say so, the other lessons—Oh, most useful, most important, the other lessons! but they are just a little serious. Something to relieve her mind, sir—if you will forgive me for mentioning it."

He played a few notes on the fiddle, and placed his right foot in position, and waited amiably to begin. Sally thanked him and made the excuse that she was tired. She wished Amelius good-night without waiting until they were alone together, and, for the first time, without giving him the customary kiss.

Toff waited until she had gone, and approached his master on tiptoe, with a low bow.

"May I take the liberty of expressing an opinion, sir? A young girl who rejects the remedy of the fiddle presents a case of extreme gravity. Don't despair, sir! It is my pride and pleasure to be never at a loss where your interests are concerned. This is, I think, a matter for the ministrations of a woman. If you have confidence in my wife, I venture to suggest a visit from Madame Toff."

He discreetly retired and left his master to think about it.

The time passed—and Amelius was still thinking, and still as far as ever from arriving at a conclusion, when he heard a door opened behind him. Sally crossed the room before he could rise from the chair; her cheeks were flushed, her eyes were bright, her hair fell loose over her shoulders—she dropped at his feet and hid her face on his knees. "I'm an ungrateful wretch!" she burst out; "I never kissed you when I said good-night."

With the best intentions, Amelius took the worst possible way of composing her—he treated her trouble lightly. "Perhaps you forgot it?" he said.

She lifted her head, and looked at him with the tears in her eyes. "I'm bad enough," she answered; "but not so bad as that. Oh, don't laugh! there's nothing to laugh at. Have you done with liking me? Are you angry with me for behaving so badly all day, and bidding you good-night as if you were Toff? You sha'n't be angry with me!" She jumped up, and sat on his knee, and put her arms round his neck. "I haven't been to bed," she whispered; "I was too miserable to go to sleep. I don't know what's been the matter with me to-day. I seem to be losing the little sense I ever had. Don't you know that I would die for you, I am so fond of you—and yet I've had bitter thoughts, as if I were a burden to you, and I had done a wrong thing in coming here—and you would have told me so, only you pitied the poor wretch who had nowhere else to go." She tightened her hold round his neck, and laid her burning cheek against his face. "Oh, Amelius, my heart is sore! Kiss me, and say, Good-night, Sally!"

He was young—he was a man—for a moment he lost his self-control; he kissed her as he had never kissed her yet.

Then, he remembered; he recovered himself; he put her gently away from him, and led her to the door of her room, and closed it on her in silence. For a while he waited alone. The interval over, he rang for Toff.

"Do you think your wife would take Miss Sally as an apprentice?" he asked.

Toff looked astonished. "Whatever you wish, sir, my wife will do. Her knowledge of the art of dressmaking is——" Words failed him to express his wife's immense capacity as a dressmaker. He kissed his hand in mute enthusiasm and blew the kiss in the direction of Madame Toff's establishment. "However," he proceeded, "I ought to tell you one thing, sir, the business is small, small, very small. But we are all in the hands of Providence—the business will improve, one day." He lifted his shoulders and lifted his eyebrows, and looked perfectly satisfied with his wife's prospects.

"I will go and speak to Madame Toff myself, to-morrow morning." Amelius resumed. "It's quite possible that I may be obliged to leave London for a little while—and I must provide in some way for Miss Sally. Don't say a word about it to her yet, Toff; and don't look miserable. If I go away, I shall take you with me. Good-night."

Toff, with his handkerchief half way to his eyes, recovered his native cheerfulness. "I am invariably sick at sea, sir," he said; "but, no matter, I will attend you to the uttermost ends of the earth."

So honest Amelius planned his way of escape from the critical position in which he found himself. He went to his bed troubled by anxieties which kept him waking for many weary hours. Where was he to go to, when he left Sally? If he could have known what had happened, on that very day, on the other side of the Channel, he might have decided (in spite of the obstacle of Mr. Farnaby) on surprising Regina by a visit to Paris.

(*To be continued.*)

San Francisco's Mixed Population.

THE following is a classification of voters in San Francisco as regards nativity: Peru, 5; Jamaica, 25; Germany, 5,644; Ireland, 10,027; England, 1,436; Scotland, 479; France, 665; Austria, 292; Poland, 132; Portugal, 42; Holland, 62; Italy and Norway, 221; Sweden, 475; Denmark, 280; Australia, 153; at sea, 21; Canada, 573; Wales, 86; Russia, 196; Sandwich Islands, 13; Society Islands, 1; Central America, 7; Hayti, 1; East India, 6; British America, 4; Philippine Islands, 1; South America, 3; Buenos Ayres, 3; Prince Edward Island, 43; Cuba, 3; Van Diemen's Land, 2; China, 5; Brazil, 6; Honduras, 1; Cape of Good Hope, 1; Gibraltar, 1; St. Croix, 2; Bermuda, 1; St. Helena, 1; Corsica, 1; Surinam, 3; Tahiti, 2; Belgium, 37; Isle of Man, 7; West Indies, 34; Turkey, 2; Azores, 5; Mexico, 28; Chili, 24; Barbadoes, 5; Fayal, 1; Spain, 23; Java, 1; Greece, 6; Massachusetts, 2,591; Pennsylvania, 1,229; Maine, 1,334; Vermont, 397; Wisconsin, 147; California, 1,488; Iowa, 60; New York, 4,416; Louisiana, 318; Maryland, 448; Kentucky, 335; Delaware, 56; Connecticut, 401; Ohio, 740; Tennessee, 98; Missouri, 284; Michigan, 180; Illinois, 280; Rhode Island, 255; District of Columbia, 87; Indiana, 172; New Hampshire, 422; New Jersey, 390; South Carolina, 97; Virginia, 360; Mississippi, 61; Arkansas, 10; Minnesota, 15; Alabama, 61; North Carolina, 54; Texas, 28; Georgia, 58; Washington Territory, 7; Oregon, 21; Florida, 13.

Bird Lore.

IN the Lech Valley there is a belief that the ravens never drink during June, because in that month they led the prophet Elijah. In North Germany, Swabia, and Tyrol, a superstition prevails that if the eggs are taken from a raven's nest, boiled and replaced, the old raven will bring a root or stone to the nest, which he fetches from the sea. This "raven stone" is very valuable, for it confers great fortune on its owner, and has likewise the power of rendering him invisible when worn on the arm. The stone is found in the nests of magpies as well as ravens, and as it makes the nest itself invisible it must be sought with the aid of a mirror. In Pomerania and Rugen the method is somewhat different. The parent birds must have attained the age of one hundred years, and the would-be possessor of the precious "stone" must climb up and kill one of the young ravens, who must be a cock bird, and not over six weeks old. Then the aggressor descends, taking careful note of the tree. The old raven immediately returns with the stone, which he puts in his son's beak, and thereupon, both tree and nest become invisible. The man, however, feels for the tree, and on reaching the nest he carries off the stone in triumph. Rugen folks declare that this feat can only be accomplished by the help of Satan, and that the man's soul is the price paid for such assistance. The Swabian peasantry maintain that young ravens are nourished solely by the dew from heaven during the first nine days of their existence. As they are naked, and of a light color, the old birds do not believe that they are their progeny, and consequently neglect to feed them; but they occasionally cast a glance at the nest, and when the young ones begin to show a little black down on their breasts by the tenth day, the parents bring them the first carrion.

SCIENTIFIC INTELLIGENCE.

A Part of the Buildings of the Universal Exhibition has been purchased by the French War Office for the use of the aeronautical school at Meudon. It will be utilized for building and inflating balloons.

A Notable Change has taken place in the Jardin des Plantes of Paris, and should be noticed by foreigners. All the galleries and houses are open every day from one to four without any ticket of admittance being required from visitors. The plant-houses only are closed on Sunday.

At a Meeting of the Victoria Philosophical Institute, a paper was read by Thomas Carr Callard on "The Contemporaneity of Man with the extinct mammalia (as taught by recent cavern explorations), and its bearing upon the question of man's antiquity." The author contended that the cavern evidence points to the more recent extinction of the mammalia rather than to the remote existence of man.

A New Form of Disease has become apparent in the heart of a very crowded portion of London. It is a new form of Cyprus fever, and a diagnosis of a recent malignant case shows the patient to be suffering from hallucinations and lowered vitality. The Faculty ascribe the disease to impure water, and have given it the name of dotephobia; and, though it is seldom fatal, the sufferer remains but a shadow of his former self.

A Complete History of all North Polar Expeditions from the remotest ages down to the present day is about to be published by Cotta, of Stuttgart. The title will be "Im ewigen Eis"; the author is the popular writer, Herr Friedrich von Hellwald. Numerous illustrations, maps, and plans will enhance the value of the work, which will appear in thirty parts. The well-known explorer, Julius Payer, one of the commanders of the Austrian Polar Expedition in 1874, has accepted the dedication of the work.

According to the Japan Papers, a singular innovation has lately taken place in an ancient branch of the trade of the country. Mizuden, a town in the province of Cambano-kuni, has always been famous for the manufacture of crape, the principal industry in the province. Hitherto, however, the crape has been manufactured from Japanese silk, but it has recently been discovered that the kind of silk required can be imported from Corea of better quality and much cheaper than it can be procured at home.

A Novel Feature of recent exports from the United States was the sale of 100 tons of iron on Chinese account. This is said to be the first shipment of American iron ever made to that market. China annually purchases a large amount of British iron, but until this transaction, the American commodity has never been imported, because of its higher cost. The abundance of iron in America, and the great improvements in the processes of its manufacture, seem to point to a large export trade in the course of a few years.

M. Jaubert, a scientist and optician of the first order, has obtained the authorization of the French Government to establish at the Trocadéro a collection of the numerous scientific instruments which he has invented or perfected, and which would be the beginning of a popular observatory. This observatory would have a laboratory for micrographical studies and researches; a laboratory for researches relative to the physics of the universe; a technological school for the execution of optical surfaces of large dimensions; and a laboratory for astronomical and microscopical photography. Professors, scientific men and lecturers are invited to aid the enterprise.

On an Earthenware Vase of the bronze age found at the lacustrine station on the Lake of Neufchatel, in Switzerland, Professor Forel, of Lausanne, remarked five impressions evidently made by the fingers of the operative while the clay was plastic. He took casts and then carefully examined and measured them. The nail of the thumb, the whole of which was reproduced, was a very pretty one, with a regular curve and moderately convex; it was twelve millimetres long and eleven broad. The nail of the forefinger was less perfect and was deeply convex in its width. From the dimensions and form of the fingers the vase had evidently been worked by a female. The vase is preserved in the museum at Lausanne.

The Self-registering Targets invented by Mr. C. Beard is contained within a casing in which there is an opening of the size of the disk or target to be exposed, and within the casing there is a roller. Paper or other material made in a long length is progressively wound forward by the roller, and so made to pass the opening in the casing. Immediately behind the opening, a plate is arranged, but the paper or other material passes in front of the plate. Each shot which strikes within the area of the opening thus perforates the paper or material and strikes the plate, which it forces back sufficiently to release a detent and allow the roller to turn under the influence of a weight or spring. The paper or other material is thus drawn forward for a sufficient length to change one target for another.

The Last Few Weeks have again been rich in "finds" at Olympia. Besides further portions of the pediment, many marbles have likewise been found dating from the Roman period, among them an excellently-preserved head of the elder Faustina, wife of Antoninus Pius, whose neck exactly fits a female torso found in the exedra of Herodes Atticus; a headless female draped figure, and two nude male torsos. A deeper excavation near the Leonidaion yielded three very valuable bronze inscriptions; and at the southwest corner of the Altis were found many remains indicative of the subjugation of Greece by the Romans, such as fragments of monuments, etc., with inscriptions; one a fragment of a decree concerning the holding of the Olympian games, in which mention is made of the honors that should be accorded to the Roman emperor.

Professor Cohn, of Breslau, has recently performed some interesting experiments to detect how far electric lighting effects our ability to distinguish colors as well as distant objects. He finds that letters, patches, and colors can be distinguished at much greater distances than in daylight or by gaslight. The experiments were conducted in the physical cabinet with a Gramme machine revolving 600 times in a minute, and driven by a three-horse power engine. With the electric light the ability to discern yellow was sixty times greater, red six times, green one and a half times, and the same for blue, as compared with daylight. With the Snell alphabet the ratio was 1 and 1.5 in favor of electric light, and with the Burchhardt points the same; and eyes which were weak in gas or daylight were found to be much stronger under electric illumination.

The Line from French Guiana to Para was interrupted by some large fish whose sharp teeth had left traces in the insulating envelope of the wires. The saw-fish has tried his terrible weapon upon the cables in the waters of the Antilles. Turtles destroyed the lines from Key West to Havana, and the cable in the Persian Gulf was broken by a whale which had blindly dashed against it; it became twisted in the broken end, and, being unable to rise to the surface to breathe, was drowned. When the engineers arrived at the spot to repair the break they found the monster still entangled in the toils. In some regions the cables are worn through by vibration, as they rest on rocks at a short distance from each other and are moved to and fro by the currents. At the bottom of the sea the rapacious little animals called the *teredo* or *limnoria* attack and destroy the gutta-percha envelope. These are a few of the dangers to which submarine cables are exposed.

PERSONAL GOSSIP.

ANOTHER royal marriage is gossiped of in Europe—that of the Crown Prince of Sweden and Norway and the Princess Victoria of Baden, the Emperor William's granddaughter.

GENERAL A. J. MYER, Chief of the United States Signal Service, has arrived in Paris from Rome. He goes to London to arrange matters of mutual interest with the British Meteorological Office.

THE Indian Government has received information that Abdul Rapman, the Pretender to the Afghan throne, who has hitherto lived under Russian protection, has invaded Bedakshan, and that the Afghan troops in Balkh have revolted.

MR. JAMES E. MURDOCH, it is now stated, will make in October only a fitting reappearance upon the stage. He will appear only in Philadelphia, his intention being to thus celebrate the fiftieth anniversary of his coming upon the dramatic stage.

THE Pope has conferred the Grand Cross of the Order of Pius IX. on Khaireddin Pasha, Grand Vizier; Caratheodori Pasha, Minister of Foreign Affairs; Osman Pasha, Minister of War, and Said Pasha, Minister of Justice and Worship, in recognition of their share in the settlement of the Armenian schism.

PRINCE FREDERICK of the Netherlands is one of the few remaining contemporaries of the Emperor William. He was born February 28th, 1797—William was born on the 22d of the ensuing March—and was married May 24th, 1825, to the Princess Louise, daughter of William III. of Prussia, and the present Emperor's sister.

MR. S. G. WILLIAMS, a graduate of Hamilton College, and at present principal of the Cleveland (O.) High School, is to fill the chair of geology in Cornell University, formerly occupied by Professor Hartt, who died soon after being called to the directorship of the Imperial Geological Survey of Brazil. Mr. Williams will pass the next year in Europe in preparation for his new work.

A NEW professorship has been founded in the Congregational Theological Seminary of Chicago by a donation of $40,000, and Rev. G. B. Willcox, D.D., of Stamford, Conn., has been appointed to fill the new chair, which is that of pastoral theology, now taught by Professor Hyde, who is to be transferred to the professorship of Greek.

THE Rev. J. A. Lature, Bishop of the South, the Rev. G. F. Stevens, Bishop of the Colored Congregations and People of the South, and the Rev. A. S. Richardson, Bishop of England and Ireland, elected at a meeting of the General Council recently held in Chicago, were consecrated by Presiding Bishop Nicholson, assisted by Bishop Fallows, in the Second Reformed Episcopal Church, Philadelphia, June 22d.

PROFESSOR ALLEN, who has become the late Professor Hadley's successor in the Greek Chair in Yale College, was graduated from Oberlin College in 1863. After some years' study in Europe he taught in Harvard College, and later has been a Professor in the University of Cincinnati. Mr. William I. Knapp, the new Professor of Modern Languages, was graduated from Madison University in 1851. He has been an instructor in Vassar College, and has passed more than ten years in Europe.

NILSSON and Trebelli were educated in Paris, Titiens and Gerster in Paris and Pesth, Albani, Miss Kellogg and Miss Thursby in America. Studying in Italy is quite unnecessary. Nor is Milan the best place for the musical aspirant. Of the two leading teachers of singing in Milan, one is an uneducated peasant of nearly eighty, who speaks very bad Italian, and whose suggestive theory is that the breath comes, not from the lungs, but from the bones, while the other is also an octogenarian, who gives his lessons in bed.

A YOUNG American woman, aged nineteen years, named Miss Leila A. Noble, of Rome, Ga., has just distinguished herself by descending to the lowest depths of the Dolcoath tin mine in Cornwall, England, to the great admiration of the miners. She reached a depth of 2,340 feet, and in ascending she had to climb up perpendicular ladders of 1,200 rounds, reaching nearly twice as high as the top of St. Paul's. The trip up and down occupied four hours and a half, and the fair adventuress brought up a large lump of tin ore, dug with her own hands, as a trophy.

THE solemn ceremonies of consecrating the Rev. Henry Chauncey Kelley, the first Episcopal Bishop of Mexico, took place in Trinity Church, Pittsburg, Pa., June 24th. At ten o'clock A. M. the clergy, about fifty in number, entered the church in procession. The Nicene Creed was recited by the clergy and congregation, and the consecration service followed. The bishops present were Lee of Delaware, who presided in the absence of the venerable Bishop Smith of Kentucky, who was unable to be present on account of illness; Stevens of Pennsylvania, Howe of Central Pennsylvania, Keerfoot of Pittsburg, Littlejohn of Long Island, Bedell of Ohio, and Coxe of Western New York.

GENERAL GRANT is expected to arrive at Nagasaki in the first or second week of July. He will be received there by a deputation of high Japanese officials, including Yoshida, late Minister at Washington. A Japanese ironclad will be placed at the disposal of the party. If agreeable, arrangements will be made for visiting the battlefields of the late war in Kiushiu, a southwestern island of Japan. Part of the journey to Tokio will be by land, where the party will probably arrive on the 1st of August. After a round of entertainments under the Government auspices in the capital and vicinity, General Grant will visit Yokohama and accept the hospitalities of the United States Consul-General and others.

THE following is given as the annual allowances to the Khédive and the members of his family: To his Highness the Khédive, £100,000; the Princess mother, £14,000; Chahret Hanem, first wife, £20,000; Djanyar Hanem, second wife, £20,000; Djachmet Assel Hanem, third wife, £20,000; Cheik Noor Hanem, fourth wife, £5,000; Thewfik Hanem (Madame Mansour Pasha), £20,000; to Prince Tewfik Pasha, £20,000; to Prince Hassen Pasha, £20,000; to Prince Hassan Pasha, £20,000; to Prince Ibrahim Pasha (one), £18,000; to Prince Mahmoud Bey, £12,000; Djemileh Hanem, (Madame Ahmed Bey), £10,000; to Prince Fuad Bey, £8,000; Kmineh and Nemet Hanem, £8,000; totals, ($1,800,000), £360,000.

M. DE LESSEPS is seventy-four years old, but he looks only fifty. He has a high, broad forehead, is rather thick set, with snow-white hair and mustache, and the piercing eye of an eagle. After the completion of the canal he married Mademoiselle de Bragard, a very beautiful and accomplished lady, only forty years younger than himself. By his first wife he has two sons, by his second seven children, the youngest an infant. He is a member of the Academy of Sciences, and a punctual attendant at its weekly meetings. His studies are now exclusively devoted to the subject of the inter-oceanic canal on this continent. M. de Lesseps has selected a spot on the barriers of the Suez Canal for his burial place, and designated this motto to be inscribed on his tomb: "Aperium terram gentibus" (I will open the earth to the nations).

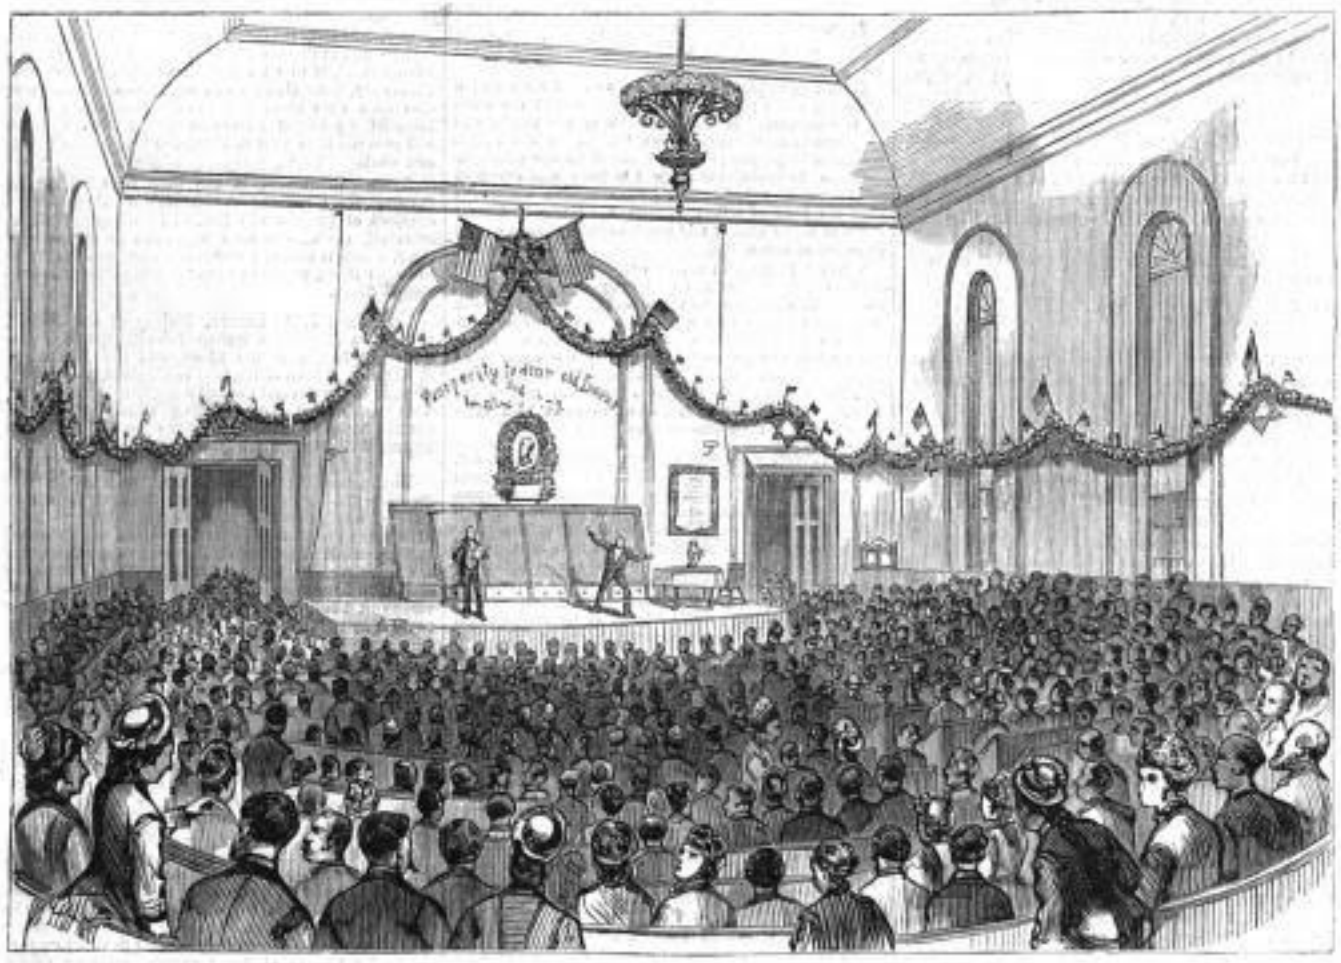
THE FIRST LESSON.



CLOSING EXERCISES AT THE NEW YORK DEAF AND DUMB INSTITUTION.

AMONG the interesting features of the college commencement season, the closing exercises for the year at the New York Institution for the Instruction of the Deaf and Dumb, at Carmansville, on Wednesday, June 25th, were deserving of more than passing notice. This grand institution is very dear to the hearts of our benevolent and sympathetic citizens. The necessity of such an enterprise is so great, the instruction there imparted has been so thorough, and the results are so marvelous, that it is always a real pleasure to attend the exercises that mark the close of the school year.

The programme, as may be imagined, contained many novel exhibitions. These were given under the direction of Professor Isaac L. Peet, LL.D., by the pupils, and illustrated the methods of teaching, and the accomplishments attained. The first exercise was devoted to the children who had been under instruction for a period of less than one year, and by it the audience were shown how the teachers secure the confidence of the little unfortunates and establish the earliest means of communicating thoughts and wants. Next came the methods and results of instruction, not only for the deaf and dumb, but the blind deaf mutes. In the case of the latter the reading of the finger-signs is done by the blind pupil placing a hand over the hand of a deaf mute, so as to feel each movement of the fingers. Questions from the audience were then put to the graduating members of the high class, which being

EXTERIOR VIEW OF THE INSTITUTION

THOMAS F. FOX DELIVERING THE VALEDICTORY ADDRESS IN THE CHAPEL.

nolds, Brooklyn; W. F. Howell, Long Island; Maggie F. Barry, Canandaigua; Louisa A. Chum, New Jersey, and Charles Shattuck. To Thomas F. Fox was awarded a gold medal for excellence in all branches. He delivered the Valedictory address with rapid gestures, so that Professor Peet, who translated it, was not able to keep pace with the mute eloquence. The report of the examination of the high class was read by E. P. Griffin, and of the general examination of the pupils by the Rev. Dr. S. H. Weston. Erastus Brooks, Avery T. Brown and many prominent ladies and gentlemen were present during the exercises, which, after the distribution of certificates, diplomas and prizes, were closed with the Lord's Prayer and the Doxology, rendered by a number of little girls in concert.

Besides the graduating class, fifty other pupils leave the institution, having completed the regular course. Among these is Jesse Bunker, a son of Chang, one of the Siamese Twins. Bunker is a bright-looking young fellow. In answer to a question put through the medium of Mr. Jenkins, instructor in articulation, he said that his father, Chang, was the twin on the left-hand side. He has five sisters and one brother. One of his sisters is also a deaf mute, and is being educated in North Carolina. His family lives at Mount Airy, in that State. He has been at the New York Institution only a year, having attended a similar school in North Carolina eight years. He is now eighteen years old, and intends to become a farmer.

EXERCISE IN ARTICULATION.

interpreted to them by the principal, they answered on the blackboard. The written answers to "What do you think of the state of the country?" "Who was the Prince Imperial, lately killed in Zululand?" "What do you know about the Weston walking match?" showed that the graduates were familiar with the passing events of the day.

The illustrations of the sign language which followed were watched with the utmost attention by the audience. The "Marseillaise Hymn" was rendered by Miss Dillingham with fingers and arms in an exceedingly clever manner — so clear, indeed, that there was no difficulty in understanding the lines. Then Miss Florence H. Jones interpreted Moore's "Parting" with equal grace, and eight little girls gave "How Sleep the Brave!" with an expression and action that elicited the heartiest applause. A patriotic dialogue followed between two deaf-mute boys.

The graduating class of 1879, having studied three years in the high class, was composed of Thomas F. Fox, John Hogan and Florence H. Jones, of New York; William B. Magill, Jersey City; James O'Neil, Whitehall, N. Y.; George L. Rey-

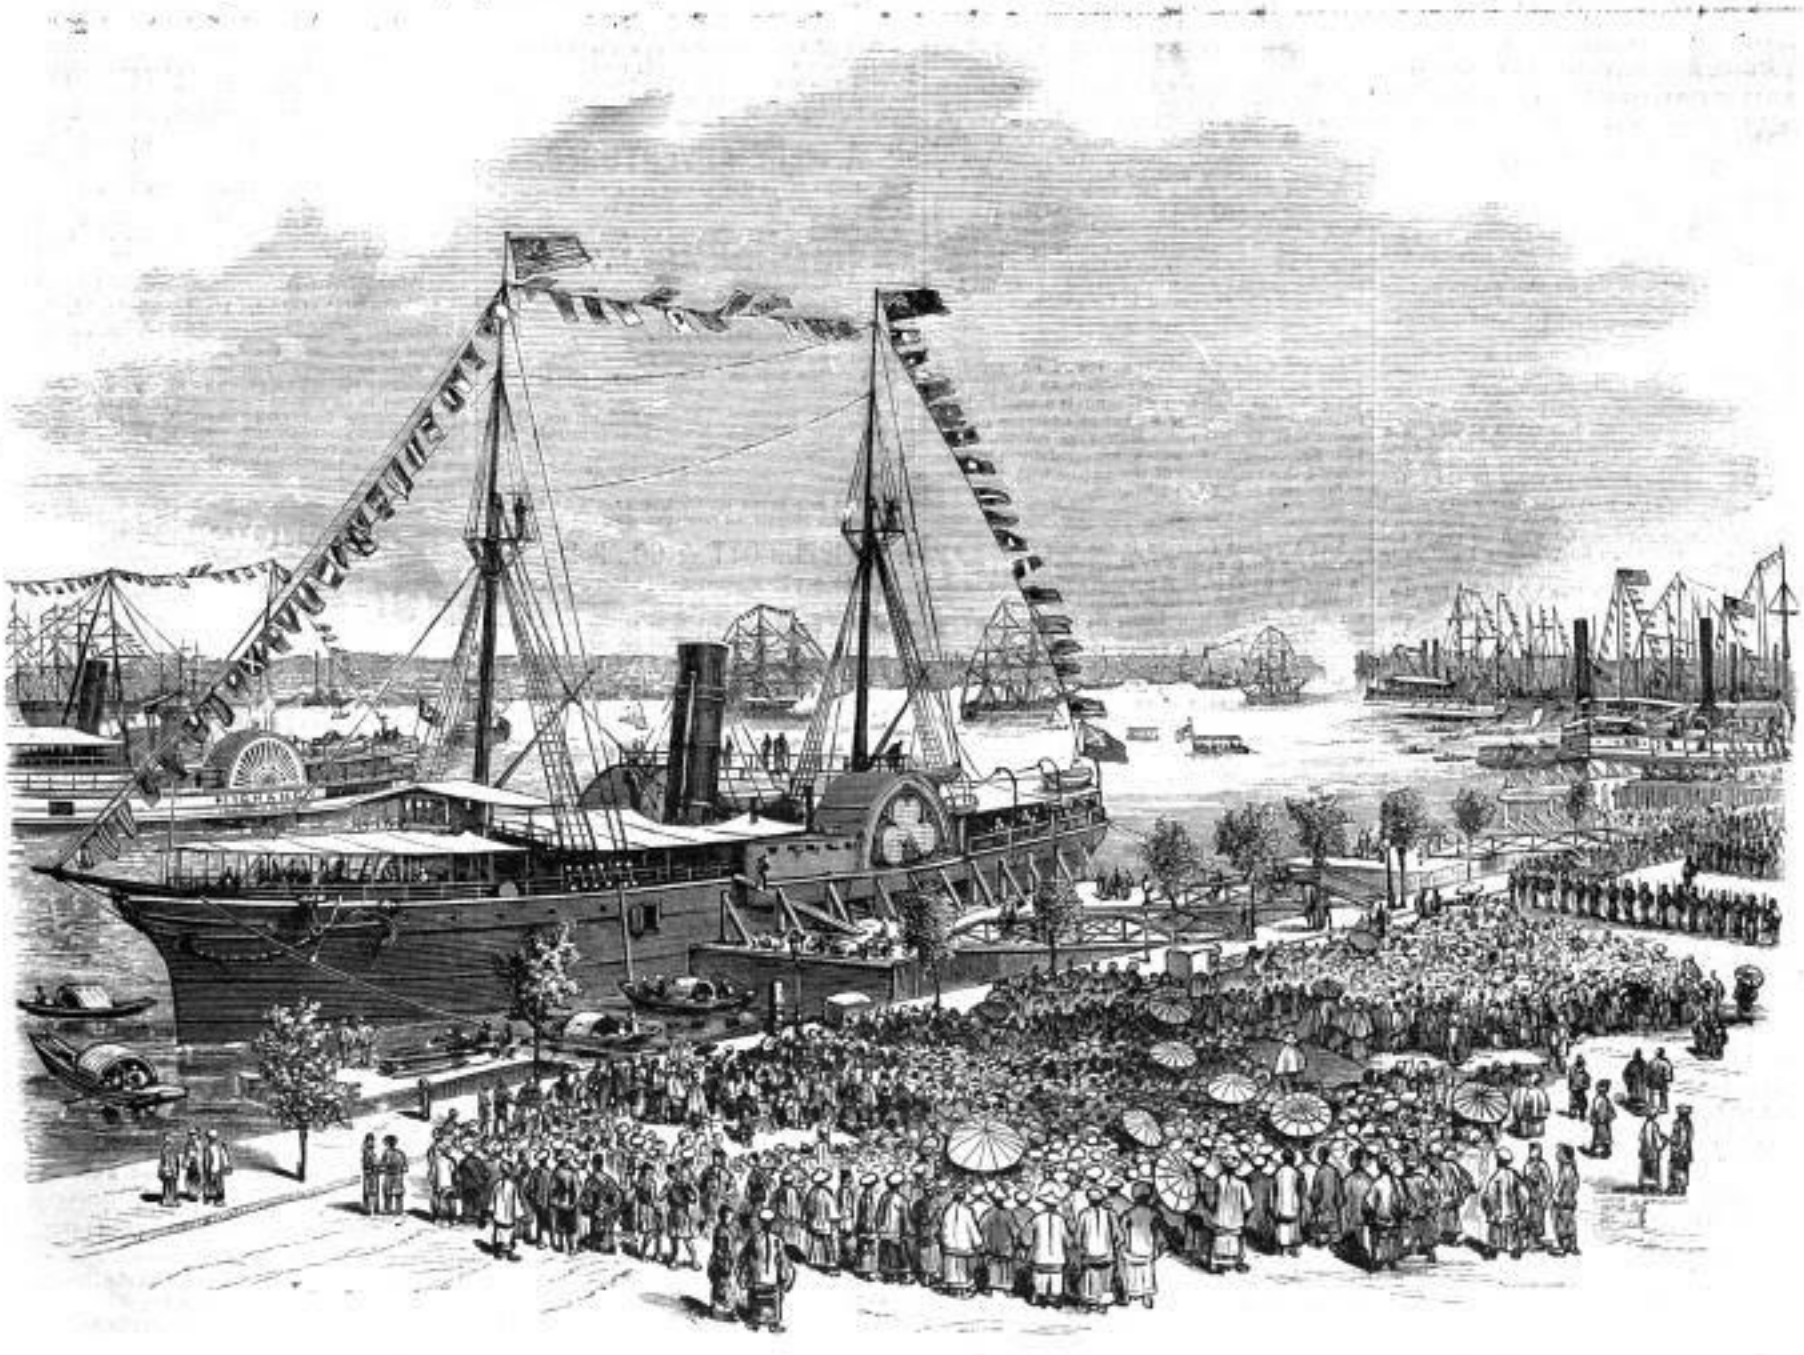
THE AMERICAN "BUND" AND UNITED STATES CONSULATE, WHERE THE EX-PRESIDENT AND PARTY WERE QUARTERED DURING THEIR VISIT.



RECEPTION OF GENERAL GRANT AND PARTY AT SHANGHAI, CHINA.

THE reception accorded to General Grant and party in China was of the heartiest character, and completely eclipsed that given to the Duke of Edinburgh and the one with which the Grand Duke Alexis was honored. The United States steamer *Ashuelot*, bearing the ex-Presidential party, came in sight of the Woosung forts on the morning of May 17th, and was received with a salute of twenty-one guns. As soon as the firing of the Chinese forts ceased, the batteries of the *Iron Duke*, the flagship of the admiral commanding the British fleet in China, ran up the American flag to the fore and fired twenty-one guns. The Chinese gunboats joined in the chorus, and the *Ashuelot* returned the salutes. There was so much cannonading and so much smoke that it seemed as if a naval battle were raging. As the war-vessel came in view of the shipping the sight was very beautiful. The different men-of-war all fired salutes and manned yards, the merchantmen at anchor were dressed, and as the *Ashuelot* passed, the crews cheered. The General stood on the quarterdeck and bowed his thanks. At three o'clock the gig of the *Ashuelot* was manned, and General and Mrs. Grant, Colonel Grant, ex-Secretary Borie, D. H. Bailey, United States Consul-General, and John Russell Young, embarked, the *Ashuelot* firing a royal salute of twenty-one guns, to which responses were immediately made by several other men-of-war in the river off the French Bund.

All the shipping in the river was covered with bunting. Flags of all nations ornamented the Bund. The arrival of the United States steamer *Ashuelot*, with the municipal guest aboard, had been telegraphed from Gutzlaff, at the mouth of the Yangsti, ninety miles distant, early in the morning, so that there was plenty of time for the newspapers to issue their extras and for all the foreign residents to assemble according to programme.

The large warehouse of the China Merchants' Steam Navigation Company, lying just above the French Bund, had been cleared of all traffic and appropriately fitted up as a reception-room at the landing. The floor around three sides had been raised in the form of an amphitheatre, and all covered with fresh Chinese matting. Seats for 800 foreign residents and native officials were all filled. When the General reached the reception-room he was welcomed by H. W. Little, chairman of the Reception Committee, with a brief and cordial address, to which he responded with equal brevity and heartiness.

Immediately at the close of the remarks several

high civil and military mandarins were introduced to the distinguished guest, and after a few moments of informal greetings, a procession was formed to escort the party to their headquarters while in the city, the United States Consulate, at what is called the "American Bund." The Manilla Band, which had played American national tunes while the people were waiting, was stationed at the head. The Shanghai Volunteer Rifles was the General's immediate escort. The Taotai's body-guard, a regiment of Chinese soldiers, did their best to obey the frantic commands of their officers, who were very anxious to make the native part of the reception very conspicuous. Sailors and marines from the American man-of-war, noble in appearance, cleanly in dress, and proud of the occasion, stepped promptly into line, and the Shanghai Volunteer Artillery closed the rear. Soon after starting, the General's horses became unmanageable, but, as an agreeable experience all around, and as giving another opportunity to show the real cordiality of the day, the volunteers unhitched the carriage and drew it themselves to the American Consulate. In the evening Consul-General Bailey gave his guests a dinner. On Monday there was a torchlight procession of the Fire Department, when many of the residents on the Bund illuminated their buildings, and gas-jets, with designs and words of appreciation and welcome, adorned both the Club and the Consulate. On Tuesday the Taotai, or Governor of the city, gave an official Chinese tea-party at the municipal quarters, which lasted for six hours and had sixty courses.

Madame Gerster-Gardini.

THE *rentrée* of Madame Etelka Gerster at Her Majesty's has created a *furore*, and London society, albeit so "cursedly impassible," exhibited an interested excitement slightly bordering upon the electric gush of its Parisian neighbors. Grim whispers that the diva's voice had suffered from her transatlantic triumphs were solemnly uttered, and the sisters and the cousins and the aunts of the crotch-and-toothpick school shook their dainty heads in token of prophetic and doleful warning. Gerster was advertised, but Gerster failed to appear, and—— It was at a matinée that Madame Gerster reappeared, and in the *rôle* of *Lucia*. She had scarcely warbled a passage or two till the critical audience *felt* her power, felt that it had increased over them, and that, instead of her trip to the United States having in any way interfered with her gift of song, it had wondrously improved her marvelous vocalism. Her *rentrée* was a succession of recalls, vases and bouquets—a veritable and absolute triumph. The managers of the Birmingham Musical Festival, the thirty-second anniversary of which takes place in August, have expressly engaged Madame Gerster as leading soprano for the morning and evening concerts. This is *the* great musical event in England, and musical England will now hear the Hungarian *prima donna* in German as well as in French and Italian music, while in the Oratorio she will sing in English. This is indeed a test, a crucial one, but an ordeal through which the gifted lady will come "brighter than flame."

FUN.

DOES a stolen hen lay ponched eggs?

PLAIN SEWING.—Planting on the prairies.

THE DOMESTIC ORDER OF MERIT.—A latchkey.

A MAN weighs more, and a fish less, by dressing.

A PEN may be driven, but the pencil does best when it is lead.

SPANGLER wants to know if too much water will make a man water-tight.

THE musquito, like the rest of the rabble, will soon make his hum by the sea.

A COUNTRY blacksmith out West put up a notice: "No horses shodded Sunday except sickness and death."

"YES," said a Texas lawyer who was defending a murderer, "the prisoner at the bar will prove an alibi. Gentlemen, we shall prove that the murdered man wasn't there."

"NO GIRL gets along well without a mother," says a moral exchange. This may be true; but hereabouts girls work harder to get mothers-in-law than they do to get mothers.

PRELIM (to tourist, who has taken shelter in a leaky shieling)—"Bad, and it's soaked to the bone you'll be gettin' wid the shramms through the roof. Come outside, sorr—it's dryur in the wet!"

A PARISHIONER of a Berkshire pastor was asked what the color of the parson's eyes was. He didn't really know, "for," he said, "when he prays his eyes are shut, and when he preaches I generally shut mine."

MY grandfather's breath was too strong for the house,
So he slept ninety years in the shed;
It was stronger by far than the old man himself,
At least that's what grandmother said.

A MEMBER of a Scotch School Board recently began an address to some children thus:—"Noo, ma bairns, wor a' like ships—some in port, some out in mid-ocean, an' some near the haven. Ye're just leavin' the port; as for me, I'm half seas over."

THE tramp's last dodge is to ask your advice about going to the next town, and when you warmly advise him to go, he says he has much confidence in your good judgment, and will emigrate further on at once. "But," he adds, "wouldn't you advise me to borrow ten cents before I start?"

A NEPHEW in Normandy, of course, assists at the reading of his uncle's will. "And to the servant who shall close my eyes I will and bequeath," reads the notary. "Does it say, 'who shall close my eyes?'" asks the heir-at-law. "It does." "Then the bequest is void. The old man only had one eye."

A WAITER was told by a countryman to "bring something of what he had." The waiter brought him a regular dinner upon small dishes, as is the usual form, and set them around his plate. The countryman surveyed them carefully a moment, and then broke out: "Well, I like your samples; now bring on your dinner!"

A MAN having fallen into a slough, his friend called loudly to another for assistance. The latter, who was busily engaged in cutting a bog, and wishing to procrastinate, inquired, "How deep is the gentleman in?" "Up to his ankles," was the answer. "Then there is plenty of time," said the other. "No there's not," rejoined the first, "for he's in head first."

NOBODY except the people in the front pews, last Sunday, and only a few there who listened very intently, could hear the tenor when the choir started out on—"When I can read my title clear," singing very distinctly, with his face turned toward the leader at the other end of the organ:

"I've lost the place: I'm in a fix;
What ever shall I do?"

And then the leader, in his profoundest bass, replied in faultless tune and metre,

"The tune is on page ninety-six;
The words on forty-two."

INDIAN DEPREDATIONS.

THE fair reader shudders when she thinks of the settler's wife watching, from the door of her rude hut, the retreating form of her husband going out to his daily labor—going out perhaps to return not again, for before nightfall a savage hand may have laid him low among the prairie grasses. Or it may be a child, a bright-eyed daughter, is snatched away in an unguarded moment, to grace the next war-dance. When we read the heartrending details of these savage depredations, we are apt to blame the Government for not taking more strict precautions to insure the settler's protection. But we daily read of the depredations of that arch-fiend Consumption, with scarcely a thought of the terrible inroads it is making in human life. Tens of thousands of homes are annually desolated by consumption to one by Indian outrage. Like the Indian, consumption oftenest comes stealthily, and no danger is apprehended until the victim suddenly finds himself hopelessly ensnared, and death's fatal arrow ends the scene. Dr. Pierce's Golden Medical Discovery, a powerful alterative, or blood-purifier and tonic, has restored thousands of consumptives who had tried every other remedy recommended to them, without obtaining any relief, and are willing to testify to its remedial powers.

FAIRBANKS' SCALES.

ORDERS at the scale factory indicate that a good grain crop is expected in the West this year, for nearly fifty 500-bushel hopper scales, and four railroad track scales, thirty tons capacity each, were ordered last week, all for use in new grain elevators being built in different parts of the West.—*St. Johnsbury (Vt.) Caledonian*, June 13th.

FOR close confinement, want of air, sedentary habits and brain and nerve tire, trust in Hop Bitters.

BURNETT'S COCOAINE.—A perfect dressing for the hair. The COCOAINE holds in a liquid form a large proportion of deodorized Cocoanut Oil, prepared expressly for this purpose.

PHILADELPHIA, May 28, 1877.

Gentlemen: Having used your COCOAINE for the past ten or twelve years, I take pleasure in giving as my opinion that no preparation made in this country will keep the hair so soft and glossy, and, at the same time, allay all irritation of the scalp. It will most effectually remove dandruff, and prevent the hair from falling out.

THOMAS ROBERTS,
Wholesale Grocer, 30 South Front Street.

AS a general thing, ladies who make any pretensions to refinement desire to have *soft white hands*. We believe that there is nothing will tend more to produce this effect than the constant use of MURRAY & LANMAN'S FLORIDA WATER mixed with the water in the basin. It removes redness and roughness. The ladies of Cuba and South America were the first to discover the extraordinary virtues of this floral water as a cosmetic, and have long since discarded the use of all others.

A RECENT newspaper article on the management of modern hotels shows that nearly all the profit is made from the wine-cellar; that is, that on the imported wines an advance of one or two hundred per cent. is regularly charged. The public will be interested to know that by buying A. Werner & Co.'s "America" Extra Dry, they may escape this enormous robbery and practically get just as much for their money. In all essentials of flavor, bouquet and purity, in fine, everything except price, "America" Extra Dry is fully up to the standard of any champagnes in this market, and day by day the fact is becoming more familiar to the public.

BETWEEN the old-fashioned inn of one hundred years ago—full of homely comfort as it was—and the gorgeous modern hotel there is a world of difference. Of the latter no better example can be found than in that noble New York establishment the ST. NICHOLAS, which successfully aims to couple the elegancies of the palace with the snug enjoyments of the home.

THE ASBESTOS ROOFING is the only reliable substitute for tin. It costs only about one half as much, is fully as durable, is *fire-proof*, and can be easily applied by any one. H. W. JOHNS MANUFACTURING COMPANY, 87 Maiden Lane, N. Y., are the sole manufacturers.

IN one of our last issues we offered to our readers an illustration of the new establishment—the Bodega. To-day we refer to their advertisement in another column of this paper. It is just the thing for parties going to the country, while those out of town may find a lasting advantage to give a trial to the BODEGA HAMPER.

READ, procure and use Hop Bitters, and you will be strong, healthy and happy.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast-tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—See article in the *Civil Service Gazette*.

JOHN HOLLAND'S Patent Record GOLD PEN
Patented Oct. 2, 1877.

Is the highest achievement in the manufacture of Gold Pens and the result of experiments for more than twenty years. The "RECORD" Pen is produced by a skillful combination of the two precious and non-corrosive metals; *16 kr. Gold* and *Platinum*, while the ordinary gold pen contains an alloy of copper, reducing its fineness without yielding that elasticity, density and steel like temper which the costly *Platinum* supplies. The "RECORD" Gold Pen *Points* are of the best *Iridium*. (Diamonds,) indestructible with fair treatment, and polished to glass like smoothness.

Steel pen writers have now every objection to gold fairly overcome, and every requirement in a Pen which will endure and not oxidize, squarely met. The "RECORD" Gold Pen is guaranteed to possess Durability, Permanency of Spring and Perfection of Point. Price, $2.50, sold by all Jewelers and Stationers in the United States. If not found order direct from *JOHN HOLLAND, Manufacturer, 19 W. 4th St., Cincinnati.*

Attractive, Useful & Instructive Reading for Everybody.

Frank Leslie's
SUNDAY MAGAZINE.
CONDUCTED BY
REV. CHARLES F. DEEMS, D.D., LL.D.

OPINIONS OF THE PRESS:

"The best, cheapest and most attractive magazine ever published in this country."—*Christian Advocate, Buffalo.*

"It is capitally and profusely illustrated throughout, and contains interesting matter upon almost every conceivable subject. . . . We cordially commend the SUNDAY MAGAZINE to the favor of our readers. No publication conducted by Dr. Deems can fail to amuse, interest, instruct and improve its readers. More we cannot say."—*The Observer, Raleigh, N. C.*

". . . Contains much reading matter for a low price, each number having considerably over one hundred pages. It is very fully illustrated, and the articles are many and miscellaneous in their character. Religious matter, plenty of stories, sketches of travel and adventure, articles concerning strange nations, and curious and interesting odds and ends of all kinds, are found between its covers."—*Courier, Gt. Barrington, Mass.*

"FRANK LESLIE'S SUNDAY MAGAZINE is again in hand. The present number is up to the very high standard of all its predecessors."—*Wilmington (N. C.) Presbyterian.*

". . . It has been constantly growing in public favor, and each number has been an improvement on its predecessor. It should be introduced to every family, for the pure and healthful literature cannot fail to exercise a highly beneficial influence."—*Kansas City (Mo.) Times.*

". . . Deserves all the encomiums pronounced upon its predecessors, with the additional remark that wherein it differs from them, it is in the sense of being still nearer the mark of perfection. Profusely and elegantly illustrated, printed on fine paper, and containing the choicest matter from all available sources, it offers to the reader an investment extraordinary for his three dollars, which is the low subscription price for a year."—*Central Protestant (Greensboro, N. C.)*

The July Number Now Ready.

Price 25 cents a copy; $3 per annum; $1.50 for six months; $1 for four months—postpaid.

SEND 25 CENTS FOR A SPECIMEN COPY.

Frank Leslie's Publishing House, 53, 55 & 57 Park Place, New York.

The Cheapest and Most Comprehensive Magazine in the World!

Frank Leslie's
POPULAR MONTHLY.

A NEW VOLUME AND NEW ATTRACTIONS!

". . . Replete with portraits and praiseworthy literary efforts, this issue contains over 100 engravings and 128 pages quarto, so that for 25 cents it probably furnishes more diversity of interesting reading matter than any other periodical. . . . This publication is meeting with much favor from the reading public. The contributors are among the most talented in the country, and herein the high intellectual standard."—*Daily Leader, Bloomington, Ill.*

"Undoubtedly FRANK LESLIE'S POPULAR MONTHLY gives more and more varied material for the cost than any other magazine in the world. One hundred and twenty-eight pages, half of which are handsomely illustrated, for twenty-five cents, would certainly seem to be the finishing point of economy in reading-matter."—*N. Y. Eve.*

"In the publication of periodicals of a popular character Frank Leslie has achieved a wide and well deserved reputation. The present number of this excellent monthly is one of the best, and is filled with articles some of which will suit all readers, and the others will be still more enjoyed by those whose tastes for special topics are unusually strong. There are no dull pages; and the illustrations are abundant. For pleasant and entertaining reading this magazine is unsurpassed."—*Saratogian, N. Y.*

". . . Freighted with instruction and entertaining matter, this magazine has become one of the necessities in all families where good reading is properly appreciated."—*Piedmont Press, Hickory, N. C.*

THE
SUMMER FASHIONS
Just received from Paris, and published exclusively in
Frank Leslie's
LADY'S MAGAZINE.

THE JULY NUMBER NOW READY,
With Accurate Descriptions of
THE NEW STYLES
OF SUMMER TOILETS, BONNETS, HATS, Etc., Etc.

The *Lyons (N. Y.) Republican*, referring to the merits of this periodical, remarks:

"FRANK LESLIE'S LADY'S MAGAZINE needs no special praise at our hands; it speaks for itself, and is a prime favorite in every household where it has ever gained a foothold. Its stories, its poetry, its sketches, its engravings, its fashions—all things about it, in fact—are first-class in their way; and, take it for all in all, we don't know of a lady's magazine in America that excels it, and few that come within cannon-shot of equaling it, in any of the departments we have mentioned. In point of cheapness it outranks them all, quality and quantity considered, its price being only $3.00 a year, postpaid."

Colored and Plain Fashion Plates are imported directly from Paris monthly exclusively for this Magazine.

The plates are beautiful impressions, colored and finished with the utmost artistic taste.

The Reports of the various changes in the styles of European toilets appear simultaneously with those in the Paris journals.

Pictures and Accurate Descriptions are also given of the

Latest American Styles of Ladies' & Children's Costumes, Hats, Bonnets, Etc., Etc.

The Literary Contents are of a varied and highly interesting character, comprising select Serial Novels and Short Stories by popular writers, Poetry, Society Gossip, Fashionable Intelligence, Anecdotes, and a Choice Miscellany embodying a fund of general information on timely subjects, etc., etc.

Published on the 15th of Every Month.
ANNUAL SUBSCRIPTION, $3.50, postpaid.

FRANK LESLIE'S PUBLISHING HOUSE,
53, 55 and 57 Park Place, New York.

ARCHDUCHESS MARIE CHRISTINE OF AUSTRIA.

"THE interests of the State" depending upon the results of a second marriage by Alfonso XII., the young King of Spain, the announcement has been made that early in the Fall His Majesty will be married to the Archduchess Marie Christine Désirée Henriette Félicité Ignière, the only daughter of the late Archduke Charles Ferdinand of Austria. Neither the King nor his loyal subjects have fully recovered from the sadness of the break in those five months of his wedded life, and while both parties speak feelingly of the pangs Mercedes, stern reasons of state make it obligatory that he should quench his grief and again assume the joys of a bridegroom. It was whispered shortly after the death of the young Queen that, when the proper time had elapsed, the King would wed the sister of Mercedes, the Infanta Maria; but the death of this lady in April last made it necessary to seek an alliance elsewhere.

But little is known of the Austrian Archduchess, destined to be the future Queen of Spain. She is the only daughter of the Archduke Charles Ferdinand of Austria (who died on the 20th of November, 1874), by his marriage with the Archduchess Elizabeth, the widow of the Archduke Ferdinand Charles Victor of Modena. She was born on the 21st of July, 1858, and is consequently in her twenty-first year. The Austrian Princess is a few months younger than the King, whereas the Duc de Montpensier's second daughter, Maria, was more than five years his senior, having been born on the 29th of October, 1852. Her death has now left the Montpensier family without a marriageable daughter. Apropos of this engagement, it is reported that another Spanish marriage is on the *tapis*, being that of the Infanta Maria del Pilar, King Alfonso's sister, to the Archduke Rudolph, Crown Prince of Austria, who has recently made a ceremonial visit to Madrid. The Crown Prince was born, August 21st, 1858, and the Infanta Maria del Pilar, June 4th, 1861.

THE SEAL ROCKS NEAR SAN FRANCISCO.

A BREAKFAST at the Cliff House, within hearing of the roar of the surf and the clamor that eternally goes up from the populous seal rocks is one of the pleasantest episodes in a visit to San Francisco. An hour's drive westward from the city, through the Golden Gate Park, or by Lone Mountain, with its silent settlement of graves and its tall sentinel cross, brings one to the beach and the cliffs, among which is nestled down Captain Foster's quaint, comfortable hotel. Leaning from the balcony just outside the breakfast and dining rooms, you can toss a pebble into the foaming white breakers, and not ten yards beyond lies the colony of the seals—a group of five or six rocky islets, peaked like small volcanoes, and wave-beaten and worn away into all sorts of fantastic fret-work.

The shifting gray sand-hills that lie all around the city are, in the Golden Gate Park, already being made to blossom as the rose. There they are clothed with young green grass, sown with the glories of the California poppy—a flower like nothing in the world but consolidated sunshine and flame—shaded with newly-planted eucalyptus and blue gum trees, and intersected with magnificent roads, broad, hard and dustless. Leaving the confines of the park, we come out upon the wide, lonely stretch of the ocean beach; and there, beyond the white belt of sand, blown into shifting hillocks and hollows, lies the vast blue splendor of the Pacific, under a sky scarcely less blue, and a rain of sunshine such as only California knows—sunshine that in a few hours will be blotted out by the increeping sea-fog, which every day wraps San Francisco about as with a veil. Driving northward along the hard, white beach road, we come upon the cliffs, running sharply down to the surf and forming miniature capes and promontories and tiny bays, and crowned by the low, white, wooden buildings and cottages of the Cliff House. From its broad balconies we look across the narrow channel of the Golden Gate, to the shadowy blue heights of Point Lobos, rising on the right hand, with Tamalpais beyond, and the softer, green swell of the Contra Costa hills; and before us, and at our feet, the long flashing rollers come heaving in and breaking in sheets of foam against the base of the cliffs.

There is a weird fascination in the "Seal Rocks"—something so hideously uncanny in the swarm of sprawling, squirming things that roll and cling and rear themselves about among the jagged fissures, and so utterly unlike any other known voice of animate or inanimate nature is the hoarse, deep cry that goes up incessantly from all the million throats, and predominates over the thunders of the ocean itself. Every rock, from the base to the peak, is alive with shapeless things in perpetual motion, tumbling over each other, twisting, rolling, fighting in clumsy fashion with their smooth flippers, or plunging with marvelously smooth graceful curves into the boiling foam that breaks all around their rocky fortresses. Some are tawny brown or yellow, and these have had their coats dried by the sun after a few hours' basking on the rocks; but those who have just wriggled up out of the surf are a dull slaty-black, and look like animated bags of wet gutta-percha. All ages and sizes are represented, from the monarch of the colony, "Bes Butler," a gray old giant who might weigh some three thousand pounds, down to the babies who are just learning to wriggle and squirm and leap after the fashion of their mammas, and add their infant notes to the general chorus. The rocks are a sight dear to the eyes of San Franciscans, and wonderfully fascinating to their guests from the East; and notwithstanding the humane recommendation of a recent tourist of the gentler sex, that the whole colony of amphibious pets should be shot as nuisances and sold for their skins, it may be predicted that the Cliff Rocks will, for many a year to come, echo back the weird clamor of the seals.

A run down the wooden steps to the beach and a sheltered little cove among the cliffs, and some revival of old-time child's-play with shells and sand and pebbles, give an additional zest to one's appetite for Captain Foster's sumptuous breakfast, and after its various courses of fish and game and fruit, the prolonged discussion of which brings us well on towards noon, we turn our faces cityward again, full of that serene satisfaction which—to the manly constitution, at least—a thoroughly good meal never fails to impart.

WHAT THE RUSSIANS WANT.

A WRITER in *Truth*, says: I was talking the other day to a Russian about the state of affairs in Russia. He said: "The Nihilists are not numerous, but the danger lies in the covert support which they receive from many who are not their adherents, because almost all, with the exception of the *entourage* of the Emperor, are sick of the present régime." "Of what do you specifically complain, and what do you specifically want?" I asked. "The abolition of the 'third section,'" he replied. "We have now no guarantee for individual liberty. A man, without trial, may be sent off to Siberia, and nothing more is heard of him. We require some sort of *habeas corpus* which would secure to all those arrested an open trial within a short period after their arrest." "And a representative system?" I said. "Not absolutely," he replied; "but the Provincial Assemblies should be allowed to send delegates to a consultive Assembly which would meet each year at St. Petersburg. The Budget would be submitted to this Assembly, and it would convey to the Czar the views of the provinces. Little by little it would become a Parliament." "Is the army disaffected?" I asked. "Some of the regiments of the guard are devotedly attached to the Emperor, but if a popular general were to put himself at the head of a military insurrection in favor of a moderate reform, he would be supported by most of the regiments of the line." "And what of the Emperor?" "He is not quite so well-meaning as is supposed, for he is excessively vindictive; but his great failing is that he is entirely in the hands of a clique who use him for their own purposes." "And the Czarevitch?" "He has been badly educated, is an unlicked cub, and is not imbued with liberal ideas."

THE ARCHDUCHESS MARIE CHRISTINE OF AUSTRIA, BETROTHED TO ALFONSO XII., KING OF SPAIN.

THE STORY OF A TOPAZ.

A ROME correspondent forwards the following curious history of a wonderful work of art: Sixty years ago Ferdinand II. of Naples ordered of the gem cutter and dealer Cairello the largest topaz known, and commissioned him to chisel upon it a subject representing our Lord breaking the eucharistic bread. The weight of this huge stone is more than two kilogrammes (seven Roman pounds); it is thirty-three centimetres in diameter and eight centimetres thick. The elder Cairello, and his son after him, worked on this stone for fifty years. They completed it just as young Francis was fleeing from Naples and Garibaldi coming in triumph in 1859-60. As the King had no money to pay Cairello's bill for the topaz and stone chiseling (230,000 francs), his Majesty gave the gem to his creditor in lieu of the claim against him. After Garibaldi entered Naples an attempt was made to sequestrate this valuable engraved stone as royal property, but Cairello showed the deed of gift the King had given in the place of the money owing to him. There was a troublesome lawsuit, which, strange to say, the gem-cutter won; for in such cases the good old rule of Rob Roy usually controls the legal decision, and

"Those do take who have the power."

But the great topaz has been a white elephant to the Cairello family ever since; so much labor, time and interest lost. They have tried over and again in vain to sell the huge gem. An object of that nature is the most difficult thing in the world to get rid of, and is valueless to a private owner; once placed in a public museum as the property of a State, it then takes its proper rank and estimation. When Mrs. Hungerford and the "silver" Mrs. Mackay of Paris were in Rome a month or so ago, attending the wedding of Miss Hungerford with Count Telfener, a hope was entertained by the agents of the topaz of selling it to one of these ladies. A person was authorized to offer it to them for 300,000 francs, but nothing was done. Now there is a plan started which needs only the sanction of His Holiness to relieve the owners of this costly gem and repay them, not for interest on their labor and capital invested, but for the simple capital itself. The stone with the engraving on it is to be photographed, and its little history, told in several languages, will surround the picture. Two millions of these are to be struck off and retailed at two francs a copy. One franc of the two will go for Peter pence, and when the sale is completed the stone will belong to the Vatican library collection of engraved gems. The other franc on each copy will be given to the owners for their indemnification, also for the expenses of the photographing, pay of agents, etc. A prominent Monsignore has engaged to take 100,000 copies of the photograph in case the plan meets with the approval of Leo XIII.

WHAT EXILE TO SIBERIA MEANS.

THE whole machinery of Siberian exile has been developed to a wonderful degree of efficiency. A regular military establishment is kept up throughout the empire for the convoy of prisoners, and by means of it convicts may be transmitted to the remotest corners of this unusually dreary region as easily as letters are conveyed. There is no pretense at remedial punishment in Siberian exile, and the unfortunate being sentenced to it may never hope to return unless he can manage to break his way through the terrible surroundings of plains and icy rivers and the wild sterility of an unexplored country. At first all grades of prisoners in Siberia are treated pretty much alike, except that the lowest and worst are compelled literally to fulfill the tasks to which they have been doomed, while, as has been said, the upper class prisoners escape the severest ordeals. Labor is gradually relaxed; at the end of two years actual imprisonment ceases, and a village is assigned to the convicts as a place of residence, within which they may be tolerably free, but beyond which they must not venture. In other three years they obtain a further privilege of living anywhere within the same government, and after a while they are permitted to choose any town in Siberia, only, having chosen their town, they must remain there, and must engage in no art or trade. Usually banishment to Siberia involves confiscation of property, but this is not invariably enforced, and some prisoners take with them into exile private means which enable them to keep up something of the style they have been accustomed to. When property is confiscated, the Government grants a small annuity. It is not all exiles to whom banishment to Siberia proves the terrible experience that it is usually represented to be, and which in many cases it undoubtedly is. The purpose of populating the land seems to have been very prominently in view with those who have had the organizing of this vast penal system, and the settlement of towns and villages of tolerably thriving and contented people has been accomplished to a wonderful extent. The exiles are formed into five distinct classes, and every one receives the treatment in the country which is considered to be proportionate to the offense to be expiated. The worst offenders—or those who have been condemned as the worst, which is often a very different thing—are sent to the silver mines of Nertchinsk, the Norfolk Island of Siberia.

SIR GARNET WOLSELEY'S AMERICAN EXPERIENCES.

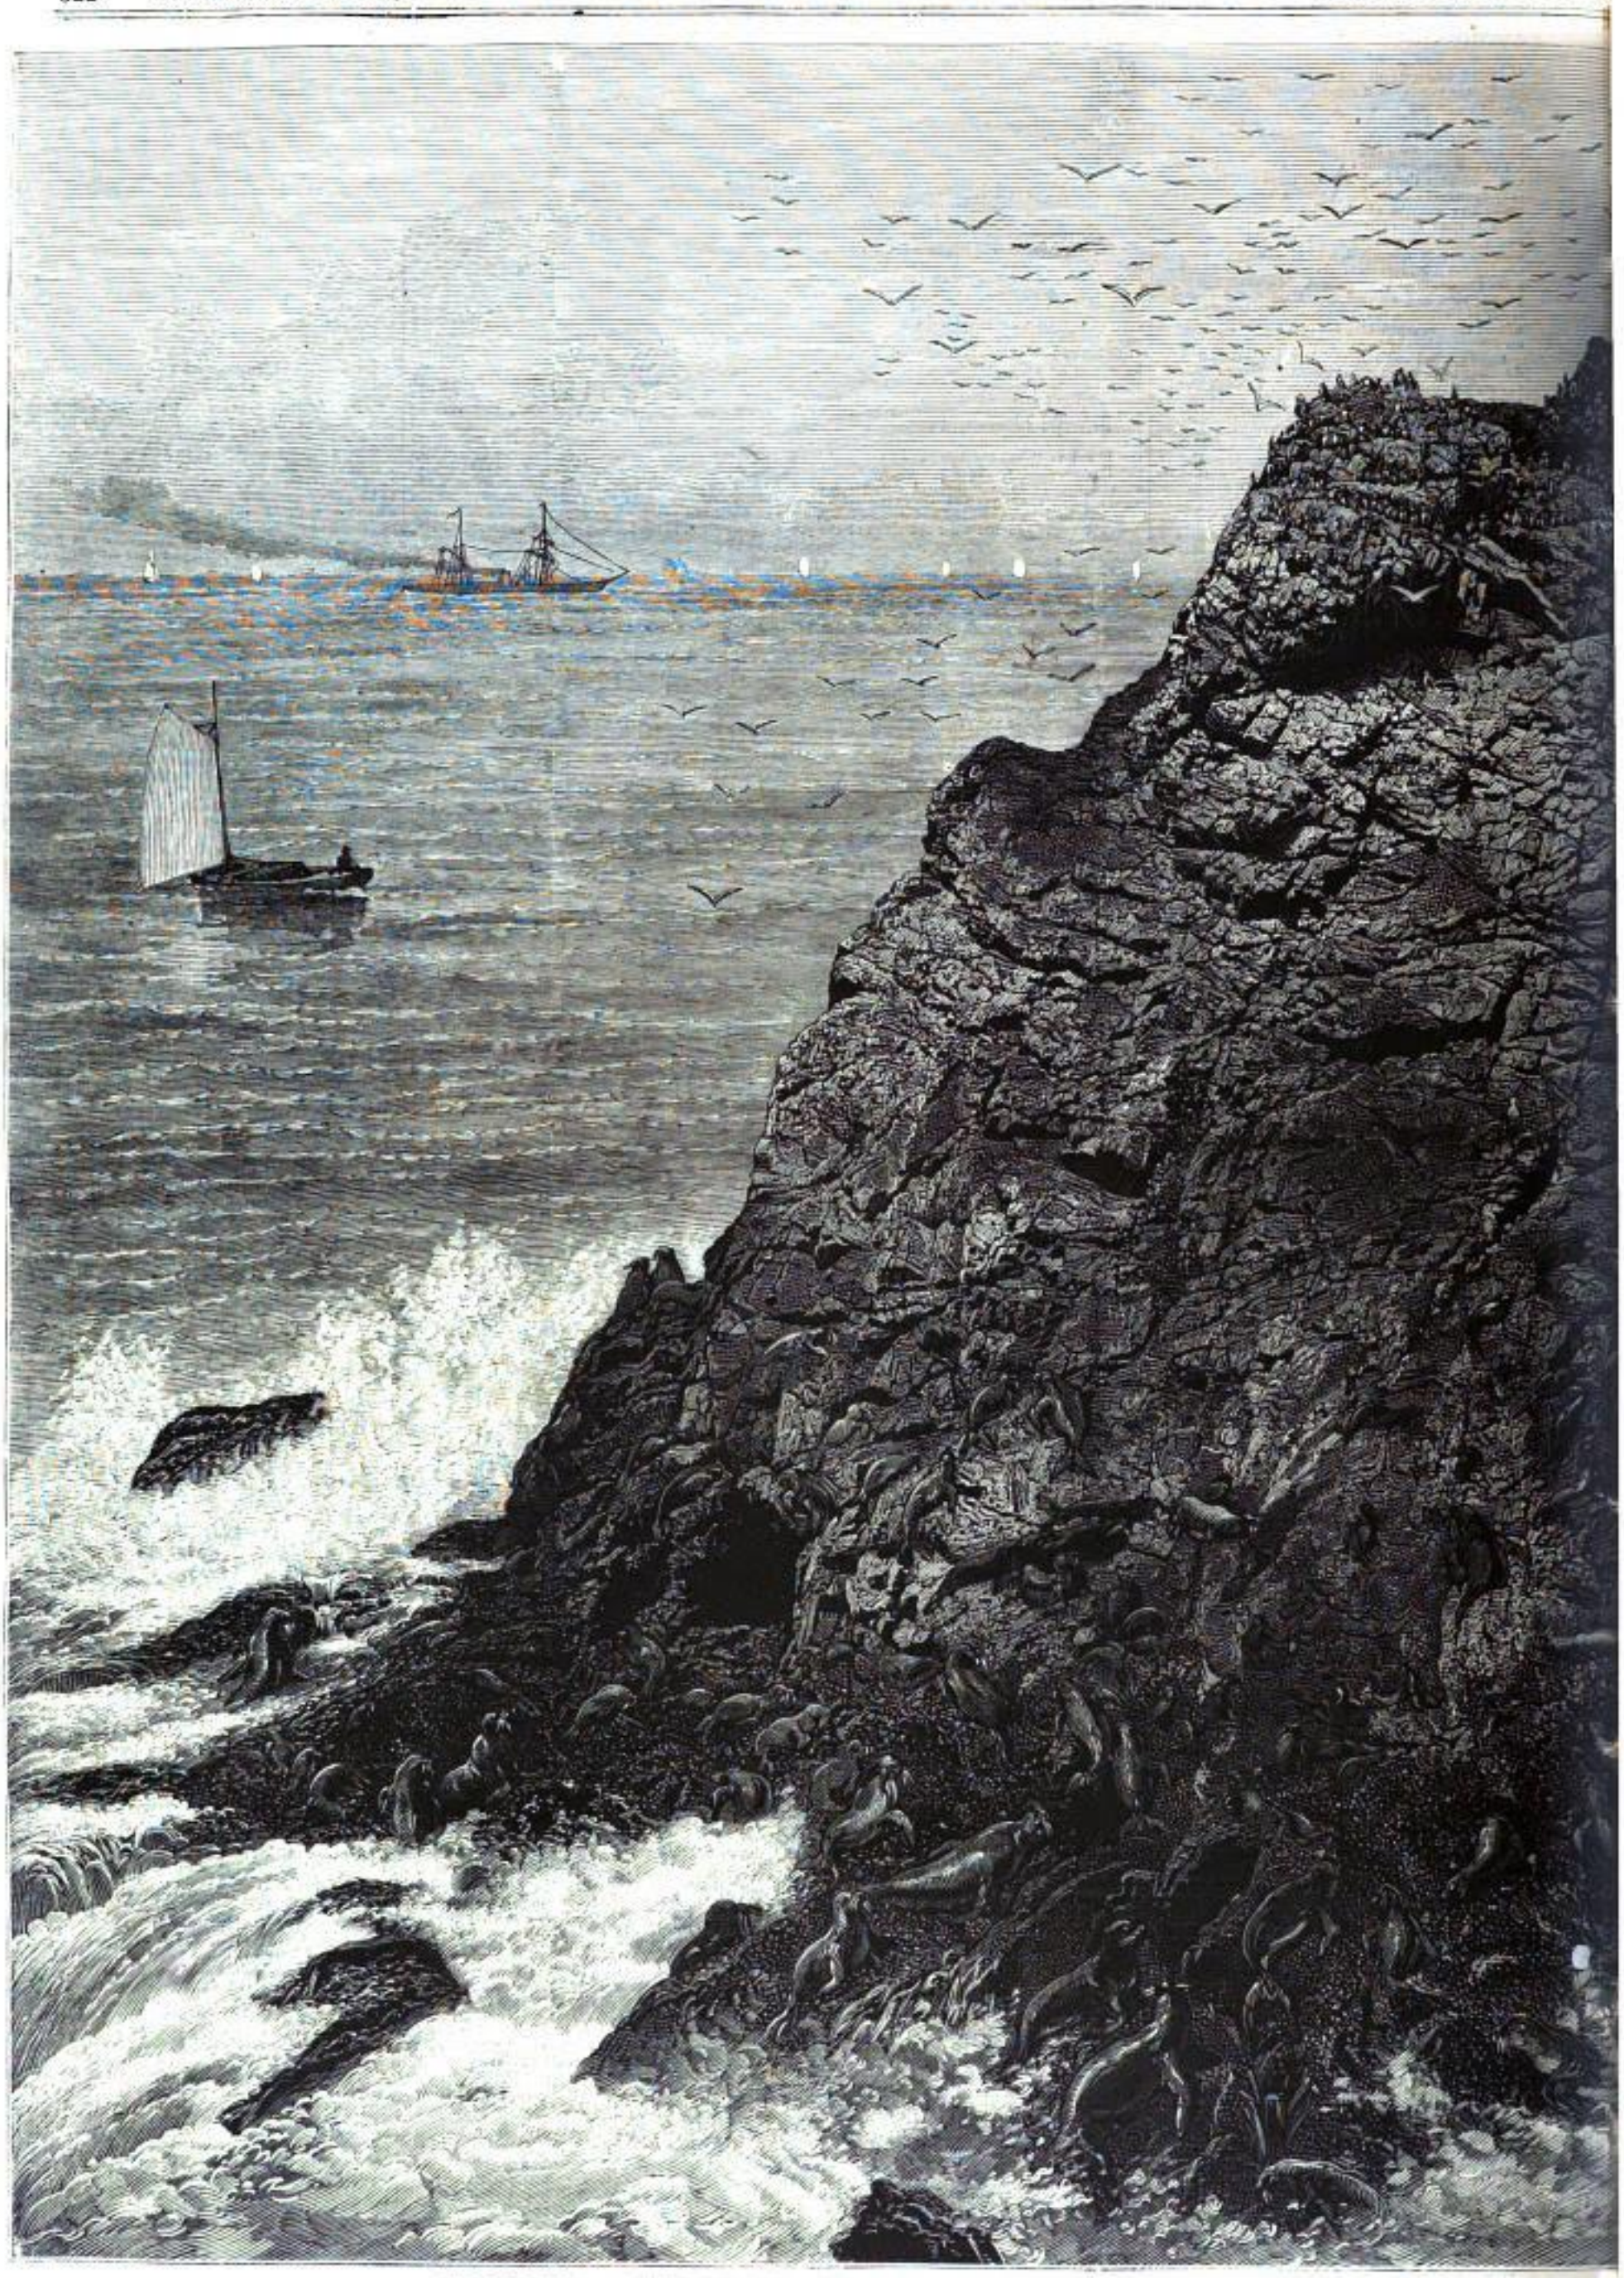
A PARIS paper says: "Sir Garnet Wolseley has done much fighting, and he has seen more. He has always made a point of going to look for it when he had the chance. In the American civil war he followed the operations for a long while on the Confederate side, as there was more experience to be gained among a minority ably officered than among a majority who at first had numbers and not much else. Sir Garnet, then Colonel, Wolseley made his way with a friend to Baltimore in 1862, just after the battle of Antietam.

"He wanted to get further south, if possible to Richmond, rightly guessing that the war was far from being at an end. To do this they had to cross the Potomac, or, as it was then called, 'run the blockade' between the two States, at a point where the river was frozen and almost as troubled in bad weather as the sea itself. The Federals kept a sharp lookout both from gun-boats and from military stations on shore. The boats carried a lime light, and if the slightest noise was heard at night they illuminated the whole expanse for a quarter of a mile from their prows.

"The population was friendly—that was the only thing in our travelers' favor; for the rest everything was against them, both land and water being in strong hostile occupation.

"At last they reached a fisherman's cottage overlooking the stream. The fisherman was afraid to house them, as his cottage was under the surveillance of a Federal patrol, but he told them to return next day; and they had to pass the night in a village, a prey to heat and musquitoes. On the following morning they stole back to the hut, and bargained for a passage across in the fishing-boat at the rather high fare of seventy dollars in gold. They were to pass the day in hiding in the hut, and to set forth in the night. They were not on any account to be seen outside the premises before that, lest their appearance should excite the suspicions of the keen watchers on the river, who, according to the fisherman, kept that part of the shore under their glasses as well as under their guns.

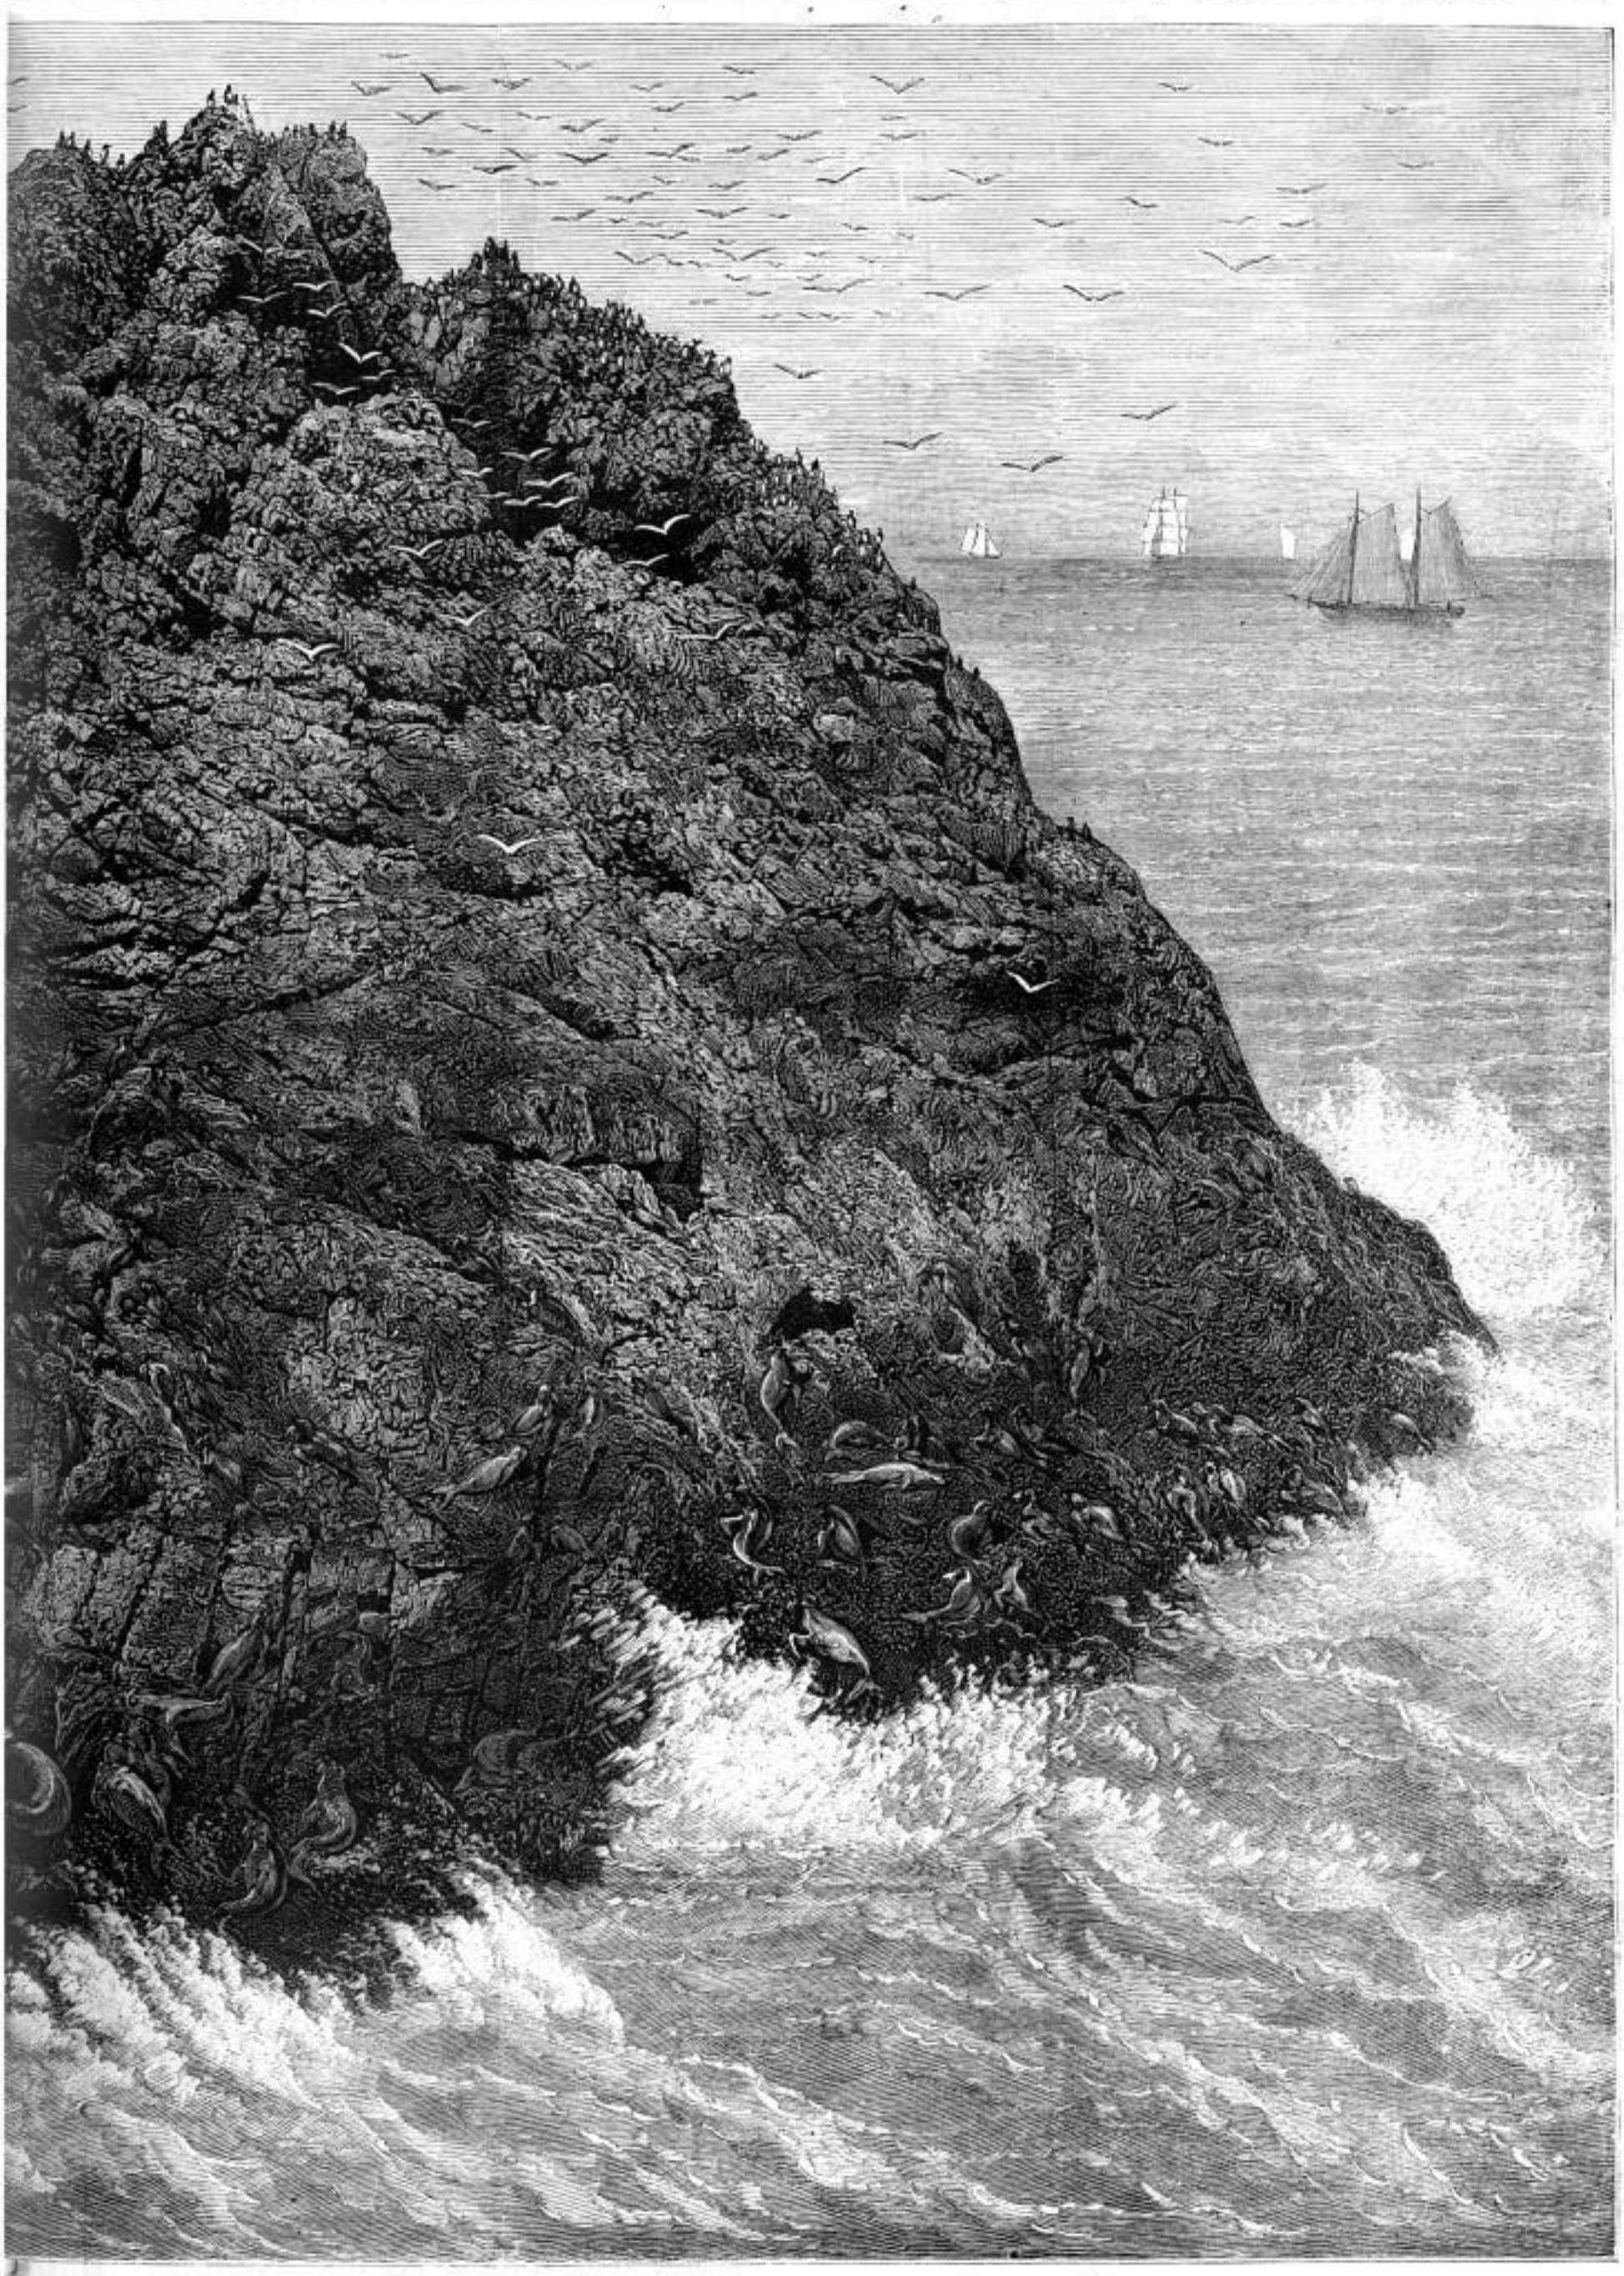
"They sat down to watch out the day, when, at about two in the afternoon, the fisherman in a state of great excitement announced that a Federal officer and a file of men were approaching the hut. There was no time for flight or hiding, so the pair quietly staid where they were. When the officer entered, the colonel's companion asked him if it would be possible to get permission for a little duck-shooting on the river. The astonished officer thought that it would not. 'In that case,' said the other, 'will you be good enough to tell two unlucky sportsmen how they are to get back to Washington.'



"The officer did not like the look of it, and he was just hesitating about his answer when Colonel Wolseley stepped forward, cigar-case in hand, and offered him a regalia. It was the psychological moment of decision, and he had seized it. The officer took the cigar and answered that a Washington steamer would call at about four the next morning at a neighboring wharf. Long before that time, of course, Colonel Wolseley and his friend were safely in Virginia.

"They parted with the officer on excellent terms, though a corporal who had seen, if not more of the service, at least more of the world, did not hesitate to communicate his suspicions of them to his chief. The young fellow stuck to his faith in the story of the duck-shooting, and left them to wait for the steamer. The fishing-boat duly came at nightfall, and with Wolseley and the other lying well covered in the bottom, cast its nets and tacked, under the very nose of a Federal gunboat, in the most innocent way in the world, until the master saw his way to put them ashore. They subsequently reached Lee's headquarters."

A PETRIFIED HUMAN HAND.



A CURIOSITY which astonishes scientists and puzzles them is now on exhibition in Gould's cabinet, at Mill City, Nevada. It is a perfectly formed hand, which apparently belonged to a boy about 14 years of age. The hand is open, the fingers being slightly bent towards the palm, on which the thumb rests. The back of the hand seems to have been crushed or decomposed before it was petrified, but the palm, thumb and fingers are perfect. It was found at the sulphur beds near Rabbit Hole by one of the men employed in shoveling crude sulphur into the refining retort, and is supposed to have been imbedded in the sulphur bank for ages. The fingers are comparatively short, a fact which indicates that it did not belong to an Indian, as the red men's fingers are generally longer than those of whites, but the thumb is longer than the average. To what race the owner of the hand belonged, and how and when it was imbedded in the sulphur, will probably ever remain unknown, unless some eminent scientists should investigate the hand and the sulphur bank where it was found, and explain these mysteries.

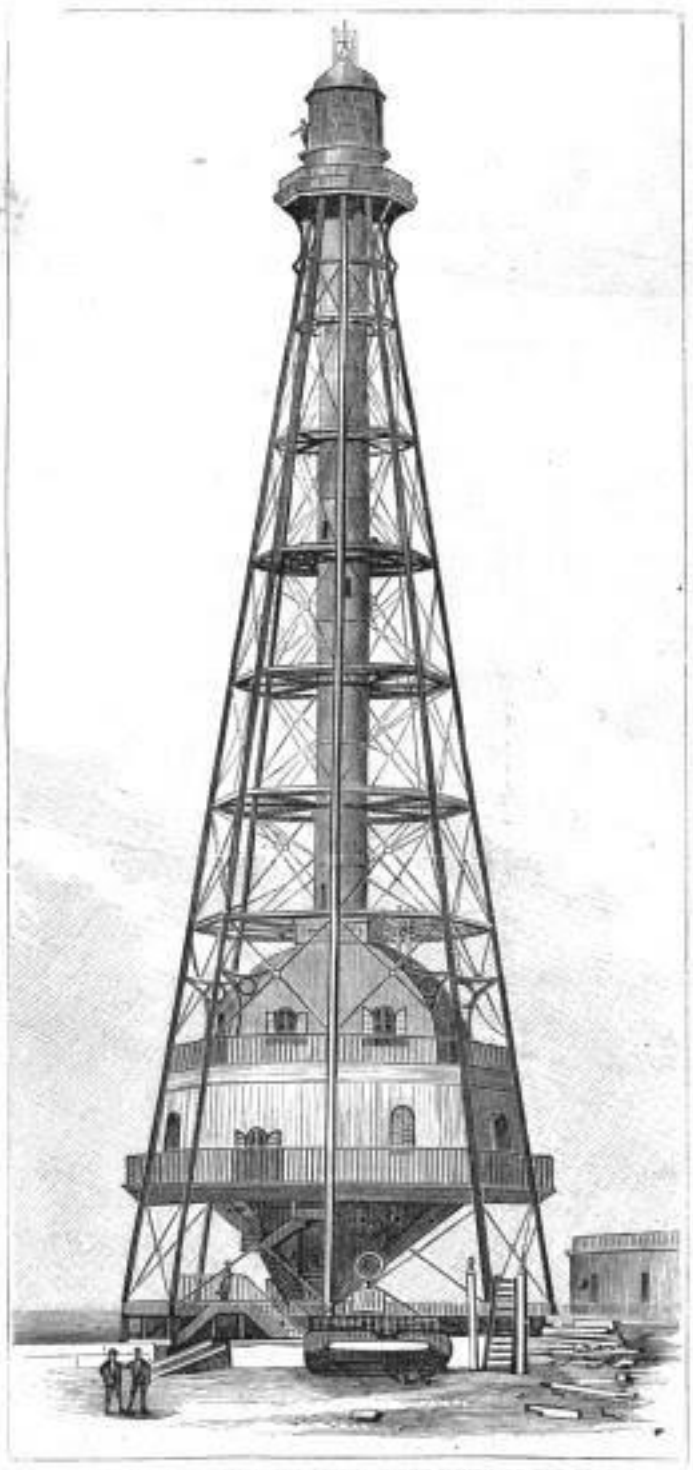
ZULU HAIR-DRESSING.—CHIEF, WITH HIGH FRONT PEAK.



DANDIES OF ZULULAND.

WE have shown the natives of Zululand in phases of military and domestic life, and the stirring events of the campaign have only now permitted the publication of photographs of some typical "dandies" of that far-away country. These four Zulus, besides representing the flashy side of life, are not without other renown among their own people, being recognized as chiefs of powerful clans. They visited Natal recently, and, being attired in the most fashionable modes of hair-dressing peculiar to their nation, were induced to sit for photographs. The hair is stiffened with a kind of gum, which enables it to retain the shapes artistically molded according to the wearer's fancy, or prescribed as an indication of his rank in life. Married men are distinguished by having their hair formed into a circular ridge, which may or may not be developed into one or two peaks at the front or back of the head. Pieces of horn and bone, the hollow of which sometimes does duty as a snuff-box, are frequently stuck in this elaborate headgear.

When a native Zulu can obtain clothing, he does so with a vengeance. It has often been wondered where all the cast-off clothing of the British and Continental armies was disposed of, but on passing through Maritzburg, one may see numerous "Caffre stores" with the uniforms of European soldiers laid out in every form of tempting display. Once, out of curiosity, a correspondent examined a native, and found him wearing, in the middle of an African Summer, a guardsman's tunic, a lancer's tunic, and the ample cloak of a life-guardsman. The women, too, are fond of clothing, bright and gay—the brighter the better.

NEW REVOLVING LIGHT AT THE MOUTH OF THE EBRO, SPAIN.

THE Ebro, rising in the mountains on the northern border of Spain, in the province of Santander, flowing eastward between the lofty and picturesque heights separating Alava and Navarre from Old Castile, intersecting Arragon near its centre, after a course of about 400 miles, empties itself into the Mediterranean through a double embouchure at Cape Tortosa, near the southern extremity of Catalonia. At Mequinenza it passes through a defile where once was probably a barrier restraining its waters as a lake in the country of Arragon. It abounds with shoals and rapids, but boats may pass with difficulty as high as Tudela, in Navarre. A canal has been cut parallel with its bank from Tudela to Saragossa. Improvements have also been made in the bed of the river lower down, and from a point near Amposta the San Carlos Canal has been opened southerly across the delta to the harbor of Los Alfaques. But by far the most important public work in connection with this tawny river is the lighthouse recently erected, and of which we give an illustration. The workmanship is admirable. All that Science has lent to the aid of illumination has been brought to bear in the reflectors, while the edifice itself is one that from its construction may bid fair to defy the Mediterranean, even in its fiercest mood.

SPAIN.—NEW REVOLVING LIGHT AT THE MOUTH OF THE EBRO.

A CHINESE DINNER.

THE wife of an American official in China writes to her friends at home an account of a ceremonious dinner which she attended recently. The feast was given by the "deputy," and was attended by only seven persons, three American gentlemen, two American ladies and two Chinese men, besides the host. Describing the deputy as a "lovely old man," the writer of the letter proceeds as follows: He passed to me first a cup of hot wine, with a graceful bow; it was only after that that one could sit down. He made the tour of the table and gave each guest his wine, accompanied by the chin-chins (bows) from both parties. Before each guest were three plates about the size of a little girl's tea-set plate—three inches in diameter. On these plates we ate all our dinner except the soups, which were put before us in small bowls. Each one had his chop-sticks and a two-pronged silver fork. In a few moments, as Mrs. M. and I could not use them very well, we were given our own forks and knives. At each plate was a big pile of melon and apricot-seeds, and this pile was replenished constantly during the four hours we were at the table. Between the courses everybody was cracking and eating away at the melon-seeds. They were not very good, of course, yet it was amusing to nibble at them, and they came in hot from the oven, and on the whole did not taste badly. On the table when we sat down were right dishes of preserved fruit of different kinds. They were all on those small dishes, but put one on top of the other to make a kind of pyramid, and in a row along the centre of the table were other dishes larger in size and holding the more substantial things. On one, were slices of lobster and salted walnuts—very good, both of them; on another, were goose gizzards cut in thin slices; on another, shrimp salad; and on another, thin slices of chicken. These were all meant to give an appetite for the dinner which followed. I sat next to the old deputy, and he helped me from the different dishes within his reach, only a mouthful or so from each, though. When we had tried all these things the first course was brought on, and, as I suppose you imagine, it was "birds'-nest soup," and very good, too. We have nothing like it at home. After that we had stewed chickens, with young onion-sprouts. The third course was cold mutton, served with raw turnip, cut in long, thin strips.

Fourth—awfully good—was pigeon eggs in a kind of acid soup.

Fifth—Cucumbers, stuffed with chopped fish.

Sixth—Roast chicken served in very small bits, with mushrooms.

Seventh—Sharks' fins.

Eighth—Mutton dumplings.

(After that there was a little rest, and we walked about the garden, going to work again after a half-hour.)

Ninth—Pork soup.

Tenth—Stewed mussels.

Eleventh—Champigeons and spinach made together.

Twelfth—Ham in slices.

Thirteenth—Stewed pigeons and bean curd.

Fourteenth—Fish.

Fifteenth—The muscles or fibres of flowers.

Sixteenth—Sea slugs (something awful to look at, just like leeches with pimples on them.)

Seventeenth—Mushrooms and bamboo-sprouts made together.

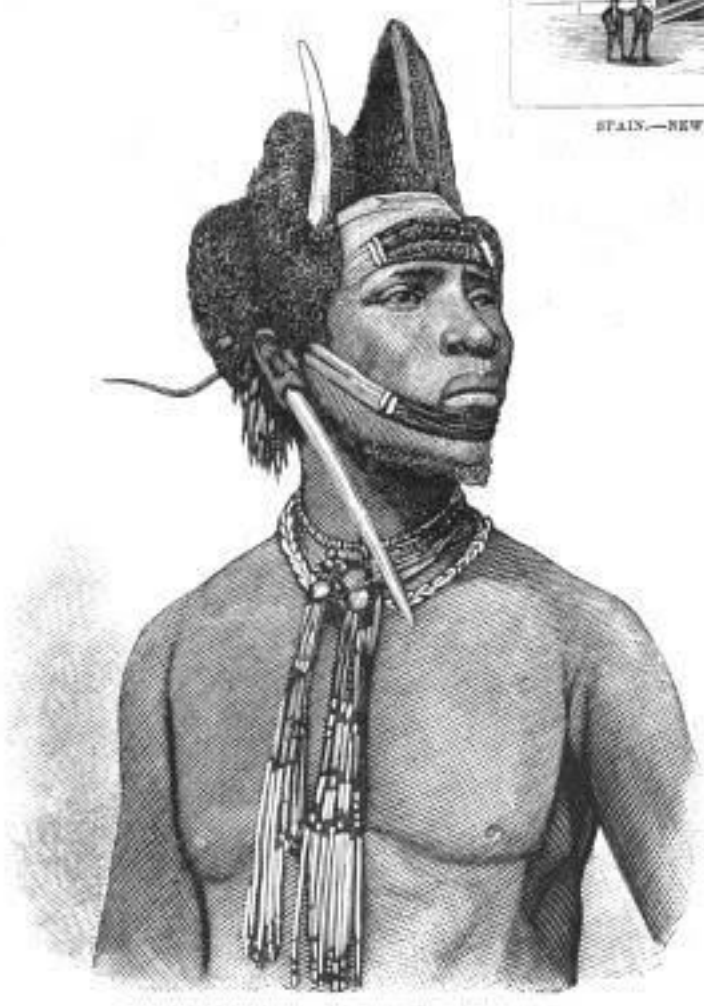
Eighteenth—Cakes and bitter almond-sauce.

Nineteenth—An entire roast pig.

(It was brought on and then taken away and carved for us. I thought the dinner at an end when we had the cakes, and was taken aback to see this animal make its appearance. They served first the crackle or skin. It was A No. 1, and we began each to eat anew; second, they carved the lean meat; third, they served some fat, and then something else, all four from a pig.)

Twentieth—Rice with chicken soup, salted cabbage, salt bean curd, chestnuts grown in water, and I don't know what.

After that, tea; and it was over.



This was followed by a two days' headache.

ZULU HAIR-DRESSING.—MARRIED CHIEF, WITH DOUBLE-PEAKED RIDGE.

HUMORS OF THE LATE PROFESSOR DOVE.

THE late Professor Heinrich Wilhelm Dove, the great physicist and meteorologist, was constantly tempted to brighten his most serious expositions in lectures at the University of Berlin by episodical by-plays of humor. At one time, in a discourse on the force of water, he was much disturbed by a group of young academicians from Nassau, who sat together on the same row of seats, and made untimely jokes during the professor's exhortations. Towards the end of the lecture he introduced a long *spritze*, or fire-engine squirt, and solemnly told his hearers that this instrument would discharge water to an almost incredible distance—"as far," said he, "as from Berlin to Nassau." The word "Nassau" had no sooner escaped his mouth than he discharged a tremendous mass of cold water upon the irreverent colony of Nassau students. Professor Dove was fond to the very last of selecting quaintly out-of-the-way illustrations, which he uttered in a most quiet and innocent manner. One of the most effective, perhaps, was his sober and business-like reckoning of the height of heaven by a calculation of the exact time which was occupied by one of the "fallen angels" in his descent.

Subscribers, in ordering our publications, should be careful to write the name of FRANK LESLIE *in full, and direct their letters to 53, 55 and 57 Park Place, New York, from which address all our publications are issued.*

THE LATE CONGRESSIONAL STRUGGLE.

IF the Democratic extremists in the present Congress had set out with the deliberate intention of affronting the moderate sentiment of the country, and giving their political opponents a decisive advantage in the Autumn elections, they could not have accomplished their purpose more effectually than they succeeded in doing at the recent special session. From first to last their course was marked by stolid stupidity and obstinate indifference to the higher demands of statesmanship. With the country just emerging from a period of unparalleled financial prostration, and striving to adjust its industries and trade upon a fixed and permanent basis, the Democratic managers have not only sought to reverse existing statutory provisions to that end, but have, at every opportunity, introduced new elements of disintegration and discord, thus destroying public confidence, injuring the public credit, and delaying the restoration of business prosperity. Refusing to recognize the logic of the Civil War, they revived the doctrine of the supremacy of the States, undertaking to subordinate the authority of the Federal Congress to the sovereignty of individual commonwealths as to matters of vital concern to the whole people, over which, under the Constitution, Congress has rightful control, and absolutely refusing to the National Executive, except upon humiliating conditions, the means necessary for the enforcement of the laws which he is sworn to execute. Warned by the President, in the very last hours of the session, of the mischief which must follow from a failure to vote an appropriation for the support of United States Marshals, through whose agency alone the laws for the protection of the revenue, the prevention of counterfeiting and violations of the public land and postal laws, the detection of smugglers and other offenders can be enforced, they stubbornly persisted in their refusal to vote a dollar to that end, and thus the Government is left with its hands tied in the presence of the criminal classes who, even with all the machinery of justice actively employed, often successfully defy the national authority.

The Republican Party during the session just concluded was not always wise or sagacious in its action; its filibustering, for instance, in opposition to the very proper Bill prohibiting the pernicious practice of imposing political assessments on public officials was utterly indefensible, and there was an unnecessary insistment upon some exploded issues; but in the final hours of the prolonged contest it certainly recovered something of the ground it had lost by earlier follies. The President having in a special message called the attention of both Houses to the fact that all appropriations for the United States Marshals expired June 30th, and urged that such provision should be made for these officers as would enable the Federal courts to transact the public business properly, a Bill was offered in the House appropriating $600,000 for this purpose, and for this every Republican voted, while every Democrat cast his vote against it. In the House a like Bill was similarly disposed of. Thus the record of both parties was distinctly made up — the Republicans favoring and the Democrats opposing and defeating an appropriation declared by the President to be demanded by the public interest, if not, indeed, by the public safety. There can be no question at all as to the judgment of the country on the issue thus made up between the hostile parties.

As to the attitude of the President, no right-thinking citizen can regard it otherwise than with approval. He has carried himself throughout with just moderation and inflexible fidelity to the obligations of his high office. With every possible temptation to play the partisan, he has recognized only the claims of patriotism, and in everything he has done in all this hot and stubborn controversy, has placed country before party, duty before expediency. The last words addressed by him to Congress, distinguished alike for their temperate spirit and timely candor, show conspicuously the quality of the man who, so long misinterpreted, has come at last to be rightly understood. Addressing especially the recalcitrant majority, and evidently determining that the exact issue shall be considered, he says:

"Under the laws prohibiting public officers from involving the Government in contract liabilities beyond the actual appropriation, it is apparent that the means at the disposal of the Executive Department for executing the laws through the regular ministerial officers will, after to-day, be left inadequate. The suspension of the necessary functions in the ordinary administration of the first duties of the Government for the shortest period is inconsistent with the public interest, and at any moment may prove inconsistent with the public safety. It is impossible for me to look without grave concern on a state of things which leaves the public service thus unprovided for, and the public interest thus unprotected; and I earnestly urge on your attention the necessity of making immediate appropriation for the maintenance of the service of the marshals and deputy marshals for the fiscal year which commences to-morrow, July 1st."

President Hayes can well afford to go to the country upon the record he has made on this issue. But who cannot see that the men who, having failed in an attempt to strip him of his constitutional power and coerce him into compliance with partisan demands, then resented his appeal with contempt, and defied the claims of duty in a blind rage of partisan prejudice, have invited sharp condemnation at the hands of all fair-minded men of whatever party faith?

COLLEGE COMMENCEMENTS.

THE interest manifested in the recent College Commencements and the closing exercises of the public schools in our large cities exhibits very clearly the popular appreciation of the value of education. It is our happy eminence as a people that educational facilities are both varied and ample. Our public schools, if not absolutely perfect, are at least the most perfect institutions of the kind in the world, and their power for good is only limited by the disposition of our youth to embrace their advantages. Our colleges are numerous and eminently useful.

The different ecclesiastical bodies are well equipped with institutions for the education of the clergy; and, in not a few instances, these institutions have taken a wider range than that contemplated by their founders. Of late years, colleges founded on broader and more secular bases have been on the increase. The older colleges, such as Harvard, Yale, Princeton and our own Columbia, have, with the advancing years, become increasingly useful. In no State in the Union is there any great difficulty in the way of an aspiring youth obtaining a good college education—such an education, in fact, as will fit him for the practice of law or of medicine, for the important and sacred duties of the pulpit, or for the not less important duties of journalism. Nor is the higher school or college wanting for the education of women. In no other country in the world is the education of woman deemed so valuable, or more carefully encouraged. Altogether, in the matters of education and educational institutions we have reason to regard ourselves as fortunate.

It cannot be pretended, however, that as to either education or the facilities for acquiring it, we have reached perfection. Much still remains to be done. Our efforts are too scattered, and our aims are not sufficiently catholic. There is, we believe, waste of money and waste of labor. It might not be wise to say that we have too many colleges or institutions which partake largely of the character of colleges; but we may say, without the fear of contradiction, that greater unity of effort is desirable and possible, and that greater unity of effort would result in higher efficiency. In the East, it would be wiser if, in place of multiplying petty and sectional schools of learning, we sought to enrich and thus to strengthen and increase the efficiency of such institutions as Harvard and Yale and Princeton, and others of their class. In course of time, there is no reason why, if our millionaires will only follow good examples, these already ancient seats of learning should not rival in wealth, utility and efficiency the oldest, the richest and the most efficient universities of the Old World.

Concentration in the West is as desirable as it is in the East. By wise and concerted effort now, by uniting the resources of the different States, it would not be difficult to build up a university which, in a very short period of time, would be the envy of the East. A national university, endowed by the Federal Government, is not likely soon to find favor with our people. But as something like a national university is desirable, if we would have among us the means of obtaining the higher education, concentration rather than diffusion of strength is obviously essential.

There is room for improvement also in the matter of education itself. In our higher schools of learning there is still too much of the atmosphere of the Middle Ages. Latin and Greek still hold their old places. It still seems to be the theory of our teachers that the object of a college education is to make men learned, and learned especially in the two great languages of antiquity. Our view is that the object of a college education should be to make a man useful. It is not denied that a knowledge of Greek and Latin is necessary enough to those who would follow any of the three learned professions. But for all other classes, a knowledge of German, French and some other living language, with a knowledge of the sciences, and a good training in English literature, would be infinitely more useful. Latin and Greek form no part of the curriculum at West Point; and for all purposes outside of the three professions, our military men are at least equally, if not more, useful than the clergy, doctors or lawyers. It is gratifying to learn that a change is recommended at Harvard by President Eliot. A change at Harvard would lead to revolution all over the land; and we hope, therefore, that President Eliot will continue in the "courage of his opinion," so that the doors of our best seats of learning may be opened to others than those who have the taste and the time to go through the comparatively useless drudgery of acquiring a rudimentary knowledge of Greek and Latin.

We do not propose by any means the removal of these languages from the studies taught at the colleges. On the contrary, we insist on the importance of these chairs. There will always be students anxious to pursue those studies. What we urge is that the student shall have a right to select his course of study, and that the honors of the college shall not be withheld from him because he is unable to conjugate a Greek verb or scan a Latin hexameter. How many able, scholarly men of to-day would willingly part with their Latin and their Greek to be able to read and speak in some one or two of the modern tongues!

EDISON'S ACHIEVEMENTS.

MR. EDISON has just exhibited to the public another important invention—a telephone on an entirely new principle, accomplishing highly satisfactory results. It is called the chemical, to distinguish it from the magnetic telephone of Bell and the carbon telephone of Edison (which cannot be used without employing the Bell magnet at one end), and it is as novel a departure from these familiar telephonic methods as it would be for the steam locomotive to be superseded in railroading, or for a telegraph-line to be operated without electricity. In the construction of this telephone the magnet is entirely omitted, and in its place is put a spool of pressed chalk, which has been saturated with some sensitive chemical, that at present in use being caustic soda. Mr. Edison explained to his visitors that this is crystallized and polarized within the spool, and that it is thus enabled to reconvert the electrical waves into vocal waves; but his explanation is too abstruse to be comprehended by any but the scientific. This spool of precipitated and saturated chalk, and the tongue of iron passing over it which causes the vibration of the mica diaphragm, form what is called the electro-motograph, and this is now for the first time applied to purposes of communication.

The principal feature of this new chemical telephone is that it delivers the massage as loudly as it was received. In the ordinary magnet telephone there is a double loss, so that the message, which is originally spoken in a loud and clear voice, is delivered at the other end in a whisper, audible only when the listener presses the instrument close to his ear. But the chemical telephone reproduces the message in all its original volume, so that it can be heard and understood all over a large hall. Indeed, by increasing the size of the mica diaphragm at the receiving end, the voice can be greatly magnified, so that the message is delivered with twice or thrice the original volume. This would seem to be a highly important improvement of the instrument for most commercial purposes; and, certainly, to sit and hear an iron machine, that looks like a coffee-mill with a glass door, read clearly and loudly from a book that is fifty miles distant, with no connection except a thin, solid wire, is very impressive to a sensitive imagination.

Mr. Edison is still hard at work on his electric light, but he sleeps more than he did and takes life easier, for he declares that it is "virtually finished," explaining that he means that nothing remains but the mechanical construction. To forward his work, Mr. Edison has just invented a new dynamometer, or power-measurer, which consists merely of a drygoods box, with a ton of iron in it, standing upon a pair of platform-scales. The belt from the engine runs under a pulley rigged in the top of the box, so that the weight is always falling but never falls, the power of the engine lifting it as it descends. Thus the exact horse-power used is indicated on the beam of the scales.

The entire number of patents obtained by Mr. Edison up to May 29th was 254, exclusive of a large number of caveats for patents, and patents obtained in other countries. These stand for only about twenty separate inventions, as each invention is covered by several patents. It is estimated that the electric light will be defended by some thirty different patents, and the new telephone is covered by more than a dozen, one of which is for a "discovery"—the third granted to Edison out of the nine with which Americans have been credited in this century.

Although Mr. Edison seems to care nothing for money, he succeeds in bringing most of his inventions to a commercial basis, and among those from which he is now reaping a large financial reward may be mentioned the quadruplex system of telegraphy, now in use almost everywhere, the telephone, the electric pen, the stock indicator, the phonograph, and some half-dozen others. Besides these are the megaphone, the microphone, the tasimeter (to measure the heat of stars,) which are interesting and some of them valuable to science, but which do not yet yield an income.

"This," said Mr. Edison, to one of his visitors, speaking of the electric light, "I expect will be the chief of my inventions, for it seems as if it would be the most widely beneficial." Being asked what he had succeeded in accomplishing, he said, "I can produce six burners to every horse-power of my engine, equal to six gas-jets, and this at less than one-third of the first cost of those gas-jets to the manufacturers of the gas. I claim that this solves the problem—but I hope to do even twice as well as this, that is, I hope to produce twelve electric lights at the price which two similar gas-jets will cost the manufacturers of gas." If Mr. Edison shall succeed in doing this, he will settle speedily and finally the question of street and domestic illumination. "Speedily," we say, without regard to the exact time when the result will be finished, for even five or ten years are as a day in the accomplishment of a revolution affecting so many interests.

THE NATIONAL FINANCES.

THE fiscal year having closed with the last day of June, we are enabled to gather from the reports of Secretary Sherman some interesting facts as to our exact financial situation. The total receipts of the Government for the year, from all sources, amounted to $276,250,327. The receipts from customs aggregated $136,582,580, and the internal revenue receipts $112,902,406. The total ordinary expenditures, not including interest on the public debt, amounted to $164,598,384. The total debt (principal) at this date is $2,027,207,256, with $30,792,351 interest. The reduction of the national debt for the year is $8,579,575. The total cash in the Treasury is $353,152,577. The revenue sustained during the year a loss of about $8,000,000 by reductions on the tobacco tax, and extraordinary sums not anticipated at the beginning of the year, amounting to $18,800,000, were paid out in obedience to Acts of Congress. This aggregate included $6,500,000 paid under the Arrears of Pension Act, and $5,500,000 paid under the Halifax Fishery Award.

The amount of gold coin and bullion now in the Treasury is $135,236,474, which is only $146,165 less than the amount on hand on January 2d, the date of resumption. No more conclusive proof of the groundlessness of the alarm as to the results of resumption which was manifested by the Inflationists could possibly be furnished than is embodied in these simple figures. The total amount of standard silver dollars coined up to July 1st is $35,801,700, and the amount issued to same date is $13,359,342. The total amount returned to the Treasury is $6,518,912, and the amount now held is $28,147,351.

TENEMENTS AND HOMES.

THE evils of the tenement-house system are universally admitted. How can they be cured? A variety of remedies have been proposed, but all are based upon the theory that the reform must come from without. It seems to us that this is a mistake, and that the true cure for the wretched manner in which the mass of workingmen are now compelled to live lies in their own hands. The money expended by this class in supporting labor unions, and in maintaining periodical strikes, if rightly applied, would emancipate them from tenement-house influences by giving them homes of their own. It is within their power to become owners instead of tenants, using co-operation to that end.

At this very moment New York might have, and ought to have, a large number of building and loan associations, sustained and governed by the wages-earning class in their own interest. Such associations have, in Philadelphia, proved a grand success, and two at least in this city have proved equally useful. They have placed the workingmen of the former city beyond the reach of the squalid wretchedness which attends our tenement system. The case of the Artisans' Building and Loan Association will serve to illustrate the beneficence of co-operation in this direction. This association went into opera-

Digitized by Google

ion in the month of March, 1873, with 143 members. The first instalment of dues amounted to $1,713. At the expiration of the first year the capital amounted to $27,468, and in March of the present year was stated to be $103,913, an increase of about 600 per cent. in six years. This capital has been loaned to members for the purchase of homes, or to attain a start in business. So long as the monthly dues and interest are paid the capital cannot be recalled, and when the association shall terminate the obligations of borrowers will be canceled.

The methods of this and similar associations are very simple. Usually the associations are made to terminate when the dues, premiums, interest on loans and fines, shall equal $200 per share. The shares of an association may consist of any given number, no member being permitted to hold more than ten. Each share pays one dollar monthly into the treasury. The money received at each meeting is put up at auction and sold to members bidding the highest rates of premium. The interest on loans is also paid monthly and sold, as are all sums received on premium account. The sales are all made in even sums of $200 to a share.

The practical working of the association is as follows: A member owning, say, five shares, and desiring to purchase a property, or to enter into business, may purchase $200 on each share, or $1,000 in all. In borrowing that sum he secures the association by bond and mortgage, and pays accrued interest in monthly instalments until the term closes, when his obligations are canceled. If he never borrows, and all members cannot become borrowers, then $1,000 cash is paid to him at the general wind-up of the institution.

It has been found that with interest at six per cent. on loans and an average of premiums amounting to as much more, and the general compounding of all moneys received, such an association will terminate in about seven years. Supposing the association to run for that period, and the owner of five shares to have been the first borrower to the extent of his stock, the following will have been his total payments:

Dues at $5 per month, 7 years	$420
Interest at $5 per month, 7 years	420
Premium, say 15 per cent on $1,000	150
Total	$990

Thus the member receives $1,000, and pays, in small sums, $990 in all. But he has his profit in the non-payment of rent and the enhanced value of property, or in the profits of business, as the case may be.

Now, compare this with the case of one not a member who borrows from an individual $1,000 for a term of seven years, and agrees to pay a like premium and interest. In the end his payments will have been as follows:

Premium on $1,000 at 15 per cent.	$150
Interest on $1,000 at 6 per cent., 7 years	420
Payment of principal	1,000
Total	$1,570

These figures thoroughly illustrate the difference between borrowing from an association and of an individual. The difference in favor of the association amounts to $580 on a $1,000 transaction.

We recommend the workingmen of this city to give the system here presented a trial, and at the same time beg to suggest to wealthy philanthropists that they may greatly assist the movement by agreeing to furnish the members of such organizations with lots at an equitable ground-rental for a long period of years, as in Philadelphia. Let the plan once be entered upon, and thousands of the wages-earning class will secure permanent homes not obtainable in any other manner. Such organizations will obviate the necessity for strikes, and blot the tenement-house system out of existence.

EVENTS ABROAD.

THE German Empire is constitutional in form, but autocratic in fact. A ministerial crisis at Berlin, therefore, does not usually carry with it the same significance that such an event would bear in the really constitutional *régime* of England, France or Italy. But the troubles that have just become critical—for they have existed in a milder form some time in the Emperor William's Cabinet—indicate a somewhat grave situation. The truth seems to be that Bismarck, who, during the past year or two, has been coquetting with all parties in turn, but has mainly relied upon the support of the Liberals, has recently manifested signs of going over to the Junkers and Ultramontanes—that is, the reactionary parties in Germany. This has disaffected his liberal colleagues. The question just now at issue is a complex one of finance, revenue and religion, the special point being how to dispose of the surplus receipts of the empire. Happy Germany, to have surplus receipts at all! The Ultramontanes wish it divided among the various States; then, of course, Catholic Bavaria, Wurtemburg and Rhineland would come in for large shares. But the Liberals fiercely oppose this, and Bismarck halts between offending his new Catholic friends on the one hand, and the loss of such colleagues as Hobrecht and Falk on the other.

Austria has been holding a general election for the new Reichsrath, the prospect being of a gain for the "clerical" and "nationalist" parties. It seems strange to be reading of the people of this proud and once despotic old empire, going quietly to the polls, and freely electing representatives who are to resolve its policy. Count Andrassy, whilom Hungarian rebel, and now Chancellor of the Empire, has recovered his health and remains, after all, at his high post.

There is an under-current of intrigue *apropos* of the Eastern Question, from which the political ferrets of Europe have not as yet succeeded in withdrawing the veil. A "coolness" is reported between Russia and Germany. Gortschakoff actually passed through Berlin without calling on his bosom friend Bismarck; Russian and German diplomats have been seeking interviews with their masters, and the Czarowitz is credited with having sown seeds of discord between the Czar and the Kaiser. England and France, it seems, will not permit the Sultan to deprive the young Khédive of the right to make foreign treaties. The deposed ruler of Egypt has gone to Naples with two of his sons.

Those uneasy vassals of Russia in the East, the Uzbeg Tartars, are in revolt, and threaten trouble. England is having better fortune in South Africa, where Cetewayo has proposed serious terms of peace. Of course he will have to yield everything; for Chelmsford will stipulate for the return of hostages, the disbandment of the Zulu army, and probably for a rectification of the Zulu-Natal frontier.

Two noted Englishmen have died during the past week. Lord Lawrence, who won his fame as an officer in India, organized the conquered Punjab, and finally became the best Governor-General India has had since Viscount Canning, will no more be seen in the House of Peers, rather hotly denouncing the Oriental policy of Lord Beaconsfield. Lord Lawrence was a man of mark, not only as a soldier and administrator, but as a conspicuous friend of popular education. He was chairman of the first London School Board after the passage of the Education Bill, and served most ably and energetically in that difficult post. We are reminded of our nearness to the time when the electric telegraph first came into use, by the death of Sir William Fothergill Cooke, who constructed the first telegraph line in England, from Paddington to West Drayton.

The literary gossips of London have been all agog with the appearance of the rugged poet, Robert Browning, on the witness stand in the Common Pleas, in the piquant case of Shepherd *vs.* the *Athenæum*. It appears that Shepherd is a literary hack, who mouses about and grubs up the forgotten or abandoned writings of famous authors, alive or dead, and publishes them for his own profit. The *Athenæum* gave him a smart critical drubbing, in which it called him "an insect," a "bookseller's hack," a "chiffonier," and other unflattering names; whereupon Shepherd brought a suit for libel. Among the discarded works he had published, were some poems written by Elizabeth Browning in her callow days, and which she had desired the world to forget.

London has found an interesting lioness to pet, in that child of the mysterious haunts of the Paris Bohemia, Mdlle. Bernhardt. Few royalties are fêted and "ovated" as this favorite and versatile actress of the "Français" has been since her arrival in England. The Londoners are in raptures over her acting, laud her sculptures and paintings to the sky, rave about her dreamy eyes, listen breathless to her poetic effusions, invite her to "at homes," garden-parties, kettledrums and stately balls; dukes, ministers, statesmen and ambassadors, poets, novelists and historians are glad to catch a smile of welcome from her fascinating lips. She is the talk of the clubs, the *coulisses*, Parliamentary lobbies and lordly drawing-rooms.

A princely marriage of thirteen years' standing has just come to grief. Princess Marie Hamilton, a ward of Napoleon III., and a relative of Queen Victoria, married against her will in 1866, the dissolute Prince of Lilliputian Monaco. She was a beautiful girl of nineteen, and he a worn out, middle-aged, rake; but her imperial guardian insisted and she was morally dragged to the altar. She has led a wretched life ever since. Subjected to violence and even to imprisonment, she at last fled to her mother, and has now secured from Rome a dissolution of the marriage, though a broken-hearted and life-embittered woman.

THE number of business failures reported in this city during the six months ending June 30th was 366, with liabilities amounting to $11,582,656, as against 514 failures for the same period last year, with liabilities of $39,630,735. The greatest number of failures—twelve—was in the produce trade. In the dry goods trade only five failures are reported, but the liabilities amounted to $1,222,977. The six months' record is, upon the whole, indicative of a solid improvement in the financial and commercial condition of the metropolis.

THE estimate of the wheat crop for 1879, indicates a total yield of 380,000,000 bushels, against 425,000,000 bushels last year. The surplus available for export is estimated at 105,250,000 bushels, or some 45,000,000 less than in 1878. The increase this year in the total area of wheat planted is about four per cent., but the present indications point to a smaller yield per acre than was realized last year.

A NOVEL financial scheme is under consideration in Connecticut. It proposes the consolidation of all the indebtedness of cities, etc., and covering it by bonds, issued and guaranteed by the State—each city to be assessed for its share of the interest, at the rate of 4.65 per cent., to be paid over to the State; the State to pay 4.50 per cent. to bondholders, and the difference to go into a sinking fund, which it is claimed will cancel the entire indebtedness in fifty years. The funded indebtedness of the counties, cities, towns and boroughs of the State in 1877 amounted to $17,151,000. The State debt is about $5,000,000, and is in process of rapid reduction. A convention is to be held to determine whether a plan of the sort proposed cannot be made acceptable to all parties concerned.

THE vote in the United States Senate, June 30th, on the resolution in favor of the unlimited coinage of silver, had a special significance in the fact that the affirmatives were all democrats and the negatives all Republicans. Only four democrats in all voted for the postponement of the resolution. The effect of the policy proposed in the resolution would be to open the mints immediately for the free coinage of silver, giving to bullion-owners the world over the immense profit which would result, and driving gold out of the country. The vote, 23 to 22, by which the matter was laid over, having been a close one, no doubt the contest will be renewed at the regular session in December.

THE extent to which the people of Great Britain and the continental countries have come to rely upon the United States for supplies of breadstuffs is shown by the comments of the London *Times* on the unfavorable crop prospects. The *Times* says: "We note that buyers mainly rely on American supplies, as the reports from the Continent are far from being uniformly favorable. Official reports of the Italian harvest say that rain and inundations have rendered the prospects in the north deplorable. Central Italy promises at least a moderately good harvest, the southwest and Sicily tolerable, and the southeast and Sardinia excellent. On the whole, the anticipations are under the average. According to Odessa newspapers, the situation of the crops in Southern Russia and the Caucasus has been scarcely ever so bad as at present. What was left by drought and hail is now, it is asserted, being annihilated by frightful swarms of grasshoppers and corn-beetles."

THE Superintendent of the Census has devised a plan for the collection of vital statistics which will no doubt yield results of great value. His plan proposes to secure the cooperation of all the practicing physicians and surgeons of the country, numbering over 60,000. These will be supplied with blank forms calling for full information as to all deaths occurring in their practice during the year ending with May, 1880, including the name, sex, race or color, age, with date of birth and occupation of the deceased, the cause or causes of death, or the symptoms where causes cannot with certainty be given, etc.; and as the statistics thus called for will be of the highest importance and value to medical science and to public hygiene, it is confidently believed that physicians generally will be careful to keep such a record of these cases as will enable them to make their information accurate and trustworthy. The American Medical Association at its recent annual meeting formally approved the plan of the Superintendent and urged the profession to give it a hearty support.

THE semi-annual disbursements in this and other cities, during the month of July, on account of dividends and interest, must make money plenty for the time being. In this city alone the amount due and payable during the month is stated at between $50,000,000 and $60,000,000. The Government interest alone on the public debt foots up, in round figures, at $16,500,000. Then the banks and insurance and trust companies are paying their dividends; a large proportion of the railways are also paying interest on their bonds, or dividends on their stock; and, later on, the savings banks will pay semi-annual dividends to their depositors, generally at the rate of five per cent. per annum. During the month the Government will, in addition to interest, pay out large sums in redemption of the public debt called in under the Funding laws. Last week, $69,502,750 of five-twenties fell due, closing out that particular issue of bonds. On the 9th, $10,000,000 of ten-forties were redeemed; on the 18th $160,000,000, and on the 21st $24,566,300 will be taken up. This will wipe out this issue also. As a further illustration of the magnitude of transfers of money at the beginning of the month, it may be added that the exchanges at the Clearing House, July 2d, amounted to $103,526,782, and the balances to $12,505,154.

NEWS OF THE WEEK.

Domestic.

THE public debt was increased $24,788 during the month of June.

SEVERAL families have been poisoned in Brooklyn by drinking milk, and an investigation is being held.

THE California Democrats have nominated the candidate of the New Constitution party, Mr. Hugh J. Glenn, for Governor.

AT Morris Island, near Trenton, N. J., a wharf broke down, precipitating seventy-five passengers into the water, of whom three were drowned.

COLONEL HORATIO G. WRIGHT has been nominated and confirmed as Chief of the Engineer Corps, vice General Humphreys, retired at his own request.

GOVERNOR GARCELON was renominated at the Maine State Democratic Convention, July 1st, upon a platform indorsing the course of the Democrats in the extra session.

JAMES P. EDMUNDS, one of the most prominent residents of Newton, Mass., has been arrested on a charge of having committed forgeries to the extent of nearly $80,000.

THE routes of the Kings County Elevated Railroad (Brooklyn) have been adopted in spite the Mayor's veto, and protests against the scheme are being sent to the Board of Aldermen.

IN the monthly circular for July of the principal coal companies the prices show an advance generally of ten cents a ton over those of June, and from twenty to thirty-five cents over those of May.

BOTH branches of Congress adjourned *sine die* July 1st. No provision was made for the pay of the Marshals of the country. One of the Bills passed during the last hours of the session placed quinine on the free list.

MINNESOTA was visited by a cyclone on July 3d which played fearful havoc with property and caused the loss of many lives. The same evening the storm struck Elkhorn, D. T., Plymouth County, Iowa, and portions of Wisconsin.

THE steamer *Isaac Davis*, loaded with passengers, careened and her hurricane deck broke off, throwing scores of passengers into Lake Quinsigamond. Four persons were killed, several more or less injured, and a number are missing.

THE coroner's investigation in the case of Joseph A. Blair, of Montclair, N. J., charged with the shooting of John Armstrong, his coachman, resulted, on July 3rd, in a verdict of manslaughter, although four of the jury favored a verdict of justifiable homicide.

ON the morning of June 30th the first water from the Comstock mines was pumped into the Sutro Tunnel, completed after ten years' labor at an expense of $6,000,000. The event was celebrated on the mountain-tops with huge bonfires and discharges of giant powder.

A SUBSTITUTE for an article of the minority report has been adopted by the Louisiana Constitutional Convention, which recognizes the principal of the State debt as constituted under the Funding Act, but reduces the interest to three per cent. for fifteen years and four per cent. thereafter.

GENERAL MILES was instructed by the War Department, on July 1st, to proceed at once with sufficient force to repel the invasion of British Indians who have crossed our border in pursuit of buffalo, and are now menacing the Gros Ventres, Assiniboines and other tribes, located in the northern part of Montana.

NEARLY all the Cabinet officials are about to leave Washington. Secretary Thompson will leave shortly for an extended trip to his home in Indiana. Secretary Sherman will go to Maine, and thence to Ohio. He will make one or two speeches in each State. The President spent Independence Day at Fortress Monroe. Secretary Evarts will visit the birthplace of Washington before long, to decide upon a monument proper to mark the spot.

THE dead body of John F. Seymour, a brother-in-law of Bishop Seymour, of the Protestant Episcopal Church, was found in the grounds of the General Theological Seminary, New York City, with a pistol shot wound in his left breast, early in the morning of the 4th. On the same day James Nolan fatally shot Jeremiah Murphy, at Verplank's Point, near Peekskill, N.Y.; Richard Rawlinson instantly killed George Sisk at Tompkinsville, N. Y.; Thomas O'Connell, a master mason and builder of Nyack, N. Y., was fatally stabbed by Patrick Nichols, a discharged employée, and Michael McArthur was fatally shot by Police-officer Wade, at the East River Park, New York, while he and some companions were assaulting the officer. Besides these, there were a large number of deaths by accident.

Foreign.

BETWEEN twenty and thirty lives were lost by an explosion in a coal-pit near Glasgow, Scotland, July 3d.

THE Duke of Cambridge heads a committee of British army officers to erect a memorial to the Prince Imperial.

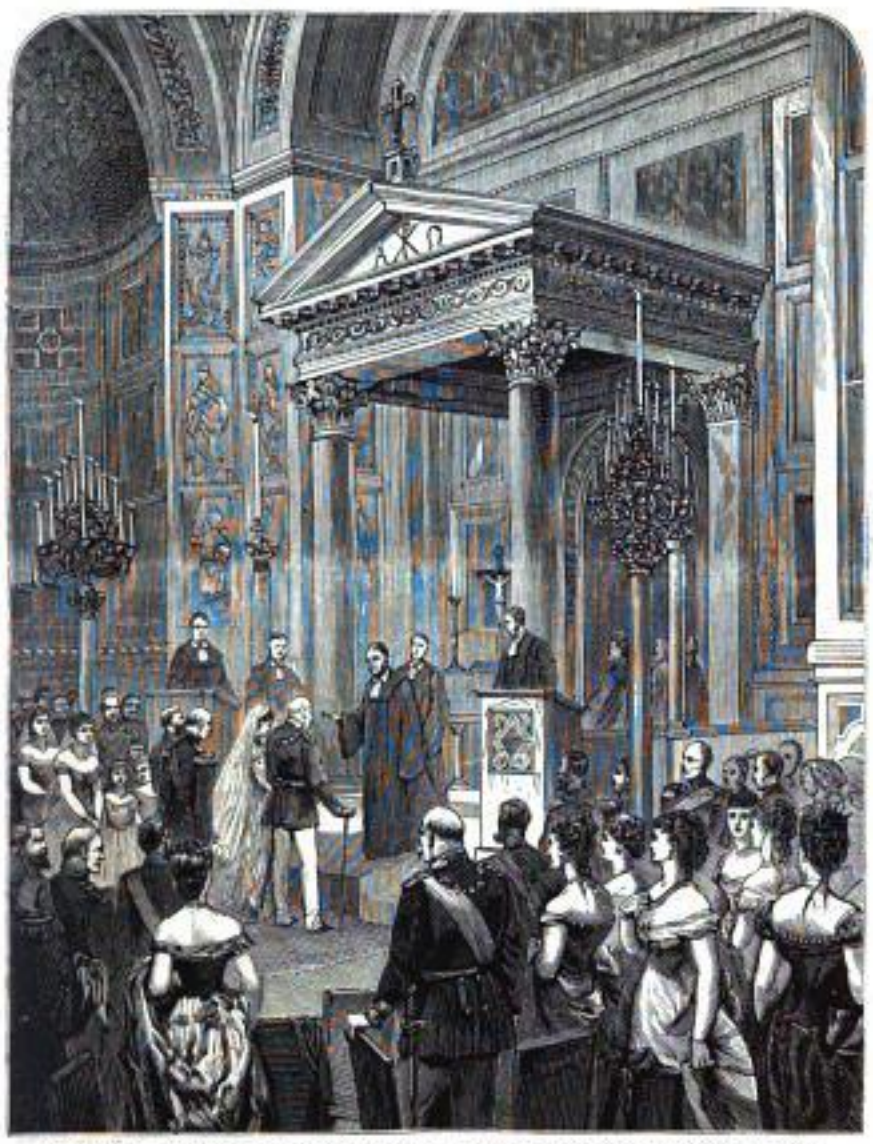
LIEUTENANT CAREY, who is charged with leaving the Prince Imperial in the lurch among the Zulus, is to be court-martialed.

A ROYAL commission has been appointed to investigate the cause of the great agricultural distress throughout Great Britain.

THE proposition submitted by Austria and Germany for a Liquidation Commission to regulate the finances of Egypt has been approved by England and France.

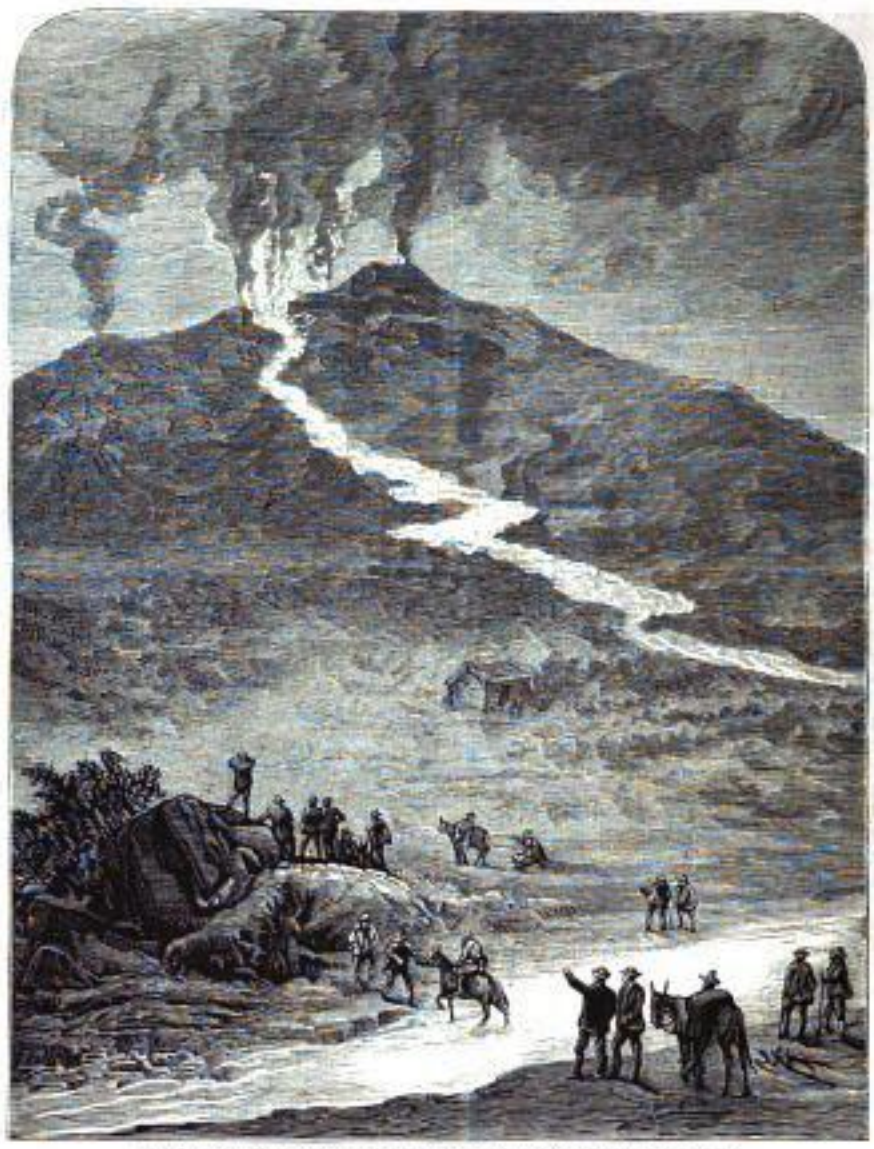
CHILE has resumed the blockade of Iquique, and contemplates landing 12,000 men on the Peruvian coast, whence they are to march on Lima. There has been a general call to arms in that city.

THE remains of the Prince Imperial arrived at Madeira July 4th. The funeral will be attended by the British royal princes. The ex-Empress Eugénie will spend some months in a convent after the funeral.



IT is said that Tewfik Pasha, the new Viceroy of Egypt, has agreed to surrender one-half of his father's civil list. The saving to Egypt would be $750,000 annually. The Prince is appointing excellent advisers.

A SPECIAL convention between Germany and the Vatican is being negotiated. The German Government is to nominate bishops subject to the approval of the Pope, and the bishops are to nominate priests subject to the approval of the Government.



IT is said that Prince Jerome Napoleon will publish a manifesto after the funeral of the Prince Imperial, urging all Bonapartists to submit to the Republic, and that he has already assured President Grévy that he will not become a pretender to the Imperial throne.

DISCHARGE OF A STEAMBOAT-LOAD OF SALMON CAUGHT ON THE SACRAMENTO RIVER, AT A WHARF AT SAN FRANCISCO.

THE SALMON INDUSTRY ON THE SACRAMENTO RIVER.

THE salmon has been known since the time of the Romans. It is one of the great game fishes of the world. It prefers northern waters, and is found in France, Ireland, Scotland, in Canadian streams, and on the Pacific Coast, from San Francisco Bay to Alaska. In Scotland it was once so plentiful that servants stipulated they should not have it for food more than twice a week. The fish at one time so abounded in New England that they were easily killed with clubs as they passed in great numbers up-stream to deposit their spawn. A few years ago they were abundant in the San Joaquin River, in California, but now they are only caught in the Sacramento and its tributaries. Though it has been taken in that State for many years, it shows no signs of diminution.

The angler, the boat-fisher, and the canner, will each tell different tales of the habits of the salmon. An expert angler states that the fish, after their return from the head-waters of the streams, linger along the coast not far from land. When the first light rains begin in Autumn, they enter the great bay of San Francisco, and remain about its shores until March. Then the snows in the mountains begin to melt, the streams are high.

and they begin to tend inland. The game preservation law forbids their being caught except between the first of April and the first of August. By the middle of April they are running rapidly upstream. Till the first of July they run freely, then diminish in number until the end of the fishing season. April, May and June are the harvest of the fishermen. About two hundred Whitehall boats are engaged in the business during the entire season, employing two men each, mostly Italians. They fish with gill-nets, taking the fish on the ebb tide, their labors extending on the Sacramento River a distance of nearly one hundred miles, or from a point a few miles from where the river debouches into the bay to the town of Sacramento. Most of them are caught in a stretch of the stream about twenty-five miles long, beginning about twenty-five miles from the river's mouth, or fifty from San Francisco. The fishermen have rules among themselves that regulate the times and spaces to be fished, setting their nets according to priority, dropping down over a portion of the stream, and withdrawing to give place to their fellows. The catch is unequal, the fish running better on quiet days, and is all the way from 120 fish per boat down to none at all. The nets are made sufficiently open to allow of the passage of all fish not weighing more than twelve or fifteen pounds.

Only one hundred boats are engaged in supplying the markets of San Francisco and the smaller towns in the interior of California. The daily consumption of fish is from 1,500 to 3,000, averaging nearly twenty pounds in weight. They are caught in the localities named, taken to the landing-places on the Sacramento River, and shipped by the steamers from Sacramento and Vallejo to San Francisco. In April and May the fish are a luxury in the hotels and restaurants of San Francisco, but they soon become so common that they pall upon the taste, and long before the end of the season the epicure sees them placed before him at table with aversion. They are sold commonly in the San Francisco markets for five and six cents a pound, and, in times of great plenty, much lower, even going as low as one and two cents. Fresh salmon are brought to New York in refrigerator-cars and sold at enormous prices. This branch of the trade is in its infancy, but may hereafter become important.

It is three hundred miles from the sea to the headwaters of the Sacramento, where the salmon leaves its spawn, and the fish are two months in traveling the distance. There they are caught in great abundance by the anglers, who during the Summer months swarm in these wild resorts. They deposit their spawn in eddies, and much of it is devoured by the mountain-trout that lie in wait. The fight among the males is ferocious; the fish are torn and lacerated, and die in immense quantities, either from starvation, exhaustion with their long journey, or from their injuries, their dead bodies lining the banks of the streams and infecting the atmosphere. Some say that the young fish remain a year before returning to the sea; others insist that they return immediately. Many assert that the females which come up to spawn, and also the males accompanying them, never return—all dying in the small streams; while others claim that most of them find their way back, but fall backwards down the current, that the water may not enter their gills and drown them. How long they remain at sea before returning is another mooted question. All these differences of opinion only show that naturalists have much yet to learn regarding the habits of this most interesting denizen of the waters.

THE CYMBAL GIRL.

I.

PRESENTIMENT, to an imaginative nature, necessarily accompanies every new life-episode. Hope of good or dread of evil marks every turn in the path of destiny. If, ascending the steps of what my friend Walford Grevor was pleased to call his "great purchase"—a villa near Rome—my heart sank, why, besides the above reasons, I was ill, nervous, depressed, and, Grevor declared, "somewhat overcome with the horrid heat." "You see I was right to persuade you to travel," added he; "change is far better than hypophosphites or any other tonic. What you want is a little novelty and excitement, and I think we shall have them here."

I turned, inquiringly, at my friend's words, but without saying that I had only accepted the invitation because I hoped to have greater quiet near Rome than at the hotel where I had staid in Florence.

"Novelty, yes," said I; "but how do you propose to get excitement here?" And I looked up at what was certainly—though I would not have said so to happy-tempered Grevor—a gloomy-looking abode.

The lawn was well enough, the fountain in its midst sparkling and tastefully decorated with aquatic plants, but—the house! Over it lay a sinister sadness of atmosphere, due, it seemed to me, to other causes than the dull color of its stone, the narrowness of its *grisaille* windows and a cold architecture strangely devoid of ornamentation.

"Same impression that I had myself," said Grevor, airily, and reading my face with the quick perception of friendship. "Looks as though some old necromancer had built it to study, undisturbed, the Black Art written on its walls. I'm not clear as to whether he isn't here yet, for, let me tell you, Penthorpe, the enchantment here is within and not without. I flatter myself that a queerer place than this could scarcely be found, and that, you see, is exactly why I bought it. If it prove *too queer*, I'll sell it, that's all! But, come in."

As we went through the lower hall, Grevor related all his difficulties in getting the villa as a purchase, and told me that the Comte del Briglio, a young Italian of great learning and a man of mark, had earnestly advised him against residing there as "not good for the soul." "The comte," said Grevor, "had not explained himself further, but was evidently a man above superstition." Grevor admitted having been somewhat influenced by his words but only for a time, and had completed his purchase, notwithstanding.

"I will show you one cause, as I take it, of the comte's remark," added my friend, and led the way to a room on the *secondo piano*; "he did not like this picture." Grevor now opened a heavy door, and I found myself in front of a life-size picture of a woman reclining upon a gorgeously decorated couch.

As a painting, the subject before me was marvelous. The ample drapery defining the magnificent limbs, the heavy shadows about the eyes, the superb hair, the contour of the features, all this belonged to a high order of artistic treatment; but how, why an artist, any artist, should have chosen to paint a countenance so expressive of the most diabolic wickedness and cruelty, the most shocking capabilities of hatred and of crime, was what I, gazing, failed to understand.

"It seems to me," said Grevor, "when I look at that face, that it is unnatural, inasmuch as it would take all the wickedness of several souls to make up that expression. Heaven would not place in one heart what would over and over again doom its possessor. Every soul has a chance to cope with its own adverse forces. This face has the eyes of many devils, the look of the utterly lost, and yet how beautiful as to outline are countenance and form! How graceful the *pose!* The draperies, how clear! The curious ornaments of the hair, how well treated! What depth of tone! What harmony of color!"

Now, I am a quiet man, an invalid for years, a student in my more thoughtful hours—being willing to devote a part of my fortune to scientific progress—and when I relate that, already adversely influenced by the picture, I declared it "frightful," "appalling," and felt an almost mad desire to leave the room where it hung, and at the same time a sort of numbness in my limbs that seemed to be gradually depriving me of the power to move from before the weird canvas, I shall, perhaps, convey some idea of its inexplicable power to terrify and to fascinate. The face seemed mockingly to gaze at me, and the glittering silver cymbals which the dancing-girl—such, I fancied, was the subject represented—held together below her breast, gave forth, I imagined, a low, tremulous, delicious sound. Beautiful devil! Weary with the dance, she had flung herself upon the couch, and, supporting herself by one snowy arm, still held herself ready to accompany—it were as though Hades had given forth the sounds fit for some demon-dance if they should suit those eyes—the rhythmic motion of unseen, perhaps ghostly, companions.

"Let us go!" I gasped, and, with a mighty effort, dragged Grevor into the hall, where, my heart beating wildly, I leaned against a deep embrasure, congratulating myself, mentally, upon having put my "fever-drops" in my trunk. Grevor remarked that I had "evidently overdone myself, and had better sup and retire."

Arrived at my sleeping-room an hour later, I sank upon the bed and fell into a heavy sleep. Never shall I be able to tell why or how I left the apartment; but certain it is that next morning my host found me, stretched, he said, upon the floor in front of the painting of the Cymbal Girl—the room it was in was a story above mine—and in a deep sleep still. I could only say that, in a dream, I had thought I beheld a dreadful dance of lost souls, and in their midst a figure of which the constant interposition of the Cymbal Girl's musical instruments prevented my seeing the face; that I had been impelled to save this unseen visitant and had become involved in the maze of phantasmagoric measure. After that I could remember nothing.

Grevor, looking gravely and apprehensively at me, demanded whether my late fever had been a brain-fever, and muttered:

"I'll lock up that room."

"Oh, do not lock her up!" exclaimed I, as though pleading for some sentient being who would suffer by confinement.

Grevor looked at me and said nothing; but later in the day I saw him talking to the Comte Del Briglio, and tapping his forehead while he pointed in the direction of my room. The comte looked very grave.

II.

WE had not been long in the villa before Comte Del Briglio had visited us again, and, in spite of the very great distance between the villa and his own abode, made us various visits. On one of these occasions I ventured to question him in my host's absence as to his having advised Grevor not to purchase the villa.

"I will tell you all that is known of its history," said the comte in reply. "I feel it, indeed, to be my duty to warn you that it is an evil abode in which to live. A few years before the death of my father, who lived till eighty, he one day sent for me to his own apartment—it was in this house—and there said to me:

"'I wish to sell the black villa—*la casa nera*,' it was thus he always designated this gloomy abode which had become a part of our property, although no portion of our family estate, nor was I who sold it to your friend. I asked my father why he wished to part with it.

"'I wish it were burned,' replied he, with that passionate speech which had outlived his youth. 'It is an accursed place. I will tell you all. Follow me.' And he led me where I will now lead you."

I rose and followed the comte. We reached the hall, and, arrived there, he pushed back a bolt that fastened what proved to be a heavy oaken door, though seeming a part of the paneling. He beckoned me to follow him and we went down a few concealed steps and found ourselves in a room dimly lighted by an octagon window. In the lower part of the room stood a statue in copper, about which it seemed as though the room might have been constructed to conceal it. I started as I looked at it. It represented, in an upright posture, the chin resting upon one hand, a figure precisely similar to that which I had named "The Cymbal Girl." The same diabolic expression marked and marred the face, and seemed to take an added intensity of expression from the darkly bright hue of the copper.

"'This,' said my father, 'represents an ancestress of that family of the Galfi from whom I purchased this villa, a woman whose cruel deeds and unholy knowledge caused her to be looked upon at once as a malefactress and a sorceress. She crowned her evil life by leaving her home to follow a bandit, the most merciless of all who infested the vicinity of Rome, and him in the after time she aided in his crimes. Captured with him, the infuriated peasantry threw her into a cauldron of boiling oil. It is from the copper of which that cauldron was cast that this statue was molded. It was intended to brand with infamy the "Donna Funesta, or Evil Woman," as the Contessa Giulietta was called, and, as you see, the statuary gave her feet which are cloven hoofs. Here are the horns he placed behind the splendid waves of her flowing hair."

"Startled," added the comte, "I looked at the head and feet of the statue and saw that it had, indeed, Satan's hoofs and horns.

"'Once set up,' continued the comte, "it was found impossible to move the statue from the place it occupied, and, at last, one of the Galfi obtained permission to build this villa and so to conceal the statue and its inscription: '*Infamia all' infamia*' (Infamy to the infamous). Do not speak of the existence of this room to Mr. Grevor," added the comte; "it is needless to make him regret the purchase of which my father, when he discovered its true history, made all haste to be rid.

"From the moment," resumed the comte, "that the villa was erected about the statue, insanity, poverty, and finally death—in some cases violent—fell upon the various members of the Galfi family who boldly attempted to reside here. The peasantry, it is handed down, resented the attempt to wipe away the shame of the deeds of the Donna Funesta by concealing the statue, and secretly set fire to other portions of the now dwindling estates. The peasants were punished, but this did not avert the fate which bore down upon the Galfi. The comtessa had been accused of sacrificing infants to the moon, of casting spells that caused madness, of causing by her influence over great personages the confiscation of property. All these calamities except the last, were features of the misfortune of the doomed family. Little by little the dust and ashes of their former greatness were whirled away by the simoon of disaster. A small estate in Palermo was all that remained at last to the last male descendant. He did not marry.

"But this is not all. I must go back in my recital. The comtessa had borne a child to the bandit, Ludovico Sconcio, and her history was well nigh as terrible as that of the mother. A dancer of infinite grace and extremely beautiful, she became a *ballerina* in a great theatre, the better to lure the victims of the band to which she belonged, that of her cruel father. None were aware that she was *La Serpe*. Young noblemen would follow her carriage, it was afterwards discovered, be waylaid, robbed, and sometimes murdered. Ignorant of all this, the dissipated Marchese Di Banza carried her off from the theatre, married her, brought her here—he had purchased this villa—caused to be painted the picture you have doubtless seen, and succeeded in concealing her from the band. It is supposed that remorse or terror caused her to fling herself from the highest window of this abode, beneath which she was found. Certain it is that the band of Sconcio obtained possession of her child, a daughter, and held her.

"Further than this, some fascination of evil dwells here still. It is wrong that the house should have been sold, and to so harmless a man as your friend. Thank heaven! *I* had nothing to do with that! Those who have lived here have always been annoyed by what some called 'spiritual manifestations,' and none have remained. I can myself assure you that lights flitting at the windows have often been seen at night, though for ten years the house has been closed. Doubtless but for its great distance from the city the cause would have been fully investigated.

"How sad," added the comte, "to think of that unfortunate girl, the last descendant of what was once a noble house! If the girl could be rescued——"

"How romantic you are!" interrupted I. "Is it to be supposed that with such blood in her veins, added to that of the famous Sconcio and with the Marchese Di Banza, the girl can be aught but a monster in human shape?"

"True," added the comte, musingly; "there was but one good Galfi, a sister of the *Strega*, or witch, whose statue you behold, and she, Benedetta, became an abbess, and died in the odor of that sanctity whose breath was never shed over that guilty house. Let the girl go; it will be one devil the less blasting the fair earth!" The comte sighed here, and, after a pause, resumed: "I have seen this girl."

"Seen her!" exclaimed I.

"Yes; a few weeks ago. It is very strange, I will add, that on the night when you came here—that before the morning on which Mr. Grevor found you, as he told me, in the room with that picture, which I believe to be the most horrible ever painted—they say poor Busetti, the artist, committed suicide after he completed it—I saw elsewhere what you told Mr. Grevor that you saw here."

I started and stared at the comte.

"At Montone, in the low gorge between the two mountains, a place where banditti lurk, I, coming hither, beheld the last descendant of the Donna Funesta. She held, as the figure in the picture holds, below her breast, silver cymbals which she faintly struck; she reclined, supported by one lovely arm, upon the green sward. Instead of the sweeping draperies of the picture she wore the graceful skirts of the Roman peasant girls. It is true," musingly added Del Briglio, "that her face, although strikingly like that of her ancestress in outline, lacks its wickedness, though not its fascination."

"To me," remarked I, "the wickedness of that pictured face prevents any possible fascination by its beauty."

The comte laughed. "Yet you rose from your sleep to return to it," said he; then continued: "I saw the robbers begin to dance with the women of the band, the girl still striking the cymbals. I watched, but was unable to discern any face but hers, on which fell the strong flare of a torch. It was a wild, strange dance."

"And such, as you said," interrupted I, "I saw in the dream that brought me back to the room with the picture. I tried in vain to save from the other dancers one whom I saw them pursuing. The face I could not see, but in the hair glittered a gorgeous serpent of jewels."

"As in the hair of the woman in the picture," replied the comte. "It was from wearing that strange ornament that La Serpe got her name. It is fortunate," added Del Briglio, "that the robbers are so far off as Montone, for our host tells me that he expects a party of English friends, who, he says, are traveling with a couple of couriers only."

"They are looked for to-day," replied I. "It is Colonel Bellsford, his daughter, her governess and a young gentleman named Parrish, the colonel's ward, and who, report says, will probably marry his daughter when their travels are over."

On the morrow the party arrived. The colonel, who had made a large fortune in India, traveled habitually with what seemed a very imprudent display of lavish jewelry. Unlike most young ladies, his daughter, a beautiful blonde, had as many dismoods as a dowager. All the appointments of the Bellsford party, except the limited number of couriers, were luxurious in the extreme; and I wondered how, traveling in Italy, they had up to that time escaped being waylaid and robbed.

III.

THE East Indian officer and his party soon spread themselves very largely over the villa, and I, finding that the proximity of my apartment to that of Miss Bellsford must be something of an annoyance to her, offered Grevor to give it up and take another. This led to his offering me the one adjoining that in which hung the picture of the Cymbal Girl. I had desired this proximity, for I wished to know whether it was in this room especially that those disturbances took place which had driven away its occupants in the by-gone time.

On the third night after my installation in the room next to that with the picture, I was startled from a light sleep by a faint sound. The room in which I lay upon a lounge was dark, but in that with the picture the moonlight fell brightly along the floor. I rose, noiselessly, shuffled off my slippers, and approached the door. Imagine my beholding the picture slide upwards from its frame and vanish into the ceiling above! In the opening thus left stood the very most beautiful girl I had ever seen, the striking semblance of the Donna Funesta, but with a face as soft and tender as hers was hard and cruel. She had scarcely appeared ere there stood beside her a man with a countenance swarthy and fierce. He wore the dress of a bandit, but was hatless, his brow being bound with a red cloth. He appeared to be threatening the girl by gesture, for neither spoke. She turned as though to fly, after apparently refusing to comply with some request which I fancied was the giving up a key held in her hand. Both figures now vanished to the left of the opening. I determined to follow, and did so. They passed along a concealed passage. The girl, obeying with reluctance the signs of the bandit, now opened a door, the last and smallest on the floor occupied by the Bellsford family. Hiding as best I might, I looked in, and, but for the deep shadows cast here and there in the hall, would have been seen by the bandit, and, beyond a doubt, instantly stabbed with a dagger of which I had noticed the pleasing and reassuring presence in that individual's belt, in company with an equally attractive pistol. The bland and engaging gentleman wearing these weapons, now opened the door, and he and the girl—and I, still unseen—looked into the room thus exposed. There, upon a table, lay the diamonds belonging to Miss Bellsford, certain studs of which the colonel was wont to give us—my host and me—the inestimable privilege of beholding the lustre in his shirt-bosom, and even the few and almost valueless trinkets of little Miss Pettigrew, the governess. The noble creature before me—I allude to the bandit—now proceeded to stow away the jewels in a bag which he formed in the twinkling of an eye by knotting up a scarf adorning his by no means unsymmetrical person, and in a moment more would have departed with his booty but there came a sound, a flash! Shot to the heart by the pistol of the plucky old colonel, fell Bruno the bandit—such we afterwards learned was the anything but lucid identification of this "rock of stumbling and stone of offense." Lights appeared. Grevor, followed by young Parrish and Miss Bellsford, entered. Then came the governess. Meantime, the girl, with no outcry at her companion's death, had vanished. I, perceiving this and guessing that she had returned to the secret passage, swiftly followed. Just as she reached the room, I caught her arm and held her firmly, despite her struggles to be free. I had in a moment more dragged her into the clear flood of moonlight. To my amazement she no longer struggled, but fell at my feet, and, with streaming eyes, entreated me to save her. She poured forth, in an incoherent torrent of impassioned language, the story of her sufferings in being held in wicked bondage by "*la bandit*," as she called the robbers, and declared that this was the first time she had ever had free speech with any but them. She would kill herself rather than return. She would never betray their haunts, but she would see them no more. Bruno had forced her to follow the governess and to betray to him the hiding-place of the jewels.

"I have a right to live honorably for I have gentle blood. I am a Vincenza, the great granddaughter of the Marchese Di Banza and of Palma Di Galfi, his wife."

I mentally remarked that if this were not a situation I should like to know what was. Without attempting to enter upon a discussion as to the amount of pride to be derived from descent through individuals who appeared to have blended the well-known humanity of Nero "Imperator" with the graceful virtues of Cesare, the Borgia of Borgias, I told Vincenza that I would conceal her in the room adjoining my own. I suggested the secret passage in case it became necessary to fly, as it probably would, for the authorities would, of course, be notified by Colonel Bellsford, a step made the more necessary by the death of the robber.

"To avail myself of the passage would be idle. It would but take me out into the open country, and the band would find me at once. Bruno may even have been told of this passage. They may come hither."

Vincenza now approached the opening left by the sliding of the picture, and quickly adjusting two bolts attached to the frame, secured the room from entrance by the secret way. The house by this time was in a complete uproar with the exclamations of terrified servants, the departing of hastily saddled horses, the swearing of Colonel Bellsford, who, he observed, "didn't like to kill a man on the battlefield, much less within four walls." All this blended with the rich voice of Miss Bellsford, and the little squeaky outcries of Miss Pettigrew who "never was so frightened, never."

A few hours more brought convoys from the local authorities. Then came the comte.

IV.

Now it was precisely the comte I wished to see. I told him—and him alone I told—of the presence of Vincenza. He turned as pale as a corpse.

"We must save her!" cried he. "We must get her away!" Setting our wits to work, we arranged to abstract a suit of the governess's clothes in order to disguise the girl, so that if discovered by the authorities while flying she would stand some chance of safety. That night, after all was still and the searching of the house completed—no one dreamed of looking behind the picture of the Cymbal Girl—the Comte Del Briglio, accompanied by Vincenza, disguised, reached a safe refuge.

Some time after the comte requested me to accompany him to Palermo, where, at the house of a worthy old woman, he had concealed the girl, under the name of Monica Rossi. She was believed to be a coral-worker.

This seclusion lasted some months, when—and *I*, at least, was not surprised—it was rumored that the comte had married. I had watched the progress of his infatuation, and heard him talk of Vincenza Di Banza's "beautiful soul," of her aspirations to a higher life. The marriage took place at Palermo, the real name of Vincenza being known only to the good *padre* who married her to Del Briglio.

Time passed. After the marriage of the colonel's niece to Parrish, I visited several Italian cities, and had almost forgotten the comte, though not, I will admit, Vincenza, when—this was three years later—I one day encountered Grevor, who had married an English girl, and, after corresponding with me a few months, had ceased to write. The moment he saw me—we met at Naples—he exclaimed:

"You remember the villa, Penthorpe, and poor Del Briglio?"

"What about Del Briglio?"

"Gone into incurable melancholy! But I must tell you all. We discovered that, during the ten years it remained closed, the villa had served as a resort for a part of the band to which that good-for-nothing scamp whom the colonel shot, you remember, had belonged. The "spiritual manifestations" were got up to drive all tenants away. The poor comte, you will recall, married; but instead of a peasant girl as we supposed, his bride was the last of the Galfi, a dreadful family of miscreants. One fatal night during the honeymoon, he was passing through a secluded valley with his beautiful wife, when she was seized by a couple of bandits. Two more pinioned him and bound him to a tree. The morning light showed him his wife bound to a stake, gagged and stabbed to the heart. On a paper through which the dagger in her breast was driven was written, '*Traditrice*' (Traitress).

"I call that rather 'hard lines,' don't you, Penthorpe," concluded Grevor, "and the comte will end up by making away with himself some fine day or my name is not Grevor. Now, see if he don't!"

But I, though *I* had loved *Vincenza*, said to myself: "Better the death of both that fated pair than the perpetuation of the race of the Donna Funesta."

THE SILHOUETTE ARTIST AND THE CITY BELLE.

AN EVENING SCENE ON BRIGHTON BEACH.

CONEY ISLAND is an inexhaustible fund of amusement to those who are fond of witnessing *bizarre* and unusual sights—sights only to be seen on its sometimes too glaring sands. Nowhere in the world do so many curious people get together for the purpose of doing nothing, and who succeed in doing it to perfection. Bathing doesn't count, neither does clam-eating, or going up in the balloon, and for genuine, downright solid idleness Coney Island takes the palm. Here is the "masher" in his element, with rakish hat, "high-toned" suit, and any amount of brummagem jewelry. Here is *paterfamilias* in full bloom, as he sits on a piazza placidly clinking his lager beer glass with that of his wife, while the olive branches disport themselves by the sad sea waves. Here is the youthful mamma, in full particular blossom, as she parades her infant, arrayed in the daintiest of costumes, accompanied by the nurse, attired in feeble imitation of the *toilette* one beholds in the Champs-Elysées or the Bois de Boulogne. Here are lovers in their element as he orders ice-cream for the adored one, and exchanges spoons with her after the first timid sip. Here is the Wall Street man at best, as he orders dinner for a fast-looking stag-party, who toss off champagne with much display of idiotic laughter. Here is the mechanic, in good form, as he carries one young lion on his stalwart shoulder and lugs another by the hand in the direction of the picnicking saloons; his wife, in well-starched garments, following with the two oldest. Here is the giggling miss, as happy as the day is long, for she and her dearest friend can get away from the old people and have a good time on the pier with Ed and 'Arry. Here the bather lords it *al fresco*, as he disports his hideous-looking frame not in the water but on dry land.

Coney Island is the Castle of Indolence, and *dolce far niente* impregnates the very atmosphere. As night falls and the twin-lights at the Hook begin to gleam across the throbbing waters, the island presents an especially brilliant appearance. All along the beach flash lamps, white against the orange-yellow of the setting sun. The hotel piazzas seem dotted with rows of independent moons, and Jablokoff candles rival in their electric brilliancy the departed dayshine. A lime-light flings its white radiance on waters now black, revealing weird-like forms plunging in the silver sheening spray. It reveals the old, old story being told on benches and on the sands, to the murmur of the plashing waves. Music from bands, such as Strauss and Offenbach have dreamt of, steals on the cool caressing night-breeze, mingled with the occasional shriek of the locomotive announcing its departure with "the sensible people."

The artist and I were present at a very quaint eighteenth-century performance during a recent visit to the island. It was night, and a young girl stood in the blazing light of a blazing lamp, her profile, which, by-the-by, was exceedingly *piquante*, showing in strong relief. As she stood so very still, we at first imagined it might be an automaton or lay-figure, till we approached more closely, and then we perceived that she was undergoing the process of having a *silhouette* done, the operator being engaged in cutting her profile out of a piece of cardboard. A solid and curious crowd pressed around her, while her lover fended off the more energetic by the stern logic of his manly arm. The "mashers" were loud in *facetiæ* as to the girl's personal appearance, but the young lady felt all the importance of the situation, and gallantly held her own, despite the fire of "chaff" that greeted her on all sides. It was a very quaint and curious sight, and if I were a young and pretty girl, with just such a profile, I would get done en silhouette every night in the week.

The King of Bavaria and his Theatre.

ALL the world has heard of the eccentric distaste of King Ludwig of Bavaria for publicity, especially in the theatre. His passionate love of the drama, and his excellent judgment upon it and its allied arts—its poetry, scenery, and music—are equally matter of notoriety. A citizen of Munich says he has not seen the King in a theatre since 1868, when he sat alone in the royal box at the first representation of "Rheingold," and watched the sporting of the water-nymphs in the green flood of the Rhine. Since that time King Ludwig has become still more shy of society, and he now arranges for separate representations of plays and operas, at which he constitutes the whole and sole audience. On such evenings even his manager, Baron von Perfall, dares not show himself in the house, but is compelled to watch the performances from behind the scenes. Of the actors and actresses in these secret performances the King is severely critical. His favorite play, Schiller's "Jungfrau von Orleans," is now never acted, because His Majesty cannot find any actress who renders the part of *Joan of Arc* to his satisfaction, although the decorations for the separate presentations of this drama have been produced at an enormous expense of time, talent and cost. The King himself journeyed to Rheims in order to secure that the scenery for the coronation in the Cathedral of Rheims should be accurate and faultless, and the view of the interior of the cathedral is said to be a masterpiece of decorative painting. The coronation procession also has been arranged with a rare magnificence, wealth, and fidelity to costume in the smallest detail, and yet, on account of the exacting criticism of King Ludwig, it is never placed upon the stage. He has lost none of his amiability for artists, and when a scene-painter or actor has specially pleased him he rewards them with gifts of unusual value. Such a life is a strange contrast to the active publicity of that of all the other sovereign Princes of the German Empire.

Mesmerism in China.

TO THE priests of Tao, the religion of Pure Reason, who dabbled under bygone dynasties in alchemy and in the science of attaining immortality, is due the discovery of *kung-fu*, and its application as a means of healing the sick. All complaints are held to be equally amenable to its power, though not all persons, professors of the art stating plainly that *kung-fu* can exercise no influence whatever over others than those who have faith. The modus operandi is as follows: A Taoist priest, known for his skill in the art, is requested to attend at the house of a sick person for the purpose of administering *kung-fu*; and accordingly, after arranging what is to be paid for his services and securing part of the sum in advance, he proceeds to fit up within the patient's room an altar for burning incense and joss-paper and for worship generally. Muttered incantations follow, as the priest walks slowly and with prescribed steps round and round the room. By-and-by he approaches the sick man and partly raises him, or turns him on his back or side, or lifts up a leg or an arm, or gently shampoos him, the object being all the time to bring the sick man's mind into rapport with his own. When the priest thinks he has accomplished this, he commands the patient to perspire or to become cool, or gives instructions for the regulation of pulse and heart, in each case according to what he conceives to be the exigencies of the disease. The whole scene is rendered as impressive as possible by silence, and by darkening the room, with the exception of one oil lamp, by the light of which is dimly visible the silhouette of the robed priest waving his large sleeves in the air. The imaginative faculty of the sick man is thus excited; and hence, perhaps, the reason why even in these days of prohibition Chinamen may still be found ready to declare that they (generally, however, their friends or relatives) have derived undoubted benefits from a well-timed administration of *kung-fu*. All my own attempts to be present at such a scene have hitherto proved unsuccessful; and the above account is gathered chiefly from conversation, aided by a few stray hints gleaned from Taoist pamphlets which contained allusions to the subject.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

The German Golden Wedding.

Having given a summary of the solemnities at Berlin on the occasion of the Golden Wedding of the Emperor and Empress of Germany, we need only here confine ourselves to the religious ceremony in the Castle Chapel. After having been congratulated by the throng of relations and princes assembled in the White Hall, the royal couple proceeded in procession to the chapel, which was already filled with the most distinguished dignitaries of the empire. The Emperor wore a general's uniform bristling with decorations, the Empress being radiant with a tiara and necklace of brilliants, and wearing a golden-colored dress. Two seats had been placed before the altar for the Emperor and Empress, while behind were some sixty chairs for the princes and princesses attending the ceremony. Dr. Kögel offered up a short prayer, and then delivered a brief sermon on the text, "And now abideth Faith, Hope, and Charity, these three, but the greatest of these is Charity." A short prayer followed, and then the royal couple rose and moved towards the altar, the Emperor steadying himself with his staff, to receive the benediction of the clergyman. The trying ceremony being over, the Crown Princess advanced and kissed the Empress's hands, the Crown Prince shaking hands heartily with his father. The Emperor and Empress then returned to the White Hall, there to receive congratulations from the diplomatic body and deputations innumerable.

The Eruption of Mount Etna.

The present eruption of Etna, which is elsewhere described at length, the most violent which has taken place since 1832, seems to be even more serious than was at first supposed. The mountain has broken out at three different points, distant from each other twelve or fifteen miles. It may be said that there are three separate eruptions going on at the same time. The most serious of the openings are those between the Monte Frumento and Monte Nero, an equal distance between Randazzo and Linguaglossa. At this spot the land is more highly cultivated. The flow of lava here seems to be immense and ever increasing in bulk. The present eruption began on May 25th, when loud bellowings were heard by the residents on the northern slope, and a great cloud of smoke was observed issuing from the side of the mountain. This cloud increased, a rain of fine black ash came on and fell for miles around, and during the night of the 27th huge fires could be seen looming through the black clouds. Next day a great stream of lava was seen from Taormina descending the mountain towards Randazzo, while from the new craters "great balls of fire were thrown high in the air, and burst into showers of fire, accompanied by thundering explosions." From that time until June 6th the eruption appears to have continued unabated; but the violence then began to diminish, although the calming down of the eruption was followed by severe earthquakes, one of which destroyed five villages.

The Austrian Silver Wedding.

The principal feature in the rejoicings in Vienna at the celebration of the silver wedding of the Emperor and Empress of Austria was the procession which passed before their Majesties. The Imperial tents of dark crimson cloth, resting on columns, stood just before the Burgthor. Right and left of the Imperial tent, in the form of a semicircle, extended four pavilions, connected by an arcade on columns, while opposite rose an amphitheatre of seats, surmounted by obelisks and columns, for the accommodation of the guests of the town. The proceedings opened with an address by the Burgomaster, asking the permission of their Majesties for the passage of the civic procession. The signal was then given, and the *cortège* began to pass, taking two hours in passing. The portion in costume, with its twenty-eight carriages and 1,500 attendants, though no doubt the most brilliant, was but a small part of the procession. The University, the Polytechnic and the Agricultural School alone had as many representatives on the scene. But the great feature of the *cortège* was the costume procession, which had been designed and carried out under the eye of the artist Makart. The costumes worn were those of the sixteenth century, and were perfect in their accuracy. The interest in this really magnificent display was intense, and when in the last group of artists Herr Makart himself was recognized in his black-and-gold dress, on his milk-white steed, he received quite an ovation all along the line.

The Naval Engagement off Iquique.

In our last issue we gave a view of the blockade of the Iquique by the Chilian squadron, and spoke of the naval combat off that port. This took place on April 21st. The Peruvian turret-ship *Huascar* summoned the Chilian wooden vessel *Esmeralda* to surrender, but was answered by a broadside, whereupon the *Huascar* rammed the *Esmeralda*, which sank immediately with 150 men on board, forty of whom were saved. Captain Thomas, of the *Esmeralda*, followed by a few men, jumped on board the *Huascar*, and fell fighting on the deck of that vessel. The lieutenant of the *Huascar* was also killed in the *mêlée*. Meanwhile the Peruvian ironclad *Independencia*, in pursuing the Chilian wooden vessel *Covadonga*, ran into shallow water and struck on a reef. After the crew and part of her armament had been removed, the vessel was burned to prevent her from falling into the hands of the Chilians. The *Covadonga* succeeded in escaping, and the *Huascar* returned to Pisagua, where Peruvian reinforcements were landed.

Submission of the Afghan Ameer.

On the morning of the 8th of May, Major Cavagnari, with an escort of the Guides and Tenth Hussars, met the Ameer in a dip in the road between the Red Khotal and the bridge at Surkhab. At a little after eight the cavalry were drawn up on the right side of the road. At nine o'clock the Ameer arrived, accompanied by Daood Shah, Commander-in-Chief, Mir Hossan, and his suite. Major Cavagnari rode forward with Mr. Jenkins and shook hands with the Ameer and his Ministers, and then the whole party moved towards Gundamuk, where, on the height of the pass leading to the Valley of Surkhab, General Sir Samuel Browne and his staff were waiting at the head of the troops, who were lining the road on either side for at least three miles, stretching as far as the Gundamuk Nullah, near which was pitched the Ameer's tent. On shaking hands with the General, Yakoob and his suite, followed by Sir Samuel Browne and staff, slowly rode down the lines amid a royal salute. On nearing the river Major Wilson's forty-pounders thundered forth twenty-one rounds. Reaching his quarters at Gundamuk the Ameer retired for rest.

AT HOME AND ABROAD.

—NASHVILLE will celebrate her centennial April 23d, 1880.

—THEY are talking in Texas of establishing an emigration agency at Castle Gardee.

—CITIZENS of Wisconsin pay annually for liquor over $19,000,000, and for public education $2,600,310.

—WINTERHEIM, a large Icelandic colony in Western Minnesota, expects an addition of 300 from Iceland in August.

—CHINESE laundries, with opium dens attached, are numerous in Memphis. A raid upon them has been made by the police, and some dreadful sights revealed.

—THE new flag for the Transvaal has at length been approved. It is in the form of a shield, with the old Transvaal ensign on the right side, the Union Jack on the left, and a crown at the top.

—THE Hotel de Ville, in Paris, the old seat of the Municipal Government, which was destroyed in 1871, is far advanced in rebuilding, and will be completed in 1881, at a total cost of about $4,400,000.

—THE cost of the late Durham strike in England is estimated at $3,200,000. Nearly half is borne by the men. Without reckoning interest, it is computed that it will take 9¾ years to make up the sum lost.

—THE International Agricultural Show opened June 30th at Kilburn, London, England. The weather was fine and there was a large attendance. The Prince of Wales and the Lord Mayor of London were present.

—THE Massachusetts Prohibitory State Committee has adopted an address to the voters denouncing all laws that favor the liquor traffic, and urging a thorough organization in support of absolute prohibition.

—DURING the six months ending June 30th there were in the City of New York 14,145 deaths, 12,117 births and 4,044 marriages, as against 12,983 deaths, 12,209 births and 3,728 marriages for the same period last year.

—AFTER two months' debates, the Italian Chamber of Deputies has approved the Ministerial Railway Bill, which provides for the construction of 3,762 miles of railways within twenty-one years, at an annual expenditure of $12,000,000.

—THE London police now attend medical lectures, given by the St. John Ambulance Association, which, it is to be hoped, may enable them to distinguish between drunkenness and disease. It would be well if our clubbers in blue could be taught to do likewise.

—THE Paris Mint has commenced the coinage of 14,800,000 francs in gold, silver, and bronze pieces for the Servian Government. The die adopted is that of the Latin Union. Servia has no national money yet, and business has hitherto been transacted in the coins of the adjoining countries.

—THE Lord Chancellor, Lord Cairns, has introduced in the House of Lords the Government's Irish University Scheme, which proposes the dissolution of the existing Queen's University and the application of its endowment grants to a new university, on the model of the London University.

—ON July 1st the Chicago elevators contained 4,201,690 bushels of wheat, 7,581,612 bushels of corn, 398,674 bushels of oats, 31,992 bushels of rye, and 78,839 bushels of barley, making a total of 7,352,807 bushels, against 7,039,449 bushels a week previous, and 1,880,111 bushels at the same period last year. Milwaukee warehouses were stored with 1,303,690 bushels of wheat, 55,443 bushels of corn, 25,565 bushels of oats, 6,055 bushels of rye, and 92,652 bushels of barley.

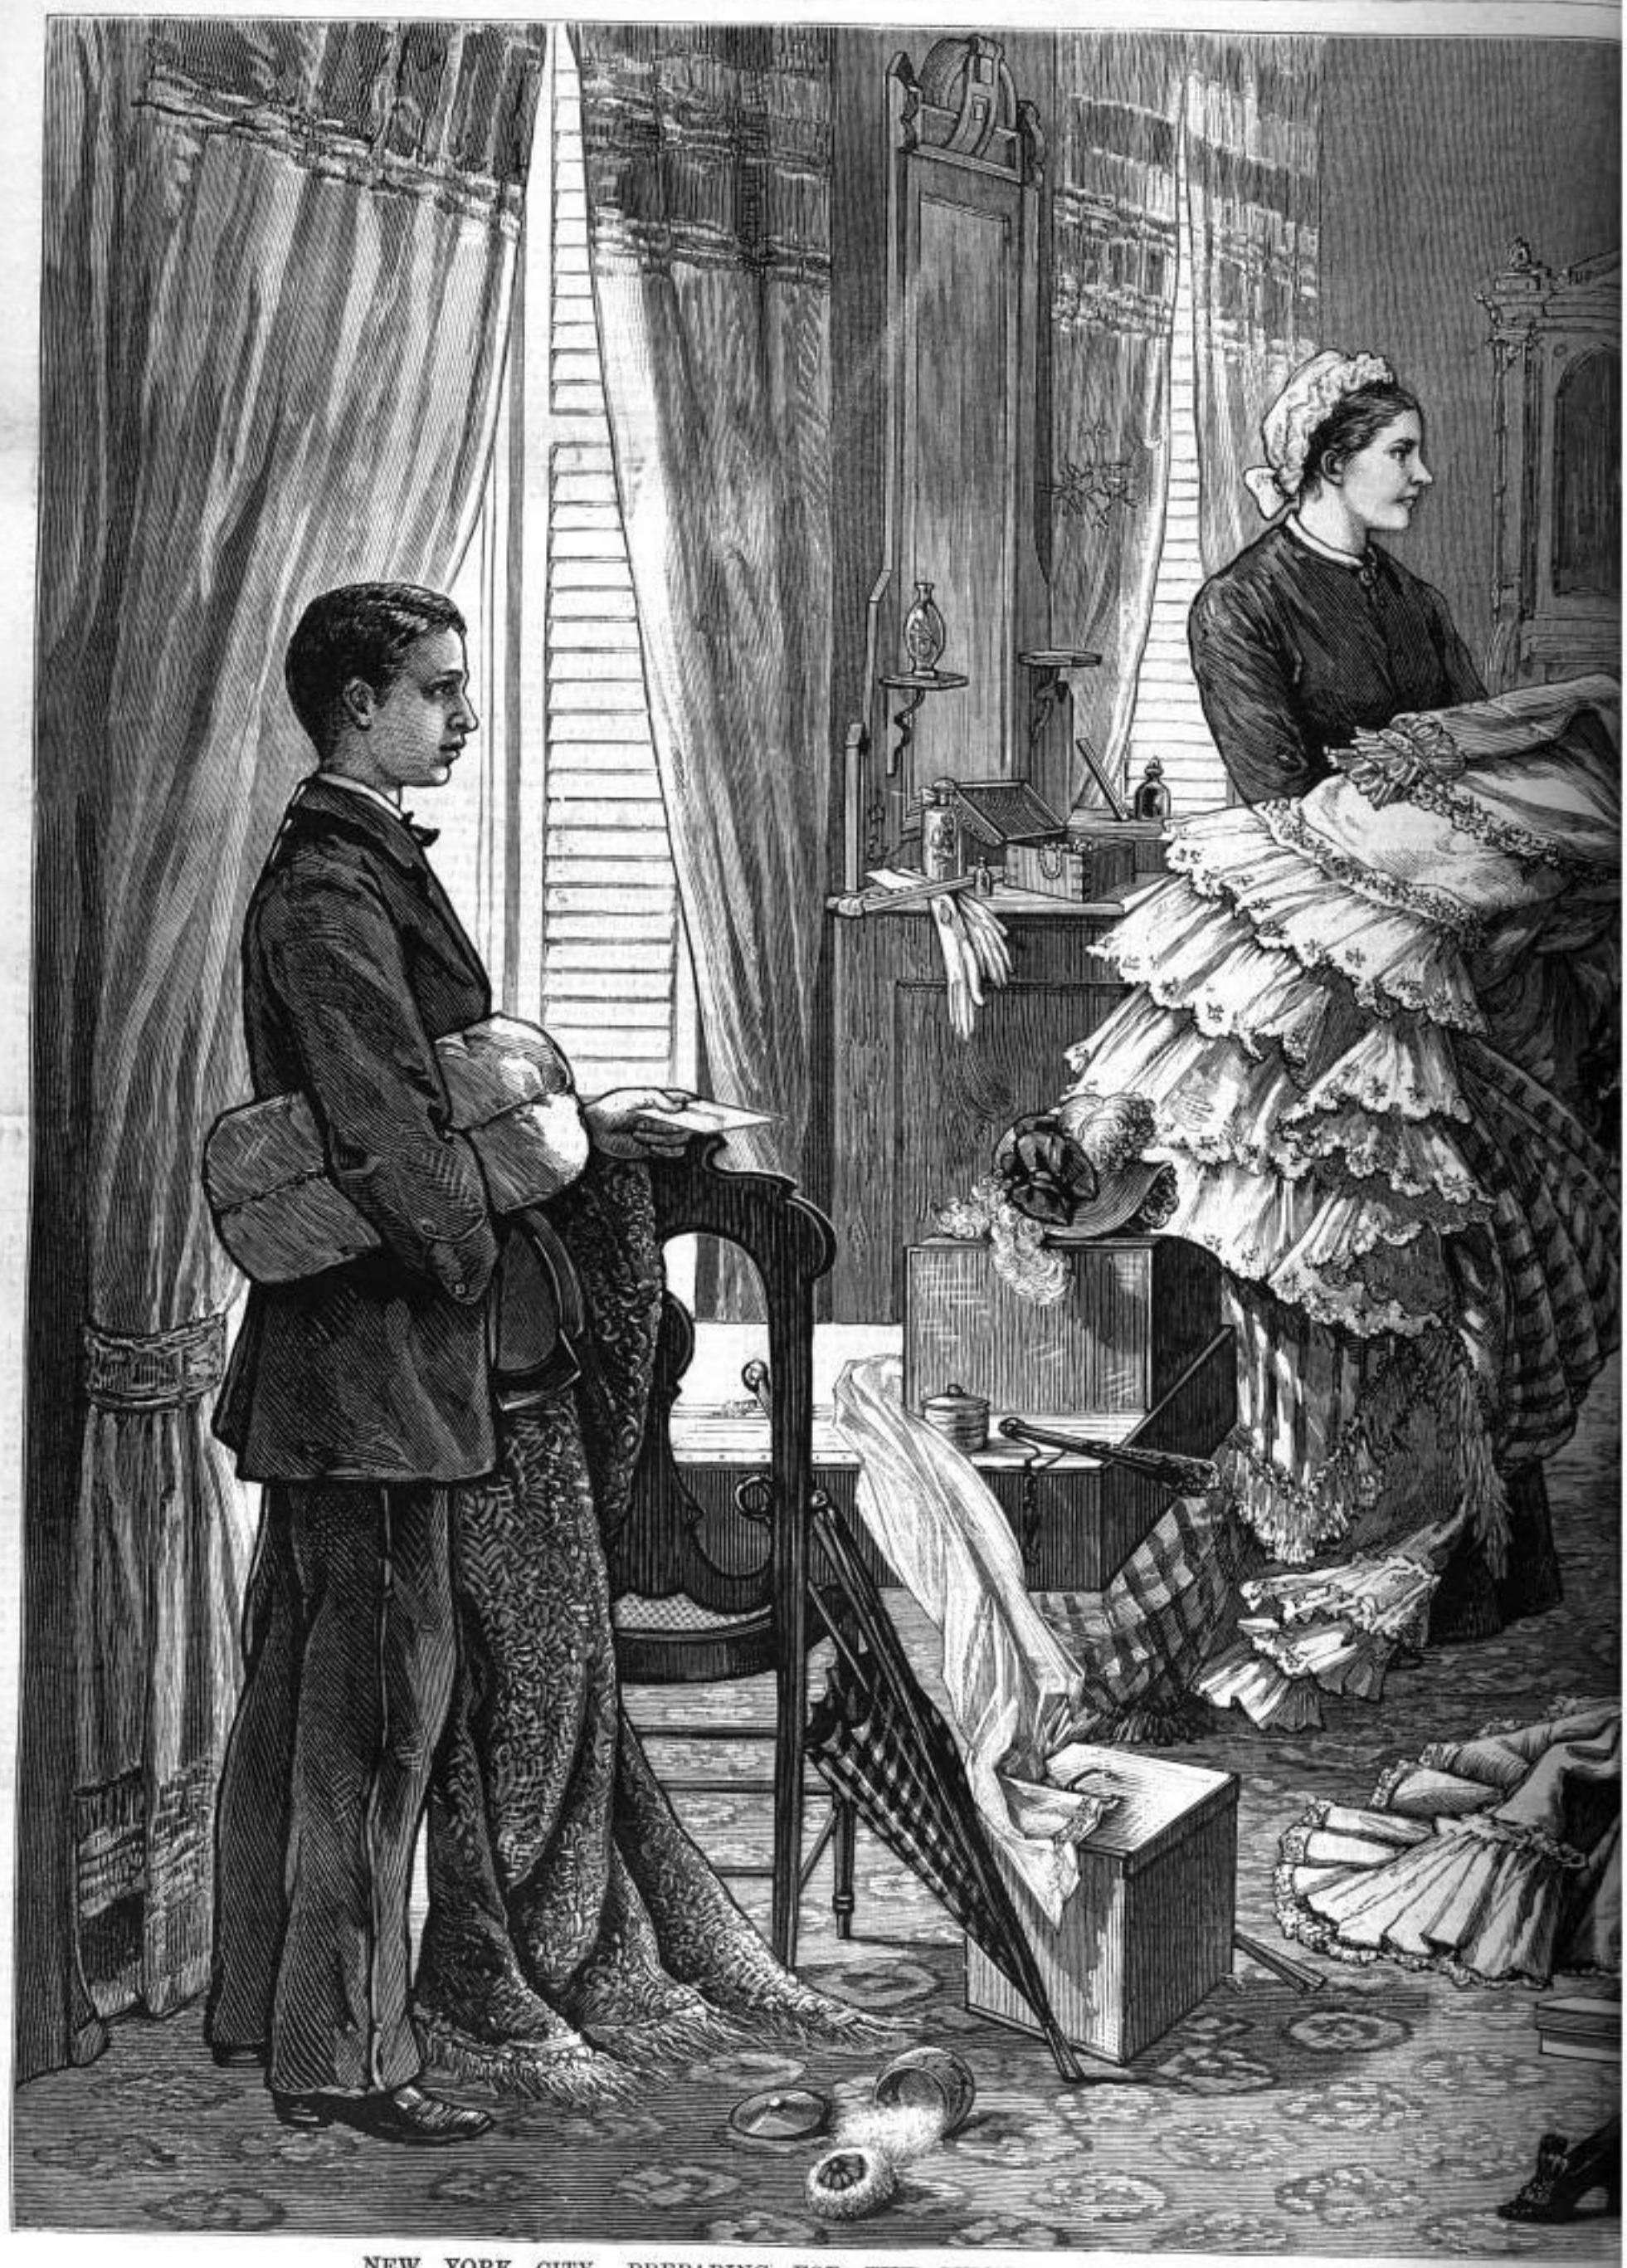
—"THE Society of the Damned" is the name of a Parisian institution—damned dramatic authors—and they meet once a month, and dine at Brebant's. Their number has no fixed limit, only every member to be eligible must have been hissed. An eminent dramatist is selected as chairman, and holds the post for three months. His election generally follows close on a splendid failure. Meilhac, Dumas *fils*, Zola and Offenbach have all filled the chair, and presided at the monthly dinner.

—ABOUT 3,000 persons attended the centennial anniversary of Cummington, Hampshire County, Mass., June 26th. Senator Dawes, a native of Cummington, read a historical address, and John Bryant, of Princeton, Iowa, a brother of the late William Cullen Bryant, read a poem. The exercises were held on the grounds of William C. Bryant's old home, and several of his near relatives were present. Among others present were Governor Talbot, Charles Dudley Warner and Professor Norton, of Harvard.

—THE Interior Department has received information from Agent Lincoln, at the Gros Ventre Agency, Montana, under date of June 16th, that British Indians, in large numbers, have crossed the border; that they are destroying the buffaloes upon which the Gros Ventres, Assiniboines, etc., depend largely for their food; that skirmishes have occurred between our own and the foreign Indians, with loss of life on both sides, and that the British Indians are well armed and are driving the American Indians before them, the latter being in a panic and desiring to cross the Missouri River.

—SUBSIDIES to the following amounts are granted by the principal cities of Europe to their lyric theatres: Berlin, 750,000 francs; Stuttgart, 625,000 francs; Dresden, 400,000 francs; Naples, San Carlo, 300,000 francs; Vienna, Imperial Theatre, 300,000 francs; Rome, Apollo, 290,000 francs; Copenhagen, 250,000 francs; Carlsruhe and Weimar Theatres, 250,000 francs; Munich, 195,000 francs; Milan, La Scala, 175,000 francs; Stockholm, 150,000 francs; Palermo, Bellini, 120,000 francs; Turin, 60,000 francs; Florence, Pergola, 40,000 francs; Genoa, Carlo Felice, 10,000 francs.

—DURING the session of Congress which terminated July 1st, 727 Bills and forty-six joint resolutions were introduced in the Senate, and 2,395 Bills and 119 joint resolutions were introduced in the House of Representatives; making a total of 3,122 Bills and 165 joint resolutions. During the session there were presented in the House of Representatives 2,019 petitions, which are classified as follows: Relating to claims, 555; commerce, 253; currency, 56; liquor traffic, 36; naval affairs, 23; military affairs, 104; education and labor, 30; patents, 78; tariff and taxation, 134; pensions, 351; polygamy, 35; postal affairs, 69; miscellaneous, 293; total, 2,019.



—THE coinage executed at the United States Mint for the month ending June 30th shows the following:

Denomination.	Pieces.	Value.
Gold	21,380	$ 427,600.00
Silver	1,312,200	1,312,092.50
Base	2,120,250	21,594.50
Total	3,454,330	$1,761,287.00

For the fiscal year ending same day the coinage was as follows:

Denomination.	Pieces.	Value.
Gold	936,864	$11,229,352.00
Silver	12,125,800	12,124,882.50
Base	9,620,100	97,798.00
Total	22,682,814	$23,452,032.50

CALM.

"Cur dextræ jungere dextram
Non datur, ac veras audire et reddere voces?"

HERE, where the uplands lie in golden spaces,
And no breeze stirs green leafage or lush grass,
I lean and dream in dim, unterrene places,
While silence hears diaphanous dryads pass.

The restful monotone of insects humming,
The drowsy plash of water in the glen,
Lull to forgetfulness of seasons coming
When discords must wax definite again.

Fern-broken and blossoms, willows gray and sedges,
Speak in blent symbols, through drooped eyelids seen,
Of some continuous calm that surely hedges
The soul's Arcadia, passionless, serene!

Even now as sun-gleams kiss the moss-grown angles,
That stem the gurgling runnel's crystal fall,
As pine and hemlock scent the wildwood tangles
My tired life feels a pledge of peace in all.

No ominous shade, no glaring sheen shall enter
That holiest mountain, owning Love for lord;
But to all lands from this celestial centre
His heralds shall proclaim supreme accord.

And then mysteriously, by sweet gradation,
Life's rugged blankness, vexed by storms and snows,
Shall softly melt in wondrous transformation
To towering valley-lands of green repose—

Till o'er an earth new-born to full fruition
Love hath spread forth his wide wings, winnowing balm,
And lifted up from death and inanition
Our souls to his illimitable calm.

* * * * *

Such, to a dreamer's fancy, is the vision
That Nature weaves around him like a spell;
When suddenly he hears, in grim derision,
The vain desires and clamorous hates of hell!

JOHN MORAN.

THE FALLEN LEAVES.

By WILKIE COLLINS.

CHAPTER XLII.

ON the morning when Amelius and Sally (in London) entered the church to look at the wedding, Rufus (in Paris) went to the Champs-Elysées to take a walk.

He had advanced half way up the magnificent avenue, when he saw Regina for the second time, taking her daily drive, with an elderly woman in attendance on her. Rufus took off his hat again, perfectly impenetrable to the cold reception which he had already experienced. Greatly to his surprise, Regina not only returned his salute, but stopped the carriage and beckoned him to speak to her. Looking at her more closely, he perceived signs of suffering in her face which completely altered her expression as he remembered it. Her magnificent eyes were dim and red; she had lost her rich color; her voice trembled as she spoke to him.

"Have you a few minutes to spare?" she asked.

"The whole day, if you like, miss," Rufus answered.

She turned to the woman who accompanied her. "Wait here for me, Elizabeth; I have something to say to this gentleman."

With these words, she got out of the carriage. Rufus offered her his arm. She put her hand in it as readily as if they had been old friends. "Let us take one of the side paths," she said; "they are almost deserted at this time of day. I am afraid I surprise you very much. I can only trust to your kindness to forgive me for passing you without notice the last time we met. Perhaps it may be some excuse for me that I am in great trouble. It is just possible you may be able to relieve my mind. I believe you know I am engaged to be married?"

Rufus looked at her with a sudden expression of interest. "Is this about Amelius?" he asked.

She answered him almost inaudibly—"Yes."

Rufus still kept his eyes fixed on her. "I don't wish to say anything rude, miss," he explained; "but, if you have any complaint to make of Amelius, I should take it as a favor if you would look me straight in the face, and mention it plainly."

In the embarrassment which troubled Regina at that moment, he had preferred the two requests of all others with which it was most impossible for her to comply. She still looked obstinately on the ground; and, instead of speaking of Amelius, she diverged to the subject of Mr. Farnaby's illness."

"I am staying in Paris with my uncle," she said. "He has had a long illness; but he is strong enough now to speak to me of things that have been on his mind for some time past. He has so surprised me; he has made me so miserable about Amelius——" She paused, and put her handkerchief to her eyes. Rufus said nothing to console her—he waited doggedly until she was ready to go on. "You know Amelius well," she resumed; "you are fond of him; you believe in him, don't you? Do you think he is capable of behaving basely to any person who trusts him? Is it likely, is it possible, he could be false and cruel to me?"

The mere question roused the indignation of Rufus. "Whoever said that of him, miss, told you a lie! I answer for my boy as I answer for myself."

She looked at him at last, with a sudden expression of relief. "I said so, too," she rejoined; "I said some enemy had slandered him. My uncle won't tell me who it is. He positively forbids me to write to Amelius; he tells me I must never see Amelius again—he is going to write and break off the engagement. Oh, it's too cruel! too cruel!"

Thus far they had been walking on slowly. But now Rufus stopped, determined to make her speak plainly.

"Take a word of advice from me, miss," he said. "Never trust anybody by halves. There's nothing I'm not ready to do to set this matter right; but I must know what I'm about first. What's said against Amelius? Out with it, no matter what 'tis! I am old enough to be your father; and I feel for you accordingly—I do."

The thorough sincerity of tone and manner which accompanied those words had its effect. Regina blushed and trembled—but she spoke out.

"My uncle says Amelius has disgraced himself, and insulted me; my uncle says there is a person—a girl living with him——" She stopped, with a faint cry of alarm. Her hand, still resting on the arm of Rufus, felt him start as the allusion to the girl passed her lips. "You have heard of it!" she cried. "Oh, God help me, it's true!"

"True!" Rufus repeated, with stern contempt. "What's come to you? Haven't I told you already it's a lie? I'll swear to it. Amelius is true to you. Will that do? No? You're an obstinate one, miss—that you are. Well! it's due to the boy that I should set him right with you, if words will do it. You know how he's been brought up at Tadmor? Bear that in mind—and now you shall have the truth of it, on the word of an honest man."

Without further preface, he told her how Amelius had met with Sally; insisting strongly on the motives of pure humanity by which his friend had been actuated. Regina listened with an obstinate expression of distrust which would have discouraged most men. Rufus persisted, nevertheless; and, to some extent at least, succeeded in producing the right impression. When he reached the close of the narrative—when he asserted that he had himself seen Amelius confide the girl unreservedly to the care of a lady who was a dear and valued friend of his own; and when he declared that there had been no after-meeting between them and no written correspondence—then, at last, Regina owned that he had not encouraged her to trust in the honor of Amelius without reason to justify him. But, even under these circumstances, there was a residue of suspicion still left in her mind. She asked for the name of the lady to whose benevolent assistance Amelius had been indebted. Rufus took out one of his cards, and wrote Mrs. Payson's name and address on it.

"Your nature, my dear, is not quite so confiding as I could have wished to see it," he said, quietly handing her the card. "But we can't change our natures—can we? And you're not bound to believe a man like me, without witnesses to back him. Write to Mrs. Payson, and make your mind easy. And, while we are about it, tell me where I can telegraph to you to-morrow—I'm off to London by the night mail."

"Do you mean, you are going to see Amelius?"

"That is so. I'm too fond of Amelius to let this trouble rest where 'tis now. I've been away from him, here in Paris, for some little time—and you may tell me (and quite right too) I can't answer for what may have been going on in my absence. No! now we are about it, we'll have it out. I mean to see Amelius and see Mrs. Payson, to-morrow morning. Just tell your uncle to hold his hand before he breaks off your marriage, and wait for a telegram from me. Well? and this is your address, is it? I know the hotel. A nice look-out on the Twillery Gardens—but a bad cellar of wine as I hear. I'm at the Grand Hotel myself. If there's anything else that troubles you before evening. Now I look at you again, I reckon there's something more to be said, if you'll only let it find its way to your tongue. No: it ain't thanks. We'll take the gratitude for granted, and get to what's behind it. There's your carriage—and the good lady looks tired of waiting. Well, now?"

"It's only one thing," Regina acknowledged, with her eyes on the ground again. "Perhaps, when you go to London, you may see the——"

"The girl?"

"Yes."

"It's not likely. Say I do see her—what then?"

Regina's color began to show itself again. "If you do see her," she said, "I beg and entreat you won't speak of *me* in her hearing. I should die of the shame of it, if she thought herself asked to give him up out of pity for me. Promise I am not to be brought forward; promise you won't even mention my having spoken to you about it. On your word of honor?"

Rufus gave her his promise, without showing any hesitation, or making any remark. But when she shook hands with him, on returning to the carriage, he held her hand for a moment. "Please to excuse me, miss, if I ask one question," he said, in tones too low to be heard by any other person. "Are you really fond of Amelius?"

"I am surprised you should doubt it," she answered; "I am more—much more than fond of him!"

Rufus handed her silently into the carriage. "Fond of him, are you?" he thought, as he walked away by himself. "I reckon it's a sort of fondness that don't wear well, and won't stand washing."

CHAPTER XLIII.

EARLY the next morning, Rufus rang at the cottage gate.

"Well, Mr. Frenchman, and how do you git along? And how's Amelius?"

Toff, standing before the gate, answered with the utmost respect, but showed no inclination to let the visitor in.

"Amelius has his intervals of laziness," Rufus proceeded; "I bet he's in bed?"

"My young master was up and dressed an hour ago, sir—he has just gone out."

"That is so, is it? Well, I'll wait until he comes back." He pushed by Toff, and walked into the cottage. "Your foreign ceremonies are clean thrown away on me," he said, as Toff tried to stop him in the hall. "I'm an American savage; and I'm used up with traveling all night. Here's a little order for you: whisky, bitters, lemon and ice—I'll take a cocktail in the library." Toff made a last desperate effort to get between the visitor and the door. "I beg your pardon, sir, a thousand times; I must most respectfully entreat you to wait——" Before he could explain himself, Rufus (with the most perfect good-humor) pulled the old man out of his way. "What's troubling this venerable creature's mind?" he inquired of himself; "does he think I don't know my way in?" He opened the library door—and found himself face to face with Sally.

She had risen from her chair, hearing voices outside, and hesitating whether to leave the room or not. They confronted each other, on either side of the table, in silent dismay. For once Rufus was so completely bewildered, that he took refuge in his customary form of greeting before he was aware of it himself.

"How do you find yourself, miss? I take pleasure in renewing our acquaintance—Thunder! that's not it; I reckon I'm off my head. Do me the favor, young woman, to forget every word I've said to you. If any mortal creature had told me I should find you here, I should have said 'twas a lie—and I should have been the liar. That makes a man feel bad, I can tell you. No! Don't slide off, if you please, into the next room—that won't set things right, no how. Sit down again. Now I'm here, I have something to say. I'll speak first to Mr. Frenchman. Listen to this, old sir. If I happen to want a witness standing in the doorway, I'll ring the bell; for the present, I can do without you. Bong Shewer, as we say in your country." He proceeded to shut the door on Toff and his remonstrances. "I protest, sir, against acts of violence, unworthy of a gentleman!" cried Toff, struggling to get back again. "Be as angry as you please in the kitchen," Rufus answered, persisting in closing the door; "I won't have a noise up here. If you know where your master is, go and fetch him—and the sooner the better." He turned back to Sally, and surveyed her for a while in terrible silence. She was afraid to look at him; her eyes were on the book which she had been reading when he came in. "You look to me," Rufus remarked, "as if you had been settled here for a time. Never mind your book now; you can go back to your reading after we've had a word or two, first." He reached out his long arm, and pulled the book to his own side of the table. Sally innocently silenced him for the second time. He opened the book, and discovered—The New Testament.

"It's my lesson, if you please, sir. I'm to learn it where the pencil mark is, before Amelius comes back." She offered her poor little explanation, trembling with terror. In spite of himself, Rufus began to look at her a little less sternly.

"So you call him 'Amelius,' do you?" he said. "I note that, miss, as an unfavorable sign to begin with. How long, if you please, has Amelius turned school-marm, for your young ladyship's benefit? Don't you understand? Well, you're not the only inhabitant of Great Britain who don't understand the English language. I'll put it plainer. When I last saw Amelius, you were learning your lessons at the Home. What ill-wind, miss, blew you in here? Did Amelius fetch you, or did you come of your own accord, without waiting to be whistled for?" He spoke coarsely, but not ill-humoredly. Sally's pretty downcast face was pleading with him for mercy, and (as he felt with supreme contempt for himself) was not altogether pleading in vain. "If I guessed that you ran away from the Home," he resumed, "should I guess right?"

She answered with a sudden accession of confidence. "Don't blame Amelius," she said; "I did run away. I couldn't live without him."

"You don't know how you can live, young one, till you've tried the experiment. Well, and what did they do at the Home? Did they send after you to fetch you back?"

"They wouldn't take me back—they sent my clothes here after me."

"Ah, those were the rules, I reckon. I begin to see my way to the end of it now. Amelius gave you house-room?"

She looked at him proudly. "He gave me a room of my own," she said.

His next question was the exact repetition of the question which he had put to Regina in Paris. The only variety was in the answer that he received.

"Are you fond of Amelius?"

"I would die for him!"

Rufus had hitherto spoken, standing. He now took a chair.

"If Amelius had not been brought up at Tadmor," he said, "I should take my hat, and wish you good-morning. As things are, a word more may be a word in season. Your lessons here seem to have agreed with you, miss. You're a different sort of girl to what you were when I last saw you."

She surprised him by receiving that remark in silence. The color left her face. She sighed bitterly. The sigh puzzled Rufus; he held his opinion of her in suspense until he had heard more.

"You said just now you would die for Amelius," he went on, eying her attentively. "I take that to be a woman's hysterical way of mentioning that she feels an interest in Amelius. Are you fond enough of him to leave him, if you could only be persuaded that leaving him was for his good?"

She abruptly left the table and went to the window. When her back was turned to Rufus she spoke. "Am I a disgrace to him?" she asked, in tones so faint that he could barely hear them. "I have had my fears of it before now."

If he had been less fond of Amelius his natural kindness of heart might have kept him silent. Even as it was, he made no direct reply. "You remember how you were living when Amelius first met with you," was all he said.

The sad blue eyes looked at him in patient sorrow; the low, sweet voice answered "Yes." Only a look and a word—only the influence of an instant—and, in that instant, Rufus's last doubts of her vanished!

"Don't think I say it reproachfully, my child! I know it was not your fault; I know you are to be pitied, and not blamed."

She turned her face towards him—pale, quiet and resigned. "Pitied and not blamed," she repeated; "am I to be forgiven?"

His generous nature shrank from answering her. There was silence.

"You said just now," she went on, "that I looked like a different girl since you last saw me. I am a different girl. I think of things that I never thought of before—some change, I don't know what, has come over me. Oh, my heart does hunger so to be good! I do so long to deserve what Amelius has done for me! You have got my book there—Amelius gave it to me—we read in it every day. If Christ had been on earth now, is it wrong to think that Christ would have forgiven me?"

"No, my dear; it's right to think so."

"And while I live, if I do my best to lead a good life, and if my last prayer to God is to take me to heaven, shall I be heard?"

"You will be heard, my child; I don't doubt it. But, you see, you have got the world about you to reckon with—and the world has invented a religion of its own. There's no use looking for it in this book of yours. It's a religion with the pride of property at the bottom of it, and a veneer of benevolent sympathy at the top. It will be very sorry for you, and very charitable towards you; in short, it will do everything for you except taking you back again."

She had her answer to that. "Amelius has taken me back again," she said.

"Amelius has taken you back again," Rufus agreed. "But there's one thing he's forgotten to do; he has forgotten to count the cost. It seems to be left to me to do that. Look here, my girl! I own I doubted you when I first came into this room, and I'm sorry for it, and I beg your pardon. I do believe you're a good girl—I couldn't say why if I was asked, but I do believe it for all that. I wish there was no more to be said—but there is more; and neither you nor I must shirk it. Public opinion won't deal as tenderly with you as I do; public opinion will make the worst of you and the worst of Amelius. While you're living here with him—there's no disguising it—you're innocently in the way of the boy's prospects in life. I don't know whether you understand me?"

She had turned away from him; she was looking out of the window once more.

"I understand you," she answered. "On the night when Amelius met with me he did wrong to take me away with him. He ought to have left me where I was."

"Wait a bit! that's as far from my meaning as far can be. There's a look-out for everybody; and, if you'll trust me, I'll find a look-out for you."

She paid no heed to what he said; her next words showed that she was pursuing her own train of thought.

"I am in the way of his prospects in life," she resumed. "You mean that he might be married some day, but for me?"

Rufus admitted it cautiously. "The thing might happen," was all he said.

"And his friends might come and see him," she went on, her face still turned away and her voice sinking into dull, subdued tones. "Nobody comes here now. You see I understand you. When shall I go away? I had better not say good-by, I suppose?—it would only distress him. I could slip out of the house, couldn't I?"

Rufus began to feel uneasy. He was prepared for tears—but not for such resignation as this. After a little hesitation, he joined her at the window. She never turned towards him; she still looked out straight before her; her bright young face had turned pitiably rigid and pale. He spoke to her very gently, advising her to think of what he had said, and to do nothing in a hurry. She knew the hotel at which he staid when he was in London, and she could write to him there. If she decided to begin a new life in another country, he was wholly and truly at her service. He would provide a passage for her in the same ship that took him back to America. At his age, and known as he was in his own neighborhood, there would be no scandal to fear. He could get her reputably and profitably employed in work which a young girl might undertake. "I'll be as good as a father to you, my poor child," he said. "Don't think you're going to be friendless if you leave Amelius. I'll see to that! You shall have honest people about you and innocent pleasure in your new life."

She thanked him, still with the same dull, tearless resignation. "What will the honest people say," she asked, "when they know who I am?"

"They have no business to know who you are—and they sha'n't know it."

"Ah, it comes back to the same thing," she said. "You must deceive the honest people, or you can do nothing for me. Amelius had better have left me where I was! I disgraced nobody, I was a burden to nobody. *Here*. Cold and hunger and ill-treatment can sometimes be merciful friends, in their way. If I had been left to them they would have laid me at rest by this time." She turned to Rufus before he could speak to her. "I'm not ungrateful, sir, I'll think of it, as you say; and I'll do all that a poor foolish creature can do to be worthy of the interest you take in me." She lifted her hand to her head with a momentary expression of pain. "I've got a dull kind of aching here," she said; "it reminds me of my old life, when I was sometimes beaten on the head. May I go and lie down a little, by myself?"

Digitized by Google

Rufus took her hand and pressed it in silence. She looked back at him as she opened the door of her room. "Don't distress Amelius," she said; "I can bear everything but that."

Left alone in the library, Rufus walked restlessly to and fro, driven by a troubled mind. "I was bound to do it," he thought, "and I ought to be satisfied with myself. I'm not satisfied. The world is hard on women—and the rights of property is a damned bad reason for it."

The door from the hall was suddenly thrown open. Amelius entered the room. He looked flushed and angry—he refused to take the hand that Rufus offered to him.

"What's this I hear from Toff? It seems that you forced your way in when Sally was here. There are limits to the liberties that a man may take in his friend's house."

"That's true," said Rufus, quietly. "But when a man hasn't taken liberties there don't seem much to be said. Sally was at the Home when I last saw you—and nobody told me I should find her in this room."

"You might have left the room when you found her here. You have been talking to her. If you have said anything about Regina ——"

"I have said nothing about Miss Regina. You have a hot temper of your own, Amelius. Wait a bit, and let it cool."

"Never mind my temper. I want to know what you have been saying to Sally. Stop! I'll ask Sally herself." He crossed the room to the inner door, and knocked. "Come in here, my dear, I want to speak to you."

The answer reached him faintly through the door. "I have got a bad headache, Amelius. Please let me rest a little." He turned back to Rufus, and lowered his voice. But his eyes flashed; he was more angry than ever.

"You had better go," he said. "I can guess how you have been talking to her—I know what her headache means. Any man who distresses that dear little affectionate creature is a man whom I hold as my enemy. I spit upon all the worldly considerations which pass muster with people like you! No sweeter girl than poor Sally ever breathed the breath of life. Her happiness is more precious to me than words can say. She is sacred to me! And I have just proved it—I have just come from a good woman, who will teach her an honest way of earning her bread. Not a breath of scandal shall blow on her. If you, or any people like you, think I will consent to cast her adrift on the world, or consign her to a prison under the name of a Home, you little know my nature and my principles. Here," he snatched up the New Testament from the table, and shook it at Rufus, "here are my principles, and I'm not ashamed of them!"

Rufus took up his hat.

"There's one thing you'll be ashamed of, my son, when you're cool enough to think about it," he said—"you'll be ashamed of the words you have spoken to a friend who loves you. I'm not a bit angry myself. You remind me of that time on board the steamer, when the quartermaster was going to shoot the bird. You made it up with him—and you'll come to my hotel and make it up with me. And then we'll shake hands and talk about Sally. If it's not taking another liberty, I'll trouble you for a light." He helped himself to a match from the box on the chimney-piece, lit his cigar, and left the room.

He had not been gone half an hour, before the better nature of Amelius urged him to follow Rufus and make his apologies. But he was too anxious about Sally to leave the cottage, until he had first seen her. The tone in which she had answered him, when he knocked at her door, suggested to his sensitive apprehension, that there was something more serious the matter with her than a mere headache. For another hour he waited patiently, on the chance that he might hear her moving in her room. Nothing happened. No sound reached his ears, except the occasional roll of carriage-wheels on the road outside.

His patience began to fail him as the second hour moved on. He went to the door, and listened, and still heard nothing. A sudden dread struck him that she might have fainted. He opened the door a few inches, and spoke to her. There was no answer. He looked in. The room was empty.

He ran into the hall, and called to Toff. Was she, by any chance, down-stairs? No. Or out in the garden? No. Master and man looked at each other in silence. Sally was gone.

(*To be continued.*)

PREPARING FOR THE SUMMER EXODUS.

SARATOGA, the Mecca of "our Daughterland?" What visions the name conjures up to the mind's eye of the charming girl who is earnestly engaged in an almost hopeless endeavor to adjust her frail and costly *impedimenta* to the limited capacity of that cavernous trunk. Visions of a boulevard as wide as that of Malesherbe and Haussman, thronged with carriages and equestrians—of lordly elms shading gay piazzas crowded with the best dressed people in the world; of hotels superb as the palace built by Aladdin for the Princess Badroulboudour; of Italian skies blue as sapphires, and golden sunlights tropical in their dazzle and sheen; of an animated crowd always in motion; of bands, of languid loungings, of excursions on the lake, of hops, of flirtations, of delightful people, of dreary bores, of tourists and toilets. Where can she show off her latest "symphony" in blue, or her "arrangement" in green, better than in the noble saloons, along the glittering piazzas, or in the wide corridors of the palaces known as hotels? Where operate on the susceptibilities of mankind to greater advantage than on the far-extending piazza when the moon is bathing mother earth in liquid pearl?

There is just a shade of perplexity on her elegant and aristocratic face, for a costume by Worth still remains to be carefully stowed away, nursed with exquisite tenderness by her maid, while an assistant from Madame Jupon's has just arrived with a box containing the sweetest thing in white, a veritable poem in muslin and lace. The Pinafore suit lies "full fathoms five" at the bottom of the trunk, the lawn-tennis costume is not far off, nor has the croquet dress been unprovided for; but where is the "willow patt rn" for garden parties? Where is that befrilled, beflounced *peignoir* to find a cosy of vantage? Where are those shoes that would have caused Madame Pompadour a fit of the spleen, to be packed? Where the hat that the dainty Skye terrier is so delightedly worrying? Where the thousand and one charming nothings which go to complete the fascination of a pretty woman's toilet? The express company's messenger awaits his instructions, and yet, within the compass of a few minutes, this perishable mound has to be reduced to the dimensions of the "leathern conveniency." *Pater familias*, who in his day has accomplished tasks little short of those given by the gods to Sisyphus, stands dismayed in the centre of the disordered apartment. Will those piles of millinery melt like snow, or are they to be compressed by some patent mechanical process nowise injurious to their crisp and cloudy appearance? Is it to be wondered at that the worthy man is considerably exercised—and yet so marvelous is the capacity, so extensive the maw of this Saratoga trunk, that room will be found for all and more—perhaps for the kitten about to be consigned, like the youthful bride in the song of the Mistletoe Bough, to a living tomb.

As she deftly arranges her finery, and finds a place for each and every article, she is wondering if Miss Van Spuyten Duyvole will be rash enough to attempt blue, or Miss Zoyder Zee dare venture on yellow; if Miss Watkins Glen has had the audacity to order a costume similar to hers; or if Miss Memphremagog will be mean enough to copy her hat *à la* Greuze, as she copied the Brétonne last season! She wonders if Mr. Richfield will visit the "Village," and if Captain Oswego remembers the promise he made at the Charity Ball. She smiles as she foretastes her triumph in the Worth "arrangement," and hopes that Charlie Benermine will be there to see, although he never seems to know, what she has on, the delightful stupid! The striped costume must be kept for the races, as Alfred Trenton is certain to attend; while for the lake she will don a semi-nautical costume, such as Black-eyed Susan should have worn when Sweet William came aboard. She has paid all her P.P.C. visits, except to those odious Newports, whom she will cut direct; and, in contemplating the satisfaction of this intended movement, she completes her packing. The marvelous trunk will be borne to the Hudson River night-boat, and the following afternoon will find her commencing the round of gayety such as a season at Saratoga can alone present to wife, widow, or maid.

THE NORTHWEST SAENGERFEST IN MILWAUKEE.

THE Northwest Saengerbund was organized in La Crosse in 1865, and has grown so steadily that there are now in Milwaukee alone 300 members. Its annual Fests, too, have increased in popularity, so that besides its own members there are always large delegations from various parts of Michigan, Wisconsin, Illinois, and adjoining States. The Fest this year was opened in the Saengerfest Hall, on the corner of Fourth and Cedar Streets, on Thursday, June 26th, and closed on Monday, 30th. Rehearsals were held in the mornings and matinées and evening concerts were given daily. On Saturday evening, after the concert, the grand ball of the Fest was held, which was as enjoyable a gathering as was witnessed in the city. The annual meeting of the Bund was held on Sunday morning, and at noon the singers and various local associations assembled and marched to the Market Square, whence the procession was made on Mason, Broadway, Huron, West Water, Reed, Florida, Clinton, South Water, East Water, Division, Chestnut, Winnebago, Eleventh, Walnut, to Quentin's Park. On Monday the visitors were treated to a steamboat excursion and carriage drives, and took hearty farewells of their liberal hosts.

REUNION OF EDITORS AT CAPE MAY.

THE annual Summer excursion of the Editorial Association of New Jersey was this year made the occasion of a delightful reunion of the Association of that State, and those of New York and Pennsylvania, at Cape May. On June 23rd and 24th, some 600 persons, representing the Press of these States, took possession of the Stockton House at Cape May, where they remained until the 27th, occupying the time in pleasures peculiar to the seaside—in excursions, fishing, bathing, etc. One of the features of the sojourn was an ocean excursion on the steamer *Republic*. Another was the annual banquet on the evening of the 25th, at which speeches were made by Messrs. A. O. Bunnell, T. S. Walter, B. Gage Berry, Colonel A. K. McClure, Major Z. K. Pangborn, Colonel M. R. Hamilton, F. G. Mather, Colonel W. L. Brown, Hon. Galusha A. Grow, and others, and a poem was read by Mr. George Wurtz. During the banquet, a toast was proposed in honor of Miss Clara Barton, of New York, the Florence Nightingale of the Civil War and of the war between France and Prussia, in both of which she devoted her labors and means to the relief of sick and wounded soldiers and the decent burial of the dead. Miss Barton, in her response, called attention to the fact that the European Government had indorsed the charitable Order of the Red Cross, and it remained for the United States Congress to do likewise in order that societies might be instituted here as in the Old World.

On the evening of June 26th a grand hop was given in honor of the guests by the proprietors of the Stockton House. Throughout, the reunion was one of great pleasure to all participants, and its influence in promoting feelings of good neighborhood among the journalists of the three States will, no doubt, be very pronounced.

The Wealthiest Roman Catholic in England.

WITH the exception of Lords Ripon and Bute, the Duke of Norfolk is almost the only very wealthy Roman Catholic in England, and had he five times the income he possesses, it would be inadequate to meet the claims made on his purse. His income is put down in the modern Doomsday Book at £219,000 a year, but, in reality, it is about £100,000, as the Doomsday is estimated at what it will be when leases at Sheffield, most of which belongs to him, fall in. He had, however, a minority of many years, and consequently a considerable sum of ready money on coming into his estate. His grandfather and father both married Protestants, for at that time the Roman Catholic Church made no difficulty about mixed marriages; but the present Duke's mother subsequently joined the ancient faith, and is intensely devout therein. Her children were all brought up in the strictest doctrine of the Church, and surrounded by ecclesiastics. The Dowager Duchess was daughter of the late eminent Admiral Lord Lyons. One of her daughters is a nun, and another a Sister of Charity. The Duke of Norfolk is small and somewhat insignificant in appearance, but a very estimable, if not particularly strong, character. He lives in great state in Arundel Castle, his famous baronial seat, in Sussex, and at Norfolk House, St. James Square, London. A more munificent and liberal peer does not exist in England. He married in 1877, but as yet has no child.

SCIENTIFIC INTELLIGENCE.

The Roman Alpine Club decided to send an excursion to Etna, which was to leave Rome on July 1st.

M. Gylden has been elected a Corresponding Member in the Astronomical Section of the Paris Academy, in place of the late Father Secchi.

The Italian State Secretary for public buildings has sanctioned the plans submitted to him for the construction of an observatory on the summit of Mount Etna.

In Digging a Channel in the neighborhood of Lake Neuchâtel, a lacustrine canoe, very nearly seven metres long, has been found. It has been placed in the Cantonal Museum.

Professor Huxley has been elected a Corresponding Member of the Paris Academy of Sciences, in the section of Anatomy and Zoology, in succession to the late Professor von Baer; and M. Schiaparelli in the section of Astronomy, in place of the late M. Tinearad.

An Influential Committee has been recently formed for the purpose of obtaining subscriptions to procure a portrait of Dr. W. B. Carpenter, F.R.S., to be presented to the University of London as a permanent memorial of his long and assiduous labors on behalf of that institution.

At St. Miguel, in the group of the Azores, the climate is very uniform, the greatest difference between heat and cold rarely exceeding ten degrees, the lowest in Winter never descending further than 58 degrees Fahrenheit, and the highest in Summer rarely exceeding 68 degrees.

A Telegram from Gordon Pasha to the Italian Geographical Society announces that Captain Martini, the leader of the Italian expedition which is going to assist the Marchese Antinori, has obtained permission to enter Abyssinia, that he had left Gdowa, and had landed at Massauah.

Queen Victoria has conferred the appointment of Companion of the Most Distinguished Order of St. Michael and St. George on George Bentham, who has yielded a life-long service to botany, and has promoted Baron von Müller, Government Botanist at Victoria, to the dignity of Knight Commander of the same Order.

M. Malezieux, of Paris, recently delivered an address on the public works of the United States, in which he complimented American engineers upon their skill in building bridges of large span, and observed that other nations might borrow many useful hints from them in regard to the use of compressed air in laying foundations.

When King Victor Emmanuel took possession of Rome he left the Roman Observatory in the hands of the late Father Secchi, out of respect for his exceptionable merits. When Father Secchi died, the Pope appointed his successor, who took possession of the establishment and refused to leave the place. He has been expelled, however, *manu militari*.

M. De Lesseps has accepted the chairmanship of a committee for arranging the commemoration of the eighteenth centenary of the great eruption of Vesuvius in 79, when Pliny lost his life, and Pompeii and Herculaneum were destroyed. According to the most trustworthy records, it was on the 23d of August that this unexpected event took place.

Professor Virchow has returned to Berlin from Asia Minor, where, as our readers are aware, he had taken part in Dr. Schliemann's excavations. The learned professor was received with great honors at Athens. The Medical Faculty of the High School of that city presented him with the honorary doctor's diploma, and the Medical Society of Athens elected him as honorary member.

Dr. Miclucho Maclay, the Russian explorer, with an Italian, Chevalier Bruno, and Captain Leeman, have sailed from Sydney for New Guinea, in the American schooner *Laddie*, chartered for a twelvemonths' cruise. Two thousand five hundred pounds has been spent on the equipment. The expedition is intended to be both scientific and commercial. New Caledonia, New Britain, and other islands, are to be visited.

The Paris Academy of Meteorological Ascents has inaugurated the series of its aërial excursions. The first took place at St. Maudes, and the second at Arcueil on the occasion of the opening of the Ecole Laplace. The ascensionists propose to take photographs from the car in order to ascertain the position of the balloons and make a verification of the laws of barometric height. The original idea of this difficult operation may be attributed to Leverrier. Each of these ascents will be followed by the publication of diagrams and scientific results obtained. They are prelaced by a lecture, given by a member of the association, on the practice of aëronautics.

In Some of the Mines in Sweden and Norway small quantities of earthy minerals are found, called gadolinite and euxenite, composed of oxides of very rare metals. Great uncertainty has long existed as to the true composition of these bodies, and M. Nilson recently undertook a series of experiments to elucidate the subject, the result being the discovery of a new metal, to which the name of scandium has been given to indicate its Scandinavian origin. The author is unable to say at present what may be the chemical properties of the new body, as the quantity of material at his disposal was insufficient to allow him to isolate the metal. Nor can he decide as to the place the new metal is to take among the older ones, but he considers that its properties differ materially from those of erbium and ytterbium, and that it shall rank between tin and thorium, as the atomic weights of these two are 118 and 234, while he calculates that of scandium at from 160 to 180.

M. Martigny, a member of the Belgium Royal Academy, has been engaged in the study of the twinkling of the stars since 1870, and his observations have extended over 602 nights. He found that his examinations were rendered inaccurate by the constant motion of the atmosphere, and he invented an instrument, which he called a scintillometer, enabling him to be much more precise in his calculations. He has clearly established the fact that the twinkling is far more evident during rainy weather than in a dry season, and, in both cases, the intensity is much more marked in Winter than in Summer. The aspect is so characteristic before a storm that an experienced observer might readily predict a change of weather. The twinkling augments regularly by degrees as the temperature diminishes and the coefficients of atmospheric retraction differ to precisely the same sense as the twinkling. The presence of water in greater or less quantity in the atmosphere exercises a most marked influence on the scintillation and modifies the characteristics according to its quantity, either when it falls to the earth in a liquid state or in the form of snow.

PERSONAL GOSSIP.

REV. DR. ORMISTON has been elected Volder lecturer for 1880 by the General Synod of the Reformed Church.

MR. CHARLES L. TIFFANY, of Tiffany & Co., Union Square, has been elected President of the Metropolitan Savings Bank.

THE REV. I. T. Beckwith, of Yale, Class of '68, has been elected Professor of Greek at Trinity College, to succeed the Rev. John T. Huntington, resigned.

ADMIRAL SIR AUTLEY COOPER KEY, K.C.B., an officer well known here and in Canada, has been appointed by the Queen's first and principal Naval A. D. C.

COUNT LEOPOLD LAZANSKY of Bohemia has started an opera house of his own, in which he feeds, clothes and pays his artists, and, like the King of Bavaria, enjoys their performances in solitude.

PRINCE ALEXANDER, the heir to the throne of the Netherlands, is pale and delicate, lean and haggard-looking, with hair almost as white as an Albinoe's and weak eyes. He is a sufferer from spinal complaint.

KING THEE BAW, of Burmah, and the British Resident of Mandelay, have been having a serious diplomatic difficulty in the refusal of the latter to prostrate himself in the presence of the King, or even to leave his boots outside the door.

THE resignation of Professor J. B. Farrington as Professor of Agriculture in the Maine State College has been accepted by the trustees, and Mr. W. H. Jordan, a graduate of the State College in the Class of 1875, has been elected to that professorship.

THE death is announced of the Rev. Thomas S. Williamson, of St. Peter, Minn., at the age of eighty. He had been for forty-six years a missionary to the Indians of the Northwest, and only a few weeks ago completed a translation of the Bible into the Dakota language.

COLONEL FELIX LABAUVE, the Frenchman who died in De Soto County a few days ago, after serving in both branches of the Mississippi Legislature and filling many other offices of trust, left $10,000 to endow a scholarship in the State University for the benefit of De Soto orphans.

IVAN TURGENEFF, the Russian novelist, is a man of imposing figure. His tall form is slightly bent, his hair is silvery, his manners are delightful. It is stated that he has been obliged to naturalize himself a Frenchman to escape the vindictiveness of his own Government, which objects to his graphic novels.

M. DE VILLEBOIS, the new Governor-General of French Cochin China, was Director of the Interior in Algiers under General Chanzy. He is the author of a dictionary of all the Algerian tribes and sub-divisions of tribes. This valuable work was published some years ago at the expense of the French Government.

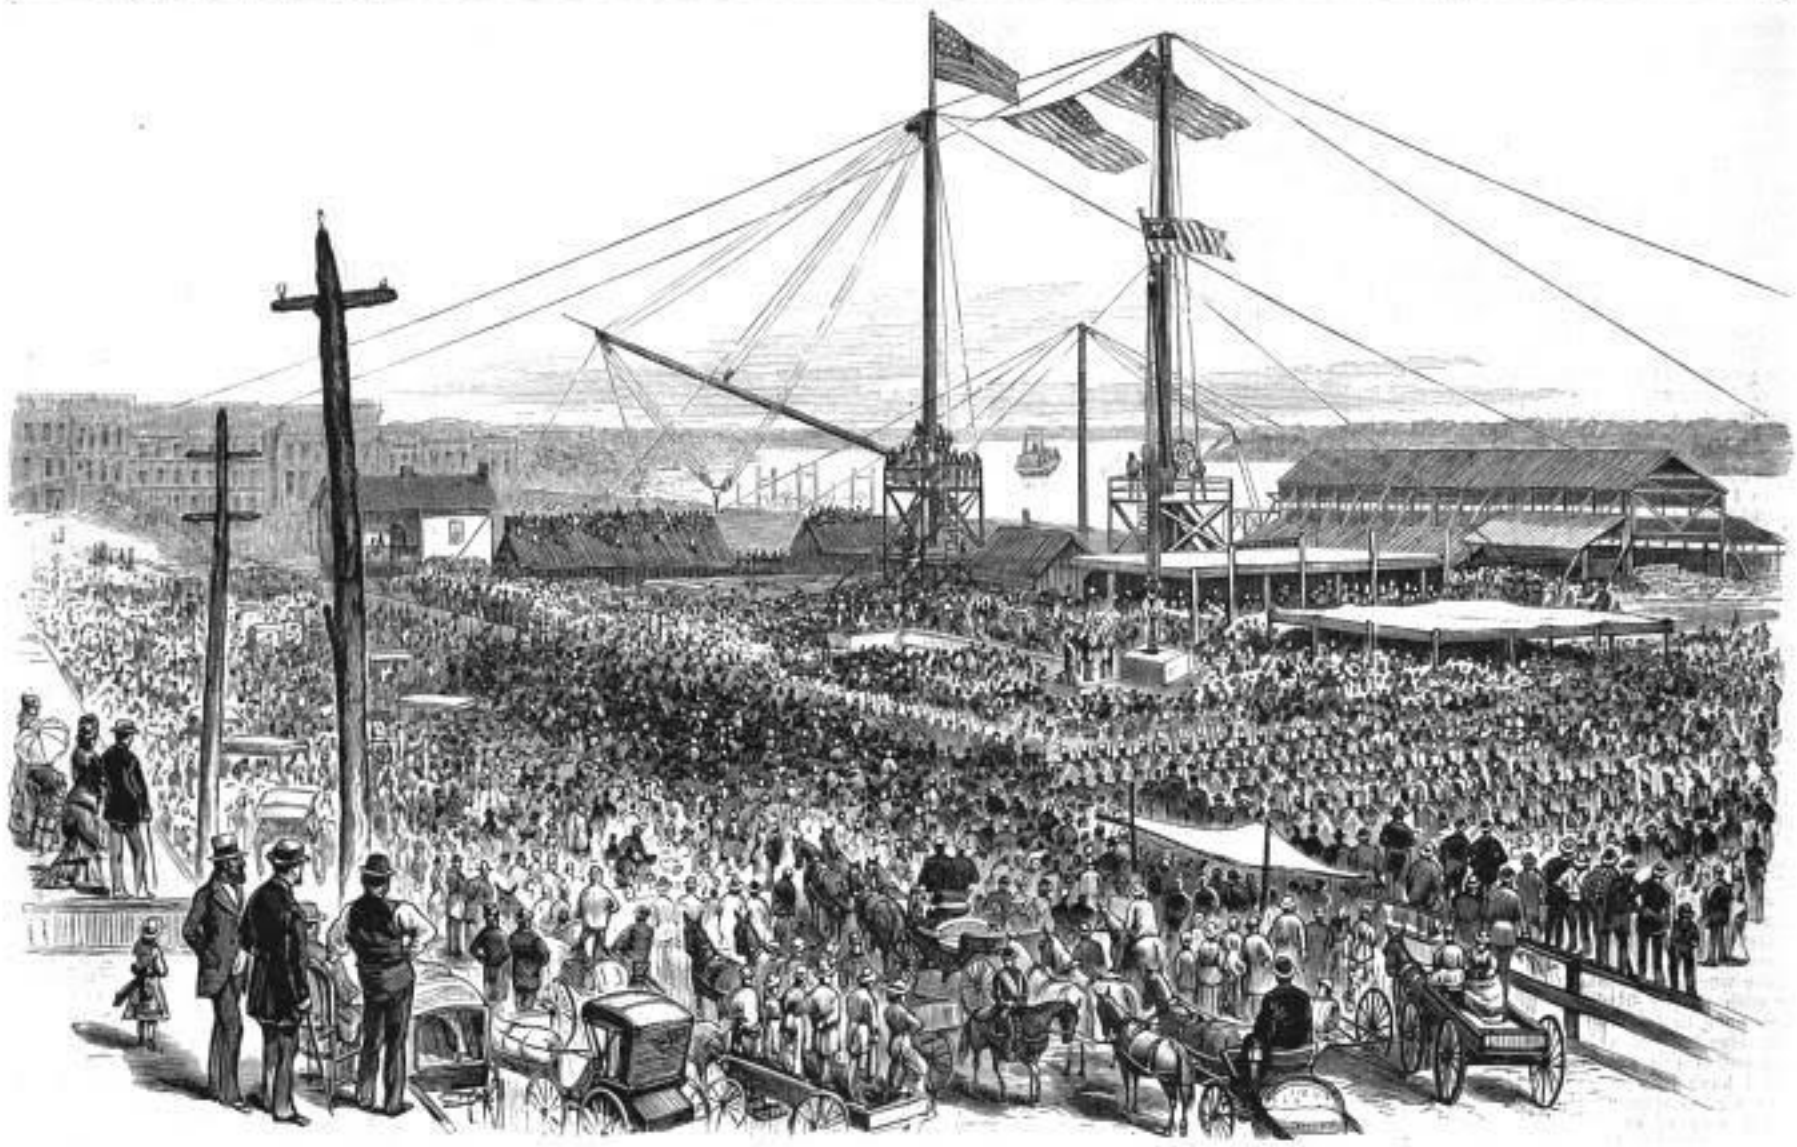
THE Prince of Wales is fond of Paris, and with the Princess he has been staying for a few days at the Hotel Bristol, his favorite stopping place in the French capital. Prince Alexander I. of Bulgaria has been with them, and he is supposed to be still a suitor for the hand of the youngest sister of the Prince, the Princess Beatrice.

ANOTHER Nihilist of high station has been executed in Russia. A St. Petersburg paper, in describing the execution of Nihilists at Kieff, adds that a young girl, who concealed her name despite the use of the lash, declared at the foot of the gallows that she was called Nathalie Gortschakoff, and that she was a niece of the Russian Chancellor.

MR. JABLOCHKOFF, the inventor of the electric candle, was lately presented with a gold medal, on which was this inscription: "To the worthy, from the Imperial Russian Technical Society." It was claimed that Mr. Jablochkoff, after many investigations and experiments, was the first man to find the practical solution of the question of the electric light.

MAJOR CAVAGNARI, whose name has been so prominent in the Afghan war, and who played an important part in bringing to a successful issue the negotiations with Yakoob Khan, has been knighted by the British Government as a reward for his services. Although of Italian descent, Major Cavagnari's education and feelings are wholly English.

MISS EMMA C. THURSBY has become a life member of the Society of French Musicians. After her last concert in Paris she was voted a *carte d'honneur* by the Artistic and Literary Circle of the Rue St. Arnaud, which she sent to the society expressing her desire to become a member. She received a flattering reply signed by Gounod, Victor Masse, Ambroise Thomas, Baron Taylor, and many others.



A YOUNG Indian Pandit, named Sgnamaji Krishna-Varma, who, considering his age, (scarcely 25) is remarkably well versed in grammatical and Vedic literature, has recently arrived in England, and has been admitted a member of the University of Oxford. He is the first real Indian Pandit who has ever visited England. He is a native of Kutch, a country on the western coast of India, inhabited by rather more than half a million of hardy people who have no literature, and whose local dialect is on its way to extinction.

THE Musical Festival Association of Cincinnati has offered a prize of $1,000 for the best musical composition by a native American composer, to be sung at the musical festival in 1880. Mr. Theodore Thomas was appointed by the association one of five gentlemen who are to pass on the merits of the work, and now the other four judges have been appointed and have accepted the trust. The full board is as follows: Theodore Thomas, President; Dr. Leopold Damrosch, of New York; Asger Hamerick, Baltimore; Otto Singer, Cincinnati; and Carl Zerrahn, Boston.

ALEXANDRE DUMAS has a fine collection of pictures, some of which, according to the *Parisian*, were obtained in this wise: "Vollon, the painter, is an early riser, and so is Dumas. Vollon is a great billiard-player; so is Dumas. Vollon arrives at Dumas's house early, say seven o'clock in the morning. The genial Alexandre proposes a game; Vollon accepts. 'What shall we play for?' asks Dumas. 'I should like a complete set of Shakespeare,' says the painter. 'Very good, I'll play you a game of thirty points, a Shakespeare against a watercolor.' Dumas is much the stronger player of the two, but sometimes remorse seizes him and he lets Vollon win. Hence the painter enriches his library and the dramatist his picture gallery.

MRS. JENNIE R. SMITH, who is under sentence of death for murdering her husband, was baptized at the Hudson County Jail, Jersey City, June 20th. The ceremony was performed by the Rev. Dr. Spencer M. Rice, rector of Grace Episcopal Church, Jersey City, in the presence of about fifteen persons, among whom were Jailer Allen and his family and two deputy-sheriffs. None of her counsel were present. The rite was administered in the parlor on the ground-floor of the jail. Mrs. Smith was dressed in black. She showed great emotion and was very nervous and excited, but she made the responses in a firm and quiet tone of voice, as if she had rehearsed the scene until it had become familiar to her. At the close of the ceremony Mrs Smith was taken back to her cell, where she wept violently for a long time.

TENNESSEE.—THE MASONIC GRAND LODGE LAYING THE CORNER-STONE OF THE U. S. CUSTOM HOUSE, COURT HOUSE AND POST OFFICE, AT MEMPHIS, JUNE 24TH.—FROM A PHOTOGRAPH BY BINGHAM BROS.

THE NEW GOVERNMENT BUILDING AT MEMPHIS.

ON Tuesday, June 24th, the corner-stone of the building which is destined to accommodate the United States Custom House, the United States Court House and the Post Office in Memphis, Tenn., was laid with Masonic ceremonies by Grand Master Connor. The ceremony was made the occasion for a display of military and civic organizations that has not been equaled since the war. At three o'clock in the afternoon, the home military and foreign companies assembled at their armories and repaired to the corner of Second and South Court Streets, where they reported to Major G. V. Rambaut, grand marshal of the day. The battalion wheeled into column of fours, and, headed by the police on foot, with Chief P. R. Athy, Captains H. F. Arata, William C. Davis, and Sergeants Charles Kuhnholz, George T. O'Haver, marched down Second to Madison, keeping step to the music of Arnold's brass band. The column marched out to Main and down Main to the front of the Peabody Hotel, where a line was formed, and arms presented to his Excellency Governor Marks, who appeared on the balcony of the hotel. After passing in review before the Governor, the battalion returned to the corner of Second and South Court, taking the front of the general street procession.

The line of march was taken up from Second Street to Adams, west to Main, down Main to Union, east to Second, north to Madison, and out to the Custom House grounds. On arriving there the military companies and civic societies took positions allotted to them around the corner-stone. The stand on the ground was crowded with ladies and invited guests, while many other distinguished citizens stood around the building. Outside the grounds a vast sea of faces could be seen. Every window and awning and housetop was crowded with people. Not less than twenty thousand people were in and around the grounds. When all was ready for the ceremony, Colonel Sesse, the superintending architect, formally invited Grand Master Connor to lay the corner-stone, and the exercises proceeded according to the Masonic ritual for such occasions. Speeches were made by the Grand Master and Governor Marks, and the ceremony closed with the firing of a salute by the Memphis Light Artillery on the bluff.

TENNESSEE.—U. S. CUSTOM HOUSE, COURT HOUSE AND POST OFFICE, MEMPHIS.—FROM A PHOTOGRAPH BY BINGHAM BROS.

The erection of the building was commenced May 7th, 1876, and the basement-story completed, in readiness for the superstructure, in January, 1877. The work was then delayed, pending the passage of the Bill providing that the building be constructed of Tennessee marble, and authorizing an additional appropriation of $85,000, passed June 20th, 1878. The work was then still further delayed by the yellow-fever epidemic of 1878. Under the arrangements as now perfected the work promises to progress steadily and satisfactorily.

The dimensions of the building are as follows: Length, 150 feet; width at the ends, 69 feet; width through the centre, 79 feet 6 inches; height from first floor to top of marble-work on towers, 102 feet 2 inches, with full three stories above the basement; height from first to second-story floor, 20 feet 2 inches; from second to third story, 11 feet 11½ inches; from third story to court-room ceiling, main cornice, 25 feet 10 inches; from third floor to roof of towers, 37 feet 2 inches, making altogether, as above stated, a total height of 102 feet 2 inches.

The white Tennessee marble is a beautiful stone, nothing in the United States approaching it for beauty; and the structure, when finished, will be the most showy and attractive public building in the Mississippi Valley.

The basement will be used for the storage of bonded goods. It contains the heating apparatus and water-closets.

On the first floor the post-office will be located. It will occupy the entire floor, with the exception

WISCONSIN.—THE NORTHWEST SÄNGERBUND AT MILWAUKEE, JUNE 26TH-30TH—SÄNGERFEST HALL, ON THE CORNER OF FOURTH AND CEDAR STREETS. FROM A SKETCH BY H. S. PACKARD.—SEE PAGE 335.

SOUTH CAROLINA.—BRONZE BUST OF WM. GILMORE SIMMS, UNVAILED AT CHARLESTON, JUNE 11TH.—FROM A PHOTOGRAPH BY G. N. BARNARD.

of the stair-halls leading to the upper portion of the building.

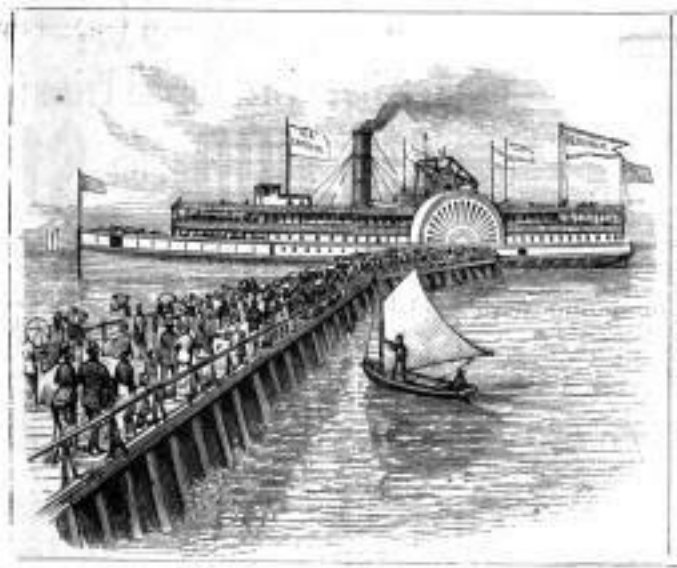
On the second floor will be located the offices of the surveyor of customs, collector of internal revenue, United States marshal, United States district attorney, United States commissioners, clerks of the United States circuit and district courts, local inspectors of steam vessels and judges' chambers.

On the third floor will be the United States circuit and district court rooms, judges' rooms of chambers, jury-rooms, district attorney, clerks of the courts, consultation room and library.

THE SIMMS MEMORIAL AT CHARLESTON.

THE bronze bust erected by the Carolina Art Association and the Simms Memorial Association to the memory of the delightful historian, novelist and poet, William Gilmore Simms, at White Point Garden, Charleston, S. C., was publicly unveiled on Wednesday, June 11th, the ninth anniversary of his death. Professor N. R. Middleton, the President of the Carolina Art Association, presided, and the proceedings were opened with prayer by the Rev. Edward R. Miles. Mr. W. D. Porter delivered the oration of the occasion, and at its close the monument was unveiled by the Misses Roach, two of the granddaughters of Mr. Simms, assisted by two young ladies from the Confederate Home.

The bust, which rests upon a pedestal of South Carolina granite, ten feet in height, is of bronze, and is the work of Mr. J. Q. A. Ward, of New York. It is of heroic size, and is a strikingly faithful representation of Simms in the prime of life. The pedestal and mound surrounding it were profusely decorated with South Carolina laurel and live-oak moss, and during the ceremonies a laurel wreath, entwined by the young ladies of the Confederate Home, was placed upon the brow of the bust by Colonel James Armstrong. The large stand from which the speeches were delivered was tastefully decorated with the flags of the United States and the State of South Carolina and with laurels and flowers, and was occupied by the officers and members of the Carolina Art Association, the Simms Memorial Association, the Board of Control of the Confederate Home, members of the clergy and legal profession, and other prominent guests.



W. S. CLARK, LL.D.

WE publish on this page the portrait of W. S. Clark, LL.D., who some time since resigned his position as President of the Massachusetts Agricultural Society to take charge of the proposed Woodruff Expedition Around the World. Mr. Clark was born in 1826, and is now in the prime of his intellectual and physical powers. He is a graduate of Williston Seminary, Easthampton, Mass., of Amherst College, and of the German University at Göttingen. His college studies seem to have taken away none of his taste or capacity for active life. When the war came he laid aside his books and took command of a regiment of volunteers, the Twenty-first Massachusetts, at whose head he served in the years 1862 and 1863. The next year his fellow-citizens called him to their civil service. He was chosen a Presidential Elector, and subsequently Secretary of the Electoral Board, and at the same election he was for the second time made a member of the General Court, in which body he served in all three years. He had become a member of the State Board of Agriculture in 1859, and has been retained in that position ever since. In 1860-1 he was President of the Hampshire County Agricultural Society, and in 1867, the last year of his service in the Legislature, he was called to the important office which he recently resigned, that of President of the Massachusetts State Agricultural College.

He was not, however, allowed to remain without interruption in the discharge of even the important duties of this responsible situation. In 1876 the Government of Japan sought and obtained his aid in the establishment of an agricultural college, whose teachings should tend to increase the capacity of that interesting empire to maintain human life and to promote human happiness. Acquainted with

books, acquainted with men, used to exercise authority, a man of culture, of energy and of enthusiasm, one who has been uniformly intrusted with high duties at home, who has done honorable service abroad, who in peaceful times has constantly been in high peaceful employment, and in war has not held back from its rough service, he was admirably qualified to fill the place of chief of the Woodruff Scientific enterprise, which, though temporarily abandoned, will yet, as we trust, under his leadership, or that of some equally efficient manager, be carried to a successful outcome.

The Losses by Etna's Eruption.

THE full accounts of the destruction caused by the terrible eruption of Mount Etna are heartrending. Catania was one of the provinces of Italy where there was a promise of a good harvest, but now the green fields and vineyards are buried under a heavy weight of hard, gray lava. The possessions of the Sicilians living on the sides or at the foot of the mountains are destroyed, and many a proprietor who in May was rich, in June is as poor as the humblest of his servants. The story, only one of many, is told of a proprietor, the father of nine children, who saw everything he possessed, houses, barns, cabins, olive-trees, corn and wheat fields and vineyards, all destroyed. The inhabitants of the towns and country houses near the course of the lava are discouraged at the extent of their misfortunes. They remove all the household goods that can be transported, the cattle, the wine in the cellars, and even the tiles on the roofs of the houses. The roads near the advancing lava are like a battlefield, filled with wagons laden with goods, herds of cattle, crowds of weeping women and children fleeing from their homes. Innumerable strangers, on the contrary, go forward on the road and advance so near the lava that the guards are obliged to send them back. Although they can advance so near as to light a cigar at the stream of lava, it is dangerous, as the lava, which at one moment looks dark and dull, is liable at the next to burst open by its own weight and make a new path for itself where it is not expected. Regiments of soldiers are stationed all along the roads to keep order, and lines of them guard the edges of the stream.

One of the streams of lava has traveled a distance of thirteen miles from the crater; it is estimated that in less than four days more than two hundred and thirty million cubic yards of lava have been thrown out.

The spectacle of this tremendous convulsion of nature is wonderfully and fearfully beautiful. It is especially impressive at night, when the fiery current often throws up in its progress great masses of molten stone. The column of smoke and fine black sand which follows the lava reflects the red tint of the fire, and looks like an aurora borealis. From the craters on the top of the mountain rise dense columns of smoke, now very white and again densely black, and often pierced by sharp streaks of electricity. The travelers who have flocked thither view these wonders with ecstasy, but the poor contadini or the rich man reduced to beggary weep over the ruin of their homes. In the daytime the cloud of smoke and sand is so dense that the sun is invisible, and the day seems to be almost like the night. Spectacles and umbrellas are necessary protections for whoever walks out in the neighborhood of the mountain, for the fine sand covers everything with a thick, heavy coating, and blows into the eyes. The eruption is accompanied by constant rumbling noises like the booming of artillery; the earth trembles, the sky is leaden. The mass of lava is from fifteen to thirty feet high, and, according to its height or the time of day, varies in color from a bright, fiery red to a dull leaden shade. If it was not for jets of smoke which issue now and then from this mass it might be thought dead lava of half a century ago, but when it moves its waves slide over each other and emit jets of fire.

Enough superstition lingers to induce the peasants of Catania at the foot of Etna to hang images of the saints and apostles on the trees and vines in the track of the lava. They hoped in this way to save their fields and houses from destruction, but the lava would not stay its majestic course for these idols. It advanced slowly, and touched the trees and the vines, the houses and cabins and barns with its fiery finger, and they blazed up with a white heat and were destroyed. At Randazzo, a town at the foot of Etna, threatened by lava, it is related that towards evening a procession of men, women and children, with lighted candles in their hands, moved towards the advancing mass of fiery lava. They carried an image of the Madonna, and held it up before the burning flood, while they called out in anguish, "Have pity! have mercy upon us!" The lava, however, did not stop, but covered the national road, which connects that town with Messina and the sea, as well as with other towns near. Its trade is ruined by this cutting off of its communications, and the people are awe-struck and depressed.

FUN.

COULD Cicero a boat?

IF you are afraid of a sting, let the bumble be.

SONG of the retail merchant—"Sprinkle, sprinkle, little cart, how we wonder where thou art."

THE musquitoes stand watch by one's bedside while the fly snatches a little sleep, and vice versa.

HAVE you observed how short the pants of the man are who wears silk socks worth three dollars a pair?

THE man who believes he can move the world should begin by Wheeling West Virginia. If not too warm, he might try Bowling Kentucky. If not afraid of a drenching he might Carl bbean Sea.

DEPRESSION.—*First City Man* (optimist): "How's business with you? I can't help thinking things are looking bet——" *Second City Man* (pessimist): "Drifting fast to the workhouse! And what makes me doubly anxious is, I can't think who'll be left to pay the poor rate!"

A LADY, not accustomed to raising poultry, set a hen on some eggs, and in due course of time a brood of chickens was hatched. A friend, coming in four days afterwards, noticing that the little things looked weak and puny, asked how often they were fed. "Fed!" was the reply; "why, I thought the hen nursed them."

"WHAT made you quit the East?" said a man in Nevada to a new-comer. "I got into trouble by marrying two wives," was the response. "Well," said the other, "I came out here because I got into trouble by marrying only one wife." "And I," added a bystander, "came here because I got into trouble simply by promising to marry one."

IN Stanstead, Canada, a man sold 10 cent packages, "warranted sure death to potato bugs; no risk of poisoning animals as with Paris green." The packages were not to be opened until time to use them. One victim, having three, opened one and found two square blocks of wood, on one of which was written: "Place the bug on this block and press firmly with the other."

STARVING TO DEATH.

THOUSANDS of men and women are starving themselves to death. They dare not eat or drink this or that, fearing it will increase their flesh. Life depends upon continuous self-denial. The only safe and reliable remedy for this terrible condition is Allan's Anti-Fat. It is wholly vegetable and perfectly harmless. Its use insures a reduction of from two to five pounds per week. Sold by druggists.

BUFFALO, N. Y., June 13th, 1878.

TO THE PROP'RS OF ALLAN'S ANTI-FAT:

Gentlemen—The following report is from the lady who used Allan's Anti-Fat: "It (the Anti-Fat) had the desired effect, reducing the fat from two to five pounds a week, until I had lost twenty-five pounds. I hope never to regain what I have lost."

Yours resp'y, POWELL & PLIMPTON,
Wholesale Druggists.

LADIES, do you want to be strong, healthy and beautiful? Then use Hop Bitters.

THE New York Central and Hudson River Railroad's Summer excursion route-book offers an exceedingly attractive list of resorts to those inquiring "Where shall we go this Summer?" All the demands of Summer travel are more than met by the Central, with its extensive and superior facilities; and passengers who value safety, speed and comfort will be sure to find it whenever they strike the line of the Central, no matter what is their point of departure or destination. The excursion route-book will be sent gratuitously to all who apply at any of the company's principal ticket-offices.

MURRAY & LANMAN'S FLORIDA WATER is probably the simplest and purest perfume ever made, being absolutely nothing more than the delicious fragrance of rare flowers, preserved and made permanent, and it is doubtless to this purity of composition that its immense popularity is in a great measure to be ascribed.

AMONG New York hotels the ST. NICHOLAS is pronounced by its patrons chief in excellence. *Cuisiniere*, furnishing, devotion to the interest of the guest, are all beyond cavil, and the rates have been reduced to the very moderate sum of $3.50 per day. The ST. NICHOLAS maintains the traditions of a quarter of a century in its adaptation to the most cultivated and refined wants of the traveling public.

ASTHMA.—Thousands of the worst cases of asthma have been relieved by using JONAS WHITCOMB'S REMEDY. In no case of purely asthmatic character has it failed to give relief.

CHICAGO, March 1st, 1878.

Messrs. JOSEPH BURNETT & Co., Boston:

Gentlemen—In the Fall of 1877 I used JONAS WHITCOMB'S ASTHMA REMEDY, and received immediate relief. And I would most cheerfully recommend it to any person troubled with Hay Fever or Asthma. MRS. R. SHERMAN,
No. 180 Ellis Ave.

THE greatest appetizer, stomach, blood and liver regulator on earth—Hop Bitters.

THE great printing establishment of Harper Brothers is now being painted with H. W. John's Asbestos Liquid Paint.

A Skin of Beauty is a Joy Forever!

Dr. T. Felix Gouraud's

ORIENTAL CREAM,

Or **Magical Beautifier,** removes every blemish on beauty; it elicits a clear, transparent complexion, free from tan, freckles, or moth-patches. The most popular for the skin ever invented; accepts no cream of similar name. Indorsement of GOURAUD'S ORIENTAL CREAM by the distinguished Dr. L. A. Sayre: A lady of the *haut ton*, a patient of Dr. Sayre, discoursing on the use of cosmetics, he remarked to the lady: "*As you ladies will use them, I recommend 'Gouraud's Oriental' as the least harmful of all the skin preparations.*" "Praise from Sir Hubert is praise indeed." Indorsed by the fashionable world.

MME. M. B. T. GOURAUD, Sole Proprietor,
48 Bond Street, New York.

KEEP MANUFACTURING COMPANY
631, 633, 635 & 637 Broadway, New York.

WITH
$5
you can buy a whole
5 per ct. Imp. Austrian 100fl. Government Bond,
Issue of 1860.

These bonds are guaranteed by the Imperial Government of Austria, and bear interest at the rate of 5 per cent. per annum, payable semi-annually.
They are redeemed in two drawings annually, in which 100 large premiums of
60,000, 10,000, 5,000,
etc., florins are drawn.
Every Austrian five per cent. 100-florin bond, which does not draw one of the larger premiums, must be redeemed with at least
120 Florins,
as there are no *blanks*, and every bond must draw something.
The next drawing takes place on the
1st of August, 1879,
And every bond bought of us on or before the 1st of August is entitled to the whole premium that may be drawn thereon on that day. Country orders sent in Registered Letters and inclosing $5 will secure one of these bonds for the next drawing.
For orders, circulars, or any other information, address
International Banking Co.,
150 BROADWAY,
NEW YORK CITY.
Established in 1874.

The Cheapest and Most Comprehensive Magazine in the World!

Frank Leslie's
POPULAR MONTHLY.
A NEW VOLUME AND NEW ATTRACTIONS!

". . . Replete with portraits and praiseworthy literary efforts, this issue contains over 100 engravings and 128 pages quarto, so that for 25 cents it probably furnishes more diversity of interesting reading matter than any other periodical. . . . This publication is meeting with much favor from the reading public. The contributors are among the most talented in the country, and hence the high intellectual standard."—*Daily Leader, Bloomington, Ill.*

"Undoubtedly FRANK LESLIE'S POPULAR MONTHLY gives more and more varied material for its cost than any other magazine in the world. One hundred and twenty-eight pages, half of which are handsomely illustrated, for twenty-five cents, would certainly seem to be the finishing point of economy in reading-matter."—*N. Y. Era.*

"In the publication of periodicals of a popular character Frank Leslie has achieved a wide and well deserved reputation. The present number of this excellent monthly is one of the best, and is filled with articles, some of which will suit all readers, and the others will be still more enjoyed by those whose tastes for special topics are unusually strong. There are no dull pages; and the illustrations are abundant. For pleasant and entertaining reading this magazine is unsurpassed."—*Saratogian, N. Y.*

". . . Freighted with instruction and entertaining matter, this magazine has become one of the necessities in all families where good reading is properly appreciated."—*Piedmont Press, Hickory, N. C.*

Attractive, Useful & Instructive Reading for Everybody.

Frank Leslie's
SUNDAY MAGAZINE.
CONDUCTED BY
REV. CHARLES F. DEEMS, D.D., LL.D.

OPINIONS OF THE PRESS:

"The best, cheapest and most attractive magazine ever published in this country."—*Christian Advocate, Buffalo.*

"It is capitally and profusely illustrated throughout, and contains interesting matter upon almost every conceivable subject. . . . We cordially commend the SUNDAY MAGAZINE to the favor of our readers. No publication conducted by Dr. Deems can fail to amuse, interest, instruct and improve its readers. More we cannot say."—*The Observer, Raleigh, N. C.*

". . . Contains much reading matter for a low price, each number having considerably over one hundred pages. It is very fully illustrated, and the articles are many and miscellaneous in their character. Religious matter, plenty of stories, sketches of travel and adventure, articles concerning strange nations, and curious and interesting odds and ends of all kinds, are found between its covers."—*Courier, Gt. Barrington, Mass.*

"FRANK LESLIE'S SUNDAY MAGAZINE is again in hand. The present number is up to the very high standard of all its predecessors."—*Wilmington (N. C.) Presbyterian.*

". . . It has been constantly growing in public favor, and each number has been an improvement on its predecessor. It should be introduced to every family, for the pure and healthful literature cannot fail to exercise a highly beneficial influence."—*Kansas City (Mo.) Times.*

". . . Deserves all the encomiums pronounced upon its predecessors, with the additional remark that wherein it differs from them, it is in the sense of being still nearer the mark of perfection. Profusely and elegantly illustrated, printed on fine paper, and containing the choicest matter from all available sources, it offers to the reader an investment extraordinary for his three dollars, which is the low subscription price for a year."—*Central Press (Greensboro, N. C.)*

The Universally Popular Illustrated Family Journal.

Frank Leslie's
CHIMNEY CORNER.
Brilliant in its Literary and Artistic Attractions.

The CHIMNEY CORNER has maintained its superiority over all its competitors, in every department, for fourteen years past. It occupies a field which no other journal attempts to fill, and is in all respects a decidedly unique publication, appealing to all classes and all tastes.

New Serial Novels are produced in rapid succession, from the pens of such popular writers as—John Habberton, author of "Helen's Babies"; N. Robinson, author of "That Mother-in-Law of Mine," "The Janitor's Daughter," etc.; Etta W. Pierce; Christian Reid; Meta Victoria Victor, author of "The Dead Secret"; M. T. Caldor; Frank Lee Benedict; J. W. De Forest; Corry Carew, author of "Belle Hodkin of Ballyboden"; Prof. H. C. De Mills, and others of equal celebrity.

The Short Stories are completed in each number, and are of a domestic, humorous and sentimental character. There are agreeably instructive articles for the home circle; Biographies of Prominent Public Characters; Curiosities of Travel; Manners and Customs of Different Nations; the Marvelous in Art and Nature; Poetry; Essays; Anecdotes, etc., etc.

Each Number contains sixteen pages of reading matter, with eight pages of admirably executed illustrations.

Beautiful Steel Engravings are frequently presented to the subscribers, far exceeding in value the price of a year's subscription.

Published every Monday, and for sale by all newsdealers, price 10 cents. Annual subscription, $4. Three months, $1. Sent postpaid.

THE
SUMMER FASHIONS
Just received from Paris, and published exclusively in
Frank Leslie's
LADY'S MAGAZINE.
THE JULY NUMBER NOW READY,
With Accurate Descriptions of
THE NEW STYLES
OF SUMMER TOILETS, BONNETS, HATS, Etc., Etc.

The *Ledger (N. Y.) Republican*, referring to the merits of this periodical, remarks:

"FRANK LESLIE'S LADY'S MAGAZINE needs no special praise at our hands; it speaks for itself, and is a prime favorite in every household where it has ever gained a foothold. Its stories, its poetry, its sketches, its engravings, its fashions—all things about it, in fact—are first-class in their way; and, take it for all in all, we don't know of a lady's magazine in America that excels it, and few that come within cannon-shot of equaling it, in any of the departments we have mentioned. In point of cheapness it outranks them all, quality and quantity considered, its price being only $3 50 a year, postpaid."

Colored and Plain Fashion Plates are imported directly from Paris monthly exclusively for this Magazine.

The plates are beautiful impressions, colored and finished with the utmost artistic taste.

The Reports of the various changes in the styles of European toilets appear simultaneously with those in the Paris journals.

Pictures and Accurate Descriptions are also given of the

Latest American Styles of Ladies' & Children's Costumes, Hats, Bonnets, Etc., Etc.

The Literary Contents are of a varied and highly interesting character, comprising select Serial Novels and Short Stories by popular writers, Poetry, Society Gossip, Fashionable Intelligence, Anecdotes, and a Choice Miscellany embodying a fund of general information on timely subjects, etc., etc.

Published on the 15th of Every Month.
ANNUAL SUBSCRIPTION, $3.50, postpaid.

FRANK LESLIE'S PUBLISHING HOUSE,
53, 55 and 57 Park Place, New York.

Important to Mothers.

MRS. WINSLOW'S SOOTHING SYRUP is the only thing that mothers can rely upon for their children. It corrects acidity of the stomach, cures wind colic, regulates the bowels, and gives rest, health and comfort to mother and child. During the process of teething its value is incalculable. It softens the gums, reduces inflammation and allays all pain, thereby giving rest to the child and comfort to the mother.

25 CENTS A BOTTLE.

CURE BY ABSORPTION.

"SAPANULE."

Nature's Remedy applied by a Natural Method.

This justly celebrated lotion is pronounced by all who have used it to be of wonderful inductive power, as well as full of healing.

Physicians of all schools recommend it as an external remedy, safe to use and of great value.

Inflammation cannot exist where it is applied.

Never fails to relieve pain, from whatever cause.

Cures Wounds, Bruises, Sprains, Burns or Scalds, Neuralgia, Rheumatism, Lame Back, Headache, Piles, Boils, Erysipelas, Contracted Cords, etc.

Removes all soreness from Bunions, Chilblains and Corns, curing them.

When used in sponge or foot baths, it at once relieves all pain and soreness of body, limbs or feet.

"SAPANULE"

SOLD BY ALL DRUGGISTS.

Ask your druggist to get it for you if not on hand.

AND NOT WEAR OUT.

SOLD by Watchmakers. By mail 50 cents. Circulars free. J. Ilaca & Co., 38 Dey St., N.Y.

"A leading incident in Tuesday's session of the Senate was the spirited plea made by David Davis in behalf of free quinine. He elaborated his subject with a vim which surprised and amused his old acquaintances, who remembered that it was a topic upon which he could offend no one."—*Washington Dispatch.*

WHY THE DUTY ON QUININE WAS ABOLISHED.

SENATOR DAVIS.—"It is of vast consequence to some of you personally, gentlemen of the Senate, that quinine should be made free. You are sadly debilitated by that malarial poison sometimes called Bourbonism. You have been shaking terribly for weeks—ever since, in fact, you ran against the first veto of the President. You need to be invigorated; and, out of pure sympathy with your condition, seeing that an enormous consumption of quinine as a tonic will be necessary to your restoration, I urge the instant passage of this Bill for the abolition of the duty."

[*The Senate was so affected by Mr. Davis's appeal, and so fully in sympathy with its objects, that it passed the Bill unanimously.*]

ROYAL

BAKING POWDER

Absolutely pure—made from Grape Cream of Tartar imported exclusively for this Powder from the Wine districts of France. Always uniform and wholesome. Sold only in cans by all grocers. A pound can mailed to any address, postage paid, on receipt of 60 cents. ROYAL BAKING POWDER CO., 171 Duane St., New York. Most cheap powders contain alum; dangerous to health; avoid them, especially when offered loose or in bulk.

THE AUTUMNAL ELECTIONS.

IF during the last few months it is just to say that the two leading political parties in the country, as represented at Washington, have been "manœuvring for a position" in the coming Presidential campaign, it is equally just to say that the ensuing autumnal elections are likely to prove the preliminary skirmish which is destined to test the strategic value of the positions respectively secured by each of the combatants. By finally framing a Bill, which the President signed, for the purpose of prohibiting the employment of Federal troops as an ordinary police force at the polling-places, the Democrats may be said to have spiked their own "alarm guns" as well as the artillery of their adversaries, insomuch that the "bayonet argument" may be considered as fairly eliminated from the impending struggle, whether as serving for a "good cry" to the Democrats, or as an active auxiliary to the Republicans in carrying elections. As under the mild rule of a pacific chieftain like President Hayes there has never been any real fear that he would use the army for the purpose of controlling political results or installing legislators in their seats, it is a matter of congratulation that the purity of our elections will hereafter be preserved from military interference alike by the strict letter of the law and by the integrity of its administration.

In regard to the Federal supervision of Congressional elections, the issue between the two parties has been brought to a hard and fast line of discrimination. Commencing with a threat, under the instigation of a few arrogant and impulsive leaders, that they would block the wheels of the Government if the President would not agree to the repeal or the practical nullification of the election laws, the Democrats, as is known, were finally driven to narrow down this issue to the single sharp point presented by the Appropriation Bill for the payment of the United States marshals and their deputies. The wheels of Government have not been blocked, and the precepts of the Federal Courts, even without provision for paying the salaries of the marshals, will probably continue to issue as heretofore; but the line of cleavage between the two parties has been so accentuated on this subject as to leave no room for confusion or doubt as to the attitude under which each party presents itself to the critical judgment of the people. Whatever may be the result of the impending elections, it cannot be doubted that the Democratic majority in Congress will be compelled to make due provision at the coming December session for the accrued salaries of the *regular* marshals, and for their *regular* work as the executive officers of the Federal courts; but no appropriations are likely to be made in the present Congress for the payment of marshals and deputy marshals appointed to scrutinize the Congressional elections. These officers may continue to be appointed as heretofore, but the propriety of their appointment and the justice of their claim for compensation will be submitted for final arbitrament to the decision of the people. In what direction that arbitrament shall fall we may be able to surmise at the end of the State elections about to take place, for each party will naturally strive to make the most of the "position" which it has assumed as a chosen vantage-ground, though the battle cannot be brought to the final victory which conquers peace until the issue shall be joined in the election of 1880 for a new President as well as a new Congress. If that election shall result in the choice of a Democratic House of Representatives, and if the Democrats shall maintain their ascendency in the Senate, the marshals and deputy-marshals who may have served as guardians of the polls will go without their compensation, and, whoever may be chosen as President, it is likely that this issue will die of inanition, or be overlaid and smothered by other issues of greater weight and magnitude. If, on the other hand, the elections of 1880 shall result in the choice of a Republican House of Representatives, especially if the Republicans shall regain their control of the Senate, it is certain that the marshals and deputy-marshals who shall have "watched for the purity of the Congressional elections" will receive full compensation for the services they may have rendered in the hope and prospect of such a tardy reimbursement for the time and labor spent in their transient functions.

As to the general question of the Federal supervision of elections, the great body of the people will, no doubt, divide on existing party lines. But those who hold, with us, that there is a *juste milieu* on this topic, which neither stalwart Democrats nor stalwart Republicans have been willing to occupy—that is, those who believe that the present laws lend themselves to "oppression and partisan partiality," which call for cure rather than for the total abrogation of the laws themselves, are likely to pay more heed to the calibre and quality of the man they vote for, whether he be Democrat or Republican, than to the mere political slogan under which the noisy leaders seek to lead their train-bands into a battle for the spoils.

And behind this issue there is a larger one which no party blinkers can obscure from the public eye. We refer to the *currency question*, as now pending in the almost even balance of the Congressional majority and minority, and as brought to the front in the State of Ohio. We do not conceal from our readers that the question of hard money and of honest money is, with us, a question above all parties and beyond all the shifting "manœuvres" of the passing hour. It is shrewdly suspected in some quarters that the Democrats have invented the latest issues of the extra session for the purpose of masking their divisions on this critical subject. If so, the mask is likely to be torn away in the collisions of the coming conflict; for surely we do not mistake in saying that the currency issue is a greatly more exigent one than the factitious issue raised about the supervision of Congressional elections at a time when no members of Congress are to be elected outside of California, and perhaps a single other district in which there chances to be a vacancy. The political complexion of the present Congress is decided beyond all possibility of change, but the wavering balances of the "silver agitation" may be decided by an emphatic utterance of the people in favor of a sound currency. And by such an utterance the Democratic Party might gain as much in wisdom as the country would be sure to gain in point of advantage. Whatever may be truly or falsely said of Providence, according to the familiar proverb, it is at least certain that the providence of politicians is on the side of the strongest battalions; and the Democrats, if suffered to fight a losing battle for bad money in Ohio, might learn wisdom enough to fight a winning battle for good money in the decisive struggle of 1880.

HARTINGTON AND THE LIBERALS.

"THE duck of the Dukeries," as the Marquis of Hartington has been styled by designing Belgravian mothers anxious for an alliance with the house of Cavendish for their daughters, has just received a sample of scant courtesy in the British House of Commons. Leader of the Liberal party, since Mr. Gladstone in a fit of postcard pettishness flung up the reins of office, the marquis has treated his following with so profound an apathy as to border upon the thin line marking contempt. It is his habit to lounge into the House and *droop* into his seat, his crush hat depending for support on the extreme tip of his nose, where he preserves a masterly inactivity, save when absolutely compelled to address the Speaker. This "sort of thing, yer know," has given dire offense to certain Radicals and Home Rulers, who have been anxiously awaiting an opportunity to repay contempt with scorn and the passage of the Army Discipline Bill through the House flung the much coveted chance into their very grasp. The abolition of the practice of flogging in the British Army was warmly advocated by the Liberal party as a party, the Home Rulers and Radicals successfully opposing the progress of the Army Discipline Bill on the flogging clause. This course of procedure so displeased the noble marquis that he stood up, and, in no measured terms, repudiated all responsibility in the action of his followers. Mr. Chamberlain, Member for Birmingham, one of the coming Masters of Parliament, amid Radical cheers, declared "that the Marquis of Hartington, who was formerly the leader of the Opposition, is now only the leader of a section." On the following night the "Dukeries" having made an energetic whip, the "swell" Liberals came to the rescue of the house of Cavendish, and cheered the *blasé* marquis on his rising to utter a few languid lispings. The second reading in the House of Lords of the Irish University Bill gave its opponents a peep behind the scenes. Lord Cairns, while still opposing the direct endowment of denominational institutions, dangled the University of London before the eyes of the Irish hierarchy, and not having the fear of Cardinal Cullen in his heart, glibly descanted upon the thousands of pounds annually bestowed in premiums at this model institution, which is open to all comers. His sop to Cerberus amounts to this, "Come to Parliament and ask for money for exhibitions and rewards for your Catholic University, and I venture to assert that no objection will be taken on denominational grounds, but a charter for St. Patrick's College—never!" If the Catholics are wise in their generation they will take what they can get. They have been chaffed by Lord Palmerston, bowed out by Lord Mayo, and "sat upon" by Lord Beaconsfield. The present Government being in a moribund condition, bids for the Catholic vote at the forthcoming general election, hence this veritable concession. What will Leo XIII. say? As Paul Cullen stands no longer in the gap, and the Lion of the Fold of Judah is neutral, Rome will decide the question. The Home Rulers will take their cue from Monsignor Kirby, who is the Irish Papal mouthpiece.

THE IMPOVERISHED SOUTH.

IT cannot be doubted that the business condition of many of the Southern States, whose people were drawn into the vortex of rebellion, is truly deplorable. Fourteen years of peace have succeeded the havoc and waste of war, but that terrible waste has not yet been repaired, and the evidences of that desolating havoc still exist on every side. Something, indeed, has been done in the work of restoration, but the results achieved have been inconsiderable. And now, with the native population, both white and black, seeking new homes, with no influx of immigration to take their places, with lands falling into disuse, with no friendly intervention of capital either domestic or foreign, and abandoned by all save the politicians, we may well inquire what is to be the future of the ex-Confederate States? The question comes home to the thoughtful and considerate of all sections and all parties.

As the whole human body must suffer when a single limb becomes injured or diseased, so must the whole country be affected when serious misfortune befalls a single section. The destiny of the country is one, and the fortunes of the South are interwoven with those of the North, East and West. What profits one section helps all; injury to either affects the whole. If the Southern people were as well conditioned to-day as prior to 1860 there would be no idle mills and no clamor for wages in the East, few, if any, breaking commercial houses in the North, and no lack of stimulus to Western production.

Leaving out of present view the active causes of a result so deplorably disastrous, we invite serious attention to a few facts bearing upon this supremely important topic. In 1850 the ex-Confederate States possessed real and personal property valued by the Federal Census Bureau at $2,289,029,642. During the succeeding ten years the tide of prosperity ran high, so much so that when the national census of 1860 was taken the value of their real and personal property was found to be $5,202,166,107, an increase of more than 127 per cent. Had there been no Civil War this ratio of increase, if continued, would have given them wealth amounting to $11,808,917,062 in 1870, and more than $26,808,000,000 in 1880. But the terrible contest they precipitated upon the country not only drank up rivers of blood but swept billions of treasure and property to destruction. In this, particularly as respects property, the Confederates were the greater sufferers. Five years of peace had elapsed when the census of 1870 was taken. According to the report of the Commissioner for that year there had been a loss to the ex-Confederate States in real and personal property amounting to 43.69 per cent. during the decade.

The following table will show at a glance the real and personal property owned by those States in 1860 and 1870, together with the decrease in each at the latter period:

States.	Value of Real and Personal Property.		Decrease.
	1860.	1870.	
Alabama	$466,237,078	$201,855,841	$264,381,237
Arkansas	212,206,473	156,294,691	62,861,782
Florida	72,302,500	44,163,655	28,917,845
Georgia	645,590,237	326,169,207	319,126,030
Louisiana	662,316,868	323,125,699	278,995,902
Mississippi	697,324,913	299,197,245	398,127,668
North Carolina	356,739,299	280,187,244	97,992,155
South Carolina	548,138,756	208,146,989	339,991,765
Tennessee	462,983,897	459,237,724	In. 4,253,827
Texas	395,200,614	159,042,842	236,148,672
Virginia	793,249,681	*660,238,824	133,010,857

* West Virginia included.

If the foregoing valuations be correct, the ex-Confederate States possessed real and personal property in 1870 to the extent of $2,929,340,528, and were only $640,310,886 better off than in 1850, twenty years anterior to the valuation of 1870. According to the tabulated statement, the loss in property for ten years ending with 1870 was as follows:

Gross decrease in real and personal property in above States	$2,272,190,411
Deduct increase by Tennessee	4,253,832
Net decrease	$2,272,825,579

In addition to this sweeping loss of property, the census report for 1870 shows that the people of the same States, at that period, were burdened by the following indebtedness:

State Indebtedness	$170,482,972
County Indebtedness	11,679,164
Debts of cities, towns, etc.	66,766,364
Total Indebtedness	$248,889,330

The aggregate of loss and indebtedness amounts to $2,526,008,741. Could this sum have been saved and capitalized at six per cent., it would have yielded an annual revenue of $151,560,524, a sum equal to the yearly support of 1,010,403 persons at $150 each. By dint of scaling and repudiation some of the States have succeeded in reducing their debts, but at the close of 1877 the ex-Confederate States, independent of county and municipal indebtedness, still owed the aggregate sum of $159,659,934, while nothing had been accomplished toward retrieving the losses of the past.

While holding to the opinion that no good can be accomplished by reproaching the South with the acts which have entailed only calamity and misery, we cannot shut our eyes to the fact that some of the Southern leaders betray a lack of wisdom in the matter of the welfare of their own people. The future well-being and prosperity of the South cannot be subserved by political intrigue, or violent partisanship, or a loss of its self-sustaining population. We say this purely in a spirit of kindness. The South may have a brilliant future and again become rich and prosperous, but it must be achieved by methods hitherto left untried. When its educated men shall learn to respect labor and teach their sons the value of industry, when life and property shall be made secure through the enforcement of wholesome laws, when education shall become popularized as it is now to some extent, and existing resources and opportunities shall be fully utilized, then the work of resuscitation will really begin. Immigration will leap to swell its population, Northern capital will stretch forth its helping hand, intelligent labor will make the most of its streams, its minerals and its lands, and the tide of prosperity, once set in motion, will rise higher and higher with each passing decade, until at length all vestiges of the old desolation shall disappear, and wealth and comfort be everywhere assured.

FOREIGN EVENTS.

IF sympathy can alleviate grief, the Empress Eugénie must take comfort from the universal expression of condolence which is manifested in all parts and among all classes of the community at the ghastly loss she has sustained by the death of the Prince Imperial. *Apropos* of the horrible disaster, much of the blame attached to the luckless Lieutenant Carey drops short when it comes to be considered that the rule in a reconnoitring party is "each for himself." They are sent out not to attack, but to ascertain for the general commanding them what the enemy is doing. Discretion is counted by them far more than valor. The instant the foe comes in sight it is their business to make off. In the Prussian army this is much insisted upon, and the year of the invasion of France, a German officer was disgraced for having, near La Flèche, engaged in a fight with some Mobiles who surprised him and the reconnoitring squad that he headed. We have not yet had the names of the two poor fellows who, not flying, were assegaied with the Prince. They, too, may have mothers, who will be thrown into deep affliction by the tidings of their death. A characteristic rumor is current in Paris to the effect that the savages who assegaied Prince Louis Napoleon were no Zulus at all, but political agents in disguise.

The Chamber of Deputies, still sitting at Versailles, has rejected by an overwhelming vote Madier de Montjeau's amendment to Jules Ferry's Education Bill, aiming at the prohibition of all religious orders from teaching, 78 voting for the amendment, 381 against it, while the Bill ultimately passed by a majority of 193. It is a strange coincidence that the question of education should be exercising the legislative assemblies of England and France at one and the same moment. The seed of bitter dissension has been sown by Jules Ferry; it remains to be seen what Lord Beaconsfield's "apron full" will produce.

Paris brings the Comédie Française on the *tapis*, and, as a matter of course, the rose in that dramatic bouquet, saucy Sarah Bernhardt. Mademoiselle Sarah has been considerably exercising the London "upper ten." She uses them as she lists, pockets one hundred guineas a night for performing a worthless piece of trash in Belgravian drawing-rooms, entitled "Le Part d'une Grand Dame," in which she "sculps" on

Digitized by Google

the stage, cutting it short if she wishes to dance, and retiring altogether if a window is left open through which a draft might assail her skeleton form. She has "chaffed" the Lord Mayor; disappointed Crutch-and-Toothpick, their sisters and their cousins and their aunts, by riding in the Row while they patiently awaited her appearance on the boards of the Gaiety at a matinée; has written to the *Times;* has set editors of society journals by the ears, one of whom, Edmund Yates, wonders that she should be admitted into any respectable family circle, the other, Labouchère, telling E. Y. to mind his own business; and now we find her selling roses at fabulous prices at the *fête* and fancy fair held at the Royal Albert Hall for the benefit of the French hospital—a *fête* that netted some thirty odd thousand dollars. Society with the big S is commencing to yawn over Sarah and her eccentricities and longs for a new sensation—let us say Cetewayo or Yakoob Khan.

The new tariff law in Germany is expected to increase the revenues to the extent of 120,000,000 marks, about $28,800,000. But as half of this sum will be required to cover the deficit of individual States, and 22,000,000 marks for fresh supplies recently voted to the Empire, the net revenue for the States will amount to only 38,000,000 marks yearly. The tariff on flour and fats will go into force immediately; the tariff for grain and wood on the 1st of October, and for all other articles on the 1st of January, 1880. This arrangement postpones the change in the tariff on the bulk of the articles for three months. Imports from countries treating German productions unfavorably will be subjected to an increase of fifty per cent. on the duties provided by the new law. This will operate greatly to the prejudice of some American interests. Great dissatisfaction is manifested in some of the manufacturing centres with the duties imposed on woolen yarns. Statistics furnished by the bank director show the interesting fact that the total loss to the Government so far by the sale and purchase of silver is 89,487,073 marks.

The recent elections at the Royal Academy of Arts have proved cosmopolitan, Mr. Alma Tadema being a Dutchman, Mr. Herkomer a Swiss, and Mr. Boughton an American. It speaks well for the genius of Boughton that he has been able, through the sheer might of merit, to "command the line" at Burlington House.

Perfect and entire liberty of worship has just been accorded to 12,000,000 of the subjects of the Czar. A dispatch from St. Petersburg announces that dissenters from the Orthodox Church, hitherto unrecognized by the State, are to bend the knee when and where they will. Have the Nihilists achieved this? If yes, it should be placed to the credit side of their very shaky account. Leo XIII. is in high favor with the faithful. He knows where to place his red hats, and how to keep on terms with the powers that be. A direct proof of his increasing popularity has just been chronicled by the fact that the Peter's Pence for the present year are ahead of those collected in 1878 by $140,000.

The British forces in Zululand have commenced the advance for which they have been so long preparing. General Sir Garnet Wolseley, who reached Cape Town June 23rd, started immediately for the front, where he would at once assume supreme command. It is expected that Cetewayo will avoid a collision until he can choose his ground and offer battle upon the most favorable possible terms. His subjugation is, of course, only a matter of time; but it may be doubted whether the achievement of that result will add anything to the lustre of the British arms in the opinion of the civilized world.

The Liberals have sustained a very serious rebuff in the Austrian elections. So far as reported, they have lost fifty seats in the Reichsrath. The English crop prospects have been rendered still more gloomy by recent storms, which, according to an eminent authority, have "put the finishing stroke to the agricultural disaster."

THE exports of domestic produce from this port during the first six months of the present year amounted to $158,243,368, which is only six millions of dollars less than for the corresponding period of last year. A number of vessels sailing last week carried exceptionally large cargoes, one taking out 100,000 bushels of wheat, in addition to other staples.

SEVENTEEN Western railroads show an increase of gross earnings during the month of June, over the previous month, of over ten per cent. The gross earnings of twelve roads, including the Pennsylvania, Erie, Reading, and one or two of the larger companies, for the first six months of the calendar year amounted to $28,705,277, against $25,777,537 for the same period last year.

THE managers of the elevated railroad lines have taken a commendable step in deciding to extend the hours during which five cents shall be the rate of fare. After the 1st of August ten cents will be charged only between midday and 3 P. M., and 9 P. M. and midnight. Should the tide of travel from half-past seven in the morning to midday, and from seven to nine in the evening be diverted from the horse-cars in a sufficient degree to prove the experiment a success, the five-cent rate is to be made uniform as soon as the circumstances will warrant it.

AMONG the more thoughtful and valuable addresses which marked the celebration of Independence Day was that delivered by Mr. A. S. Hatch, of this city, at Woodstock, Conn. Mr. Hatch took as his subject, "The National Finances and the Public Faith," and his plea for honest money and the faithful performance by the nation of all its financial obligations was marked throughout by a vigor and clearness of statement in every way worthy of the subject and the occasion.

A NUMBER of influential Southern journals have expressed themselves in favor of the nomination of Senator Bayard as the Democratic candidate for President. Thus the New Orleans *Times* says:

"A man like Mr. Bayard, of Delaware, is the only one who occurs to us now as being the man for the emergency. Mr. Bayard has occupied a large space in the politics and history of the country, and has impressed himself upon the age as a patriot and statesmen of the purest and noblest type. He has always kept his robe of office immaculate and his manhood above reproach. He is so far beyond the reach of an unworthy motive as he is superior to the dictates of caucuses or cliques. Mr. Bayard is the man who seems to us, more than any other, fit to receive the suffrages of the nation. He is a man of which the generation can be proud."

THE framers of the Fourteenth Amendment to the Constitution builded better than they knew. It absolutely turns out to be a shield and defense for John Chinaman. San Francisco statesmen some time ago enacted an ordinance that the queues of all Chinamen imprisoned in the county jail for petty offenses should be cut off. The point was raised that the ordinance was unconstitutional, and Justice Field of the United States Supreme Court, has just decided that the point is well taken, that the ordinance is invalid, being in conflict with the Fourteenth Amendment. The pigtail, therefore, is no longer in danger of official amputation; but we may expect that the "sand-lot" orators will greet this decision of the court with a storm of indignant protest.

A PRIVATE letter from General Grant is said to have been received by a gentleman in Washington, in which he announces that he will not return to this country until after the Republican nomination is made for President. This decision has been brought about by the accounts he has received of the officious intentions of some of the individuals who fastened themselves upon his administration to get up a sort of hippodrome reception upon his arrival at San Francisco—a demonstration to which he expresses the greatest aversion. He expects that his Australian tour and possibly a voyage along the west coast of South America, the Isthmus and Mexico, will consume the period between the present and the early part of June next, by which time he expects that the excitement incident to a Presidential nomination will be over.

SOME light is thrown upon the question of the desirableness of subsidies for the encouragement of ocean steamship communication by the experience of the Hamburg-American line. This line competes directly with the Compagnie Générale Transatlantique, but receives no subsidy, while the French line, on the contrary, has an annual support from Government of nearly ten million francs. Without the subsidy the French line would show a loss on its fiscal year of 6,240,000 marks. On the other hand, the Hamburg line has a profit of 1,050,000 marks. These facts would seem to show that Government subsidies are not always wise, or, rather, that economic management and enterprise can easily make up for any such exceptional support. It is to be said, however, that the Hamburg steamers touch at Havre and get a great deal of freight, if they have not full cargoes from Hamburg, while the French steamers are dependent on Havre freight alone.

M. DE LESSEPS is evidently determined that the public interest in the inter-oceanic canal project shall not be permitted to die out. Every day or so some fresh statement in reference to its prospects is flashed across the sea; and if skillful advertising can secure the capital needed for the work, it will be speedily forthcoming. M. de Lesseps's latest announcement is that the total cost of constructing the canal will not exceed $50,000,000, and that the difficulties in the way are not as formidable as those which had to be overcome in the construction of the Suez Canal, as a railway already exists along the course of the proposed Panama Canal, with a large town at each terminus. Meanwhile there is an intimation that our Government will probably consider the question raised by Senator Burnside's resolution as to whether American interests will be endangered by the establishment of the canal under foreign protection and domination.

WE learn that strong appeals have recently been made to the President and Secretary of State, by prominent and influential Mexicans, for the withdrawal of the present Minister to that Government, and the appointment of some representative who is more fully in sympathy with the idea of a closer union than now exists between the two countries. There seems to be no doubt that Minister Foster has proved an obstacle to the development of a spirit of fraternity and good-will. Some of his published statements in reference to Mexican affairs have given very great offense to all classes of the population, and members of the Government represent that it will be impossible to establish amicable trade or other relations so long as he remains the medium of communication with the United States. His usefulness as ambassador having ceased, it is certainly difficult to see why our Administration should persist in maintaining him in that capacity at a court to which he has made himself in every way obnoxious, and it is to be hoped that the representations lately made to the President by persons of the highest character and intelligence may induce him to direct a speedy change.

THE story that President Hayes proposed to abandon his civil service policy and employ the Federal patronage in Ohio for the furtherance of the interests of Republican candidates, turns out to be unfounded. There is no doubt, however, that certain Ohio and other politicians have endeavored to persuade him to displace Democrats and lukewarm Republicans who are now incumbents of Federal offices. But he has steadily refused to modify the rules laid down at the beginning of his Administration, and, by way of warning, has recently stated that if he were to take any action at all in the matter it would be to make these rules more stringent and imperative. The confidence of the country in the sincerity of the President's professions on the general question of reform in the public service will be sensibly strengthened by this decisive refusal to permit the Government patronage to be used for partisan ends, even in his own State, where his personal interest in political results is naturally greater than anywhere else.

THE number of immigrants arriving at this port during the month of May last was 18,109, against 12,213 during the same month last year. The total arrivals of immigrants during the year ending May 31st were 92,801, as against 71,691 during the corresponding period in 1878, and statistics in the Land Office show the emigration to the Western country this season to have thus far been unprecedented. As many as 1,200 entries of public lands were lately made in six days, which is said to be equivalent to the taking up of 192,000 acres of Government land. Most of this land has been entered under the Homestead Law and Timber Culture Act. This latter Act was passed to promote the growth of timber on barren land, and its provisions are that the settler shall plant not less than 2,700 trees on each acre, and that at the time of making the final proof there shall be growing at least 675 trees to each acre. In this way much that has been comparatively waste land is rapidly being improved and settled. The movement of population has been principally in the direction of Kansas, Dakota and Minnesota.

THE report of the Commissioners of Taxes and Assessments for 1879, places the total valuation of real estate in New York City at $918,134,380, an increase of $17,278,680 over 1868. This increase is due to new buildings and improvements, and the taxing of the elevated and surface railroads, the Fourth Avenue tunnel, masonry and tracks, from Forty-ninth Street to the Harlem River. The valuation of personal estate for 1879 is stated at $175,934,955, as against $197,532,075 in 1868—the decrease in the valuation of insurance companies alone being nearly $2,000,000. In the case of insurance and trust companies the decrease in the value of personal estate is due, for the most part, to the changing of investments in various other securities to Government bonds. Shrinkage in values is given as the cause of the decrease in the personal estate of the miscellaneous corporations. The decrease in the matter of the valuation of personal property of resident and non-resident individuals (amounting to $6,532,600) is caused by the unusually large number of people who have "sworn off" or "sworn down" their personal taxes for 1879. In the valuation of real estate by wards, the Nineteenth Ward ranks first, returning $129,281,745, and showing an increase over 1878 of $5,971,090. The Twenty-first Ward ranks next, having a total valuation of $75,664,300. Five Wards—the Seventh, Tenth, Thirteenth, Fifteenth and Twenty-fourth—show a decreased valuation.

AT Berkley Chapel, in the heart of Belgravia, as we learn from the English papers, there occurred the other day a sweet, simple, touching, solemn and poetic ceremonial—a children's flower service. All the small men and maidens of Mayfair, accompanied by their guardian elders, came crowding to the service—whereof the Litany was expressly composed by Lord Dunmore—some of the tiny Samaritans arriving an hour before the appointed time, each being armed with a fragrant bouquet. The Princess of Wales brought her three little girls, with magnificent bouquets tied up with great pink bows, and Princess Mary her sailor boys and girls similarly equipped. There was not a child that did not carry flowers, some of them modest as the violet, others gorgeous as ducal hot-houses and the hands of ducal gardeners could make them. This Summer tribute was destined for the Children's Hospitals of London, and many a smile was brought to the wan face of sick childhood, light to heavy eyes, and joy to weary little hearts by this sympathetic and tender offering. We, too, have our children's hospitals—alas, how often too full! We, too, have our Summer flowers; and why not place bouquets in the wan little hands, why not bring Summer gladness to weary little hearts? The floral service in Berkley Chapel is an example well worthy of being followed, and we confidently trust, ere many days roll over, to find that our Samaritans—and their name is legion—will have profited by the lesson writ in roses.

NEWS OF THE WEEK.

Domestic.

NEARLY $200,000,000 in called bonds will be redeemed by the Treasury during the present month.

A MOVEMENT for the abolition of capital punishment has been started in the New Hampshire Legislature.

EIGHT persons were killed and forty wounded by an explosion of five tons of giant powder at Bodie, Cal., July 10th.

A HEBREW council, held in this city last week, adopted resolutions looking to the establishment of agricultural colonies.

THE Government is fearful lest illicit distilling should revive in the South, now that there is no money to pay deputy-marshals.

EDWARD HANLAN, the single-scull champion, arrived at this port from England July 11th, and was warmly received by his admirers.

TWO persons were killed, a number injured, and two buildings demolished by the explosion of a boiler in a planing-mill in Baltimore, July 11th.

NOTWITHSTANDING the rejection of their report by the Board of Aldermen, Mayor Cooper's Rapid Transit Commissioners are preparing a second document.

A FIRE at Cleveland, Ohio, July 8th, destroyed buildings and other property valued at $100,000. Among the structures destroyed was the Atlantic and Great Western Freight Depot.

CAPTAIN EADS reports the final success of his great engineering work at the mouths of the Mississippi. The jetties are practically completed, and the result is approved of by the Government officer in charge.

THE Regents of the State University have conferred the honorary degree of LL. D. upon Thurlow Weed. A few months ago they conferred the same degree upon another distinguished citizen of New York—Peter Cooper.

THE Sinking Fund Commissioners of New York have voted to lease the Fulton Market property for a term of twenty-one years, and the Association of Market men will proceed at once with the plans for the new building.

THOMAS HENDERSON, a seaman, who recently arrived at Quarantine on the bark *Sipple*, from Havana, died July 10th at the hospital of yellow fever. The City Health Board has taken measures to assume control of the tenement-houses.

THE Board of Aldermen of this city have rejected the report of the Rapid Transit Commission appointed by Mayor Cooper, which laid out routes for elevated railways on Fourth Avenue and Fifty-ninth Street, and in the annexed districts.

SEVERAL cases of yellow fever have occurred at Memphis, Tenn., and over 5,000 residents have fled the city. At New Orleans, Little Rock, Galveston, Montgomery, Vicksburg, Pine Bluff, Oxford and Holly Springs, quarantine has been established against Memphis.

JUDGE KNAPP, who tried Mrs. Smith and Mr. Bennett for the murder of Police Officer Smith, in Jersey City, while acting as a Judge of the Supreme Court, on July 11th, affirmed all his rulings on the first hearing. The case now goes to the Court of Errors and Appeals.

AMONG the deaths reported during the past week were those of Judge Abram B. Olin, of Montgomery County, Md.; Dr. A. Clark, editor of the Pittsburg *Advocate;* Captain James C. Luce, formerly commander of the lost ship *Arctic*, and ex-Governor William Allen of Ohio.

THE National Board of Health, which was created by a recent Act of Congress, with full authority to take charge of all places in the United States in which infectious and contagious diseases may appear, have issued rules and regulations to be enforced during the existence of yellow fever.

Foreign.

A FIRE in Port-au-Prince, the capital of Hayti, has destroyed blocks of buildings.

GENERAL VON MANTEUFFEL is to become Governor of Alsace-Lorraine in August.

A MEETING in Bordeaux, France, at which Blanqui, the agitator, was to speak, has been interdicted.

A BERLIN correspondent says there are marked symptoms of estrangement between Germany and Russia.

IT is announced that Prince Jerome Bonaparte has virtually assumed the leadership of the Imperialists.

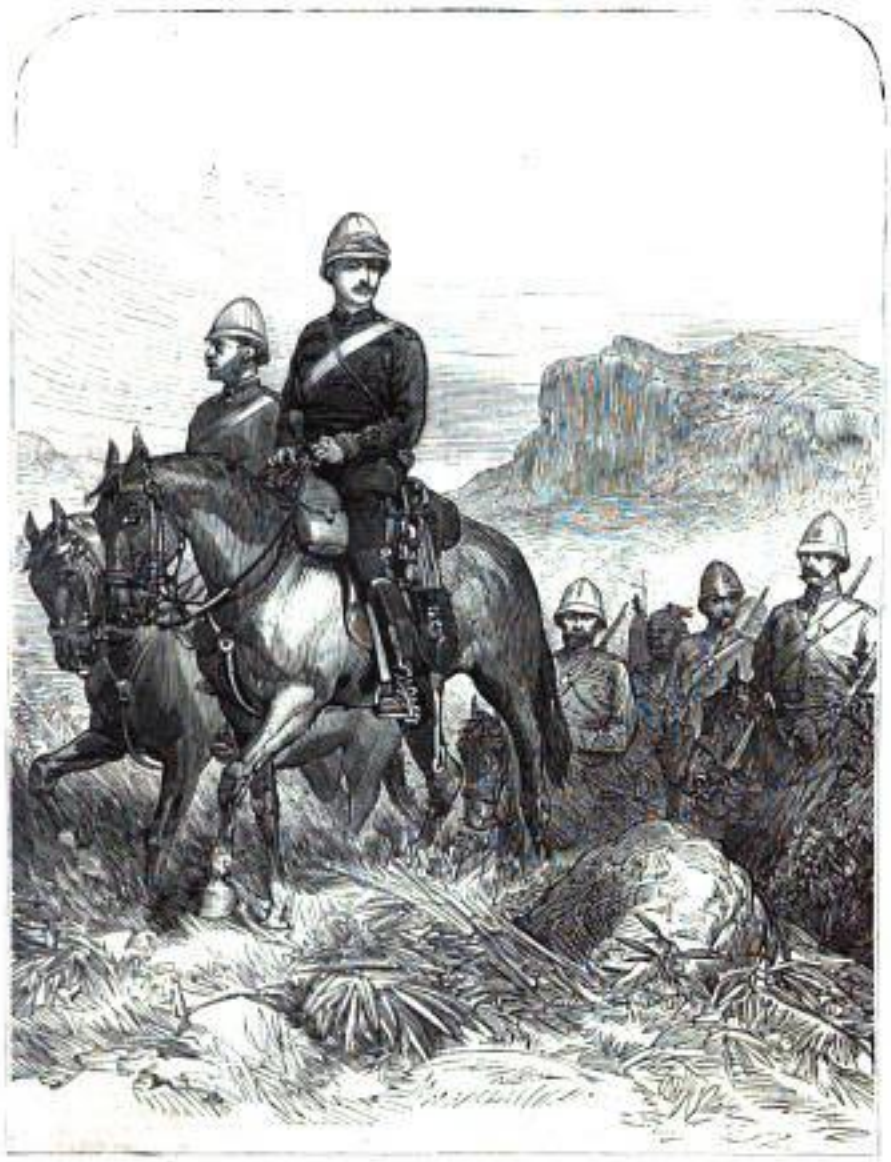
THE German Government prohibits all interference by its consular representatives in the internal affairs of Samoa.

PRINCE ALEXANDER, of Bulgaria, on July 9th, took the oath of fidelity to the constitution, and afterwards dissolved the Assembly.

THE dissenters from the Orthodox Church, who have just been accorded full liberty of worship in St. Petersburg, are the sect known as "old believers." The other dissenters will remain under the existing disabilities.

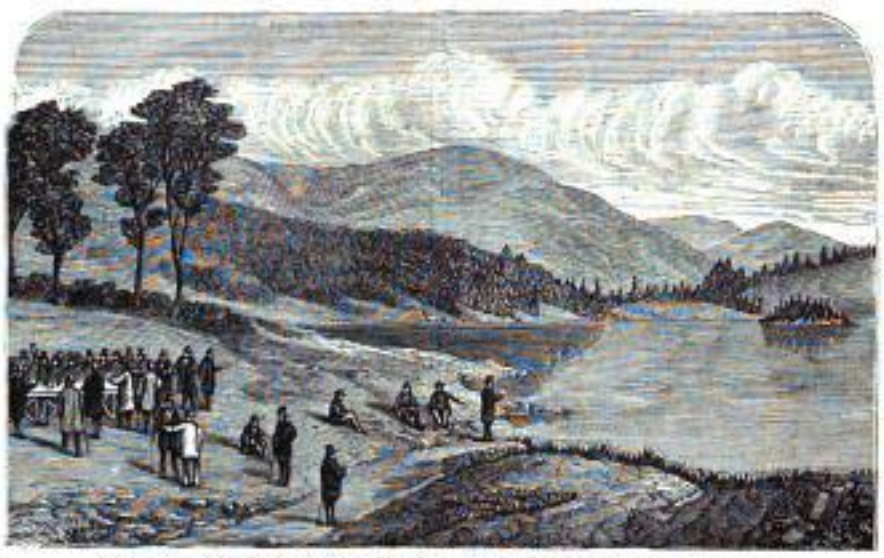
IT is understood that Prince Bismarck will meet Archbishop Masella, the Papal Nuncio to Bavaria, at Kissengen this month, when it is thought a final understanding between Germany and the Vatican will be reached.

IT is reported that the negotiations between Russia and the United States relative to the fisheries near Alaska have resulted in an agreement by which vessels of the United States are allowed to fish in Russian waters in return for the payment of a money compensation.



A SECOND fire at Irkutsk, in Asiatic Russia, has destroyed five churches, a convent, a Lutheran church, the Court of Justice, police offices, the telegraph office, the post-office, the excise, artillery, engineers' and medical establishments, three banks, the barracks and the Town Hall.

THE new treaty between Spain and China admits the Chinese in Cuba to all the rights conferred upon citizens of the most favored nation. They may sue in the courts, and may depart out of the dominions of Spain whenever they choose, their responsibility to criminal law alone being sufficient to detain them.



ON the third reading of the Tariff Bill in the German Reichstag, on July 11th, a motion by Herr Reichensperger, of Crefeld, for a reduction of the duties on cotton goods, was rejected. The clauses relative to cotton were adopted substantially the same as on the second reading. The motion of Herr Stumm to increase the duties on iron was adopted. The duty on flax was approved. Herr Mirbach's motion that the duty on rye be doubled was adopted. The remaining duties on corn were agreed to.

AUNT HETTY'S SNUFFERS.

THE young people of to-day know nothing about them—very few under thirty having ever seen them—and, except in the far West or extreme North, they exist only in the memories of the fathers and mothers of the present generation.

These were plain brass, and very serviceable when they first came into my possession. I had them plated with silver and the words "Aunt Hetty" engraved upon the box-top, and always keep them in the place of honor on my mantel. I never in my life bet a penny on a horserace or any other sporting event; yet I won these snuffers on a racer, and in my house is another prize, the greatest man ever gained, won at the same time.

A good many years ago I went to spend a short vacation at my uncle's, who lived on a farm in the County L——, near the village of W——, on the shore of Lake Michigan.

Uncle Ben was not at home when I arrived there. It being court-week, he was attending court at the county-seat, fifteen miles away.

I had been expected, so uncle had said he should not be home every night, as aunt would have a protector in me.

On the second or third morning after my arrival I decided to walk to the village of W——, some five miles from the farm, to make a few trifling purchases, get the mail, and enjoy what I needed more than anything else—a little exercise.

I had closed the gate and struck out briskly, when aunt called out:

"Don't forget the snuffers, Jack. Your uncle left them there a long time ago for a new rivet, and, though he's been to town forty times since, says he never can think to call for them. And don't stay too long, for, though it is a lovely morning, it may storm like anything before night."

It was in "May, beautiful month," and a lovely morning for a walk.

I sauntered leisurely along, keenly enjoying the fresh air, the warbling of hundreds of feathered songsters—the trees were literally alive with birds—and the sight of myriads of wild-flowers by the roadside.

On the left lay beautiful green fields over which light cloud-shadows flitted, and the air was stirring just enough to cause the vast fields of young grain to wave and ripple like the gently-agitated surface of the great lake near by.

On the right was a dense forest, which extended to the cliff on the edge of the lake three miles away, and skirted the shore for many miles north and south.

Down this beautiful road I walked, not seeing a soul until I reached the crossroad which led to the village.

There a teamster was resting his horses after a hard pull through the woods. He wiped his forehead, saluted me after the fashion of his kind, and invited me to ride, but as I declined he started villagewards, while I fell to the rear away from the wagon and the dust.

I had not proceeded far when an energetic "whoa!" caused me to look up and see that my woodman was waiting for me. Within speaking distance he called out:

"I say! Nothing wrong up to the judge's, is there?"

I didn't know.

"Wal, I didn't know but you'd know. Jest as I was goin' into the wood this mornin', Kit, that's his daughter, the judge's you know, came tearing down the skirt road, that road you was walking onto—they call it the 'skirt' road Bob says, because it runs along the edge of the timber—like mad on her Major. Wal, sir, I expected to see her thrown into next week whenshe turned on to this road; but, by grief! she fetched it, for when the dust cleared away I see her feather bobbin' way down here, and the Major's heels twinkling in the sun like fireflies in a June night. She's a brick, that young woman is, and her Major's a thoroughbred, I tell you. Bob says he can jest walk away with any horse in this county 'cept his 'big brown,' but he's sich an ugly cuss and a hard mouth, nobody'll ride him, so they can't tell how fast he'll go."

I walked by the wagon's side while my loquacious friend talked horse and "Bob" till we reached the village, and "Bob says" rang in my ears as I entered the post-office, where in a few minutes I was deep in my partner's account of the doings in the business and social life of the city during my absence.

The post-office was also a tailor's shop, and the tailor was the postmaster. He sat cross-legged on a table and stitched, stitched, within reach of the case containing the township's mail matter, and handed the inquiring rural his or her letter or paper, or looked a "nothing" over his glasses, accompanied with a solemn shake of the head, without changing his Turkish position.

A little gilt sign hanging above the letter-case belied the peaceful appearance of the man, for it read: "A LAWLESS TAILOR." He was, however, a lawful postmaster, for Uncle Ben told me afterwards that he had held the office for years, and would probably continue to hold it for the remainder of his days.

Mr. Lawless's sign-painter had played a joke upon him which brought the laugh from every observer, but the old gentleman had always failed to see the point, probably owing to the fact that the painter had omitted it.

It was a quiet, pretty village. The blacksmith with his anvil was the only man to make noise enough to prove that the place was inhabited, nor was it at that time of day by many others than himself, for it was a village of farmers and all were hard at work in their fields.

After a short stroll on the solitary street, I had Aunt Hetty's snuffers safely stowed away in my pocket, when I concluded to step into the tailor's post-office and glance over the *News* before returning to Uncle Ben's.

At that time the city papers were filled with reports of corruption in police and county boards—of course now everybody is honest, judges are just, and city and county commissioners incorruptible—but there were bad men in the world then. Attorneys and judges were charged with conniving at the escape of moneyed criminals. Gamblers, banko-men, police captains, and eminent judges were said to be check by jowl. In the copy of the *News* before me was a three-page *exposé* of ring rascality in which names were given in full. It was a startling revelation. Several persons implicated had hitherto borne unblemished reputations, and among them were two or three of my personal friends.

I became so absorbed in the article that I took no note of time—did not know that black, ugly-looking clouds were rolling up from the west. A knot of villagers and farm hands, driven from their work by the approaching storm, had gathered at the door, yet I did not know it until they rushed pell mell into the office, and the rain beat furiously against the window-panes.

I was alarmed. One look out of doors sufficed to convince me that it was useless to think of walking home, for the storm looked as if possessed of staying qualities, and the roads would be terribly muddy.

But I must get home! Uncle Ben would never forgive me when on his return he learned that I had permitted his dear little wife to remain all night alone at the farm-house. No, that would never do, so I raised King Richard's cry, "a horse, a horse!" but no horse could I get for love or money; they were all hard workers thereabouts and every animal would be needed when the storm had passed.

A thought had evidently struck a half-comical, half-ugly looking Irishman in the crowd, that they might have a little "divarsion." He addressed the party in a half-undertone intended for me to hear. "I b'lave, bys, them city chaps is all good riders. Bob Granger's brown horse 'ud be nothin' to 'em—maybe our frind here's as good as the rist. It's an illegant opportunity for 'im, anyhow." Then to me, "Would ye moind the brown, sir; he's a rale divil for goin', an' av ye only kape yer sate on 'im, ye'll be home in a jiffy—say the word. The last man that rode 'im niver found any fault wid 'im, an' he wasn't much of a rider aither."

A tall, dark-browed, pompous-looking man had entered the office in time to hear a portion of the foregoing. He said to me: "If I get the drift of this conversation, and I think I do, you'll better appreciate the force of Mike's remarks when I tell you that the last man who attempted to ride my horse was dashed against the post out there and instantly killed."

The speaker, who was the oracle, Bob Granger, actually looked proud of the diabolical qualities of his horse, whom he delighted to think no man could mount and live.

I had always from my pony days been called an excellent horseman, and I secretly believed I could ride Mr. Granger's "brown," but did not at all fancy a failure for the amusement of those gaping shock-heads, so said nothing.

The rustics conversed among themselves and were merry at my expense. Rude remarks and ruder jests were freely made and loudly applauded, and they stared amusedly at me till a fresh joke brought the guffaw and a general movement.

My blood was boiling, but I kept quiet. Said one: "Such a fine corpse, and coppers on his eyes."

"Coppers? coppers is it? Twinty-dollar goold pieces, devil a liss. Shall I order the 'brown' around for ye, sir?"

Surprise was pictured in every face when I said, "If you will be so kind."

Then there was a buzz and a burr-r-r. Mr. Granger strongly objected, much as he would like his horse exercised, the risk was too great. He didn't want my death laid at his door.

I assured him that I had ridden several horses (not at one and the same time) that were as bad as his could possibly be; that I had not the slightest fear of his horse; that if he would saddle and bridle the animal and bring him to the door, I would ride him to my uncle's and return him at my earliest convenience, and, furthermore, would consider myself under many obligations to Mr. Bob Granger.

It had stopped raining, temporarily, and the mob departed to witness the preparations for my taking off, leaving me to my thoughts, which were that I would ride that horse, if they brought him around, if I died for it.

In a few minutes the gentle beings who were so willing to see me risk my neck were again assembled in front of the office, and in their midst, with two or three men at his head, pranced Mr. Granger's man-killer, a powerful brown horse, who had too long been allowed to have his own way, I thought, for I could see nothing particularly wicked-looking about him.

After several unsuccessful attempts to mount him, I was at last seated in the saddle, and proceeded to make him understand that he had "got a man on his back."

Finding that all his manœuvres short of a double somersault failed to unseat me, he started off at a break-neck pace down the very road I wished to take.

What a glorious ride it was! We sped so rapidly that I fancied we were facing a hurricane.

Telegraph poles flew past in such rapid succession as to appear like a tall picket fence. The green fields rolled back as if in anxious haste to get behind us, and the fences looked dim and indistinct streaks by the roadside.

John Gilpin would have blushed for very shame had he witnessed my ride on the "brown," and would ever after wish to be the hero, not of his ride but of mine.

Dark clouds were rolling up again—quick flashes and low rumbling thunder told that the storm would soon be renewed.

Still "Brownie" thundered on as if only warming to his work, and rapidly thickened the coat of mud which covered us.

Capping a little knoll not far in front, I saw another horse and rider flying before the storm.

I was not, it appeared, the solitary horseman of this road, and yet I was, for by the habit and plume, wet and bedraggled, which swung to the breeze, the other was a lady.

Her horse was certainly no ordinary beast, but I could see that mine gained upon him.

Huge drops of rain began to fall, and when we were scarcely three rods apart, a blinding flash and terrific crash came at the same instant, and a gnarled oak, which had withstood the storms of a hundred years, fell across the road immediately behind us, a victim at last to the terrible fury of the lightning.

At the instant of the crash, with a shudder and wild snort of fear, my horse bounded into the air and positively flew. If I before had any control over him, which I doubt, I had entirely lost it now. It was with great difficulty that I had kept my seat.

How had the lady fared? I soon saw that she had lost control of her horse, a powerful black, and realized that each of us had as clear a case of runaway on hand as heart could wish.

It suddenly occurred to me that we were rapidly nearing the "skirt" road. It was impossible to turn that corner at the speed we were then going—we should certainly be thrown and killed.

My horse would, if left to himself, probably go straight into the woods; but the other (for the young lady could be none other than Miss Kitty, the judge's daughter) would be sure to take the "skirt" road, for that led home.

No time to think of it, for there was the crossing! I was on the right side. I pulled hard on my left rein and we flew safely past and into the woods, the horses going neck-and-neck.

We were safe! The animals could not keep up that gait forever—they must stop somewhere. Were we safe? Where would they stop? We had passed the road leading to the clearing where wood had been cut and piled for the market, and the path we were in was hedged on both sides with a thick undergrowth of bush and brier, with no opening on either side. It led—great God! why had not I thought of it—to the very edge of the cliff, where it turned and continued on the cliff's edge for nearly half a mile. It was called the "cliff walk," and in no place was it more than seven feet in width. It was a runaway of death for us. My companion evidently realized our peril, for she was pale as marble.

In a spot where the roots of an upturned oak narrowed the way my horse was forced to take a position a length behind the other, and thus we flew to death!

I grew delirious, wild; fancied I could hear the angry waves dashing against the rocks at the foot of the cliff, hundreds of feet below; and they seemed eagerly calling to us, "Come!"

The distance from the "skirt" road to the lake was nearly three miles, but we were flying, and on horses mad with fright, to whom that distance was nothing. On, on we flew, with clothing torn and faces scratched and bleeding. Again, neck-and-neck, with flaming eyes, the brown and black rushed, like a very whirlwind, to sure destruction.

It is said that a drowning man sees the events of his whole life pass like a panorama before his eyes in only a moment's time. Certain it is that in a few seconds my past life moved before me. Events which had occurred in childhood and were long forgotten crowded thick upon me. Books read when a schoolboy came fresh to mind. Robinson Crusoe and Friday lived and moved again, and the Swiss Family Robinson were re-shipwrecked. Later and more important events—everything, all, my whole life—passed in review, and then—we were still flying along that narrow path, over stumps and half-sunken logs, crashing through underbrush where the path was too narrow for the free passage of two abreast. My companion sat in her saddle, pale and stern, her eyes fixed on the path before her, and making no effort to check her steed in his mad race.

My few seconds' dream was fresh in my mind, and, in some unaccountable way, the adventures of the Swiss Family Robinson took precedence of every other part of it. The elder Robinson's method of treating, or breaking, his obstinate donkeys occurred to me. It was very primitive and equally effective—he bit their ears, chewed them, I suppose, when the animal was unusually obstinate. Oh! happy thought! I screamed with delight, "I have it, I have it!" and as the white-capped waves far out in the lake appeared to view, and the roar of the breakers could be plainly heard, I hastily drew Aunt Hetty's snuffers—old brass candle-snuffers, how unromantic—from my pocket, and with one hand fastened them with a vise-like grip to an ear of my horse, at the same time catching with my other hand the bridle-rein of the black horse, and pulled and tugged at both with all my strength. The snuffers won by some twenty feet, and, when I looked from the spot over which we must surely have gone, but for them, down, far down into the boiling waters below, I thanked my stars that candles were yet used by the frugal farmer, and that Uncle Ben had so often forgotten an important part of his errands to the village.

I shall never forget to my dying day the pale face that was turned to me, nor the glance of gratitude from those beautiful eyes, as we turned our horses' heads and rode slowly back through rain and mud.

She had ridden in the morning to visit a family living near W——, and, like myself, remained too long. Resisting the entreaties of her friends to remain with them, not fearing the storm, she had started home, and would have had no trouble but for the combined effects of that terrible crash and my mad clatter behind her, which rendered her magnificent Major unmanageable.

I accompanied her home, then cantered back to Uncle Ben's, where I arrived, I am fully persuaded, as sore and lame an individual as ever possessed bones and muscles.

Hot water for feet, a huge draught of sage-tea in bed, dim visions of Aunt Hetty flitting about, a feeling that the bed was trying to throw me out, then—terrible dreams: I stood before a prodigious cliff with black feathers waving from its top, and horse's legs striking out from its face. It tried to jump over me, and I frantically struggled with a pair of snuffers to beat it back.

At times I heard a low, sweet voice, new, yet not entirely unknown to me. My hair would be gently put back, and soft hands press my forehead. That was delightful! But darkness would come again—a sensation of being roughly jolted, and of flying through the air with cold rain beating against my face—a blinding flash, a deafening roar, and again I rode that dreadful race.

When I awoke on what to me was the next morning, I was told that I had passed just a week of my vacation in bed, and that Uncle Ben, the doctor and the hired man, had had all the exercise they needed during the most of that time to keep me there.

Judge Boyd had called two or three times, and his daughter every day, bringing each time a beautiful bouquet. I could account now for the happy part of my dreams.

Bob Granger had been to see me, too, about his horse. He would leave him a few days at the farm, he said, but, before leaving, had offered to sell him to Uncle Ben. The price asked I considered moderate, and commissioned Uncle Ben on the spot to buy him for me. Before I was able to leave the house I became sole owner of Brownie. He never ran away again, nor played any ugly tricks, but was always ready to display his wonderful speed if his rider was willing.

Miss Boyd was the happy owner of a phaeton and span of ponies, and every fine day during my convalescence she took me out for a drive. She frankly told me that her papa said she might until I fully recovered.

I recovered very slowly, but our acquaintance ripened, on my part, rapidly into love, and I asked her one morning if I might talk to her papa on a subject which lay very near my heart, and if he were willing, would she be? She said not a word, but looked—the same beautiful eyes that beamed on me on the cliff's edge, full of gratitude then, now full of love.

It was not a hard matter to convince the judge that I would be a good son-in-law. I have always suspected that some one strong in his good graces had put in a good word for me, but no one has ever admitted it, so Miss Kitty and I were formally engaged, and continued our drives long after my health was fully recovered. Mounted on Brownie and Major, we several times dashed into the village to get the mail from "A Lawless Tailor," our arrival always creating an excitement in the sleepy burg, only equaled by our departure—we always ran our horses at the top of their speed from the post-office to the skirt-road. On one of these occasions, as we were about to leave the post-office I overheard, "That's the fellow that broke the brown horse and saved the judge's daughter," and "them two looks mighty well together." Kitty heard the last remark; she said he meant the horses, of course, and I don't know but he did.

In the following September Kitty and I were married (*to each other*), and a merrier wedding-party never was in forty counties.

Our wealthy friends gave us many beautiful and costly things, but from my dear little aunt came the best of all—the wedding present most highly prized by us was Aunt Hetty's Snuffers.

AMERICAN INSTITUTE OF INSTRUCTION.

ITS FIFTIETH ANNUAL MEETING AT FABYAN'S, NEW HAMPSHIRE.

THE fiftieth annual meeting of the American Institute of Instruction, held last week at Fabyan's, White Mountains, drew together a large number of persons interested in education and educational methods, the greater majority being teachers actively engaged in school work. The sessions were held in a building erected expressly for the purpose, and which was admirably adapted to the use to which it was put. The Institute commenced its session July 8th, and completed its labors on the 11th. The first day was given up to the selection of committees, and addresses by Josiah Dana, of Castleton, Vt., on "Old and New Methods of Teaching"; Hon. Henry Barnard, of Connecticut, on "Neglected and Destitute Children"; Professor Thatcher, of Yale College, on the "Great Value of Public Schools"; and John Hancock, of Ohio, on "Piece-work." On the second day a paper was read by Professor J. L. Lincoln, of Providence, R. I., on "Some of the Present Aspects of Classical Teaching and Study," and thought that physical studies narrowed scholars, while Greek and Latin made broad, cultured, and able men. Professor Louis Soldan, of St. Louis, said that the moment Europe went back to the study of classics the Reformation commenced and scholarship revived. The high school question was opened by the Hon. B. G. Northrop, Secretary of the Connecticut Board of Education, who gave the high school progress in Massachusetts. He condemned the practice of forcing scholars into classical studies unless they intended completing professional or collegiate courses. Mr. Adams, of Rhode Island, believed that high schools were necessary for the safety and the growth of the republican institution, and the best army and police force was the public school. H. P. Warren, Principal of the New Hampshire Normal School, thought that primary schools should receive more attention, and that graduates of colleges should not be placed over high schools without special training. D. P. Allen (colored), of North Carolina, gave an ac-

Digitized by Google

count of the growth of educational interest in his State, and the organization of a normal school under his management. He asked pecuniary aid, and a committee was appointed to solicit funds. George O. Welton, agent of the Massachusetts Board of Education, illustrated the method of teaching numbers by the object and oral method. The evening session was occupied with a lecture on "Eclipses of the Sun," with stereopticon illustrations, by Professor C. A. Young, of Princeton, N. J.

On the 9th addresses were made by A. C. Perkins, Principal of Phillips Academy, Exeter, N. H., on "Extremists in Education"; by Hon. J. W. Dickinson, Secretary of the Massachusetts Board of Education, on "Oral Teaching," and the neglect of gymnastic exercises in schools was discussed by a number of prominent instructors. All the discussions were marked by ability, and the meeting cannot fail to result advantageously to the cause of education.

While those in attendance upon the Institute gave close attention to the regular exercises, they very generally embraced the opportunity to enjoy the peculiarly attractive surroundings amid which they were placed. Many of the lady teachers occupied their spare moments in sketching and in exploring the points of interest in the mountains, to which excursions were made on foot and in wagons. Others, less adventurous, spent their leisure in chatting, singing, and lounging about the hotels and their contiguous resorts. The large concourse of visitors attracted, as usual, venders of all sorts of wares—the basket-makers, especially, reaping a golden harvest. By way of guarding against imposition upon the hotels and railways, the tickets of all regular delegates were officially stamped by the Secretary of the Institute.

A more enjoyable gathering of educationalists was perhaps never held than this which found among the White Hills of New Hampshire a fresh invigoration for the renewal of the teachers' work in the coming Autumn.

During the present season the means of approach to and of communication among the mountain resorts have been greatly improved. New railroads connecting Jefferson and the Profile House with the outside world have been opened, and all the lines from New York have increased their facilities. The Fall River Line offers excellent inducements to White Mountain travelers, and by means of its new and popular dollar line to Boston, via Newport, is securing a large share of the passenger business with the New England States.

Among the mountain hotels many improvements and enlargements have been made. The Sinclair House, at Bethlehem, has always held a very high reputation among visitors to the mountains, and its popularity under its present proprietors is said to be greater than ever before. Special attention is given to the health of guests, every sanitary precaution being observed. Southern visitors to the mountains have made this hotel one of their most favorite abiding-places. The house accommodates 350 guests.

REUNION OF THE DODGE FAMILY AT SALEM.

THURSDAY, July 10th, being the 250th anniversary of the landing of William Dodge at Salem, Mass., was celebrated by a gathering of his descendants in Mechanic Hall. Some 400 representatives of the family were present. Hon. William E. Dodge, of New York, presided, and introduced Rev. Mr. Dodge, of Sparta, Ga., who offered prayer. Vice-Presidents were announced, among them Hon. A. P. Dodge and General G. M. Dodge, of Iowa; Fred C. Dodge, U. S. A.; Francis Dodge, of Danvers; George E. Dodge, of Chicago; Robert Dodge, of New York; C. E. Dodge, of Providence, R. I.; R. P. Dodge, of the District of Columbia. Thayer Oliver and Dr. Wheatland, of Salem, were made honorary vice-presidents. Major Ben. Perley Poore and William Dodge, of Boston, were elected secretaries. The first speaker was Robert Rawson Dodge, of Sutton, Mass., and he was followed by Robert Dodge, of New York, who claimed that the family approached a million in number of descendants. Hon. Augustus Cæsar Dodge, of Iowa, gave some interesting historical incidents of the Dodges living in the border States. Senator Dodge and his father were United States Senators from Ohio, and the father and son represented the State in the United States Senate at one and the same time. Dr. Ezekiel Dodge, of Madison College, New York, spoke briefly of the branch of the family with which he was connected. William E. Dodge spoke at length of his father, and said that the American Peace Society was formed in his father's house. The chairman exhibited an ancient deed dated 1694, and signed by Richard Dodge. Brief remarks were made by Christopher Dodge, of Providence; J. Wayne Dodge, of Western New York; Temple Dodge, of Malden, Mass.; Mr. John Washington Dodge, of Richmond, Va.; John C. Dodge, of New Hampshire, and Richard Dodge; the remarks in each case being limited to ten minutes. Letters were read from John A. Dodge, of 12 Wall Street, New York; Eliza Dodge Glass, of Cedar Rapids, Ia.; Theodore A. Dodge, of the United States Army, and others. During the speeches a call was made for remarks from Dodges of eighty years old and upwards, to which four responded, taking their place on the platform and being introduced by William E. Dodge, the chairman. A committee was chosen to arrange for the publication of the genealogy of this widespread and influential family.

OUR POPULAR SUMMER RESORTS.

ENCAMPMENT OF THE TWENTY-THIRD BROOKLYN REGIMENT AT NEWPORT, R. I.

ONE of the most notable and pleasant military excursions of the season was that made by the Twenty-third Brooklyn Regiment to Newport, R. I., July 4th. This regiment is one of the crack organizations of the National Guard, including among its members representatives of many of the first families of Brooklyn, and its visit to the popular watering-place of New England was, therefore, an occasion of more than mere local interest. The regiment left this city in the steamer *Old Colony* on the evening of the 3d, and reached Newport at five o'clock on the morning of the 4th, being formally received by the Newport Light Infantry, and welcomed by Mayor Burdict on behalf of the city, and by Adjutant-General Barney on behalf of the State. The regiment, after a brief march, went into camp on the cliffs, where the tents were already spread. The camp, named "Camp Robinson," was admirably located. It comprised twenty acres of ground, and was smooth and level as a floor. The tents, over 200 in number, occupied the southern end of the field, and were exceedingly comfortable. The officers' tents measured fourteen feet square, and those for the men were nine feet square. The upper part of the field was reserved as a parade-ground. Directly in front of the tents was the broad, blue Atlantic; to the north and east were Newport's famous beach, and also a line of elegant Summer homes, while as far as the eye could reach to the south were the rugged cliffs which have been immortalized in song and prose.

During the morning the regiment participated in the parade in honor of the day, winning warm encomiums from all beholders. The procession was the finest ever seen in the State. In the afternoon the Twenty-third was reviewed by Governor Van Zandt, who was attended by his full military staff. The evolutions of the regiment were watched with the greatest interest by an immense crowd of spectators, and the highest admiration was expressed at their proficiency.

On the 5th a reception was given by Mr. A. A. Low, of New York, in honor of Colonel R. C. Ward and his officers, and was, without any exception, one of the most superb affairs ever given at Newport. There were fully three hundred distinguished persons present. The brilliant party tarried on the lawn for a long time, listening to the music of the Twenty-third Regiment Band, and then proceeded to the spacious dining-room, furnished in East Indian style, where a collation was prepared. At five o'clock General Israel Vogdes, commanding the First United States Artillery, reviewed the Twenty-third Regiment on their grounds facing the cliffs. In the evening Colonel Ward and his officers entertained General Vogdes and his officers at a collation at the Ocean House.

On Sunday, the 6th, the regiment attended Divine service at Trinity (Episcopal) Church, where there was a large attendance. The galleries were reserved for the relatives and friends of the members of the regiment. The opening services were conducted by the rector, the Rev. G. I. Magill. The sermon was preached by the Rev. William A. Leonard, chaplain of the regiment.

On the 7th, Colonel Ward and the officers of the regiment visited Fort Adams upon the invitation of General Vogdes, to review Light Battery K of the First United States Artillery. Before the review there were three rifle matches between two teams, composed, the one of the officers of the First United States Artillery, and the other of officers of the Twenty-third Regiment; also a match between the enlisted men at the fort and a team composed of visitors. Each man fired five shots at 100 yards. The visitors won all the matches. A grand lunch was subsequently given to Colonel Ward and his officers by the officers of the United States steamer *Portsmouth* and those of the Torpedo Station. The officers of the regiment tendered a reception to the Mayor, City Government and citizens in general, in the Ocean House parlors in the evening.

The 8th was marked by a mock parade and review of the regiment in front of the Ocean House. The members of the regiment were dressed in the most grotesque-looking uniforms imaginable, and were headed by a local fire-engine company, and Lieutenant Adams, of the Twenty-third, who was mounted. A band was improvised for the occasion, the principal instruments being tin-whistles and drums of the same material.

The encampment terminated on the evening of the 9th, after a review by General Burnside, when the regiment embarked on the steamer *Old Colony*, a salute of thirty guns and a grand display of fireworks being given as the steamer left the dock, in the presence of some 5,000 spectators. On arriving in this city on the morning of the 10th, special boats conveyed the men to the foot of Montague Street, Brooklyn, where they were received by the Thirteenth Regiment and escorted to their Armory.

How a Russian Revolutionist Died.

THE unfortunate officer, Dubrovin, who, on May 24, was hanged at St. Petersburg, the first public victim of the state of siege, died most heroically. A company of the Wilmanstrand Infantry Regiment, to which the condemned man had formerly belonged, was ordered from Staraja Russ to be present at the execution. A square was formed about the gallows by a considerable number of troops. A man of noble presence, Lieutenant Dubrovin, clad in the black robe of the condemned, on which the word "Traitor" was inscribed, came out from prison with firm step, singing with mighty voice a kind of Russian Marseillaise, in which praise was given to the names of Rylieff, Odojerski, and other champions of freedom, who were hanged under Nicholas in 1826. This song seems to have been of Dubrovin's own composition. The beating of drums had to be resorted to in order to stifle his voice. When the death-warrant was read to him by a lieutenant of the Moscow Regiment of Guards, he contemptuously said, "Stop that silly ceremony!" When the priest offered him the cross, Dubrovin bade him go to a place which is usually not mentioned. Then he walked firmly to the scaffold, calling out, "Long live freedom!" whereupon the executioner quickly threw the cap over his head and performed his office. There is much alarm in Government circles on account of the corps of officers among whom Dubrovin had lived having never given the slightest intimation to superior authorities as to the sayings or doings of their revolutionist comrade.

The Longest Tunnel in the World.

THE Hungarian Government has, through the last ten years, again developed greater activity in this work, and at its request the Parliament has granted the yearly sum of 100,000 florins for the purpose. In the year 1874 there were still 2,326 metres to be worked out, which would under ordinary circumstances have been a task of eleven years; but in 1873 experiments were made in boring with machines, which method was tried for the first time in the Mont Cenis tunnel, with surprising success, then in the St. Gothard Railway tunnel, and lastly in the "Sutro" gallery (Nevada). After many trials, they succeeded in finding out the most convenient arrangement, and the whole work was done in three and a half years. With this method the entire tunnel could have been finished in twenty-seven years.

The length of the Mont Cenis tunnel is 12,233 metres; the length of the St. Gothard is 14,920 metres; the length of the Sutro gallery of mines is 6,147 metres; the length of the Joseph II adit is 16,538 metres. The total cost amounts to 4,500,000 florins. The importance of this tunnel is very great, firstly as regards geology. The geological and orographical literature of that country is very old; Schemnitz has been repeatedly visited by distinguished men of science from all quarters of Europe, but the difficulties and complications of its geological structure are so great that there is still much to be done. One of the greatest obstacles in the way of investigation is that the surface is very seldom exposed; dense forests and products of decomposition of the rocks cover many of the slopes. The tunnel furnishes a section more than ten miles in length, and gives not only valuable information as to the downward prolongation of the lodes known in the upper levels, but some new ones have been traversed, and the entire series of rocks, with their mutual limits as well as modifications and occasional transitions, is to be seen without interruption.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

The Late Prince Imperial of France.

The remains of the late Prince Imperial of France arrived at Portsmouth, England, on the morning of July 16th, having been conveyed in the troop-ship *Orontes*. They were shortly after transferred to the steamer *Enchantress*, which proceeded with them to Woolwich, all the men-of-war in the harbor flying their flags at half-mast and firing minute-guns. On Saturday morning the body was placed on a gun-carriage drawn by eight horses, and conveyed direct to Camden House, Chislehurst, escorted by the Royal Horse Artillery. After the formal identification of the corpse, it lay in state in the hall where the remains of the late Emperor were similarly exposed, until the hour for the formal religious ceremony in the Church of St. Mary. As the body was borne from the gun-carriage into the church, the cadets fired three rifle volleys. A short Mass was celebrated, and the remains were deposited in a temporary resting place until the tomb in the little chapel containing those of the Emperor can be prepared for their reception. The decision of the court-martial in the case of Lieutenant Carey, who commanded the expedition in which the Prince Imperial lost his life, has been sent to England for confirmation prior to its publication. Lieutenant Carey will go home under arrest pending the Queen's decision upon the verdict.

The New Edinburgh Waterworks.

The Lord Provost of Edinburgh, with the Bailies and municipal officers of that city, and the Provosts of Leith, Portobello and Dalkeith, performed on Friday, June 13th, the ceremony of opening the new waterworks at the Moorfoot hills, for the supply of Edinburgh and the neighboring towns above named. The new works, so far as completed, are Portmore Reservoir, Tweedsdale Burn aqueduct, Gladhouse Reservoir, and the aqueduct and pipe track in Alnwick Hill. Two of the filters, the store reservoir, and clear water tank at Alnwick Hill are also finished and in working order. The additional quantity of water which will now be brought in daily is 4,000,000 gallons, or say thirteen gallons to each person, and which, with the present supply of twenty-six gallons, makes thirty-nine gallons per head to a population of 298,350. The works still to be completed are two filter-beds at Alnwick Hill, Edgelaw Reservoir, and Rosebery Reservoir, and it is estimated on their completion that there will be a daily supply of fifty-two gallons to each person, which is just double the former supply. Our illustration shows the scene at the Portmore Reservoir, when the Lord Provost and his party, amongst whom was Sir James Falshaw, Bart., his predecessor in the municipal chief dignity, tasted the water of the new supply, having first inspected the embankment and the sluice.

The Hut Tax in Natal.

Our sketch in Natal represents a scene which belongs to the ordinary civil administration of the British Government in that South African province. Mr. Moody, the resident official magistrate at Ladysmith, was sitting day after day for more than a fortnight, with his clerks, at a table under a tree in front of his abode, to receive payment of the hut tax yearly due from all the Zulu and other native householders of every kraal or village in his district. The tax is fourteen shillings upon each hut, and every Zulu or Caffre husband, who possesses a number of wives, is obliged to keep each of them, with her children, in a separate hut, so that a polygamist has to pay rather heavily to the British Government for his extravagant indulgence in such multiplied matrimony.

The Inundation of the Po.

The Po, having its source in Piedmont in two springs 6,000 feet above the level of the sea, flows in a winding and irregular course for about 450 miles across the whole breadth of Northern Italy, entering the Adriatic by a delta. About fifty towns of considerable size are situated on its banks or those of its tributaries. Boats can ascend to within sixty miles of its source, but the current is so rapid as to render navigation difficult. Destructive floods are liable to happen at all seasons, and the flat country along its lower course renders artificial embankments necessary. A terrible inundation took place on the early morning of the 4th of June last, in the district between Borgoforte and Bonizzo, whereby hundreds of families have been literally washed out of their houses and homes. The river gave no warning note to the many guardians who watch by its banks, but with a sudden leap it burst its bounds, bearing desolation on the crest of its seething waters. The damage done to crops and property is estimated at a ruinous figure. One of our illustrations represents the effect of the inundation at Turin, and the other the House of Providence, or rendezvous of the people rendered homeless by the terrible catastrophe. Prompt provision was made by Parliament for the temporary relief of the sufferers.

The War in South America.

The latest intelligence concerning the war between the South American States is to the effect that for urgent political purposes Chili has ceded the whole of Patagonia to the Argentine Republic; that the latter has refused to ratify the treaty ensuing; and that the Chilian fleet has resumed the blockade of the Peruvian fort, Iquique. Almost all the actions of the belligerents up to last accounts had been confined to the naval encounters; but from the moving of the various armies it is expected that a land campaign will soon be opened with a battle in the interior. Just where this will be there can be no conjecture, because the troops of each country have invaded the territory of the other. The famous *Huascar* maintains a practical control of Peru's best port, and friendly offers of mediation have been refused by the contending Governments. Our illustration shows the gathering at Iquique of Chilians having business relations there, with their families and household goods, upon the declaration of hostilities, preparatory to taking their departure.

The Agricultural Depression in England.

In consequence of the great distress in the agricultural districts of Great Britain, the emigration to the United States and the North American colonies has increased to such an extent that it is fully anticipated the average of past years will not only be reached but passed. In 1861 the number of persons of British origin who came to the United States as emigrants amounted to 38,160; ten years later they numbered 150,768. During the last two years the exodus slackened, but for several weeks past the movement has been so general as to cause an alarm which has penetrated so far as the Parliament itself. In many instances large landholders have reduced their rents, or remitted fair per centages for the year; still the complaint in general that the small farmers can neither pay the rent nor secure enough from their ground to live upon. It is asserted that the landed proprietors, taken *en masse*, do not receive three per cent. for the use of their agricultural estates, and that thousands of acres are being daily vacated by the farmers. It is no wonder, then, that such a scene as we reproduce should be of frequent occurrence on the London docks.

AT HOME AND ABROAD.

—THE Zulu war is costing England $500,000 per month.

ZULU chiefs say that the King will not submit to Lord Chelmsford's terms of peace.

—THE Greenbackers will hold a State Convention in Mississippi July 22d, at Jackson.

—NEARLY 3,000 European immigrants arrived at New York during the last week in June.

—THE "Legislative Council" in Memphis has passed an ordinance prohibiting opium-smoking.

—A LONG-EXTINCT crater on Mount Hood, Oregon, is now emitting volumes of sulphurous smoke.

—IT is admitted by the St. Petersburg *Golos* that the war with Turkey cost Russia $750,000,000 and 200,000 lives.

—THE once-powerful tribe of Seminole Indians have dwindled away to about 400 persons, located in South Florida.

—THE Kiowa Indians are at large in great numbers in Western Texas, and there is much alarm among the stock men.

—FOUR hundred Nihilists were arrested at Kiev on the night of the 26th of June, and a great store of weapons were seized.

—ON July 9th there was a gathering of 500 members of the Ely family at Holyoke, Mass., and on the 10th one of 400 representatives of the Dodge family at Salem.

—ADJUTANT-GENERAL STEELE, of TEXAS, reports that there are between 4,000 and 5,000 fugitives from justice from that State, of whom 851 are murderers.

—THE contributions of Peter's Pence for the first half of the present year have increased by $140,000, compared with the sum contributed during the same period of 1878.

—M. LEPERE, French Minister of the Interior, has officially estimated that the purchases of foreign grain rendered necessary by the bad home crops will amount to $100,000,000.

—THE permission recently given to the French General Chanzy to inspect a Russian fortress and coast defenses, which is a favor not usually granted to foreigners, has seriously offended German susceptibilities.

—THE Swiss Government has paid $600,000 to the St. Gothard Tunnel Company, which have been hitherto withheld on account of the terms of the contract not being observed. The tunnel will be completed in a few months.

—AN examination of the records of the Pension Bureau up to the 30th of June of the present year, shows that 32,890 arrears of pension cases, representing $7,220,572.44, had already been paid, or were ready for payment on that date.

—THE eminent firm of Sir William Armstrong & Co. have delivered to the Canadian Government a number of the heaviest of their breech-loading guns, manufactured specially for the defense of the principal cities of the Dominion.

—THE Argentine Republic is now shipping wheat to Europe and on a somewhat extensive scale. For twenty-five years the principal exports were hides; a few years afterwards wool, and now wheat takes the lead. That is the steady march of civilization.

—BY late investigations it has been found that the number of children under fourteen years of age employed in the tobacco manufacturing industry in Germany is not less than 6,695. This is a larger number than there is employed in any other branch of industry.

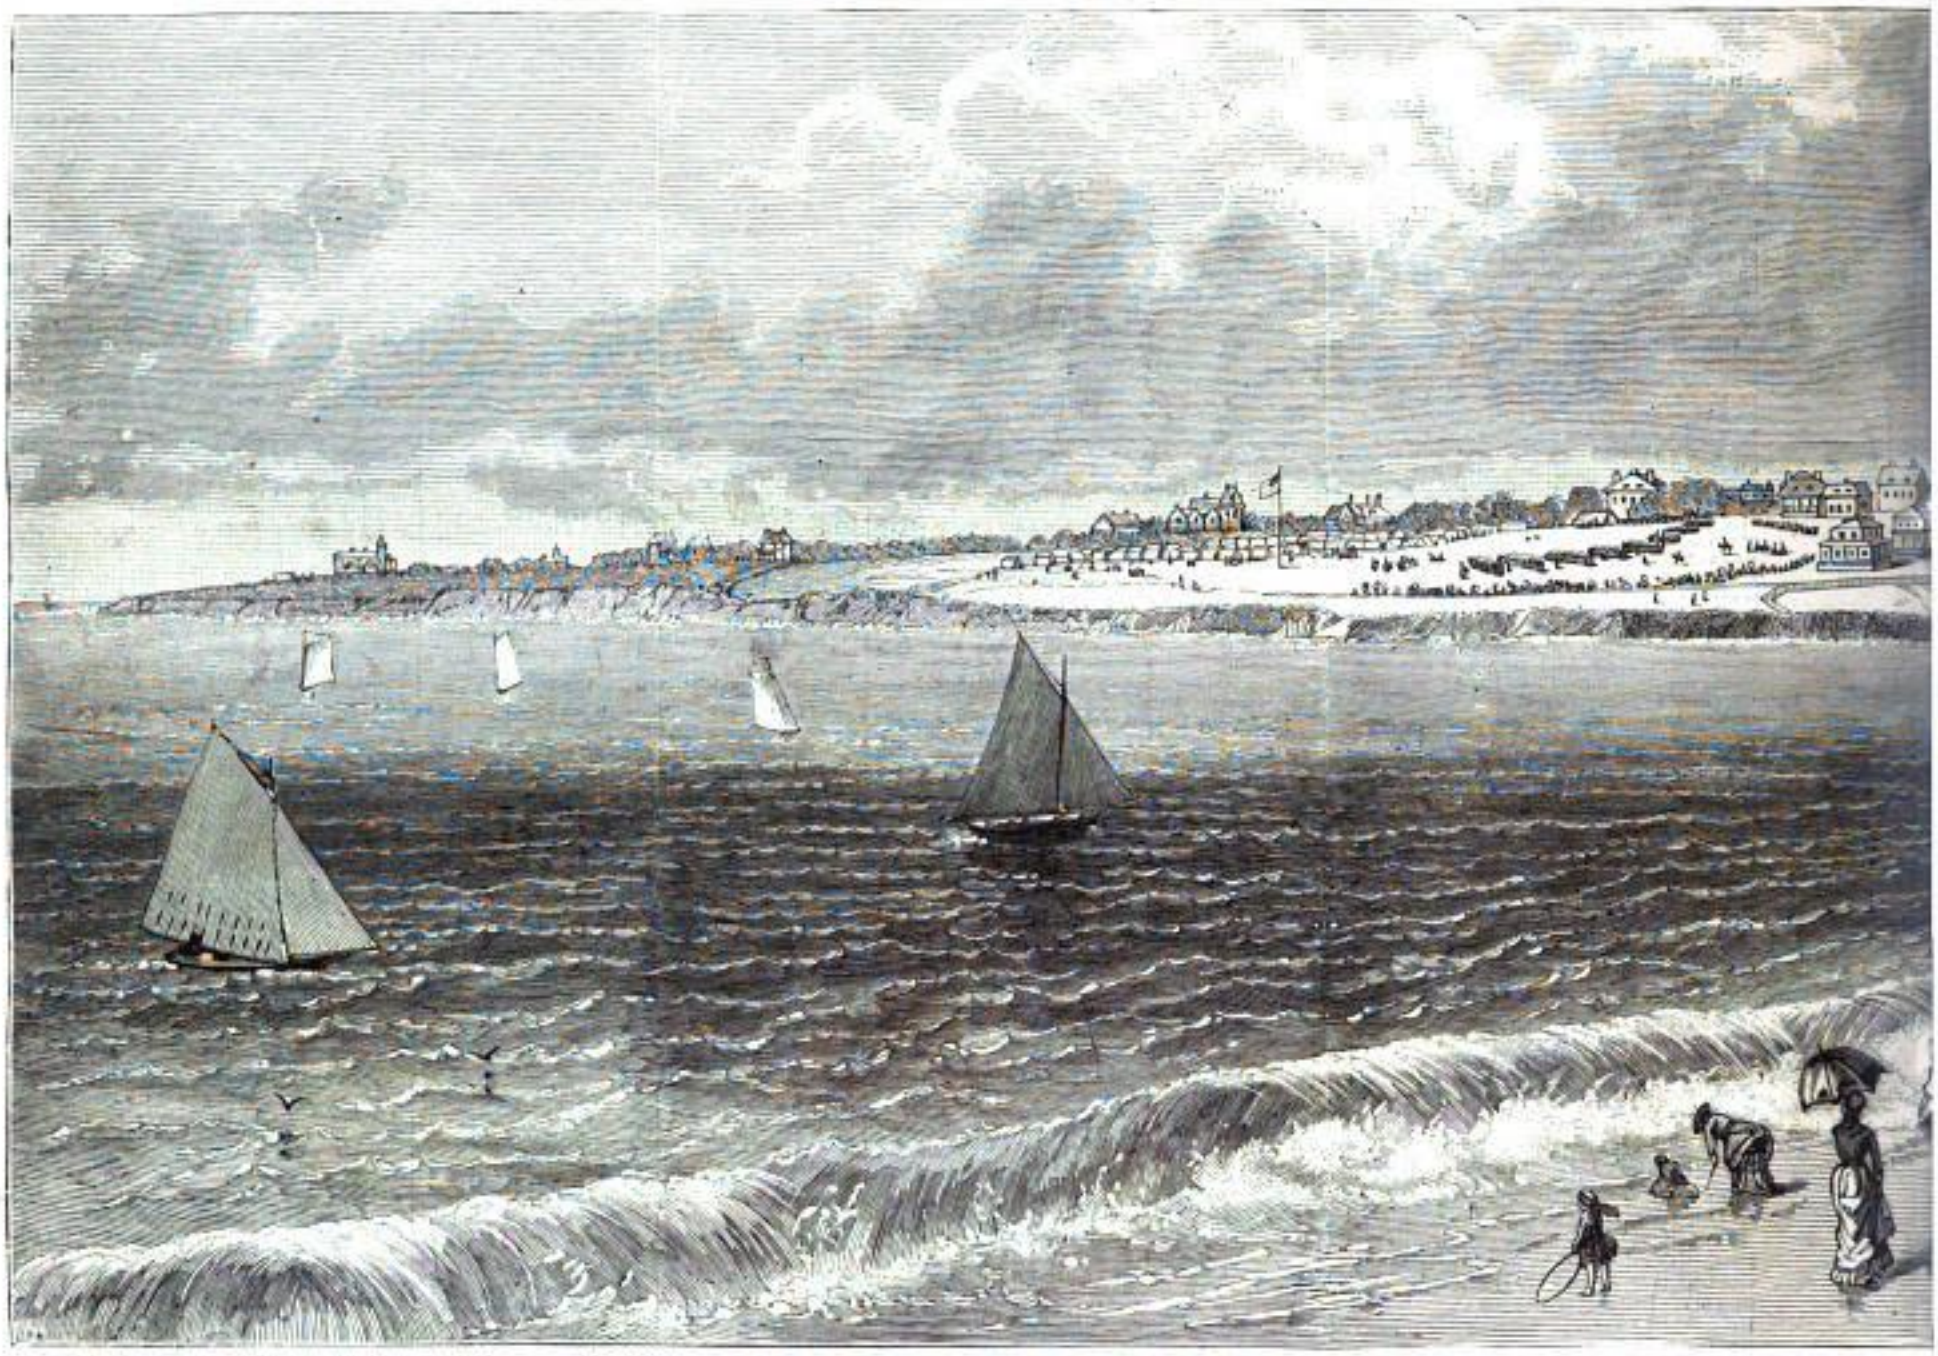
—THE central spire of St. Mary's Cathedral in Edinburgh, regarded as the most important Gothic church edifice which has been erected in Scotland since the Reformation, was completed on June 7th by placing there with ceremony the topmost stone and an iron cross.

—THIS year nearly 800,000 Frenchmen will actually serve the colors for a longer or shorter period. Of these 570,100 belong to the active army, 144,570 men and 2,850 officers to the reserve of the active army, and 117,800 men and 5,820 officers to the territorial army.

—THE University of Cambridge, England, has resolved to institute a special examination in the art and theory of teaching, for the sake of encouraging teachers in higher and secondary schools to become familiar with the literature of their profession, and the best methods of practicing it.

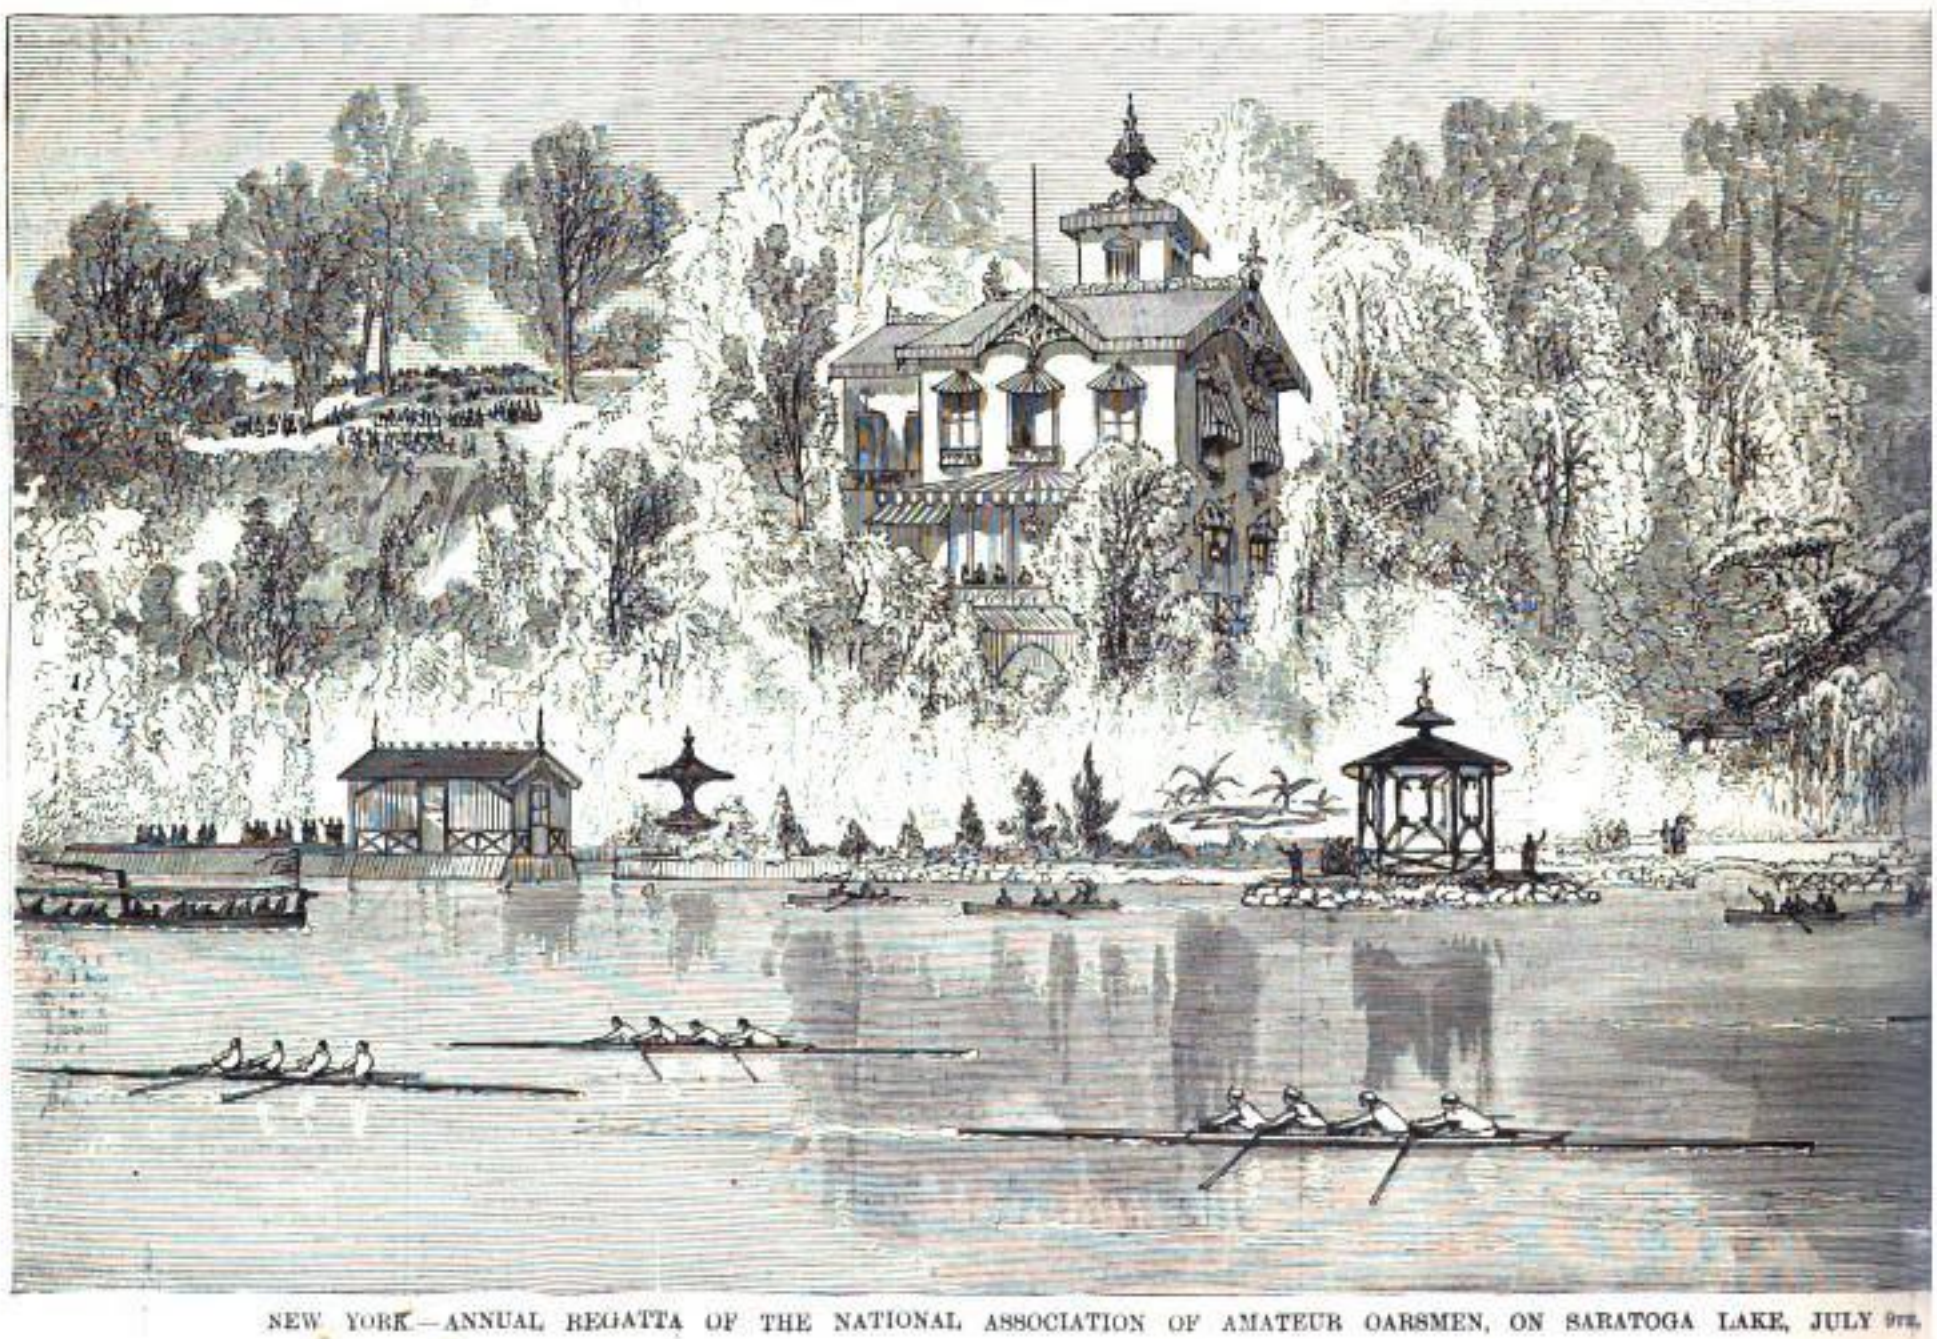
—IN Paris a lunatic named Verdelet, on being refused admission to the Chamber of the Council of State, July 8th, amused himself by firing with a revolver at the hats of the councilors, which were hanging on the wall in the lobby, and was arrested. He did not aim at or injure anybody.

—THE question of the destruction of the ailanthus-tree in Atlanta has been agitating the community for some time. The doctors have been called upon to decide as to the baleful effects of the tree upon the general health, and they are wide apart in their notions. Meantime the authorities are in a quandary.



—DURING the last twenty years 120,000,000 barrels of petroleum has been produced in Pennsylvania—37,000,000 during the past five years. In 1860 it was worth $20 a barrel; the average price in 1878 was only $1.40. Philadelphia exported last year nearly 80,000,000 gallons. Quite a number of vessels were cleared with it for Japan.

—THE failures of farmers are becoming alarmingly frequent in England. In 1870 they numbered 229; in 1875, 354; in 1876, 460; in 1877, 477; in 1878, 515, and in the first half of 1879, no fewer than 614. In addition, the facts are well known that farmers in many countries are now losing their capital, that landlords find great difficulty in reletting at any price, and that the remissions of rents have only met a portion of the difficulty.



—THE tide of emigration to the Far West has greatly increased the railroad traffic, and this, with the immense movement of produce to the seaboard, have added to the earnings of the companies, and stimulated the building of new lines in different directions. Within twelve months there will be in operation another road to the Pacific below the snow line. In less than three years we shall have four trunk lines to the Pacific, and the people of Asia and Australia will be in close business relations with us.

—THE new treaty of Spain with China regarding the immigration of Chinamen to the Island of Cuba grants to the latter the full consideration due to free and civilized persons, and abolishes all the former conditions imposed upon their immigration, which made them no better than semi-slaves. The immigration of Chinamen by contract is entirely prohibited; the immigrants will go to Cuba by their own free will. Spain promises to treat the Chinese in Cuba with the same considerations as foreigners of the most favored nations.

BEES.

TRADITION'S favoring verdict would express
In you all dutcous thrift and toil extreme,
Against gray wintry dearth, while Summers beam,
Hoarding with zeal your honeyed bounteousness.
And yet in drowsy reverie I confess
That booming now where flowery vistas gleam,
Among these halcyon garden-paths, you seem
The murmurous incarnations of *silence!*

Nay, more: you are like those pages clad of old
By pampering lords in velvet and in gold,
Who bore sweet amorous writes, with cautious airs,
To delicate ladies in rich robes aglow,
Strolling down glades of shadowy Fontainebleau,
Or loitering at Versailles on marble stairs.

EDGAR FAWCETT.

THE FALLEN LEAVES.

BY WILKIE COLLINS.

CHAPTER XLIV.

TOFF was the first who recovered himself. "Courage, sir!" he said. "With a little thinking we shall see the way to find her. That rude American man, who talked with her this morning, may be the person who has brought this misfortune on us."

Amelius waited to hear no more. There was the chance, at least, that something might have been said which had induced her to take refuge with Rufus. He ran back to the library to get his hat.

Toff followed his master with another suggestion. "One word more, sir, before you go. If the American man cannot help us, we must be ready to try another way. Permit me to accompany you as far as my wife's shop. I propose that she shall come back here with me and examine poor little miss's bedroom. We will wait, of course, for your return, before anything is done. In the meantime, I entreat you not to despair. It is at least possible that the means of discovery may be found in the bedroom."

They went out together, taking the first cab that passed them. Amelius proceeded alone to the hotel.

Rufus was in his room. "What's gone wrong?" he asked, the moment Amelius opened the door. "Shake hands, my son, and smother up that little trouble between us this morning in silence. Your face alarms me—it does! What of Sally?"

Amelius started at the question. "Isn't she here?" he asked.

Rufus drew back. The mere action said no, before he answered in words.

"Have you seen nothing of her—heard nothing of her?"

"Nothing. Steady, now! Meet it like a man; and tell me what has happened."

Amelius told him in two words. "Don't suppose I'm going to break out again as I did this morning," he went on; "I'm too wretched and too anxious to be angry. Only, tell me, Rufus, have you said anything to her——?"

Rufus held up his hand. "I see what you're driving at. It will be more to the purpose to tell you what she said to me. From first to last, Amelius, I spoke kindly to her, and I did her justice. Give me a minute to rummage my memory." After brief consideration, he carefully repeated the substance of what had passed between Sally and himself during the latter part of the interview between them. "Have you looked about in her room?" he inquired, when he had done. "There might be a trifling something to help you left behind her there."

Amelius told him of Toff's suggestion. They returned together at once to the cottage. Madame Toff was waiting to begin the search.

The first discovery was easily made. Sally had taken off one or two little trinkets—presents from Amelius, which she was in the habit of wearing—and had left them, wrapped up in paper, on the dressing-table. No such thing as a farewell letter was found near them. The examination of the wardrobe came next—and here a startling circumstance revealed itself. Every one of the dresses which Amelius had presented to her was hanging in its place. They were not many; and they had all, on previous occasions, been passed in review by Toff's wife. She was absolutely certain that the complete number of the dresses was there in the bedroom. Sally must have worn something, in place of her new clothes. What had she put on?

Looking round the room, Amelius noticed in a corner the box in which he had placed the first new dress that he had purchased for Sally, on the morning after they had met. He tried to open the box; it was locked—and the key was not to be found. The ever-ready Toff fetched a skewer from the kitchen and picked the lock in two minutes. On lifting the cover, the box proved to be empty.

The one person present who understood what this meant was Amelius.

He remembered that Sally had taken her old threadbare clothes away with her in the box when the angry landlady had insisted on his leaving the house. "I want to look at them sometimes," the poor girl had said, "and think how much better off I am now." In those miserable rags she had fled from the cottage, after hearing the cruel truth. "He had better have left me where I was," she had said. "Cold and hunger and ill treatment would have laid me at rest by this time." Amelius fell on his knees before the empty box, in helpless despair. The conclusion that now forced itself on his mind completely unmanned him. She had gone back, in the old dress, to die under the cold, the hunger, and the horror of the old life!

Rufus took his hand, and spoke to him kindly. He rallied, and dashed the tears from his eyes and rose to his feet. "I know where to look for her," was all he said, "and I must do it alone." He refused to enter into any explanation, or to be assisted by any companion. "This is my secret and hers," he answered. "Go back to your hotel, Rufus—and pray that I may not bring news which will make a wretched man of you for the rest of your life." With that he left them.

In another hour he stood once more on the spot on which he and Sally had met.

The wild bustle and uproar of the costermongers' night-market no longer rioted round him: the street by daylight was in a state of dreary repose. Slowly pacing up and down, from one end to another, he waited with but one hope to sustain him—the hope that she might have taken refuge with the two women who had been her only friends in the dark days of her life. Ignorant of the place in which they lived, he had no choice but to wait for the appearance of one or other of them in the street. He was quiet and resolved. For the rest of the day, and for the whole of the night if need be, his mind was made up to keep steadfastly on the watch.

When he could walk no longer, he obtained rest and refreshment in the cook-shop which he remembered so well, sitting on a stool near the window, from which he could still command a view of the street. The gas-lamps were alight, and the long Winter's night was beginning to set in, when he resumed his weary march from end to end of the pavement. As the darkness became complete, his patience was rewarded at last. Passing the door of a pawnbroker's shop, he met one of the women face to face, walking rapidly, with a little parcel under her arm.

She recognized him with a cry of joyful surprise.

"Oh, sir, how glad I am to see you, to be sure! You've come to look after Sally, haven't you? Yes, yes; she's safe in our poor place—but in such a dreadful state. Off her head!—clean off her head! Talks of nothing but you. 'I'm in the way of his prospects in life.' Over and over again, she keeps on saying that. Don't be afraid; Jenny's at home, taking care of her. She wants to go out. Hot and wild, with a kind of fever on her, she wants to go out. She asked if it rained. 'The rain may kill me in these ragged clothes,' she says; 'and then I shan't be in the way of his prospects in life.' We tried to quiet her by telling her it didn't rain—but it was no use; she was as eager as ever to go out. 'I may get another blow on the bosom,' she says; 'and maybe it will fall on the right place this time.' No, there's no fear of the brute who used to beat her—he's in prison. Don't ask to see her just yet, sir; please don't! I'm afraid you would only make her worse, if I took you to her now; I wouldn't dare to risk it. You see we can't get her to sleep; and we thought of buying something to quiet her at the chemist's. Yes, sir, it would be better to get a doctor to her. But I wasn't going to the doctor. If I must tell you, I was obliged to take the sheets off the bed to raise a little money—I was going to the pawnbroker's." She looked at the parcel under her arm, and smiled. "I may take the sheets back again, now I've met with you; and there's a good doctor lives close by—I can show you the way to him. Oh, how pale you look! Are you very much tired? It's only a little way to the doctor. I've got an arm at your service—but you mightn't like to be seen walking with such a person as me."

Mentally and physically, Amelius was completely prostrated. The woman's melancholy narrative had overwhelmed him; he could neither speak nor act. He mechanically put his purse in her hand, and went with her to the house of the nearest medical man.

The doctor was at home, mixing drugs in his little surgery. After one sharp look at Amelius, he ran into a back parlor, and returned with a glass of spirits. "Drink this, sir," he said—"unless you want to find yourself on the floor in a fainting-fit. And don't presume again on your youth and strength to treat your heart as if it was made of cast-iron." He signed to Amelius to sit down and rest himself, and turned to the woman to hear what was wanted of him. After a few questions, he said she might go; promising to follow her in a few minutes, when the gentleman would be sufficiently recovered to accompany him.

"Well, sir, are you beginning to feel like yourself again?" He was mixing a composing draught, while he addressed Amelius in those terms. "You may trust the poor wretch, who has just left us, to take care of the sick girl," he went on, in the quaintly-familiar manner which seemed to be habitual with him. "I don't ask how you got into her company—it's no business of mine. But I am pretty well acquainted with the people in my neighborhood; and I can tell you one thing, in case you're anxious. The woman who brought you here, barring the one misfortune of her life, is as good a creature as ever breathed; and the other one who lives with her is the same. When I think of what they're exposed to—well! I take to my pipe, and compose my mind in that way. My early days were all passed as a ship's surgeon. I could get them both respectable employment in New Zealand, if I only had the money to fit them out. They'll die in the hospital like the rest, if something isn't done for them. In my hopeful moments, I sometimes think of a subscription. What do you say? Will you put down a few shillings to set the example?"

"I will do more than that," Amelius answered. "I have reasons for wishing to befriend both those poor women; and I will gladly engage to find the outfit."

The familiar old doctor held out his hand over the counter. "You're a good fellow, if ever there was one yet!" he burst out. "I can show references which will satisfy you that I am not a rogue. In the mean time, let's see what is the matter with this little girl; you can tell me about her as we go along." He put his bottle of medicine in his pocket, and his arm in the arm of Amelius—and so led the way out.

When they reached the wretched lodging-house in which the women lived, he suggested that his companion would do well to wait at the door. "I'm used to sad sights; it would only distress you to see the place. I won't keep you long waiting."

He was as good as his word. In little more than ten minutes he joined Amelius again in the street.

"Don't alarm yourself," he said; "the case is not so serious as it looks. The poor child is suffering under a severe shock to the brain and nervous system, caused by that sudden and violent distress you hinted at. My medicine will give her the one thing she wants to begin with—a good night's sleep."

Amelius asked when she would be well enough to see him.

"Ah, my young friend, it's not so easy to say just yet! I could answer you to better purpose to-morrow. Won't that do? Must I venture on a rash opinion? She ought to be composed enough to see you in three or four days. And when that time comes, it's my belief you will do more than I can do to set her right again."

Amelius was relieved, but not quite satisfied yet. He inquired if it was not possible to remove her from that miserable place.

"Quite impossible—without doing her serious injury. They have got money to go on with; and I have told you already she will be well taken care of. I will look after her myself to-morrow morning. Go home, and go to bed, and eat a bit of supper first, and make your mind easy. Come to my house, at twelve o'clock, noon, and you will find me ready with my references, and my report of the patient. Surgeon Pinfold, Blackacre Buildings—there's the address. Good-night."

CHAPTER XLV.

AFTER Amelius had left him, Rufus remembered his promise to communicate with Regina by telegraph.

With his strict regard for truth, it was no easy matter to decide on what message he should send. To inspire Regina, if possible, with his own unshaken belief in the good faith of Amelius, appeared, on reflection, to be all that he could honestly do, under present circumstances. With an anxious and foreboding mind, he dispatched his telegram to Paris in these terms: "Be patient for a while, and do justice to A. He deserves it."

Having completed his business at the telegraph-office, Rufus went next to pay his visit to Mrs. Payson.

The good lady received him with a grave face and a distant manner, in startling contrast to the customary warmth of her welcome. "I used to think you were a man in a thousand," she began, abruptly; "and I find you are no better than the rest of them. If you have come to speak to me about that blackguard young Socialist, understand, if you please, that I am not so easily imposed upon as Miss Regina. I have done my duty—I have opened her eyes to the truth, poor thing. Ah, you ought to be ashamed of yourself!"

Rufus kept his temper, with his habitual self-command. "It's possible you may be right," he said quietly; "but the biggest rascal living has a claim to an explanation when a lady puzzles him. Have you any particular objection, old friend, to tell me what you mean?"

The explanation was not of a nature to set the good New Englander's mind at ease. Regina had written, by the mail train which took Rufus to England, repeating to Mrs. Payson what had passed at the interview in the Champs-Elysées, and appealing to her sympathy for information and advice. Receiving the letter that morning, Mrs. Payson had already answered it, and sent it to the post. Her experience of the unfortunate persons received at the Home was far from inclining her to believe in the innocence of a runaway girl, placed under circumstances of temptation. She inclosed to Regina the letter in which Amelius had acknowledged that Sally had passed the night under his roof. "I believe I am only telling you the shameful truth," she had written, "when I add that the girl has been an inmate of Mr. Goldenheart's cottage ever since. If you can reconcile this disgraceful state of things with Mr. Rufus Dingwell's assertion of his friend's fidelity to his marriage-engagement, I have no right, and no wish, to make any attempt to alter your opinion. But you have asked for my advice, and I must not shrink from giving it. I am bound, as an honest woman, to tell you that your uncle's resolution to break off the engagement represents the course that I should have taken myself if a daughter of my own had been placed in your painful and humiliating position."

There was still ample time to modify this strong expression of opinion by the day's post. Rufus appealed vainly to Mrs. Payson to reconsider the conclusion at which she had arrived. A more charitable and considerate woman, within the limits of her own daily routine, it would not be possible to find. But the largeness of mind which, having long and trustworthy experience of a rule, can nevertheless understand that other minds may have equal experience of the exception to the rule, was one of the qualities which had not been included in the moral composition of Mrs. Payson. She held firmly to her own narrowly-conscientious sense of her duty. The two old friends parted in coldness for the first time in their lives.

Rufus returned to his hotel, to wait there for news from Amelius.

The day passed—and the one visitor who enlivened his solitude was an American friend and correspondent, connected with the agency which managed his affairs in England. The errand of this gentleman was to give his client the soundest and speediest advice relating to the investment of money. Having indicated the safe and solid speculations, the visitor added a warning word, relating to the plausible and dangerous investments of the day. "For instance," he said, "there's that bank started by Farnaby——"

"No need to warn me against Farnaby," Rufus interposed; "I wouldn't take shares in his bank if he made me a present of them."

The American friend looked surprised. "Surely," he exclaimed, "you can't have heard the news already! They don't even know it yet on the Stock Exchange."

Rufus explained that he had only spoken under the influence of personal prejudice against Mr. Farnaby. "What's in the wind now?" he asked.

He was confidentially informed that a coming storm was in the wind; in other words, that a serious discovery had been made at the bank. Some time since, the directors had advanced a large sum of money to a man in trade, under Mr. Farnaby's own guarantee. The man had just died, and examination of his affairs showed that he had only received a few hundred pounds, on condition of holding his tongue. The bulk of the money had been traced to Mr. Farnaby himself, and had all been swallowed up by his newspaper, his patent medicine, and his other rotten speculations, apart from his own proper business. "You may not know it," the American friend concluded, "but the fact is, Farnaby rose from the dregs. His bankruptcy is only a question of time—he will drop back to the dregs; and, quite possibly, make his appearance to answer a criminal charge in a court of law. I hear that Melton, whose credit has held up the bank lately, is off to see his friend in Paris. They say Farnaby's niece is a handsome girl, and Melton is sweet on her. Awkward for Melton."

Rufus listened attentively. In signing the order for his investments, he privately decided to stir no further, for the present, in the matter of his young friend's marriage-engagement.

For the rest of the day and the evening, he still waited for Amelius, and waited in vain. It was drawing near to midnight, when Toff made his appearance with a message from his master. Amelius had discovered Sally, and had returned in such a state of fatigue that he was only fit to take some refreshment, and to go to his bed. He would be away from home again on the next morning; but he hoped to call at the hotel in the course of the day. Observing Toff's face with grave and steady scrutiny, Rufus tried to extract some further information from him. But the old Frenchman stood on his dignity, in a state of immovable reserve. "You took me by the shoulder this morning, sir, and spun me round," he said; "I do not desire to be treated a second time like a teetotum. For the rest, it is not my habit to intrude myself into my master's secrets."

"It's not my habit," Rufus coolly rejoined, "to bear malice. I beg to apologize sincerely, sir, for treating you like a teetotum; and I offer you my hand."

Toff had got as far as the door. He instantly returned, with the dignity which a Frenchman can always command in the serious emergencies of his life. "You appeal to my heart and my honor, sir," he said. "I bury the events of the morning in oblivion, and I do myself the honor of taking your hand."

He smiled with polite suavity, and left the room. As the door closed, Rufus smiled grimly. "You're not in the habit of intruding yourself into your master's secrets," he repeated to himself. "If Amelius reads your face as I read it, he'll look over his shoulder when he goes out to-morrow—and, ten to one, he'll see you behind him in the distance!"

Late on the next day, Amelius presented himself at the hotel. In speaking of Sally he was unusually reserved, merely saying that she was ill, and under medical care—and then changing the subject. Struck by the depressed and anxious expression of his face, Rufus asked if he had heard from Regina. No; a longer time than usual had passed since Regina had written to him. "I don't understand it," he said, sadly; "I suppose you didn't see anything of her in Paris?"

Rufus had kept his promise not to mention Regina's name in Sally's presence. But it was impossible for him to look at Amelius without plainly answering the question put to him, for the sake of the friend whom he loved. "I'm afraid there's trouble coming to you, my son, from that quarter." With those warning words, he described all that had passed between Regina and himself. "Some unknown enemy of yours has spoken against you to her uncle," he concluded. "I suppose you have made enemies, my poor boy, since you have been in London?"

"I know the man," Amelius answered. "He wanted to marry Regina before I met with her. His name is Melton."

Rufus started. "I heard, only yesterday, he was in Paris with Farnaby. And that's not the worst of it, Amelius. There's another of them making mischief—a good friend of mine, who has shown a twist in her temper that has taken me by surprise after twenty years' experience of her. I reckon there's a drop of malice in the composition of the best woman that ever lived—and the men only discover it when another woman steps in and stirs it up. Wait a bit," he went on, when he had related the result of his visit to Mrs. Payson. "I have telegraphed to Miss Regina to be patient and to trust you. Don't you write to defend yourself till you hear how you stand in her estimation, after my message. To-morrow's post may tell."

To-morrow's post did tell.

Two letters reached Amelius from Paris. One from Mr. Farnaby, curt and insolent, breaking off the marriage-engagement. The other, from Regina, expressed with great

Digitized by Google

severity of language. Her weak nature, like all weak natures, ran easily into extremes, and, once forced into asserting itself, took refuge in violence, as a shy person takes refuge in audacity. Only a woman of larger and firmer mind would have written of her wrongs in a more just and more moderate tone.

Regina began without any preliminary form of address: She had no heart to upbraid Amelius, and no wish to speak of what she was suffering, to a man who had but too plainly shown that he had no respect for himself, and neither love nor pity even for her. In justice to herself, she released him from his promise, and returned his letters and his presents. Her own letters might be sent in a sealed packet, addressed to her at her uncle's place of business in London. She would pray that he might be brought to a sense of the sin that he had committed, and that he might yet live to be a worthy and a happy man. For the rest, her decision was irrevocable. His own letter to Mrs. Payson condemned him—and the testimony of an old and honored friend of her uncle proved that his wickedness was no mere act of impulse, but a deliberate course of infamy and falsehood, continued over many weeks. From the moment when her eyes were opened to the truth, he was dead to her—and she now bade him a last farewell.

"Have you written to her?" Rufus asked, when he had seen the letters.

Amelius reddened with indignation. He was not aware of it himself, but his look and manner plainly revealed that Regina had lost her last hold on him. Her letter had inflicted an insult—not a wound; he was outraged and revolted; the deeper and gentler feelings, the emotions of a grieved and humiliated lover, had been killed in him by her stern words of dismissal and farewell.

"Do you think I would allow myself to be treated in that way without a word of protest?" he said to Rufus. "I have written, refusing to take back my promise. 'I declare, on my word of honor, that I have been faithful to you and to my engagement' (that was how I put it), 'and I scorn the vile construction which your uncle and his friend have placed upon an act of Christian mercy on my part.' I wrote more tenderly, before I finished my letter, feeling for her distress, and being anxious above all things not to add to it. We shall see if she has love enough left for me to trust my faith and honor, instead of trusting false appearances. I will give her time."

Rufus considerately abstained from expressing any opinion. He waited until the morning when a reply might be expected from Paris; and then he called at the cottage.

Without a word of comment, Amelius put a letter into his friend's hand. It was his own letter to Regina returned to him. On the back of it, there was a line in Mr. Farnaby's handwriting: "If you send any more letters, they will be burned unopened." In those insolent terms, the wretch wrote, with bankruptcy and exposure hanging over his head.

Rufus took Amelius by the hand. "There's an end of it now," he said. "That girl would never have made the right wife for you, Amelius; you're well out of it. Forget that you ever knew these people; and let us talk of something else. How is Sally?"

At that ill-timed inquiry, Amelius dropped his friend's hand. He was in a state of nervous irritability which made him apt to take offense, where no offense was intended. "Oh, you needn't be alarmed!" he answered, petulantly, "there's no fear of the poor child coming back to live with me. She is still under the doctor's care."

Rufus passed over the angry reply without notice, and patted him on the shoulder. "I spoke of the girl," he said, "because I wanted to help her; and I can help her, if you will let me. Before long, my son, I shall be going back to the United States. I wish you would go with me!"

"And desert Sally!" cried Amelius.

"Nothing of the sort! Before we go, I'll see that Sally is provided for to your satisfaction. Will you think of it, to please me?"

Amelius relented. "Anything to please you," he said.

Rufus noticed his hat on the table, and considerately left him without saying more. "The trouble with Amelius," he thought, as he closed the cottage-gate, "is not over yet."

(*To be concluded in our next.*)

THE AMATEUR REGATTA AT SARATOGA.

THE seventh annual regatta of the National Association of Amateur Oarsmen was held on Saratoga Lake on July 9th, 10th and 11th. Representatives of eleven States in the Union and of Canada were named in the entries, giving distinction to forty-one associations. There were thirty-one scullers, eighteen four-oared crews, eleven champions, and the three fastest six-oared crews in the country.

The weather and the water were as fair on Wednesday (the first day) as could be desired, and at ten o'clock the first race was called. This was a pair-oared contest between the Olympics of Albany, the Wah-wah-sums of Saginaw, Mich., and the Zephyrs of Detroit, and resulted in a victory for the former in 9 minutes 41¾ seconds, with the "Wahs" only 16 seconds behind. This race, which was greatly admired by the spectators, was followed by a walk-over for the crew of Cornell College, no other college crew putting in an appearance, much to the general surprise. With no stimulant save to make a good record, the crew pulled over the course in 9 minutes 15 seconds, and took the Eureka Cup. The third event, for the Single Scull Cup, offered by the Triton Club, was a walk-over for J. Lewis, Jr., of Cornell, who made the course alone in 11 minutes 54¼ seconds.

The best struggle for supremacy among the senior scullers was a decided relief after the disappointment of the two preceding events. In the first heat, Murray, of the Elizabeth Club, won by a length and a half, in 11 minutes 35 seconds; in the second, Rathburne, of the New York Athletic Club, won easily in 11 minutes 13½ seconds; and in the third, the most spirited of the trials, Holmes, of the Pawtucket Club, followed inch by inch by Mumford of New Orleans, won in 10 minutes 53¾ seconds.

The contests of the day closed with the six-oared race, for which the Shawmuts of Boston, the Mutuals of Albany, and the Dauntless of New York, were entered. The latter crew was heavily handicapped, for, while the other two rowed in shells, they had to row in a gig with a cockswain. This, of course, is a very serious disadvantage, but so great was the confidence of the public in this crew, and especially in its plucky little stroke, Roach, that there were plenty of people willing to back the Dauntless crew at even terms against the field. This race was started precisely on time, as were all the races, indeed, and it was one of the very pleasantest features of the regatta that every race was started just at the time announced, and that there was no delay. In this race the Shawmut got off first, pulling about forty-three strokes to the minute, with the Mutuals second, pulling about forty, and Roach's crew last. But before the quarter mile was passed the Mutuals had taken the lead, and Roach's plucky little crew had taken second place. Bad steering made the Mutual crew lose two or three lengths on the last half mile, but in spite of this they won quite easily by six or seven lengths in 8 minutes 59 seconds, with the Dauntless crew second, three or four lengths ahead of the Shawmuts.

The second day opened as favorably as the first, and brought to the stands a largely augmented audience. The first race that morning was the double-scull race, for which there were six entries, all of them starting. The Athletics of New York won in 9 minutes 8¼ seconds, with the Wah-wah-sums second, and the Minnesotas third. The race between the "Wahs" and the Minnesotas was closely contested, and was won by only a quarter of a second. The Minnesotas were ahead of the "Wahs" through nearly the whole of the race, but near the finish line the Saginaw crew made a splendid spurt and beat the Minnesota men by only a few feet. The Hartford crew was fourth, some four or five lengths behind the Minnesotas; the Quaker City crew were some distance behind the Hartfords again, and the Wyandottes were beaten badly.

The next two races were trial heats for the junior scullers. The contestants were Burt Brown, of the Union Springs; Edward Field, of the Monmouth Club; S. R. Seyfert, of the Nautilus Club, of Reading, Pa., and H. K. Leonard, of Watkins. Between Brown and Seyfert the struggle from beginning to end was superb. Brown finally winning in 10 minutes 26 seconds. Seyfert's time was 10 minutes 31 seconds. Field was third in 10 minutes 33 seconds. Leonard, who for some unknown reason had been made the favorite, was badly beaten, distanced in fact. In the second heat the starters were Harry Ball, of the Zephyrs, of Detroit; William Murray, of the Elizabeths, of Portsmouth, Va.; S. G. Jackson, of the Palisades, of Yonkers, N. Y., and William J. Gear, of the Longmeil Club, of Canada. Murray was a big favorite, and won easily in 10 minutes 27 seconds. Jackson was second, in 10 minutes 33¼ seconds, and Gear third, in 10 minutes 33½ seconds.

What was considered the great event of the regatta was the four-oared shell race, which was next on the programme. For the first heat there were six crews entered, and all of them save the Zephyrs started. The Saugerties crew got somewhat the best of the start, but about the half-mile the Mutuals, who were alongside them, drew up, and were about on even terms with them. Towards the end of the mile the Mutuals of Albany began to draw up alongside of the Saugerties men, and the Wah-wah-sums, who were pulling along away over on the West shore with splendid life and fire, were showing dangerously near the front. As they came up to the finish line, it was still uncertain who was the winner, and when the Wah-wah-sums won in 8 minutes 43½ seconds, the Mutuals were only about four seconds behind them, and the Saugerties crew was less than three seconds behind the Mutuals. The Crescents were fourth and the Hope, of New Orleans, was last.

In the second heat the Friendship crew was drawn, and the Lacidae, the Elizabeth, the Shoe-wae-cae-mette (the crew that went to Henley last year), the Olympic and the Michigan started. The "Shoes" won in the amazingly good time of 8 minutes 35¼ seconds. The "Shoes" took a stroke of about forty-five to the minute, and kept it up throughout the race. The Elizabeths were a good second, so close to the "Shoes" that from behind one could scarcely tell who had won, and the Olympics were third, the Michigan fourth, and the Montreal crew last, well behind.

In the third heat five boats started at a frightful pace on even terms and kept the same unbroken front for the first eighth of a mile. They were the Watkins of Watkins, on the west; the Atlantas next, then the Hillsdales, then the Cohoes, then the St. Johns, of New Orleans, and on the extreme outside of the line, the Wyandottes, of Michigan. The race was won by the Hillsdale crew without any great apparent trouble, in 8 minutes 41½ seconds. The Atlantas were second, the Wyandottes came in third, the Watkins crew fourth, while the Cohoes and St. John men took the last two places.

The last heats of three important races were rowed on Friday. The final heat of the junior single sculls was won by Murray, Jackson being second. In the senior single sculls decisive heat, Mumford was declared the winner. In the final heat of the four-oars, the Michigan crews rowed wildly, and another race was ordered without them. In this the Hillsdales won, making better time by three seconds than the best made on Thursday.

THE STORMING OF STONY POINT.

"GENERAL, I'll storm hell if you only plan it!" This fiery sentence was uttered upon the night of the 16th of July, one hundred years ago. The speaker was "Mad" Anthony Wayne; the person addressed, George Washington. The redcoats swarmed among the green trees that lined the banks of the Hudson. They had carried everything before them, and, lastly, held Stony Point, a rocky promontory, washed by the lordly river on three sides. The fort was garrisoned by 600 men, under Colonel Johnson. It bristled with cannon, while scientifically constructed earthworks defended every inch of slope leading up to it. Washington recognized its strategic importance. "Who'll storm Stony Point?" he asked, instinctively turning towards one man. "General, I'll storm hell if you will only plan it," was the reply that leaped into history.

It was a daring enterprise, and one that demanded exceptional coolness, daring and bravery. Midnight, and fixed bayonets! Words of terrible significance. The muskets were unloaded lest some over-excited soldier might fire and reveal the storming party to the enemy. One man insisted upon loading, and was grimly run through the body by his officer. The right column was formed of 150 volunteers under Colonel de Fleury, the left of 100 volunteers under Major Stewart, and each was preceded by a forlorn hope of thirty picked men commanded by Lieutenants Gibbon and Knox. The night was dark; not a sound was heard save the distant challenge of the sentinel and the dulcet plash of the river. A negro spy led the way. Two sentinels were seized and gagged, and the forlorn hope reached the outworks before its existence was recognized. Upon the discharge of the first musket the fort blazed into vitality, and a hellish fire of grape-shot belched forth upon the assailants. Upwards through sheets of flame, through a hurricane of musket-balls, through the death-dealing grape dashed the forlorn hope, seventeen out of twenty going down. The Americans used the cold steel, and the cold steel mercilessly cut its way from slope to summit. Lieutenant-Colonel de Fleury was the first to spring upon the parapet and haul down the English flag. Major Posey, shouting "The fort is ours!" leaped upon the bayonets of the still fiercely fighting foe. "Mad" Anthony Wayne, struck by a musket ball on the head, and believing it to be his death wound, heroically cried, "Carry me into the fort and let me die at the head of my column"; but he rallied to write at two o'clock on that memorable July morning, one hundred years ago: "Dear General—The fort and garrison of Colonel Johnson are ours. Our officers and men behaved like men who are determined to be free—yours most sincerely." The number of prisoners captured was 553, including Colonel Johnson and several officers. Two flags and two standards were taken, one belonging to the garrison, the other to the Seventeenth Regiment. "Mad" Anthony Wayne received from Congress a gold medal emblematical of the glorious action, while silver ones were presented to De Fleury and Stewart. Nor were the leaders of the forlorn hope forgotten, for Lieutenants Gibbon and Knox were made captains on the field of honor. As the Summer tourist of to-day passes Stony Point, on the enchanting Hudson, let him remember "Mad" Anthony Wayne, who, upon a July night one hundred years ago, uttered the fiery words, "General, I'll storm hell if you only plan it."

The programme for the celebration of the centennial anniversary of the event here described, July 16th, embraced an oration by General Joseph R. Hawley, of Connecticut, and a sham battle by the militia, carried out according to the original plan of battle—the militia to be commanded by Lieutenants Febiger and Vogdes, of the regular army, the former a descendant of Colonel Febiger, who led in the attack one hundred years ago. From the proceeds realized from the celebration it is proposed to erect a monument to General Wayne on the spot where the battle occurred.

SCIENTIFIC INTELLIGENCE.

A Municipal School has been recently established in Paris for apprenticeship in the work of wood and iron.

Professor Wurtz, the eminent French chemist, has been appointed a Member of the Council of the Legion of Honor.

In the neighborhood of Düsseldorf a woman, who had been bitten by a mad dog, has been cured by Dr. Offenberg, by an injection under the skin of a dose of twenty centigrammes of curare.

Fossil Remains of a Mastodon have just been found in Vienna on the Otakringer Strasse. Professor von Hochstetter himself undertook the excavation of the remains. With the exception of the jaw and teeth all the bones found are much decomposed, and it will be very difficult to preserve them.

The Geographical Department of the Japanese Government, which is displaying considerable activity in many directions, has commenced the publication in sheets of a large plan of the City of Yeddo, showing the various divisions, streets, bridges, etc., and giving the names in Japanese and Roman characters.

Professor Nordenskjöld, of the Swedish Arctic Exploring Expedition, writes that on September 28th he got fast in the ice in latitude 67° 7′, longitude 173° 32′, one English mile from a coast with three villages. The passage was difficult. Six hundred English miles were forced through heavy drift and ground ice.

The Mayor of Liverpool has given to the Council of the Iron and Steel Institute an invitation to visit that town in September, and a deputation from the Council of the Institute waited upon the Mayor and provisionally fixed September 24th, 25th and 26th for the meeting, which will be the first held by the Institute in that town.

The Village of Mariaweiler, near Düren (Rhenish Prussia) proves to be a great field of débris of a Roman colony. A Roman villa has just been excavated there, so that most of the apartments could be measured. An inscription in one of the rooms has not yet been deciphered. The Roman coins found at the place date down to the fourth century.

We Regret to Announce the Death of Dr. Karl Neubauer, the eminent German chemist. Dr. Neubauer died on the night of June 1-2d at Wiesbaden, where for many years he had been working in the laboratory of Dr. Fresenius. The death is also announced of Dr. Justus Ulrich, Professor of Mathematics at Göttingen University, who died on May 30th.

An Improved Torpedo of the Whitehead or fish pattern has been tested at the Royal Arsenal, Woolwich, and been sent to Portsmouth for a course of sea-trials. It is capable of a high rate of speed, and maintains its velocity for a considerable range. It is also cheaper, and, as each torpedo costs about $1,500, this is a considerable advantage. The purchase of the secret from Mr. Whitehead cost the British Government, with the improvements, $3,750,000.

The Government Council of the canton of Berne have issued a very wise ordinance. The beautiful Alpine flower, the "edelweiss," and, it appears, almost disappeared in many mountainous districts. Its sale has been used as an excuse for beggary, and so the Council is determined to put a stop to the extinction of the beautiful plant. Persons plucking "edelweiss" up by the roots will be fined from five to fifty francs. In future only the full-blown flower may be taken.

Russian Engineers have been sent to Kazala to examine the Sea of Aral, with a view to the discovery of a new channel, or the deepening of the old one, connecting the Syr Daria with the Oxus. Steamers destined for service on the Oxus have hitherto experienced great difficulty in penetrating to Khiva from Kazala, on account of the obstacles at the mouth of the river. Captain Brookoff believes that a channel exists at the entry of the Oxus into the Sea of Aral; and, in the event of this being discovered, there would be free and easy communication between Kazala and the Afghan frontier.

Ten Years Ago the idea of a German navy only excited ridicule, while now it has become an imposing fact, which is not only recognized but respected by all the maritime States, and by means of which the German Government is beginning to take up a strong position in all parts of the world. The number of the ships of the German navy is already over seventy; some are ships of 6,000 tons burden, and the total tonnage is nearly one hundred thousand tons. These vessels have steam power of 120,000 horses, and are armed with upwards of four hundred guns. The estimate of the naval expenditure of Germany for the year 1878-79 amounts to 24,000,000 marks for ordinary and 34,000,000 marks for extraordinary expenditure.

PERSONAL GOSSIP.

THE appointment of General Ignatieff as Provisional Governor-General of Nijnii-Novgorod is contemplated.

THERE are 600 subscribing adherents to Père Hyacinthe's church, more than he expected to win in so short a time.

THE operation of removing the right eye has been successfully performed upon Mr. Plimsoll, M.P., the sailors' friend.

ADJUTANT-GENERAL TOWNSEND has been placed in charge of the work of codifying the army regulations under the recent Act of Congress.

MR. GLADSTONE has been making a vigorous plea for the more persistent and practical study of natural history in the English schools.

MRS. LANGTRY, the "sensation beauty" of the last three London seasons, is coming to the United States, and has already engaged passage.

MRS. FAWCETT, wife of Professor Fawcett, the blind Member of Parliament, is lecturing once a week at Oxford, to an audience of ladies, on political economy.

THE British Commissioners have made strong representations to Aleko Pasha, Governor-General of Roumelia, concerning his unsatisfactory administration.

THE Right Rev. Reginald Courtenay, Bishop of Kingston, in the island of Jamaica, recently resigned, after a service of twenty-six years, and will return to England.

THE approaching marriages of Minnie Hauk to a German journalist in London, and of Carlotta Patti to M. de Munck, the violoncellist, are among the items of European gossip.

THE Stuarts of Philadelphia have presented Princeton College with a residence for its president, Dr. McCosh, which is said to be the handsomest home of any college president in the United States.

DR. LELAND, the Amherst graduate, who at the request of the Japanese Minister of Education was sent out to establish the gymnastic system in the normal school at Tokio, has been very successful in his efforts.

A FRESH placard has been found on the walls of the Palace of Justice, threatening the life of the King if he ratified the Bill which was recently passed by the Belgian Parliament, depriving the clergy of the control of elementary education.

ALANSON WORK, who was imprisoned in the Missouri Penitentiary for over three years, nearly forty years ago, on a sentence of twelve years, for trying to help slaves to freedom, died in Hartford, Conn., July 6th. He was eighty years old.

MR. KUHARA is a clever and scholarly Japanese gentleman, who is about to come to this country for the purpose of post-graduate study at Johns Hopkins University. He is a graduate of the Imperial University at Tokio, and has translated many English works into Japanese.

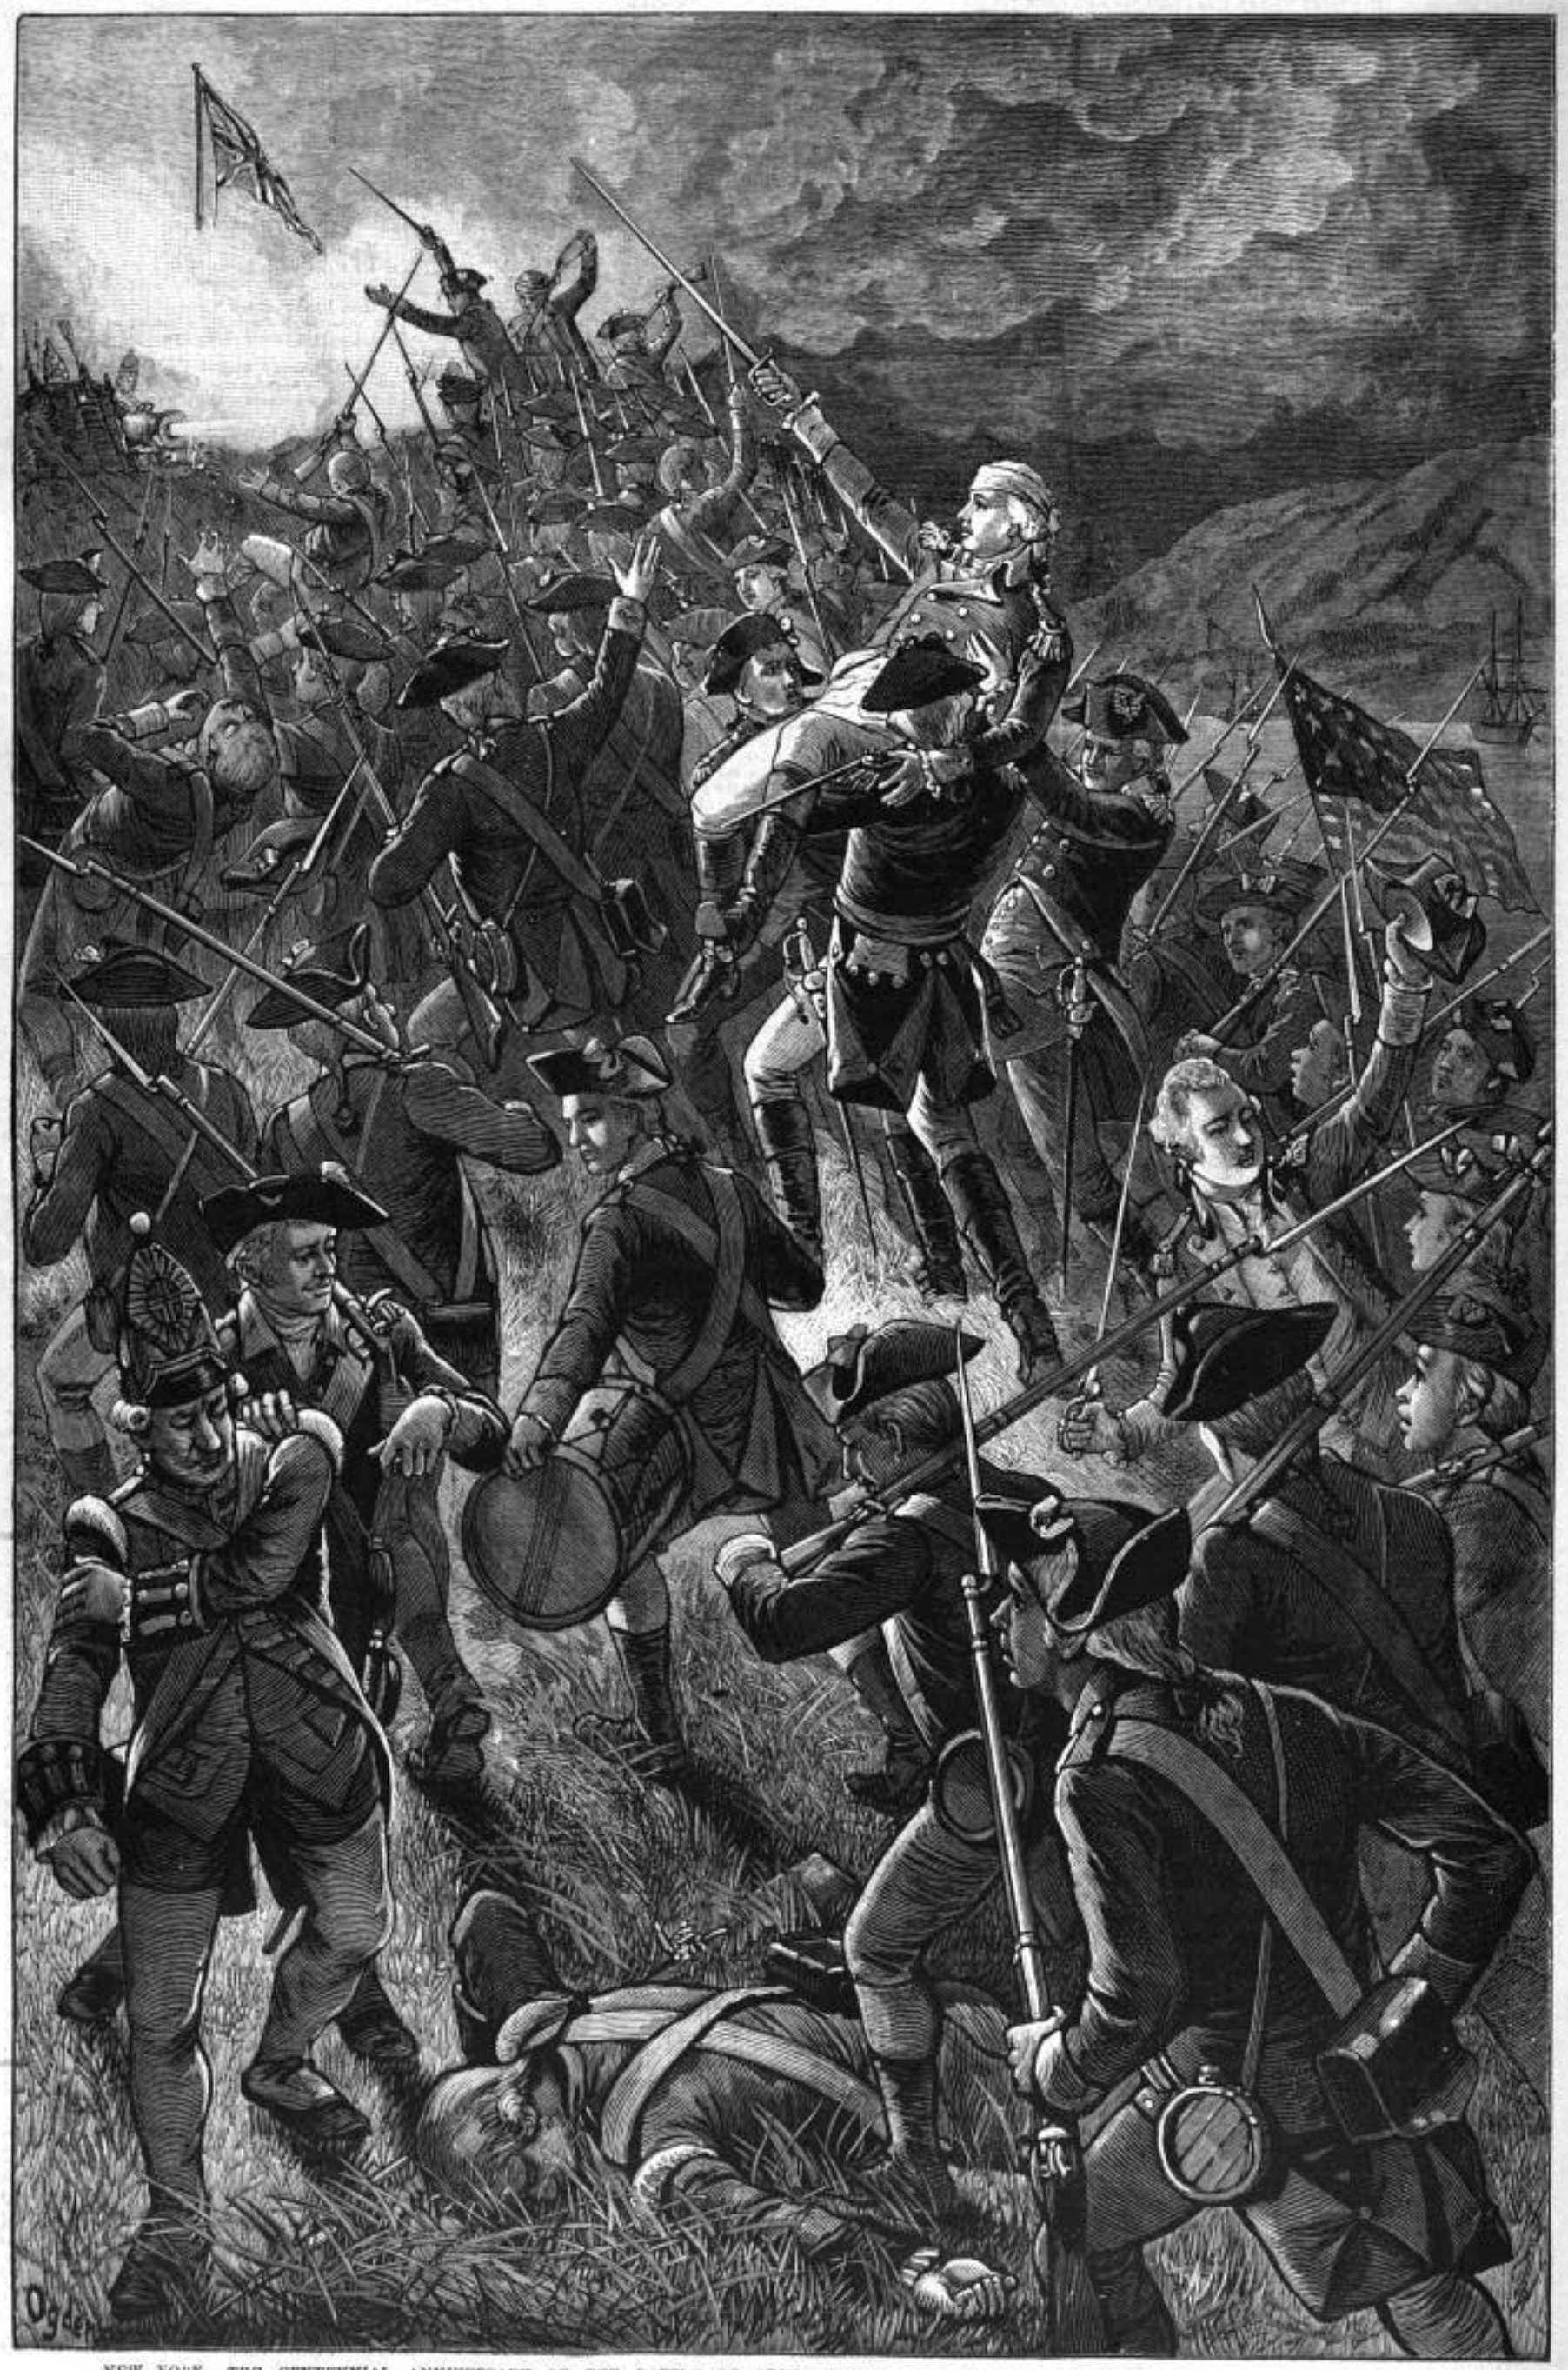
PRINCE ALEXANDER of Holland, who is, since the death of his brother in Paris, the heir presumptive to the Dutch throne, is twenty-eight years old, in very delicate health, and of a retiring, indolent disposition. He is fond of reading and serious pursuits, and takes a lively interest in politics.

REV. DR. JOBSON, one of the most eminent English Wesleyans, has had an attack of paralysis, which, it is feared, will necessitate his retirement from the important position he has held for some years past at the Conference Office. Dr. Jobson was president of the Conference in Hull in 1869.

THE visit of Prince Henry of Germany to Japan was officially terminated with a farewell audience by the Emperor. The Prince was invested with a first-class decoration of the Japanese Order of Meriti. The captain of the corvette *Prinz Adalbert*, on which Prince Henry is a midshipman, and the German Minister to Japan, received second class decorations.

PRINCE CHARLES DE TALLEYRAND, Duke de Perigord, who died recently at the age of fifty-one, son of the great Talleyrand, has been out of public life ever since 1830, previous to which he was in high favor, a General and Peer of France, and Gentleman of the Bedchamber to Charles X. In recent times he has been chiefly distinguished for works of charity.

PRESIDENT GRÉVY has conferred the rank of Commander of the Legion of Honor upon Rear Admiral Daniel Ammen, of the United States Navy; of Chevalier of the Legion of Honor upon Commander T. O. Selfridge and Engineer Menocal, of the United States Navy, for their distinguished services during the prosecution of the surveys for the Isthmus Canal, and in recognition of the skill and thoroughness with which they presented their respective projects.



A PONTIFICAL requiem Mass for the repose of the soul of the French Prince Imperial was solemnized at St. Mary's Catholic Church, Newport, July 8th, by the Right Rev. Bishop Hendricken. The altar was draped in mourning and adorned with brilliant lights and a profusion of costly lace. The church was full, notwithstanding the heavy rain. Among the attendants were Colonel Jerome Napoleon Bonaparte and family, and Charles Bonaparte, of Baltimore.

FRANCE has a learned locksmith in the person of M. Adrien Maquet, of Marly-le-Roi, who hangs bells and patches locks and keys for a living and is the first living authority on all matters connected with L'Isle de France, in the Middle Age and Renaissance, especially those concerning St. Germain, Versailles and Marly. As to genealogies, arms, marriages, transfers of property, etc., he has corrected all the standard books, and this without any more knowledge of Latin than what he calls "guess-learning."

PRINCE VICTOR NAPOLEON, the seventeen-year-old son of Prince Jerome, and the new heir to the Bonapartist idea, is rather tall, handsome, and straight as a dart; dark in hair, cheek and eye; and in temper and temperament a true Corsican-Italian. His features are regular, his hair is trained over his brow and cropped, and he has his mother's mouth, though not the peculiar nose of the House of Savoy. He is said to be a thorough Napoleon in looks, in character and in a certain fiery impetuosity of temper.

THE new Ameer of Afghanistan has been photographed. He was dressed in European style, the coat and trowsers were of white cloth, heavily embroidered with gold, epaulets of gold, and a sash of blue, with three gold stripes through it, was worn over the left shoulder. The head-gear was a steel helmet with gold, and a plume of feathers surmounting it. Yakoob Khan parts his hair in the middle, and when the helmet was off the front view of the face presented a wonderful resemblance to the Duke of Edinburgh—this was noticed by more than one of those present. The projection of the forehead over the eyes is marked, but the brow retreats very much, the head being remarkably high and small, the height being behind and not in the front. He speaks English slowly but intelligibly, and reads it very well.

THE AMERICAN ARCTIC EXPEDITION.

DEPARTURE OF THE "JEANNETTE" FOR THE POLAR SEAS.

THE expedition organized under the patronage of Mr. James Gordon Bennett for the exploration of the Arctic seas has at length departed on its important mission. On the 8th of May, the steamer *Jeannette*, fitted out at Mr. Bennett's expense with everything that experience could suggest as likely to be of value in the voyage of discovery, and manned by a crew of picked men, weighed anchor in San Francisco Bay, passed out through the Golden Gate, and, in the light of the setting sun, sailed away for the distant world. The departure of the expedition was, as it deserved to be, an occasion of universal interest to the people of the Pacific metropolis, who flocked by thousands to the pier-heads and ships on the city front, and to the shore-slope in the vicinity, to witness the event. The bay, too, was thronged with yachts and steamers. At four o'clock in the afternoon, conveyed by the steam-tugs *Active*, *Goliath* and *Julia* and the city fire-tug *Governor Irwin*, and attended by the entire pleasure fleet, all bearing full loads of spectators, the *Jeannette* steamed slowly down the harbor amid the dipping of flags, screaming of steam whistles, and a salute of ten guns from Fort Point. Passing a moment outside the Heads, a multitude of vessels passed under the stern of the steamer, giving her hearty and tumultuous parting salutes, and then, with the benediction, so to speak, of the entire population, she steamed away.

The history of the *Jeannette* is quite generally known. She is a bark-rigged steamer of 420 tons register and 200 horse-power, local, low, and taking-location. She was built in 1857 by the British Government for a dispatch boat and tender to the Mediterranean fleet, but subsequently sold out of the navy to Sir Allan Young, who fitted her up. She was then known as the *Pandora*, and made a voyage to the Arctic seas, intending to prosecute a search for relics of the Franklin expedition. She started, however, too late in the season, and the ice being found too thick had to return to England, where last year she was purchased by Mr. James Gordon Bennett, and by special Act of Congress registered as an American vessel under her present name. Lieutenant George W. De Long, United States Navy, was, with the approval of Secretary Thompson, placed in charge of her and took her out to San Francisco, where at Mare Island she was thoroughly overhauled and put in order for her Polar voyage. She has a steam launch, five strong whale boats rigged with sails and boat-covers, and a folding boat that can be used in the water or upon runners on the ice.

In the outfit are included eight Arctic tents each six feet by nine, a set of spare sails and a number of ice-saws with which ice from ten to fifteen feet in thickness can be cut. A deck-house roofed over and fastened together by mortises and screw-bolts is provided, which can be taken down and put up at will. The cabin and forecastle are padded inside with several thicknesses of felt, and the poop-deck is covered with three thicknesses of stout canvas painted over. The ship will be heated by stoves burning soft coal. Every man on board has a good hair mattress, pillow, and pair of heavy blue blankets. The clothing consists of three suits: one is of brown duck, lined with gray blanket and bordered with copper, the coat of water pattern with a number of pockets and a broad belt; another, of black cloth—pea-jacket, trowsers and sou'wester; the third, for dress parade, is the regulation blue naval uniform, with regulation cap and black neckerchief, double-breasted shirt with broad collar, and sailor-jack trowsers. Each is additions has a long loose overcoat, a number of pairs of woolen stockings reaching to the knee, and canvas stockings lined with felt. A complete outfit of fur clothing will be taken on board at St. Paul's with the Government dogs. Instead of canteens, rubber bottles, which will not break or dent, are supplied. There is a beautifully appointed surgery. Every square inch of cargo-room is taken up with provisions. With the exception of flour and fx preparations all the stores

are in the concentrated or condensed form—meats, vegetables and fruits. The *Jeannette* is provisioned for three years. About twenty tons of provisions and seventy tons of coal will be caché at St. Michael's in reserve for use on the return voyage, or in case the *Jeannette* should be lost or abandoned. All will eat the same food cooked in the same kettle; pemmican and bread will be the principal articles in the daily menu, and instead of spirits ample rations of beer, tea and coffee will be served. Every appliance and accessory that forethought and experience could suggest has been obtained without regard to cost, so that the vessel is without doubt the best equipped that ever set sail for the Arctic regions. The whole cost of the expedition is defrayed by Mr. Bennett, and will be in the neighborhood of $300,000.

In selecting the crew choice was made from 1,200 applicants, no men being accepted under twenty-five or over thirty-five, and care being taken that all were of average height, size and weight, sound in all respects and without consumptive tendency, of good character, northern born or raised and inured to cold and accustomed to the sea. The seamen receive $25 a month; the others are paid in proportion. The names of the officers and crew are as follows:

Commander—Lieutenant George W. De Long, United States Navy.
Chief Officer—Lieutenant C. W. Chipp, United States Navy.
Second Officer—Lieutenant J. W. Danenhower, United States Navy.
Surgeon and Head of Scientific Branch—Dr. J. W. Ambler.
Astronomer—S. L. Newcomb.
Naturalist—M. R. Brooks, Smithsonian Institute.
Meteorologist—J. J. Collins, New York *Herald*.
Ice-Master—William H. Dunbar.
Chief Engineer—G. W. Melville, United States Navy.
Machinist—Walter Lee.
Boatswain—William Coles.
Carpenter—William Lindemann.
Coal-passers—George W. Boyd, I. Iverson, John Landerbach.
Seamen—Adolph Dressler, Nils Erickssen, August Goertz, Peter E. Johnson, Henry Kanck, George Kuehne, Herbert Leach, Frank Munson, Louis Noros, Edward Starr, Henry D. Warren, Henry Wilson.

Four Esquimaux will be shipped in Alaska. Most of the officers and men have had some Arctic experience. Lieutenant De Long went in search of the *Polaris* in 1873 on the *Tigress*. Lieutenant Chipp has also sailed to the Arctic regions, the ice-master is an old whaler, the engineer has had experience in the Polar seas, and the carpenter has been north twice—on the *Polaris* and after escaping from the floe upon the *Tigress*.

The orders of the *Jeannette* are to go through Behring's Strait, reach a Winter harbor at a point as far north as possible, and then dispatch a party across the ice-fields with dogs and sledges in the direction of the Pole. No persistent attempt has ever been made to approach the Pole by way of Behring's Strait. The efforts of the English and Russian explorers in the last century and the early part of the present, which resulted in fixing the outlines of the American and Asiatic coasts on either side of the strait, were directed toward finding a northwest or northeast passage to the Indies. Their motives were commercial. Afterwards came the numerous expeditions sent in search of Sir John Franklin, making important discoveries, which, supplemented by the scientific expeditions of more recent years, have given us maps of the islands, bays and sounds lying north of the American Continent, and of the shore-line of the mainland. Only one of the Franklin expeditions went up through Behring's Strait. This was that of Captain McClure, commanding the *Investigator*, which passed through the Strait in 1850. McClure succeeded in taking his ship to a point within sixty miles of Barrow's Straits, but was there obliged to abandon her. The party was rescued by the crew of the *Resolute*, which, two years after the sailing of the *Investigator*, entered the Arctic ocean by way of Baffin's Bay. After the rescue, however the rescued and the rescuers were forced to abandon the *Resolute*. They then went to Beechy Island, where they were taken off by the *North Star* in 1853 and taken to England.

There are many who believe that the channel between the Arctic and Pacific oceans offers a more favorable approach to the polar regions than the routes heretofore selected. Certainly the questions to be solved by the exploration of the Arctic Circle are of sufficient importance to justify an expenditure of effort in that direction; and all Americans will indulge the hope that Mr. Bennett's enterprise and munificence, having succeeded in solving the secrets of the Nile, his representatives on this expedition may be equally successful in unlocking the mystery of the unmapped Arctic Sea.

In connection with our illustration of the departure of the *Jeannette*, we give a view of San Pablo Bay and Mount Tamalpais. This mountain is ten miles north of San Francisco, and has an elevation of 2,604 feet. The summit can be reached on horseback, and commands a fine view of San Francisco and San Pablo Bays, with many of their tributary valleys, and of the summit of the Sierra Nevada. San Pablo Bay is connected on the north with San Francisco Bay by a strait three miles wide, and is nearly round and about ten miles in diameter. At the head of this bay is Napa or Mare Island, on which is a United States Navy Yard.

FUN.

THE man newly shaven may be vile within, but he presents a clean sir face.

IT is one of the curious ways of the world that a male hair-dresser often dyes an old maid.

STATUES usually look better than the men they represent. Yes, and they behave better, too.

WHAT is the difference between carmine and a nocturnal cat carouse? One is a shade of the red and the other is a raid of the shed.

TELL us not with painted pictures
Circuses are what they seem,
For the soul sees through such mixtures,
And circus bills are but a dream.

"I SAY, Maud," says a young man to a young woman, "really, you know you ought to bounce that old woman you have to open the door and do chores. She takes snuff and talks like a magpie, and is altogether very revolsing." "I know I ought to, but then, you see, it's difficult to do it. She's my mother. However, I'll give her a talking to."

A NEWBURYPORT (Mass.) man was badly sold, recently. He had a great project on hand for boiling down bones to make "superphosphate." All the neighboring boys were engaged to collect material. The man thought, however, that he would first try the bones as a fertilizer without burning. So, having a lot of grapevines, the first lot of bones were planted around the roots of one vine. The boys saw the proceeding, so at night they went and dug them all up again. Bright and early the next morning they presented themselves with a supposed new lot. The bones were bought again and put around a second vine. The process was repeated till fourteen grapevines had been thus served and fourteen times had those identical bones been sold.

REINVESTMENTS.

OFFICE OF FISK & HATCH,
BANKERS AND DEALERS IN GOVERNMENT SECURITIES,
No. 5 NASSAU STREET,
NEW YORK, July 7th, 1879.

The sure place for the savings of the people, for trust funds, for estates, for all those desiring perfect security and a certain income, is in the Bonds of the Government. We buy and sell all issues of United States bonds, including the popular Four per cents. We pay especial attention to the refunding of the called Five-Twenty and Ten-Forty bonds. A complete assortment of the different denominations of the Four per cents., which are issued in 50s, 100s, 500s, 1,000s coupon form, and in addition in 5,000, 10,000, 20,000 registered, constantly on hand for immediate delivery.

We also pay especial attention to purchases of all first-class investment bonds and stocks on commission at the Stock Exchange. Our office is free to all intending investors who may desire to consult files of quotations and obtain information before making their investments.

☞ Holders of FIVE-TWENTIES of either issue, and of TEN-FORTIES, should take notice that ALL THESE BONDS HAVE BEEN CALLED IN FOR REDEMPTION, that the Five-Twenties have all ceased to draw interest, and that the interest on the last of the Ten-Forties will cease on the 21st day of the present month. As they will lose interest on their money by holding their called bonds that are past due any longer, and as those not yet due can now be disposed of as advantageously as at maturity, holders will find it to their interest to make their exchanges and reinvestments at once.

FISK & HATCH.

THE LITTLE PITTSBURG CONSOLIDATED MINING COMPANY.

THE following letter has just been made public:

NO. 206 BROADWAY, NEW YORK, July 10th, 1879.
D. H. Moffat, Esq., Vice-President of the Little Pittsburg Consolidated Mining Company:

DEAR SIR: In compliance with your request, I beg to inform you that the decision of Mr. Justice Miller, of the Supreme Court of the United States, sitting in the Circuit Court of the United States, in Denver, Col., refusing to appoint a Receiver and refusing to issue an injunction in the matter of Foss and Hunter against the Little Pittsburg Consolidated Mining Company, is clearly a decision in favor of the company.

Foss, Hunter & Bissell owned twenty-seven one-hundredths of the Little Pittsburg property, and sold it to Mr. Chaffee for a certain sum in stock, and sold the stock for a certain sum in money, to be paid before a certain day. Mr. Chaffee has delivered to the Trustee the stock and has paid to the Trustee the money, but Messrs. Foss and Hunter desire to repudiate their contract, upon the ground that there was no consideration for it, in the hope that Mr. Chaffee would pay them a much larger sum in order to avoid litigation. I have already given an opinion that the contract was fully sustained by a consideration, and, coinciding with me, Mr. Rockwell, the Trustee, executed the deed to the company. The legality of this act is fully sustained by the decision of Mr. Justice Miller, and there is no more probability of any decision in this case affecting in any way the property of the Little Pittsburg Consolidated Mining Company than there is of one affecting the property of the Bank of England.

Mr. Bissell being in accord with Mr. Chaffee, and having consented to receive his portion of the purchase money of the twenty-seven one-hundredths of the stock owned with Foss and Hunter, it leaves two-thirds of twenty-seven one-hundredths in dispute between Foss and Hunter on the one side and Mr. Chaffee on the other. Whatever the issue may be—whether Mr. Chaffee succeeds in sustaining his side of the case and forcing Foss and Hunter to take the contract price for the property, or whether the court says that Foss and Hunter are relieved from their engagement and may claim a higher price, it is simply a private suit between Foss and Hunter and Mr. Chaffee, with which your company has no concern whatever. I remain, very respectfully, yours, ROBERT SEWELL,
Of Counsel for the Little Pittsburg Consolidated Mining Company.

—*Commercial Advertiser.*

HOW WOMEN WOULD VOTE.

WERE the question admitted to the ballot, and women were allowed to vote, every woman in the land who has used Dr. Pierce's Favorite Prescription would vote it to be an unfailing remedy for the diseases peculiar to her sex. Dr. Pierce has received hundreds of grateful testimonials of its curative power.

IOWA CITY, Iowa, March 8th, 1878.
DR. R. V. PIERCE, Buffalo, N. Y.:
Dear Sir—For many months I was a great sufferer. Physicians could afford me no relief. In my despair I commenced the use of your Favorite Prescription. It speedily effected my entire and permanent cure.
Yours thankfully, MRS. PAUL R. BAXTER.

PIANO PURCHASERS.

A GOOD piano at a fair price is one of the wants of the times. Most "cheap pianos" are scarcely worth the freight. An instrument that is durable, that is substantially made, and has all those qualities of tone which make a first-class piano, can be had from the MENDELSSOHN PIANO CO., 21 East Fifteenth Street, New York, from $140 to $400. For over thirty-seven years their factory has been producing pianos, and adopting every new invention which has proved itself to be valuable. They can be compared by an expert with the instruments of the highest name and fancy price, and the result is surprisingly satisfactory. The piano is warranted for five years, and no purchaser has ever made a complaint. From personal knowledge and critical examination we can recommend any one to send for a catalogue to the above-mentioned manufacturers.

A HALF or whole bottle of MURRAY & LANMAN'S FLORIDA WATER mixed with the water of the bath is of great use to invalids and all delicate or nervous persons, as it revives and braces up the failing strength and soothes the most irritable nervous system.

"DOG-DAYS"—and every dog has his day—with all their attendant evils of exhaustion, depression and general lassitude, are close upon us, a season in which a mild, healthful and bracing stimulant is greatly needed. Such a stimulant and one which completely fills the bill is the "AMERICA" EXTRA Dry Champagne of A. WERNER & Co., of this city. Composed only of the pure and unadulterated juice of the grape "AMERICA" EXTRA Dry is one of the safest and most satisfactory tonics ever offered, and is grateful and comforting alike to the delicate, the overtasked, and in fact to the whole world at large. The steady and continuous increase in its demand establishes its merits.

FAIRBANKS' SCALES.

THE following translation of a letter which the Messrs. Fairbanks have received from Russia is of interest to all American manufacturers:

GRAND RUSSIAN R. R. CO., NICOLAI LINE,
ST. PETERSBURG.
DIRECTORS' OFFICE, May 24, 1879.

MESSRS. FAIRBANKS & CO.:

I beg to inform you that our line is supplied with many FAIRBANKS' SCALES, of which some are already since 1857, and the rest since 1862, in constant use. Many of them are exposed to the open air the whole year round, without any protection against the bad weather. All these scales, without exception, have given entire satisfaction, and, according to the opinion of the station-masters, supersede in accuracy, easy method of weighing heavy loads, and chiefly in durability, all the other systems of scales.

Having twenty-two years' experience with the FAIRBANKS' SCALES, the Superintendent's office of the Road can unhesitatingly recommend them as especially practically adapted to railroad use.

(Signed) KOENIG, Director of the Nicolai R. R.
Engineer and Actual Counselor of State.

NOTE.—The Nicolai Line is the oldest in Russia, and was built by the Emperor Nicolas as a grand military road between Moscow and St. Petersburg. It is upwards of four hundred miles long.

WHAT nobler example of the palatial modern hostelry could there be than the ST. NICHOLAS HOTEL? Centrally located for pleasure and business, with apartments, both single and in suites, of a style to suit the most luxurious, and a table of unsurpassed excellence, the traveler nowhere can find more delightful accommodations. The present administration of the hotel is fully equal, if not superior, to anything in the past.

THE American breakfast-table, never too bountiful nor attractive, has a valuable addition in MANIOCA. From this edible root from the Tropics a variety of dishes may be made, recommended especially for invalids and weaklings, but by no means harmful for the robust and healthful. Griddle-cakes, superior to anything else which ever bore the name, are made from MANIOCA, while desserts and delicacies of every variety, in which it is an ingredient, are unsurpassed. MANIOCA deserves for many reasons a larger sale and fame, and is rapidly winning both.

HOP BITTERS has restored to sobriety and health perfect wrecks from intemperance.

BURNETT'S COCOAINE kills dandruff, allays irritation and promotes the growth of the hair.

OTTAWA, ILL., April 5th, 1878.
MESSRS. JOSEPH BURNETT & CO.:
Gentlemen—For over two years I have suffered terribly with "scald head" in its worst form. A few weeks ago I tried a bottle of your COCOAINE. The first application gave me relief, and now the disease is effectually cured. I cheerfully recommend BURNETT'S COCOAINE to any one suffering with the above complaint.
Yours respectfully, N. C. STEVENS,
Deputy Sheriff.

MANUFACTURERS and other owners or occupants of large buildings will conserve their interests by sending for samples and price-lists of H. W. JOHNS' ASBESTOS LIQUID PAINTS. H. W. JOHNS' Manufacturing Company, 87 Maiden Lane, New York, sole manufacturers of genuine Asbestos materials.

CLERGYMEN, Lawyers, Editors, Bankers and Ladies need HOP BITTERS daily, for nerve force.

For Sale Cheap.—Excursion Tickets (first-class) to Liverpool and return. Address, "Tourist," Box 4,121, New York P. O.

Commonwealth Distribution Co.—10th Drawing—at Louisville, Ky., July 31st.—The management, desiring to make these Drawings as attractive as possible, announce a GRAND CONCERT for the next Drawing, which takes place on July 31st. Time speeds on, and now is the time to buy tickets. Persons from all sections of the country will visit the Drawing, but the interests of those absent will be as well cared for as if they were personally present. $112,400 is a great deal of money to give away these hard times, but this amount will be certainly distributed on July 31st. Tickets are only $2, and for this amount one can draw $30,000. Address at once T. J. COMMERFORD, Secretary, Courier-Journal Building, Louisville, Ky.; or T. J. COMMERFORD, No. 163 Broadway, New York.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected cocoa, Mr. Epps has provided our breakfast-tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—See article in the *Civil Service Gazette*.

Sold only in soldered tins, labeled,

KEEP MANUFACTURING COMPANY
631, 633, 635 & 637 Broadway, New York.

WITH
$5
you can buy a whole
5 per ct. Imp. Austrian 100fl. Government Bond,
Issue of 1860.

These bonds are guaranteed by the Imperial Government of Austria, and bear interest at the rate of 5 per cent. per annum, payable semi-annually.

They are redeemed in two drawings annually, in which 100 large premiums of

60,000, 10,000, 5,000,

etc., florins are drawn.

Every Austrian five per cent. 100-florin bond, which does not draw one of the larger premiums, must be redeemed with at least

120 Florins,

as there are no *blanks*, and every bond must draw something.

The next drawing takes place on the

1st of August, 1879,

And every bond bought of us on or before the 1st of August is entitled to the whole premium that may be drawn thereon on that day. Country orders sent in Registered Letters and inclosing $5 will secure one of these bonds for the next drawing.

CATARRH

Is a terrible disease. Its fearful effects are corruption running down the throat, weak eyes, deafness, loss of voice, loss of smell, disgusting odors, nasal deformities, and finally consumption. From first to last it is ever aggressive. Ordinary treatments are worse than useless. Thousands suffer with this disease without knowing its nature or the great danger in neglecting it. Many thousands are dying with consumption who a few years or months before had only catarrh. If neglected while a cure is possible, it may rapidly develop, and the symptoms of quick consumption announce that it is too late.

CONSUMPTION The terror of humanity that yearly carries thousands to an untimely grave, not sparing the young, talented, nor beautiful.

ASTHMA which makes life so miserable its victims almost WISH for DEATH. Minister's SORE THROAT, CATARRHAL DEAFNESS, and

BRONCHITIS the advance guard heralding the near approach of consumption that most physicians of all diseases, HAY FEVER. For these diseases the most thorough, successful and pleasant treatment is

CARBOLATE OF TAR INHALANTS

Satisfaction always guaranteed. It does not require ten minutes to demonstrate the value of **Carbolate of Tar**, the most healing remedial agent known to science. Balmiest and essences of the most healing and soothing properties are so combined with Pine Tree Tar that the most breathing converts them into a dense smoke or vapor. This is *inhaled*, takes right to the diseased parts. **No heat, no hot water**, simply inhaling or breathing it, and you feel its healing power **at once.** This treatment is indorsed by physicians, and highly commended by thousands who have used it with perfect satisfaction.

HOME TREATMENT FREE sent to any parts of the **United States** or **Canada**, to be returned if not satisfactory. Consultations, trial of remedies, circulars, commendations, and all particulars free to all. Address, naming this paper.

Attractive, Useful & Interesting Reading for Everybody.

Frank Leslie's
SUNDAY MAGAZINE.
The Best and Cheapest Sunday Periodical in the World.

THE AUGUST NUMBER NOW READY.

"The ample size of the page of the SUNDAY MAGAZINE enables the conductors to give a larger amount of reading matter in each number than is furnished by any of its American or European contemporaries; while the price is lower by one-third than that of any one with which it comes in competition."—*Cumberland Presbyterian, Nashville, Tenn.*

"There is not a magazine in this country that contains so much good reading, with so many capital pictures, and so cheap."—*Southern (Richmond, Va.) Churchman.*

"First, by long odds, among all magazines of its class. About seventy articles and as many illustrations, besides 'At Home and Abroad,' 'Editor's Portfolio,' etc., etc., and the many articles in these grand divisions. Twenty-five cents a single number, and $3 a year."—*Presbyterian, Wilmington, N. C.*

"Probably this is one of the most pleasing magazines published—containing a greater variety of reading matter and more illustrations than any other periodical. It is full of life, and is always in advance of the other monthlies."—*The (N. Y.) Methodist.*

"It contains a great variety of wholesome and instructive reading for individuals or families, with very numerous illustrations, making the work attractive to all."—*Hartford (Conn.) Christian Secretary.*

"To attempt to quote the titles, even, of articles, would exceed our limits. It has about sixty articles, comprising travel, history, poetry, biography and moral tales. The Editorial Miscellany is of sterling merit. The amount of matter puts every similar publication at a disadvantage in comparison. It is cheaper than dime novels. It has 128 royal octavo pages, fully illustrated, for 25c."—*Michigan Christian Advocate.*

CONTENTS.

Articles, Descriptive, etc.—"Emigration to the Holy Land," by Prof. Wm. Wells—(Illustrations: Sir Moses Montefiore; The Cedars of Lebanon; The Mount of Olives; Jericho and the Jordan; Mount Lebanon.) Issued July 21st.

"THREE WOMEN AT ODDS" is a short serial, unaffected in style, of great power in portraying character, and highly dramatic in plot. The dialogue is natural, with bright flashes of wit, and always exciting in a healthy and legitimate way.

No story can claim attention more deservedly during the idle hours of summer than

"THREE WOMEN AT ODDS."

CURE BY ABSORPTION.

"SAPANULE,"

Nature's Remedy applied by a Natural Method.

This justly celebrated lotion is pronounced by all who have used it to be of wonderful inductive power, as well as full of healing.

Physicians of all schools recommend it as an external remedy, safe to use and of great value.

Inflammation cannot exist where it is applied.

Never fails to relieve pain, from whatever cause.

Cures Wounds, Bruises, Sprains, Burns or Scalds, Neuralgia, Rheumatism, Lame Back, Headache, Piles, Boils, Erysipelas, Contracted Cords, etc.

Removes all soreness from Bunions, Chilblains and Corns, curing them.

When used in sponge or foot baths, it at once relieves all pain and soreness of body, limbs or feet.

"SAPANULE"

SOLD BY ALL DRUGGISTS.

Ask your druggist to get it for you if not on hand.

PINT AND QUART BOTTLES, 50C. AND $1.

THE CURRENCY ISSUE.

IT is well known to our readers that both the leading political parties of the country, in standing "upon the order of their going," and in seeking to put their best foot foremost in the coming canvass, are plainly held, at least for the nonce, in much provisional doubt and quandary. We have more than once referred to the devices by which it is supposed that the Democratic leaders would fain hide from public view the divisions of their party on the currency question, but this state of vacillation and indecision is not confined to the Democrats alone. The Republicans, too, are not entirely agreed among themselves as to the issue which they shall make predominant in the impending campaign. Hampered as they are, in States like Ohio, with a considerable body of retainers hanging upon their flanks, who make no secret of a recent longing for the flesh-pots of inflation, and disturbed as they are, in States like Maine, by a recalcitrant set of independents who refuse to run with "the Republican machine," it has been hoped by leaders of the "stalwart" order, that a cure for all such weaknesses and defections may be found in making a fresh draught upon the surviving passions left by the war, especially since these passions have been fanned into a new flame by some fume and bluster in the recent proceedings of Congress.

Believing as we do that the "currency issue" will not down at the bidding of Democratic strategists or of Republican temporizers, we are glad to see it announced that Mr. Secretary Sherman has been selected by the Republican managers to strike the keynote of the Republican campaign in Maine as well as in Ohio, and in striking this keynote he at least will be sure to give no uncertain sound upon the question of honest money, as now placed in issue before the people. And it is not simply as the head of the Treasury Department, and as the successful financier of the present administration, that Mr. Sherman may be properly put forward as the expositor of the Republican faith in matters of currency and finance. It is through many hesitations and not a few *détours* that the Secretary has advanced to his present strong position upon these questions, and hence nobody should be more familiar than he with the captivating fallacies which still blind the minds of the Greenbackers, and which once were potent enough to obscure from his clear sight the vision of truth to which he has recently attained. If his present advanced position is a sufficient guarantee that he has left these fallacies behind him, it is none the less true that he has allowed some of them to remain in the recent publication of his financial and political speeches, as if to mark by buoys the points at which he went astray. With these buoys in his eye he should now be able to keep his party on the right tack.

For ourselves, we are free to avow the opinion that any attempt on the part of the Republican leaders to relegate the financial issue into the background will be a mistake only less capital than that of the Democratic politicians who have planted themselves on a wrong affirmative in this matter. It was a favorite maxim of Lord Bacon that "truth emerges sooner from error than confusion"—we have had occasion to quote the maxim before—and it would be a fresh illustration of the apothegm if the Republicans should weaken the financial truth that is in them by confounding it with panic cries that wake no response in the heart of the people.

The currency question, as submitted to the people of Ohio, presents a square issue which admits of no "dodging." The Democrats have not "dodged" in placing at their head such a typical exponent of the "Ohio idea" as General Ewing, a man whose "war record" is likely to make him impervious enough to all outcries inspired by the spectre of "the Solid South"—a spectre which is periodically conjured up by the "stalwart" Republicans that they may claim for themselves the monopoly of laying it.

It is a great misfortune that the "currency issue" should be embroiled in the strife of politics and be made the football of party; but since it is so embroiled, it should be the aim of good patriots and of sound financiers to extricate it from such untoward entanglements at the earliest possible day. And it can be extricated only by a successful battle fought in defense of honest money, not for Ohio alone, but for the whole land. It so happens that, for the present, the State of Ohio is the Thermopylæ of the struggle, and the issues of the coming campaign are largely suspended on the more or less resolute stand that shall there be made by the champions of sound finance. It would indeed be a crying shame, and a weakness as well, if the Republicans, after having drifted into a right position on this subject, should now be found to have something less than the courage of their opinions on a matter of such profound concern.

In so arguing we do not frame our conclusions on simple calculations of political loss and gain. We consider only the loss or gain which must accrue to the whole country from the triumph of wrong or right opinions upon this topic. A blow struck for the right is a blow struck for the welfare of the whole country, though for the time being its political advantages may inure to the benefit of the party which has been selected to wield it. The Republicans of Ohio are fighting a critical battle not for themselves alone, but for the adherents of honest money in all parties and in all parts of the land. As such representatives it should be their aim and ambition to rise to the height of their position, lest, failing in this, they should let the victory for truth and right slip through their hands by betraying to popular contempt the slack hold they take on each.

THE BONAPARTES.

WHY is it that the choice of the bewildered Bonapartists of France is confined to Jerome Napoleon, or his son Victor? To a large portion of them Jerome is hateful; and the Savoy blood that runs in Victor's veins—the blood of Victor Emmanuel, who deprived the Pope of his patrimony—alienates from him those Bonapartists who are also strong Ultramontanes. Whither have all the other heirs of the House of Bonaparte vanished, that another alternative, a third leader, cannot be found?

Charles Bonaparte, that rather impecunious and obscure Corsican noble from whom the family descends, was the father of eight children—five stalwart sons and three lovely daughters. The sons were Joseph, Napoleon, Lucien, Louis and Jerome; the daughters were Marie, Pauline and Caroline. Of these seven brothers and sisters of Napoleon, there are descendants of Lucien, Jerome, and the three sisters, still living. The lines of Joseph, Napoleon and Louis are extinct; Napoleon's by the death of the Duke of Reichstadt in 1830, and Louis's by the death of the young Prince who met his fate by the Zulu assegai. But two of the brothers of the Great Napoleon are still represented. One son, at least, of Lucien still lives; and four or five of his grandsons exist, among them Prince Charles Bonaparte and Cardinal Bonaparte. Of the stock of Jerome, Jerome Napoleon and his sons are the sole recognized male members; but a daughter, the Princess Matilda, the separated wife of the Russian Prince Demidoff, is still alive. Of all three of Napoleon's sisters, also, there exist several grandchildren.

It would seem at first sight, therefore, that there should be plenty of material from which the Bonapartists might choose a leader around whom to enthusiastically rally. Why is it, for instance, it might be asked, that Lucien's grandsons do not fill the bill? Lucien was older than Jerome, and indeed than Louis; and, failing the lines of Joseph, and of Napoleon himself, his heirs would be the natural successors to the bee-bespangled robe of the Empire. The reason why Lucien's heirs are not considered is, that Napoleon deliberately excluded his next younger brother and his children from the succession. Lucien was the ablest of his brothers; he married against Napoleon's autocratic will; he refused to repudiate his wife, as his brother Jerome had done, when so commanded by the imperious Napoleon; he became a sort of Republican, disaffected to the Empire, and so Napoleon, through his puppet Senate, deprived Lucien and his heirs of all hope of ever reaching the Imperial throne. The Bonapartists of to-day cannot go behind the action of the founder of the dynasty, hence Lucien's grandsons must still suck their thumbs in obscurity.

By the Salic law, descendants through the female line are excluded from the throne of France. This ancient law was respected by Napoleon; hence the grandchildren of his three beautiful sisters—of Marie Murat, the Princess Bajocchi and the Princess Borghese—are ineligible. Thus the choice is narrowed down to the descendants of Jerome, the youngest of Charles Bonaparte's children. It is confined, indeed, to yet closer limits; for Jerome Bonaparte has descendants of older birth than Jerome Napoleon. Of the fruit of his first marriage with Betsy Patterson, of Baltimore, there are stalwart descendants in our midst. But that marriage was annulled, and the children and grandchildren of Madame Patterson-Bonaparte are just as effectually excluded from the Imperialist succession as are those of Lucien and of Napoleon's sisters.

The cause of Imperialism seems desperate to-day, as it did after the death of the Duke of Reichstadt, for want of a head under whose lead the friends of the Napoleonic tradition may all unite. It may, like the two Napoleons' own flesh and blood, become extinct; or there may arise, in the future, another Bonaparte like the third Napoleon, a bold conspirator, a conspicuous personality, a man of ambition without scruple and of nerve without a quiver, who will revive the dormant cause, and again establish the Empire on the foundations of a third ruined Republic.

MURDER FOR LOVE.

THE emotions have always been a strong factor in the commission of crime. A very large proportion of the robberies in all countries in all times have been perpetrated in order that the thief might present money, jewelry, or other valuables or luxuries to some third party not immediately implicated in the crime; while from the earliest historic ages murders have been committed for the gratification of illicit love. Such tragedies are not at all peculiar, and there is no occasion for surprise, or even remark, in the fact that nearly half the murders of the present day have their origin and source in what is called affection.

But the criminal records of this time do disclose an increase of a class of murders which, if they are not entirely new, are at least so novel and difficult to deal with as to require careful attention and treatment. We allude to those murders which are committed on account of an alleged regard for the victim. This crime is not quite a new invention, and its chief peculiarity is that it sometimes seems a benevolent deed. Mothers have often slain their daughters to protect them from outrage and degradation, and fathers have sometimes resorted to the same tragic deliverance, like Virginius before the Roman Dictator, Appius Claudius. No parent would probably be hanged for murder for taking the life of a child in such a dire extremity; but from this the procession of emotional murders shades off rapidly into doubtful ground. A woman in Chicago who slew her daughter to prevent her from living a life of shame was sent to the penitentiary for a term of years; and a man near Liverpool who killed his wife to save her from a similar fate, and who thereupon confessed his deed and attempted to justify his action, has been hanged. Still other specimens of this class are further from the dividing line of right and wrong. In Wethersfield, Connecticut, nearly a hundred years ago, an affectionate, intelligent, hard-working man seized a razor one morning and took the lives of his wife and two beautiful young children, and then slew himself; and he left behind him a long and elaborate argument which he had drawn up in justification of the deed. He held that the family was his; that he was responsible for their happiness; that he loved them devotedly and could not see them suffer; that he was unable to lift them above want, and death would be a relief to them all. In Pocasset, Rhode Island, a man, apparently sane, recently killed his young daughter with great deliberation, because he felt that the Lord required the sacrifice for the sins of himself and his friends. A woman in Michigan—and all evidence shows that she was really a tender-hearted and loving mother—shot her little boy and killed him a short time ago, so that he would not "grow up bad." Her motives were not accepted in justification, and she is in jail. It is scarcely a week since a young man in Illinois killed a sister to whom he was devotedly attached, in order to keep her from marrying a young man of intemperate habits. The fact that the homicide immediately slew himself relieved the courts of the State from considerable embarrassment. A man in California killed his invalid wife at her own written request, "to put her out of misery," and then presented himself before the courts in tears and claimed acquittal and approval.

This sort of crime is getting too common by half. Psychology has its hands full without being called on to decide on the turpitude of persons who defend their violations of law by claiming that they kill their best friends in the interest of mercy and humanity. If A may kill B, either at B's request or otherwise, to put B out of misery, there is no limiting this violent benevolence. It certainly seems as if there were a good many people whose death would be no loss to themselves and a gain to society, but it is not yet considered safe to authorize every man to act as executioner. If real affection and a desire to preserve "the unities" shall be accepted as a justification of crime, we may as well adopt the morals and customs of the Japanese, who generally kill and bury their parents with great ceremony when they arrive at fifty or sixty years of age, and are no longer self-supporting. Then would earth be transformed to the heaven of the utilitarians; the old, the crippled and the sick could be killed off, and society could be reinforced and strengthened by "the survival of the fittest."

THE BUSINESS OUTLOOK.

A SIGNIFICANT indication of the revival of business, and the increased confidence and activity in mercantile circles, is furnished by the large reduction in the number of failures during the last six months. The circular of Dun, Barlow & Co., just issued, shows that during the period named the failures in the United States were 4,058 in number, against 5,825 for the first six months of 1878. The liabilities, in the same period of this year, were only $65,000,000, against $130,000,000 for the first six months of last year. The difference in favor of 1879 is, therefore, a reduction of 1,969 in the number of failures, while the liabilities show a decrease of $65,000,000, one-half of what they were in 1878. The greatest number of failures in any one State was 569, in New York, and the next highest, 317, in Pennsylvania. There has been a marked reduction in the average indebtedness of each failure. Thus, the number of failures for 1876 were 9,092, representing liabilities to the amount of $191,117,786, or an average of liabilities of $21,020. In 1877, there were 8,872 failures, involving $190,699,963 in liabilities, making an average of $21,491. In 1878 the failures numbered 10,478, covering liabilities to the amount of $234,383,132, or an average of $22,369. Compared with the second quarter of 1878, the difference in favor of the last three months is most significant, showing a decrease of more than 900 failures, with a decline in liabilities of $26,000,000 in a single quarter.

Commenting upon the facts presented in these statistics, the circular of Messrs. Dun, Barlow & Co., remarks:

"To show how completely reversed is the condition of trade, so far as indicated by these statistics, as compared with last year, we quote a sentence contained in our circular issued this day one year ago, referring to the failures of the first half of 1878: 'These figures of increase in failures and liabilities are of very grave import, for never before in an equal period in the history of the country have business misfortunes been so numerous, or aggregate an amount of loss by bad debts been so great.' To-day, in contradistinction to this gloomy picture, it is our great good fortune to say that never before in our experience in the compilation of these statistics has the decrease in mercantile casualties been so marked; in no previous period has the comparison of losses by bad debts been so favorable as at the present hour."

While the evidences of an improved condition of affairs in this country are thus multiplying on every side, the reports from Great Britain continue to represent a state of business depression almost without precedent. Heavy failures are reported almost daily; many manufacturing industries are at a standstill, and now a threatened partial failure of the crops is adding to the prevalent apprehensions of suffering and disaster. In consequence of the depression in Lancashire, large numbers of operatives are emigrating to America, and thousands of agriculturists would follow if they possessed the means to do so. Many Lancashire farmers, indeed, are already preparing to emigrate to Manitoba. The *Mark Lane Express*, in its last weekly review, thus states some of the depressing elements of the trade situation:

"Published statistics show that the movement for a reduction in the output is spreading in the cotton districts. In addition to the depression at Blackburn and Oldham, already reported, 450,000 spindles at Preston are stopped, out of an aggregate of 2,000,000. One-quarter of the looms at Preston are also stopped. At Accrington work is very irregular, particularly in the weaving department. Six thousand eight hundred spindles are idle in two mills, besides numerous other stoppages. In the Leigh district 120,000 spindles are working on short time, and 140,000 are stopped altogether. In the Huntington district 74,000 spindles and 1,100 looms are idle."

We may well deplore the depression of British industry, and the suffering which must inevitably follow the paralysis of so many interests, while gratefully acknowledging that kindlier Providence which has extricated us from embarrassment, and planted our feet once more on solid ground.

WHO ARE THE ZULUS?

THE British press, more especially that part of it which is hostile to Lord Beaconsfield, has from the beginning of the Zulu war indulged in sentimental denunciations of his policy, maintaining that Cetawayo was a noble king, fighting for the independence of his native land against an unjustifiable aggression. This view of the question has, more or less, been taken by our own journals. The delusion will be effectually dispelled by a work just published in London from the pen of Captain Lucas, of the British Army, and who has been for many years a resident in South Africa. He states in the preface that he has been a careful student of the rise and progress of the Zulu kingdom, and that the historical facts are briefly these.

The founder of the Zulu kingdom was a

Digitized by Google

bloodthirsty and ambitious savage, named Chaka, who, hearing in 1813 from some shipwrecked English sailors of Napoleon the First, formed the insane design of rivaling the great Corsican conqueror. He had then just succeeded to the chieftainship of a petty tribe dwelling on the sea coast near the Tugela River, and as he subdued tribe after tribe, they were compelled to take the name of Zulu, which means in their language "heaven." That Chaka was a most remarkable savage, and had a great talent for war, is undoubted, since he invented what may be termed the Zulu Phalanx, and that peculiar method of fighting which proved so fatal to the British at Isandula. He saw with true Napoleonic instinct, that, owing to the scarcity of cover in Zululand, it was better to fight in the open ground in heavy masses. Some of these were forty deep. The attack commences at rifle range. The centre, then, is trained to give way as though in rapid retreat, the wings making off to the right and left. The enemy then naturally pushes off in pursuit. At a given signal the Zulus halt, and, wheeling, rush upon the foe with frightful yells, protecting themselves with their shields, and dealing death with their short assegais. Every soldier carries three or four throwing-assegais, but his chief reliance is the short, heavy-bladed assegais for close quarters. The officers march in the rear, and communicate their orders by swift runners trained for that purpose. In battle, the general with his staff seeks some rising ground, and keeps one of the oldest regiments as a reserve, as was the custom with Napoleon.

From 1813 to 1828 Chaka carried out his terrible policy, devastating adjacent countries, and forcing the inhabitants to acknowledge his rule. A more cruel monster never reigned even in Dahomey. His ferocity proved his ruin, for, hearing that his troops had suffered a defeat, he ordered the execution of two thousand of their wives, among whom were the wives of his two brothers, Dingana and Umlangano. These conspiring against him caused him to be murdered while he slept, on September 23d, 1828, in the fifteenth year of his reign. These two brothers then fought a duel to settle the succession, and Dingana having slain his rival, became King of the Zulus.

Dingana reigned from 1828 to 1840. He abandoned his brother Chaka's ambitious plan of conquering and annexing, but in violence and treachery he almost rivaled him. Inviting some seventy Dutch Boers to a banquet to talk over some disputed question, he ordered them to be massacred, and suddenly marching upon their settlement near Natal, murdered nearly seven hundred women, children and old men. The Dutch Boers made war upon this monster, and being joined by the tyrant's brother, Panda, with about 4,000 of the best Zulu troops, Dingana was defeated and put to death, Panda becoming king in his stead. Panda reigned thirty-two years, maintaining a peaceful policy, dying of old age in 1872, when he was succeeded by his son Cetawayo, who partakes more of his uncle's bloodthirstiness.

The Chaka family in some degree resembles that of Napoleon, whom the Zulu chief so longed to imitate, and the death of the Prince Imperial seems to give an interest to the resemblance.

EVENTS ABROAD.

IN England, the House of Lords having read the Irish University Bill the third time, it now descends to the House of Commons, where the Home Rulers will hold a Donnybrook Fair in its honor. It will be strange, indeed, if heads are not smashed over its clauses, as the Protestant Irish representatives will support it tooth and nail, while the Catholics will work every lever within Parliamentry usage to defeat it. The Bill relating to elections and corrupt practices at elections will not be considered this session. In the French Chamber, the Jesuit clauses in M. Jules Ferry's Education Bill are under fire, and we may expect volcanic eruptions that will dwarf even those of the red-hot Mount Etna.

The clause in poor "Lulu's" will in which he so gracefully thanks England for the shelter she afforded him, has caused a heart-throb all over the length and breadth of the land, and the movement to commemorate his life is assuming immense proportions. It is proposed not only that there shall be a statue in Westminster Abbey, but that some other memorial shall be built with the proceeds of the army subscription, whilst a charitable institution is also to be founded "in memoriam." The contributions of the British army will reach nearly $250,000, the battery to which he was attached while at Woolwich subscribing $5,000. Cardinal Manning preached the funeral sermon at Chiselhurst on Sunday, in the presence of the Imperial family, saving that fat sensualist of sixty, whose refusal to visit the sorrow-stricken Empress has caused the feeling of indifference towards him to change to aversion and contempt. He is the dog-in-the-manger representative of the Napoleon dynasty.

Russia has other troubles besides Nihilism. In one district cholera has made its appearance, while in another diphtheria is still committing terrible ravages, obliging the authorities to direct a universal fumigation of the dwellings and clothing of the peasantry. This epidemic is said to have raged more or less violently for a period of seven years, and to have "carried to the grave, in some districts, almost all of the rising generation." The protracted prevalence of this disease is no doubt largely due to the habits of the people and their habitual disregard of plain hygienic and sanitary laws.

In anticipation of possible dissensions among the Bonapartists, the members of the Orleans family in France are trying to arrive at an understanding as to the policy they shall pursue in order to most effectually advance their prospects. They are likely to have their labor for their pains, it scarcely being among the possibilities that any member of the Orleans family shall ever again rule in the country from which they were once banished, and to which they were permitted to return only by an act of popular complaisance.

In Central Asia the English rifle is doing deadly mischief, simply from the fact that it is English. The St. Petersburg *Gazette* repeats in circumstantial form the accusation which has been lately current in the Russian press that the Turcomans opposing General Lavaroff's expedition from the east shore of the Caspian Sea are armed with English rifles, received by the way of Herat from the British reserve supplies in Afghanistan, and the *Gazette* tauntingly asks in what light the English Government regards the traffic?

Centennials may retire for a thousand years or more, and enthusiastic committee-men hide their diminished heads before the celebration of the eighteenth Centennial of the destruction of Pompeii, to be held on the 25th of September next. A visit will be made to the principal monuments, and a special monster excavation will be "personally conducted," not by Mr. Cook, but by a noted Italian archæologist. One can fancy with what delight Mr. Alma Tadema will make sketches, and Mr. Di Cesnola grub amongst the ruins where Pliny set his sandaled feet. What if Vesuvius, alive to the importance of the thing, were to indulge in an eruption? We are in a realistic age.

Roumania is courting destruction by her persistent refusal to recognize the rights of the Jews. We are no longer in the Middle Ages, when to torture a Hebrew meant so many shekels of gold, and the extraction of a Jew's tooth yielded a fortune. Austria, Russia and Turkey will not stand by with folded arms and see Roumania stand defiantly in the path of progress. Of course any coercion put upon this bellicose little State would lead to the renewed complication of Eastern affairs, and Roumania relies upon this. In the meantime public opinion should be strong enough to right the Jews, especially if convoyed by the lips of Benjamin Disraeli.

A circular from Rome addressed to bishops throughout the Catholic world calls upon them to promote a monster clerical pilgrimage to the Holy City for the next feast of the Epiphany. Turkey shows some signs of making concessions to Greece. M. de Lesseps now says that he expects to see the Darian Canal completed in five or six years. De Lesseps, by the way, has been appointed, with a number of engineers and Government officials, on a Commission to examine the project for uniting Algeria and Senegal to the Soudan, a province of Egypt, by railway. A Senatorial committee has also pronounced in favor of France taking an active part in opening up Central Africa. The petty little quarrel between Columbia and Brazil is about to be settled by arbitration. A diplomatic agent will be appointed to the court of Rio de Janeiro, and to this personage will fall the duty of causing the disputants to shake hands. The reports from Zululand indicate a probably early termination of the war, Cetewayo having made peace proposals. Sir Garnet Wolseley has assumed command of the British forces.

THE Attorney-General of New York decides that the new six per cent. interest law will not be operative until the first day of January next, and that the same penalties against usury will remain hereafter as now exist.

REPORTS made to the Treasury Department represent that as fine cod-fishing banks as exist anywhere in the world lie along the coast of Alaska, and that the fish, in quality and size, are equal to those caught off the Banks of Newfoundland. One report says that "the whole coast of Alaska, from Portland Canal in the south to the Polar Ocean in the north, embracing, including the islands, 26,000 miles of sea frontage, is one grand reservoir of fish, sufficient to employ thousands of men in supplying the demand constantly growing, and soon to increase immensely by the peopling of Washington Territory, Oregon and California, and the embryo States now upbuilding all along the great continental highway from the West to the East, as well as the Sandwich Islands, China and Japan." If these reports are true, and there seems to be no reason to dispute them, there is certainly ample room for American enterprise in our own waters, without purchasing fishing privileges from Russia, as a cable dispatch intimates we are seeking to do.

ACCORDING to official statistics the reduction in the interest-bearing debt from the highest point, August 31st, 1865, to July 1st of this year, amounted to $583,886,594, and the reduction in the annual interest charge when the present funding operations are completed (August 1st), will be $67,203,919. The total debt has been reduced $729,224,315, and the reduction under the present Administration is $61,573,886.

AMONG other indications of the improving condition of affairs among the industrial classes, we may mention the fact that the business of savings banks in this and other States during the past six months has been unusually prosperous. In this State many of the banks show a considerable increase of deposits, and generally throughout the country it is believed that the savings of the working classes have been greater than for some years past.

TWO members of the Cabinet—Secretary Sherman and Postmaster-General Key—are spending a brief vacation in New England. The latter gentleman moves about very quietly, being apparently intent on getting as much enjoyment as possible out of his play-spell, and keeping wholly clear of politics and politicians. Mr. Sherman, however, seems to have a steady eye on the main chance, and will, perhaps, lose no fair opportunity to promote his personal ambition.

IT is wonderfully entertaining to read that, with the thermometer among the nineties, the American Philological Association listened, during its meeting at Newport last week, to the reading of papers on such lively subjects as the "Critical and Rhetorical Labors of Dionysius, of Halicarnassus," "Ideological Etymology," etc. We can conceive of nothing more refreshing in this torrid weather than this philological exercise, unless it be idling under the lee of an iceberg, or perusing, in the original, Dionysius's twenty books on "Roman Antiquities."

A JURY composed entirely of negroes was recently empaneled in Virginia for the trial of another negro who had murdered his grandmother. The evidence was conclusive, but the jury, following the example of many white juries in disregarding the testimony before them, returned a verdict of guilty of murder only in the second degree, and fixed the penalty at eighteen years imprisonment in the penitentiary. A jury of New York professionals, with all their knowledge of the niceties of criminal law, could not have done better than this.

COMPLETE returns to the Treasury show that the receipts for the last fiscal year were $274,034,916. Estimating the population of the country at 46,000,000, it appears that the General Government in effect levies within a few cents of $6 upon every man, woman and child in the land, or about $40 to each family. Deducting the "poor whites" and negroes in the South who consume little that is taxed and nothing that is imported, and it is probably safe to say that the burden which is laid upon the average well-to-do people of the country, amounts, especially in the wealthier States, to fully $8 per capita.

FIVE thousand and twenty houses in this city, visited week before last by the inspectors of the Board of Health, were found to be inhabited by 25,634 families. Many of the tenements are mere nests of fever and other diseases, and if contagious sickness should break out among them, a carnival of death would inevitably follow. The inspectors report that in many neighborhoods sanitary supervision can accomplish but little until the present buildings are removed and replaced by structures more in accordance with the requirements of public health. How long must the owners of these places be permitted to profit at the expense of the public safety?

THE yellow fever scare in Memphis has stimulated the authorities of Mississippi Valley towns and cities to the performance of a neglected duty, namely, the adoption of thorough precautions against the introduction and spread of disease. The National Board of Health is also employing all the authority at its command to secure a careful sanitary inspection of all places likely to be visited by the fever. The Board is of opinion that the disease is due to a specific, particular cause, which is capable of growth and reproduction, transportable, and may be destroyed by exposure to temperatures above 240 degrees Fahrenheit, or by chemical disinfectants of sufficient strength, if brought into immediate contact. The cases of yellow fever recently observed are considered as due to causes surviving from last year's epidemic, and not to recent importation from other countries. It follows that there is a liability to the appearance of other cases in places visited by the epidemic of last year, and that there is danger of the spread of the disease to the North and East if proper sanitary precautions shall be neglected. If the recent scare shall result in the adoption generally of such precautions, it will not have been altogether mischievous.

NEWS OF THE WEEK.

Domestic.

THE crops in Virginia and Georgia are suffering greatly from drought.

THE Wisconsin Greenbackers have nominated Colonel May for Governor.

A FIRE at the Brevoort Colliery, near Pottsville, Pa., July 15th, caused a loss of $250,000.

SIX cadets of the Military Academy, West Point, have been dismissed for hazing.

HANLAN, the victorious Canadian oarsman, had a great popular welcome at Toronto, July 15th.

PITT'S Agricultural Works in Buffalo, N. Y., was destroyed by fire July 16th, involving a loss of $75,000.

A NEW JERSEY Sunday-school Assembly, attended by some 5,000 persons, was held at Ocean Grove last week.

THE convicted Mormon Elder, George Reynolds, has been transferred from the Nebraska Penitentiary to a prison near Salt Lake City.

THE New Hampshire House by a very large majority has indefinitely postponed the Bill for the abolition of capital punishment.

THE Duke of Argyll and his party, after a visit of two or three days in this city, during which they visited many points of interest, sailed for England July 16th.

PRESIDENT HAYES will spend nearly all of September at his home in Ohio, being compelled to quit the White House by the fear of malaria from the neighboring lowlands.

THE Boston Aldermen have authorized the Mayor to extend official courtesies to any members of the President's Cabinet who may visit the city during the present month.

THE Pennsylvania Democrats have nominated Mr. D. G. Barr for State Treasurer. The Greenbackers have nominated Mr. Peter Sutton, a wealthy farmer, for the same office.

THE Iowa Prohibitionists have nominated a ticket for State officers, headed by Professor G. T. Carpenter for Governor, who positively declines to accept his nomination.

THE new Bureau of Surveys has been fully organized, and intends to devote a year or two of special though not exclusive attention to the mineral lands of the United States.

THE Assembly Railroad Committee, which has been engaged in this city for some weeks in inquiring into railroad management, has adjourned to meet in Saratoga during the third week in August.

THE Oregon Railway and Navigation Company has executed a mortgage for $6,000,000 to the Farmers' Loan and Trust Company of New York as trustees. The money will be used to extend the company's lines.

MR. CHRISTIAN ANDREW ZABRISKIE, one of the millionaires of the famous New York and New Jersey family of that name, was killed by an express train, July 14th, on the New Haven road, at Central Morrisania.

THE Lake George regatta closed on July 18th with a four oared contest between crews from Columbia, Wesleyan and Cornell Colleges, which was won by the former in 8 minutes 26 seconds, considered the best time in slack water on record.

CHARTINE COX was found guilty July 17th, in the Court of General Sessions in this city, of murder in the first degree in the Hall case, and sentenced to be hanged on the 29th of August. On the 19th a writ of error and a stay of proceedings were granted on application of his counsel, the writ being returnable October 6th.

THE steamer *State of Virginia*, which left New York for Glasgow on July 10th, ran aground on a sand-bank on the south side of Sable Island, two hundred miles from Halifax, in a dense fog, on the night of the 12th. All her passengers were landed safely except four women and five children, who were lost by the capsizing of a boat near shore. It is feared that the vessel will become a total wreck. Some of the cattle on board were saved.

FIVE new cases of yellow fever were reported in Memphis, July 17th, they being all in one house. The announcement created fresh alarm, and many people left the city. On the 18th, five other cases were reported and one death took place, making up to that date sixteen cases and seven deaths. On the 19th there were seven new cases and two deaths, and on the 20th ten cases and four deaths. These cases are said to dispel the sporadic theory. The inhabitants are leaving as fast as possible, the poor being sent away by the city authorities.

Foreign.

CHINA is said to be preparing for war with Russia.

THE deficit in the German Budget for 1878–79 is 6,297,821 marks.

THE Canadian four per cent. loan has been fully subscribed in London.

GENERAL GRANT reached Nagasaki, Japan, June 21st. He was welcomed as the guest of the nation.

ALARM is manifested in Germany at the schemes which are on foot to establish biennial sessions and secure appropriations for two years.

THE French Chamber of Deputies has voted urgency for the Bill excluding the religious element from the Superior Council of Education.

THE Empress Eugénie has issued an address, in which she publicly thanks the English people for their sympathy at the death of the Prince Imperial.

A PARIS paper announces that the Minister of the Interior will dismiss all the officials of his department who attended the Prince Imperial's funeral.

THE Turkish authorities having (July 13th) released some officers of the United States ship Quinnebaug, the Turkish naval commander was compelled to formally apologize.

THE laws which empower the French Government to expel Jesuits from France have never been repealed, and it is believed that the Government will enforce them.

A DISPATCH from Callao says the Peruvian authorities there have forcibly removed the Chilian Envoy from on board of a British mail steamer, notwithstanding the protest of the captain.

MR. TENNANT, a Liberal, has been elected to the House of Commons from Glasgow without opposition in the place of Mr. Alexander Whitelaw, a Conservative, recently deceased.

IN accordance with a law passed by the French Senate and Chamber of Deputies, the Council of State, the last stronghold of the Reactionaries, has been remodeled by the appointment of twenty new members.

A CAST OF THE NET.

THE STORY OF A DETECTIVE OFFICER.

CHAPTER I.

ANY one who feels the slightest curiosity as to the date of my story can tell pretty nearly when its events occurred, by various incidents mentioned in it, and which the public know quite as much about as I do; but I do not feel inclined, for certain reasons of my own, to identify the precise date or to name the exact spot at which I was employed in the business.

It was a case for the police—for the detective police—and I was the detective employed. Now you must understand that I was not at this time regarded as a regular detective; I was a sergeant in what we call the "A" Division, and I did ordinary duty; but though I was not yet on the regular detective staff, somehow or another I was very often taken from my usual work and put on all sorts of jobs, sometimes fifty or a hundred miles in the country; and I was once paid a very high compliment by the chief magistrate—of course I mean at Bow Street. He said: "Nickham, you're not a regular detective, are you?"

"No, your worship," I said; "I am not."

"Well, Nickham, you're worth a dozen of them; and I have made a special note of your conduct, and shall send it on to the Commissioner.

The Commissioner was old Sir Richard Mayne then. And that's how I got to be a sergeant; but it was only because I was lucky in two or three cases which the chief magistrate happened to notice.

Well, I was one night at the section-house, for I wasn't on duty, and I was sitting in the large room by myself; for it was a fine evening, and none of the men cared much about chess or draughts or things of that kind. I was reading the paper by myself, when the door opened and one of our people looked in. It was Inspector Maffery, and I was very much surprised to see him there, as our place was quite out of his district. Seeing I was by myself, he said, "Oh!" in a tone which showed he was pleased at it, and, turning to some one outside, he said: "Come in, sir; the party is here by himself." With this a tall, stout, gray-whiskered gentleman came in.

Inspector Maffery closed the door after him, and not only did that, but shot the bolt, and then coming to me at the table, says: "Nickham, this is Mr. Byrle, the celebrated engineer that you have heard of."

Of course I had heard of him; in fact I once had a cousin who worked in his factory. So I bowed and made a civil remark.

Then Inspector Maffery went on to say: "This, Mr. Byrle, is Sergeant Nickham, one of our most active men, as I have told you, and who, I think, is just the man for you. This place is very safe; and as I have bolted the door, and the men below know I am here, there will be no interruption; and you can say anything you wish to Nickham as well here as anywhere."

So they sat down; and with a very polite speech, for he was really a gentleman, Mr Byrle told me what he wanted.

He made a long story of it; I shall not; but the public have really no idea of putting facts well together, and presenting them without any excrescences, if I may say so. However, I listened patiently, and found out what was required. It seemed that his factory had been robbed on several nights, in spite of an extra watchman being put on; and only the completely finished and most expensive engine-fittings were taken, showing that the thief, whoever he was, knew what things to take, where to find them, and where to dispose of them. The robberies were mortifying, because they proved, as all such things do, that the firm were employing a thief, and trusting some one who was deceiving them. The loss of these fittings often delayed other work seriously; and, above all, it was considered that it demoralized all the factory (where the best part of a thousand hands were employed), by showing that the firm *could* be robbed with impunity. So, although it was scarcely the sort of business which a first-rate man was required to work, yet I listened very patiently, and asked such questions as occurred to me. For a civilian, Mr. Byrle seemed pretty sharp at catching my drift; while, as an old hand and knowing what was best with the public, Inspector Maffery sat without saying a word, or one now and again at the most, leaving Mr. Byrle to settle things for himself. I then roughly sketched out a scheme, which in a few words I laid before the gentleman.

"I understand your plan entirely, Mr. Nickham," said the old gentleman; "and the sooner you begin the better, for I feel we shall be successful. Mr. Maffery assures me you can be relieved from your duty here at any time; so I trust there will be no delay. I have said money is not to stop you, and you will take this on account of expenses—when exhausted, let me know." With that he handed me a bank-note, and I thanked him, and, of course, promised to do my best.

Then Inspector Maffery said: "I will see to all the essentials, Nickham, so make your preparations as soon as you can."

Now I liked Maffery very well, and he was certainly one of our best inspectors; but all this civility, taking trouble off my hands and so forth, merely told me that Mr. Byrle was a most liberal party, and that Maffery believed he had got hold of a good thing. Mr. Byrle shook hands with me, and they went away together, leaving me to think over the business.

I must confess I was a little disappointed—although I could see I was likely to be well paid for my work—in being set at such a very commonplace job as this. After I had traced Lady Brightley's jewels, I thought I should have been selected for the most important work; and when Inspector Maffery brought Mr. Byrle in, I really hoped it was about the great Bank-paper robbery.

The reader is quite aware, I have no doubt, that Bank of England notes are printed on paper specially made for the purpose, and that no other paper has three rough edges, the only clean-cut edge being where the two notes have been separated—and this is one of the great tests of a genuine note. It will be recollected, too, how a great quantity of this paper was stolen from the mill at Alverstoke, and the Bank was in a terrible state about it, because as for engraving and all that handicraft sort of work—why, bless me! there's men by the dozen in England and on the Continent, too—*I* know some of them—who could print off a note with all the little touches on which the examiners rely as perfectly imitated as if they had worked for the Bank for years. So when the gang got hold of the genuine paper, it was a serious matter. They took the principal thief, however, and got the paper back. A desperate service it was, too, as I——, the chief man in the affair, was one of the most resolute and desperate roughs in London; and the officers that took him ran great risk, and deserved great praise.

Of course, the public rejoicing was very great, because nobody had known when the bad notes might come into circulation; but we knew, some of us, that it was all a sham, that a lot of the paper was still missing, and that if the right man got hold of it there would soon be thousands of forged notes—all fives, probably—flying about. It was pretended that all the paper was got back, or that the Bank people thought so, on purpose to make the holders of the remainder think that the hunt was given up; but it was no such thing. Two or three of the best men in the force were to continue the search, and I had hoped I should be selected; but I was told I would not do, because I could not speak any foreign language, and it was thought the men might have to go abroad after the paper. For all that, when I saw Inspector Maffery come in with Mr. Byrle, I thought, as I just said, that I was to be chosen. However, I had found out my mistake, and I was thinking over my instructions when the door opened again. I did not look up at first, supposing it was one of our men; but a cough attracting my attention, I turned round. I saw a slight-built, rather under-sized young fellow, with something of a foreign cut about him, very good-looking, though, and a most uncommonly piercing eye, and he at once said: "I am Mr. Byrle's clerk, and have been waiting for him, and he wishes to know where he is to see you?"

"To see me?" I said. "Why—does he want to see me?"

"I think what Mr. Byrle means is, that in case he wants to speak to you, where shall he find you?" replied the young fellow. "You see I don't know much of the business myself; I only know he has engaged you as a detective."

"And that's more than you ought to have known," I said; "however, Mr. Byrle knows his own business best. Tell him that of course he can always hear of me under the name agreed upon, at the Yarmouth Smack, where I shall lodge."

"Under what name, did you say?" asks the clerk.

"I didn't say any name, and I don't mean to say any name," was my answer. "If Mr. Byrle wants any more information, he had better write."

"Oh, very well," says he, quite short and sharp, for I supposed he did not like my manner, and away he goes.

I sat and thought, or tried to think, but I could not get on so well as before; the visit of that young fellow had unaccountably upset me, and I could not settle down again. Then in came first one, then another, then two or three, of our men, and so I got up and went out. I had scarcely turned the corner when I met Inspector Maffery, and it was pretty easy to see by his rosy cheeks and unsteady eye what *he* had been up to.

"Off for a meditative stroll, I suppose, Mr. Nickham," he says. "You are the boy for my money."

"I'm glad to hear it, inspector," I said. "But I don't think much of Mr. Byrle's clerk, nor of Mr. Byrle himself for his judgment in sending him to me."

"Mr. Byrle's clerk!" he says; and then repeats it: "Mr. Byrle's clerk!"

"Ah!" I said. "Mr. Byrle's clerk. He came with a message from Mr. Byrle to know where he should meet me if he wanted to see me. I had already settled with him how I would call at his manager's private house with my report, whenever I had anything to say; and he ought to have been satisfied with that."

"You are making some mistake here, Sergeant Nickham," says Inspector Maffery. "Mr. Byrle had no clerk with him; and, moreover than that, I've been with him myself till the last five minutes; till he got into the train, in fact, and can swear he never spoke to anybody but myself from the time I left you."

"Then there's a screw loose!" I said; "there's a something wrong here, inspector, and we have got to deal with uncommonly deep files. They have scored the first notch in the game, that's clear, but perhaps we can turn the tables on them all the better for it."

"If there's a man in the force as can do it, Sergeant Nickham, you are that man," says Inspector Maffery. "I'll trust it to you; for my head just now isn't up to the polishing-off of such a business. But do what you like."

"Can I have Peter Tilley for a week, inspector?" I said.

"Have half-a-dozen for a month, if you like," he answered. "Mr. Byrle is that much in earnest, Sergeant Nickham, and he is that rich and liberal, that he would buy up half a division rather than be beaten. So pick who you like, and keep them as long as you like. I will see you all right."

"Very good, inspector," I said. "Then I will have Peter to-morrow; and don't make any report of this little adventure, not even to Mr. Byrle. I think I see the little game, and I will try to spoil it."

If I had had any doubt as to the inspector having had quite enough brandy-and-water with Mr. Byrle (it was sure to be brandy-and-water, for Inspector Maffery never touched anything else; he said it was ordered for his liver)—I say if I had felt any doubt before, I should have had none after the way he wrung my hand and said: "If there's a man on the force as can do credit to the force and bring 'em through in triumph, that man is Sergeant Nickham." And so, with another squeeze of my hand, he walked away with a step so excessively solemn and stately, that it was only a little better—a very little—than staggering across the pavement, in the way of telling what was the matter with him; but Inspector Maffery was not a bad fellow, and never carried favor with those above him by worrying and spying on those below him, and so we liked the old boy.

Now this was a very awkward incident—I mean, of course, about the clerk—and showed me that my work had already begun, and was likely to be a little more intricate than I had expected. How the stranger came to know so much as he evidently did, I did not trouble myself just then to consider; he *did* know it; that was the fact I was concerned with. Why it was worth his while to take so much trouble about a small affair, I did not much care either, though this was more important, as it was evident some one had employed him, for I would swear he was no smith or fitter; and so it was clear there was a good many in the swim. I don't mean to use any slang if I can help it, but "swim" is a regular word, you know, and we can't do without it.

My mind was at once made up; I was always very quick in making up my mind, and prided myself upon it. I am bound to admit I often got wrong through it, but perhaps no oftener than people who were slower; and I took care to make a good deal of the times when I was right, and so that covered everything. Now, Peter Tilley, the officer I had asked for, was a man as much about my size and build and color of hair and eyes, as if he had been my twin-brother; and indeed he was not much unlike me in his features. Any one who knew us would not mistake us for each other, but a casual acquaintance might do so. I was wearing then rather extensive mustaches and whiskers; they gave me quite a military cut; and they were not common in the force then, though any man wears them now that chooses. I at once determined to shave them off—for I never allowed personal considerations to interfere with business—and make Tilley wear a set of false articles as much like my own as possible; and this I knew would immensely increase his resemblance to me as I appeared that day, while I should, of course, look very unlike myself. Then I would send Tilley to the Yarmouth Smack—which was a public-house at which, under some disguise, I had agreed to lodge while on my search—and he could keep his eyes open for anything going on; but he was not to trouble himself much. It was uncommonly likely, I thought, that the spies—for I didn't doubt there was more than one—would make sure that Smith or Brown or Jones, or whatever Tilley called himself, the lodger at the Yarmouth Smack, was Sergeant Nickham, and so, as long as they kept him in sight, they had the trump-card, if I may be bold enough to say so, in their hands. And if I had not met Inspector Maffery when I did, when the clerk's visit was fresh upon me, and I was rather out of temper about it, I should probably never have thought of mentioning the matter, and the detective work would have begun on the wrong side.

Byrle & Co.'s factory was close to the Thames, and had a wharf in connection with it, and one waterside public-house would do as well for me as another. In fact, as the receiver was as likely to live on the opposite bank as on their own, I might actually gain by living at some place with the river between me and the factory, for a boat could easier cross the river in the dark than a cart could drive through the narrow streets and lanes without being noticed.

I told Tilley as much of my plan as was necessary; he was delighted to help me, for he fancied I was a rising man, and it was something of an honor to work with me. He was willing enough to wear the mustache, too; indeed, this was such a common and natural sort of disguise, that it was adopted quite as a matter of course. I did *not* tell him that I wished him to be mistaken for me; I took care to choose the mustache and whiskers; but it never occurred to him why that particular style was chosen; nor did I tell him, or Inspector Maffery or Mr. Byrle, that I was going to shave. There's nothing like keeping your own counsel in these cases; and I resolved that if I had occasion to report anything to the inspector (for he was supposed to have the case in hand), I would actually wear a false mustache myself; but it was specially arranged that I should not go near any of the authorities until I thought it desirable, for Mr. Byrle was of the opinion that if the least suspicion got afloat with regard to myself, the men who were robbing him were quite fly to watching where I went. (I am afraid I have dropped into slang again; to be "fly" to a thing, means that you are up to it, or down to it, as some prefer to say.) Well, this was Mr. Byrle's opinion, and, I am bound to say, after the visit of the sham clerk, it was mine, too.

CHAPTER II.

BY ten o'clock on the following morning I had sketched out my plan, and, more than that, I was down at the water-side and looking after a lodging, for I never let the grass grow under my feet.

I was not likely to be very particular about my lodgings in one sense, though in another I was more particular than any lodger that ever came into the neighborhood; and after a little trouble I pitched upon a public-house again, chiefly because my going in and out would attract less attention there than at a private house; so I secured a small second floor back room at the Anchor and Five Mermaids, or the Anchor, as it was generally called, for shortness.

The great recommendation of the Anchor and Five Mermaids was that it was nearly opposite to Byrle & Co.'s engineering shops, a ferry existing between the two places; this ferry was reached by a narrow, dirty lane, which ran by the side of the Anchor, and I could see that numbers of the workmen came across at dinner-time. The Anchor stood at the corner, one front looking on the lane, the other upon the river; and once upon a time there had been, not exactly a tea-garden, but arbors or "boxes" in front of the house, where the customers used to sit and watch the shipping; but this was all past now, and only the miserable remains of the arbors were there; and it was as dull and cheerless a place as the tavern to which Quilp took Sampson and Sally Brass in the "Old Curiosity Shop," of which indeed it reminded me every time I looked at it.

I always had a readiness for scraping acquaintances; in fact, it is not much use of your being a detective if you can't do this. If you can't be jonnick with the biggest stranger or lowest rough, you are no use on that lay. I really must avoid slang terms; but "jonnick" means hearty and jovial; on a "lay" means being up to some game or business. Before the first dinner-time had passed, I had got quite friendly with two or three of Byrle's hands who came into the Anchor to have their beer; and I learned some particulars about the firm, and then about the gatekeeper, that helped me in my ideas.

Directly after they had all gone back, I went over, too, and the dinner-traffic having ceased, I was the only passenger. The ferryman did not like taking me alone, but he was bound to do it; and he looked as sulky as if he was going to be flogged at a cart's tail. He was a tall, bony-headed fellow, between fifty and sixty, I should say; and I noticed him particularly because of an uncommonly ugly squint in his left eye. In accordance with my plan, I began talking cheerfully to him while he was pushing off from the shore; but he didn't answer me beyond a growl. Then I offered him some splendid chewing tobacco, which a "friend just over from America had given me." Really and truly I had bought it within a quarter of a mile of the Anchor and Five Mermaids, but he wasn't to know that. *I* can't chew; I hate the idea; but I put a piece of the tobacco in my mouth, knowing how fond these waterside men are of the practice, and how friendly they get with one of the same tastes. To my surprise, he would not have it, and I was glad to pitch my plug into the river when he turned his head away. But, confound these cock-eyed men! there is never any knowing where to have them. He had not turned far enough, I suppose, or I didn't make proper allowances for his squint, for as I threw my plug away with a shudder—it had already turned me almost sick—I caught his plaguy cross-eye staring full at me. I knew it was by the expression on his face; that was my only guide, for an astronomer could not have told by his eye in which direction he was looking.

The ferryman pulled well, however, and just as we got athwart the bows of a short, thick-looking craft—it is of no use my trying to say what kind of a craft she was—I can't tell one from another—a voice hailed us. "Ay, ay," says the boatman, lifting his sculls; "do you want to go ashore, captain?" "Yes," returned a voice, and I looked up and saw a man leaning over the side of the vessel, and the boatman sending his wherry close under the ship, the stranger slid down by the rope very cleverly and got in. Though the boatman had called him "captain," and though he was very clever with the rope, he didn't look altogether like a regular sailor; he was a dark, full-faced man, with black eyes, a dark mustache, and curly, greasy-looking hair.

The stranger said a few words in a very low tone to the boatman, evidently to prevent my overhearing, and then nothing passed until we landed. The sulky ferryman took his fee without a word, and then I went straight to the wicker-gate of Byrle's factory, where, of course, I found the gatekeeper. I stated that I was in want of employment, and heard that they were taking on laborers, and had applied for a job.

"No; I don't know as we want any more hands," said the man, who was sitting down in a little sentry-box; "and we have had plenty of people here; besides, you're lame, ain't you?"

"A little," I said, limping as I moved; "not very bad, a kick from a horse some years ago."

"Ah, you won't do for us, then," he said; "but I'm sorry for you. *I'm* lame too, from a kick of a horse. I can't stand without my stick," here he rose up to let me see him; "but you see I was hurt in the service, and the firm have provided for me. I'm very sorry for you, for it's hard to be slighted because you are a cripple. Here is sixpence, old fellow, to get half a pint with, and I wish I could make it more."

I took the sixpence, and thanked him for his kindness; he deserved my thanks, because he wasn't getting more than a pound a week, and had four or five little children. I found this out afterwards.

I was satisfied at having made a friend who might prove useful, but I had one or two more questions to ask him, and was thinking how I could best bring them in, when he said hurriedly: "If you could get hold of Mr.

Digitized by Google

Byrle by himself, he might do something for you, for he is a very good sort, and you seem strong enough in every other way, and would make a good watchman, I should think."

Yes; he did not know how good a one!

"Mr. Byrle senior or junior?" I asked, on the strength of my information from the hands at the Anchor.

"Junior! Oh, lor! that wouldn't do at all!" exclaimed he, with quite a gasp, as if the idea took his breath away. "It's a case of 'Oh, no, we never mention it,' with him. He's seldom at home, and when he is, he and the old gentleman lead the very —— Here you have it! Here's Mr. Forey, the only foreman in the place who would listen to you. Now, speak up!"

Mr. Forey, a dark-whiskered, stoutly built man, came up, glancing keenly at me as a stranger; so touching my cap, I again preferred my request to be taken on as a laborer.

"I don't like lame men," he said; "but there does not seem to be a great deal the matter with you. You say you can have a first-rate character. We shall be making changes next week, and there's no harm in your looking round on Monday morning at nine sharp. Stop! I can give you a job now. Do you know how to get to T——?"

"Yes, sir," I said.

"Then take this letter to Mr. Byrle, and bring back an answer," said Mr. Forey. "If he is not at home, ask for Miss Doyle, who may open it. I want an answer this afternoon; so cut off! Stay! here's a shilling for your fare; it's only tenpence, you know; and I'll leave eighteenpence with Bob here at the gate for your trouble."

I took the shilling, Bob winking triumphantly at me, as if to say it was as good as done, and I left the yard.

(To be continued.)

THE CENTENNIAL ANNIVERSARY OF STONY POINT.

IF "Mad" Anthony Wayne had a hot time of it on the 16th of July, 1779, the artist and I, on the 16th of July, 1879, had much to complain of on the score of caloric. The boat in which we sailed up the lordly Hudson was a perfect oven, and from this oven we emerged into a heat such as flashes upon one from the open mouth of a furnace at full blast. The breeze that fanned our cheeks while on the river was such as preludes the dreaded sirocco. The sun that cast its sheening light upon us as we landed at Stony Point sought to scorch our very marrow, and the ascent to the fort was simply an ordeal by fire. The scene, as we approached the theatre of "Mad" Anthony's brilliant exploit, was intensely, marvelously picturesque. In the background rose the giant mountains of the Highlands, clad with glistening verdure to their summits, and forming a green rampart against the keen, luminous blue sky. Here and there from out the foliage peeped forth tiny white villages, timidly approaching the mirror-like waters of the placid river, while right and left wooded hills and hooded hollows stretched away in the hazy distance. On our left Stony Point stood boldly to-day as it did one hundred years ago, the ruins of the old fort that "Mad" Anthony so gallantly stormed gayly decked with the Stars and Stripes, as indeed was every available spot on the classical promontory, the red and blue in superb contrast with the sun-lighted foliage. In front of the Point and grimly confronting it, like a pair of watch dogs, lay two vessels-of-war—the *Minnesota* and the *Saratoga*—displaying bunting from topmast truck to bowsprit, the shadows clean cut in the mirrored water, their guns run out at the ports ready for action, while across the river skimmed their saucy steam pinnaces, radiant in snow-white awnings and flags that had never a breeze to wave them. All over the water were dotted pleasure craft, from the brick-carrying schooner from Haverstraw, hastily pressed into the service, to the inevitable canoe, from the palatial river steamer to the saucy steam-launch. Every deck was crowded, and the white sails and many-tinted parasols and dressings of the fairer sex threw such color into the scene as one only sees in "a bit of Fortuny." At the landing we got mixed up with elderly gentlemen, arrayed in the uniform of the Continentals, seemingly peculiarly adapted to the purposes of opera bouffe, and with members of other regiments boasting equally remarkable warlike raiment. These warriors of a hundred years ago, wiping their dripping heads in nineteenth-century pocket-handkerchiefs, used language as profane as that uttered by "Mad" Anthony to General Washington, when the latter proposed to storm the fort, and at a very early stage in the proceedings silently disappeared as though they were the ghosts of the men who formed the forlorn hope on that memorable July night in 1779. Country folk mustered strong, as did venders of a decoction facetiously termed lemonade; while excursionists, bewailing the evil destiny that cast them upon this stony gridiron, simmered, sweltered, grilled, and feebly gasped the single word "water," with tongues parched to the dryness of the old letters read out by Colonel Febiger. There was a marquee, striped like a zebra, beneath which hundreds packed themselves—not to listen to the oration, not to hear what the original Colonel Febiger wrote to his wife, not to hear how "Mad" Anthony offered to storm even a warmer place at his General's bidding, but simply to gain respite from the scorching, flaming rays of a sun that seemed to be coming up out of the earth as well as down out of the sky. General Joseph A. Hawley was the orator, and well did he acquit himself, despite difficulties such as hedged the task given by the gods to Sisyphus, and Judge Sutfern, of Rockland County, welcomed the perspiring and miserable patriots in a harangue which, at a lesser temperature, would have elicited such a storm of cheers as would have caused the craft on the river to swing again at their moorings. There was no sham battle, the struggle with King Sol being all too real, and ere the coming storm caused heaven's artillery to crash o'er Stony Point, the visitors were well homeward, uttering the common witticism, "Well, I guess it will be a hundred years before *I* am caught at Stony Point again."

THE EASTERN TORNADO OF JULY 16TH.

THE tornado which swept Massachusetts on the afternoon of Wednesday, July 16th, was unprecedented in violence for that region. It started in New York, causing much damage along the Mohawk Valley, and passing through Herkimer, Fulton, Montgomery, Schenectady, Albany and Rensselaer Counties. Shortly after two o'clock it struck the southern suburbs of Pittsfield, near the western boundary of Massachusetts, and it sped through the length of the State at the average rate of at least seventy miles an hour, reaching Boston at 4:15. In its course down from the Berkshire Hills to the sea-coast it took several swinging curves, and the whole breadth of New England, in varying degree, was included in its sweep. In the Connecticut Valley it struck Northampton and Springfield with furious force and Hartford comparatively lightly, while Fitchburg, thirty miles to the north, further on, received it heavily, and so again Needham and the towns southwest of Boston.

The damage has been literally immense in its sum total, and the loss of life terrible in the aggregate. Ruined crops, especially corn-fields and fruit-trees, in the rural regions, and roofless and chimneyless houses, with the windows battered in by hailstones, in the towns tell the story of this midsummer tempest's devastation. Had an invading army fought its way across the commonwealth its ravages could scarcely have been more extensive. Not less than twenty buildings were more or less completely demolished in Pittsfield and vicinity, to say nothing of the uprooting of hundreds of large trees, with the attendant casualties—fifteen in Northampton and two in Fitchburg. The storm in Boston was probably the severest at the Neck. Upon striking the city it seemed to split into two currents, the one striking the South End and the other spending its greatest force to the north of the city limits.

Along Revere Beach the tornado was felt with terrible violence. The immense skating pavilion at the Atlantic House was totally demolished, as were also some of the smaller buildings near at hand. At the Ocean House several trees were uprooted, sheds destroyed and general havoc made. Along the beach many of the smaller houses were overturned, and scarcely a bath-house is found intact at any point. The wind was so strong that the sand was taken up in dense clouds and carried across the beach into the bay, and in many instances windows were broken by the hailstones, which were of immense size. The storm headed towards Nahant and passed over that peninsula.

At Nahant the Cadets' marquee and cook tents were blown down, and two locomotive headlights, valued at $100, destroyed. Along the road from Lynn to Nahant a number of teams were blown over and some damage resulted. A barouche, belonging to a Nahant party, was totally wrecked. All along the streets of the town beautiful trees were prostrated, and a large number of small buildings and bathing-houses blown down along the shore.

Northampton is despoiled of its beautiful shade trees, mostly large elms, for which it is noted; there being some fifteen uprooted on Elm Street alone, through which the tornado passed with marvelous rapidity.

The greatest loss of life was on the water, and the sad fate of the Dundon family is one of the most melancholy incidents of the storm. The party, numbering six persons, and consisting of Mr. Thomas Dundon, engineer on board the lightship at Wood's Hole, his wife, two sisters, Misses Mary Ann and Susan Dundon, his niece, Miss Lizzie Dundon, and Master Arthur Beam, left Charleston about 8:30 o'clock in the yacht *Myrtle*, and passed the early portion of the day below. Seeing the approaching storm, Mr. Dundon made sail for the city, and was met by a squall on Bird's Island Flats, off East Boston Point. Finding it impossible to reach the city, Mr. Dundon placed his wife, two sisters and niece in the yacht's tender, and before the boy and himself could get on board, the tender was blown away from the yacht and swamped, the yacht meeting the same fate. Mr. Dundon was forward when the yacht went down, and he clung to the mast as long as it was out of water, and then he drifted towards the shore and was picked up in an exhausted condition by the tug *Vim*, which had a brig in tow. The bodies of Mrs. Dundon, Mr. Dundon's sister Mary Ann, aged forty-five, and his niece Lizzie, aged twelve, the daughter of Captain Dundon of the buoy-boat *Daisy*, were also recovered by the crew of the tug *Vim* at a late hour, but those of Miss Susan Dundon, aged twenty-eight, and Master Arthur Beam, aged fourteen, had not been found at last accounts.

CLUB LIFE IN SAN FRANCISCO.

THE visitor to San Francisco cannot fail to be impressed with the delightful thoroughness with which the amenities of social life are observed. A city without distinctive organizations among its people would be quite a dreary waste, in spite of commercial eminence or architectural attractions. Club life, the world over, is a cosmopolitan tie, and does more than any other influence to make a traveler feel "at home," wherever he may lay down his satchel and umbrella.

In the remarkable metropolis of the Pacific, just as elsewhere, the merchant, the banker and the professional man seek quiet and recreation in the salons of the clubs. These will aggregate over 2,000 members now, and the number is increasing weekly. The "Union" Club, located in Wells, Fargo & Co.'s building, on the corner of California and Montgomery Streets, was incorporated in November, 1865. It partakes more than any other of the features of an English club, and is representative of much of the wealth of the city. The initiation fee is $200, and the monthly dues $10. The oldest club in the city is the "Pacific," which was organized in 1852, and is located on the corner of California and Webb Streets, the building of the San Francisco Savings Union. It is a decidedly exclusive corporation. With the "California" Club, on Sutter Street, these form the aristocratic organizations, having for their objects the maintaining of rooms for the convenience, comfort, amusement and general benefit of their members.

A distinctive feature of the San Francisco Turnverein, organized in 1853, is that no one can become a member unless he can speak the German language fluently. It has a theatre, gymnasium, and a school for boys and girls, besides the usual apartments required for liberal club life. The Caledonian is for the encouragement and practice of Scotch games and music, and the preservation of the manners and customs of Scotland. The Concordia is almost exclusively German, and is located on the corner of Stockton and O'Farrell Streets. The Bar Association has a club-house at Nos. 632-4 Sacramento Street, with billiard and other rooms. To become identified with it a person has to be a member of the Bar in good standing. The initiation fee is $25, and the monthly dues $5.

For absolute freedom, uninterrupted pleasure, congenial and stirring companionship, wit, snap, dash, and the true Yankee go-ahead *esprit*, the visitor should seek admission to the quarters of the Bohemian Club, on Sacramento Street, near Montgomery. This club was organized April 1st, 1872, for the association of gentlemen connected professionally with literature, art, music, and the drama—and as if these walks would not accommodate a sufficient number of desirable people, the range was extended so as to include those who loved or appreciated these intellectual employments, and were otherwise eligible. The badge of the club consists of a shield, upon which an owl is perched on a grinning skull bearing across the breast the motto, "Weaving spiders come not here." Once a month a "High Jinks" is held. This is an entertainment for members and their guests, during which the actor, the singer, the artist, the writer and the musician are drawn upon liberally for contributions to "a high old time." So popular is the club that the very best talent has been drawn to it, and the "Jinks" are marvels of intellectual feasts, never dull or lagging, always interesting, and in general decidedly brilliant.

The apartments, which embrace a reception, reading, smoking and card rooms, with kitchen and theatre or concert hall, are always open, and at any time in some of them groups of men eminent in the several professions may be seen gathered there, seeking recreation or amusement, or discussing questions of public interest. For many years a single word was sufficient to develop an animated debate on the Chinese question, and now that for a season the adoption of the new Constitution of the State is exciting general comment, just mention Kearney, the "Honorable Bilks," or "New Cons—" and you will open the floodgates of eloquence, vehement, invective.

Within these rooms you may learn more about California, San Francisco, leprosy, the Chinese, the hoodlums, mines and mining, the bonanza magnates, rings, corruption, the world and everything in, above and below it, in an hour, than you could acquire elsewhere in a lifetime.

It is related of Humboldt, that, being seated next to a society-lady at a supper, he was astounded at the request to give, in the fifteen minutes that must elapse between the first two courses, "a history of the entire world." In the Bohemian Club, with its representatives of all professions, countries and ladies, such a limited narrative would scarcely be impossible.

In addition to these clubs, there is the Olympic formed in 1873 by the consolidation of the San Francisco Olympic and the California Olympic Clubs. In it there are classes for exercise in gymnastics, boxing and fencing, both for the members and their lady friends. There are also in the city a number of organizations not designated as clubs, although having many features in common with them, such as the "Dashaway," a temperance association of far-famed reputation and the owner of one of the most elaborate buildings in the city. A professional club man, from whatever part of the world he may hail, certainly need not feel lonesome while stopping at the city with the Golden Gate to the ocean.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

Tributes of Sympathy for the Ex-Empress.

From the moment intelligence was received in London of the death of the Prince Imperial of France, the residence of the ex-Empress, Camden Place, Chiselhurst, has been daily visited not only by large numbers of the aristocracy and upper class of society, but by working people of both England and France, who called to inquire about the health of the ex-less widow, and to leave messages of personal sympathy. While many stopped at the lodge gate, others penetrated to the lodge itself and wrote their names with appropriate sentiments in the visitors' record book kept there.

The Imperial Golden Wedding.

We give two additional engravings of the grand celebration of the golden wedding of the Emperor and Empress of Germany. The first one represents the Imperial pair as they appeared in the drive through the principal streets of Berlin after the ceremony. The enthusiastic populace everywhere greeted and hailed the aged couple with hurrahs and acclamations. The second engraving represents the members of the Royal and Imperial family offering their congratulations to the Imperial pair in the grand White Saloon of the Imperial palace. Owing to the feebleness of the Emperor, he was compelled to lean upon a stout cane during the various ceremonies.

The Execution of Solovieff.

The dastardly attempt upon the life of the Czar of Russia on the 2d of April last was expiated on the 9th of June. Solovieff was hung outside the city on the parade-ground in the plain of Smolensk. At 9:50 A. M. one of the prison-carriages, drawn by a single horse, approached the spot. Solovieff sat with his back to the horse, his arms tied, and bearing upon his breast a placard inscribed: "State Criminal." He was dressed in black, wore high boots, was pale but very calm. The executioner, dressed in a red coat and black waistcoat, seized the prisoner upon the arrival of the carriage, and, assisted by a grey-bearded priest, attempted to help him up to the scaffold; but Solovieff grossly refused all assistance, and walked calmly to the pillory and placed his back against it. His death-warrant was then read, while the soldiers presented arms. Again Solovieff refused the ministrations of the priest, and calmly mounted the scaffold. The rope was placed around his neck, and, amid the roll of the drums, the steps were kicked from beneath his feet, and the Czar's would-be assassin was launched into eternity. Our sketch was made during the reading of the death-warrant.

Inauguration of the East Algerian Railway.

On May 20th, 1879, the East Algerian Railroad, extending from Constantine to Setif, in Algeria, was inaugurated by M. Albert Grévy, the newly-appointed Governor-General of that country at the Telergma Station. The Governor and suite were conducted to a large tent where a collation was spread for two hundred and fifty guests. At the left, in the plain, was a long file of Arabs, in their white burnous, standing silent and motionless, contemplating with wonder these things so new to them. In the rear of these, mounted on their horses and with their guns in hand, were the Arab horsemen of the province, the horses all highly decorated for the occasion, being covered with rich cloths, blue, violet, red and yellow, and their riders clad in their finest costumes. Upon the arrival of M. Grévy with the General Commandant of the province, M. Jarel, the delegate of the East Algeria Railroad, and M. Graux, the Prefect of Constantine, they were presented to the Arab chiefs assembled. Each in turn advanced, bowed to M. Grévy, spoke a few words which were translated by an interpreter, and then resumed his usual motionless position. The Governor-General responded, saluting them, and entered the tent followed by the invited guests.

The Signing of the Peace.

After about three weeks' personal negotiations between Major Cavagnari and the Ameer Yakoob Khan, the definitive Treaty of Peace was signed at Gundamuk on May 26th. We have already given the details of the treaty itself, of which the terms are satisfactory on both sides, the British obtaining every desired political and commercial advantage, including, of course, the "scientific frontier," which comprises the Kuram, Pishin and Sibi Valleys, together with the complete control of the Khyber and Michin Passes, the Ameer's foreign affairs being henceforward conducted directly under the supervision of the British, who moreover are to have a Political Resident at Cabul. On his side the Ameer is to receive an increase of rupees annually. Yakoob Khan is said to be exceedingly pleased with the result of his visit to the British camp, and he is very grateful to the Viceroy and Major Cavagnari for the favorable treaty granted him.

The Insurrection in Algeria.

On the 21st of May last an insurrection took place at Batna which proved the springing of a mine. Some Arabs of the tribe of Ouled-Daoud, in the mountains of Aures, in the province of Constantine, revolted against their Cadi, Si Ben-Daid. The commandant of the place immediately sent an officer, M. Corbé, with seven men to quell the insurrection, but instead of finding some twenty Arab insurgents M. Corbé was confronted by three hundred men superbly mounted and armed to the teeth, and led by a chief named Mohammed-ben-Abd-er-Rhaman. M. Corbé called to his aid some two hundred Arabs whom he regarded as trustworthy, but on the night of the 24 of June the insurgents pounced upon his camp, his two hundred fled without striking a blow, the seven troopers were killed or wounded, and M. Corbé alone succeeded in effecting his escape. This success caused the insurrection to spread like wildfire and until it became necessary to crush it by calling out a very considerable force. Our illustration represents the entrance to the gorge of Touba, a deep road bounded on the right and left by enormous rocks. To the right is to be seen the village of Touba, with the fourth battalion of Chasseurs in the order of assault.

AT HOME AND ABROAD.

—ALL the Crown possessions in Russia have been declared untaxable.

—THERE are 7,000 lakes in Minnesota, representing about 2,000,000 acres of water.

—AN evidence of the hard times in Edinburgh is found in the unprecedented number of workmen enlisting in the army.

—LIFE-SAVING stations are to be erected in Texas at Sabine Pass, Galveston Island, Pass Cavallo, Aransas and Brazos Santiago.

—PHILADELPHIA is to have an elevated railroad in the centre of the city, connecting with the Pennsylvania road by the way of Filbert Street.

—THE inauguration of the Burns monument at Kilmarnock will take place on the 9th of August. The entire cost of the work will, it is said, be about $15,000.

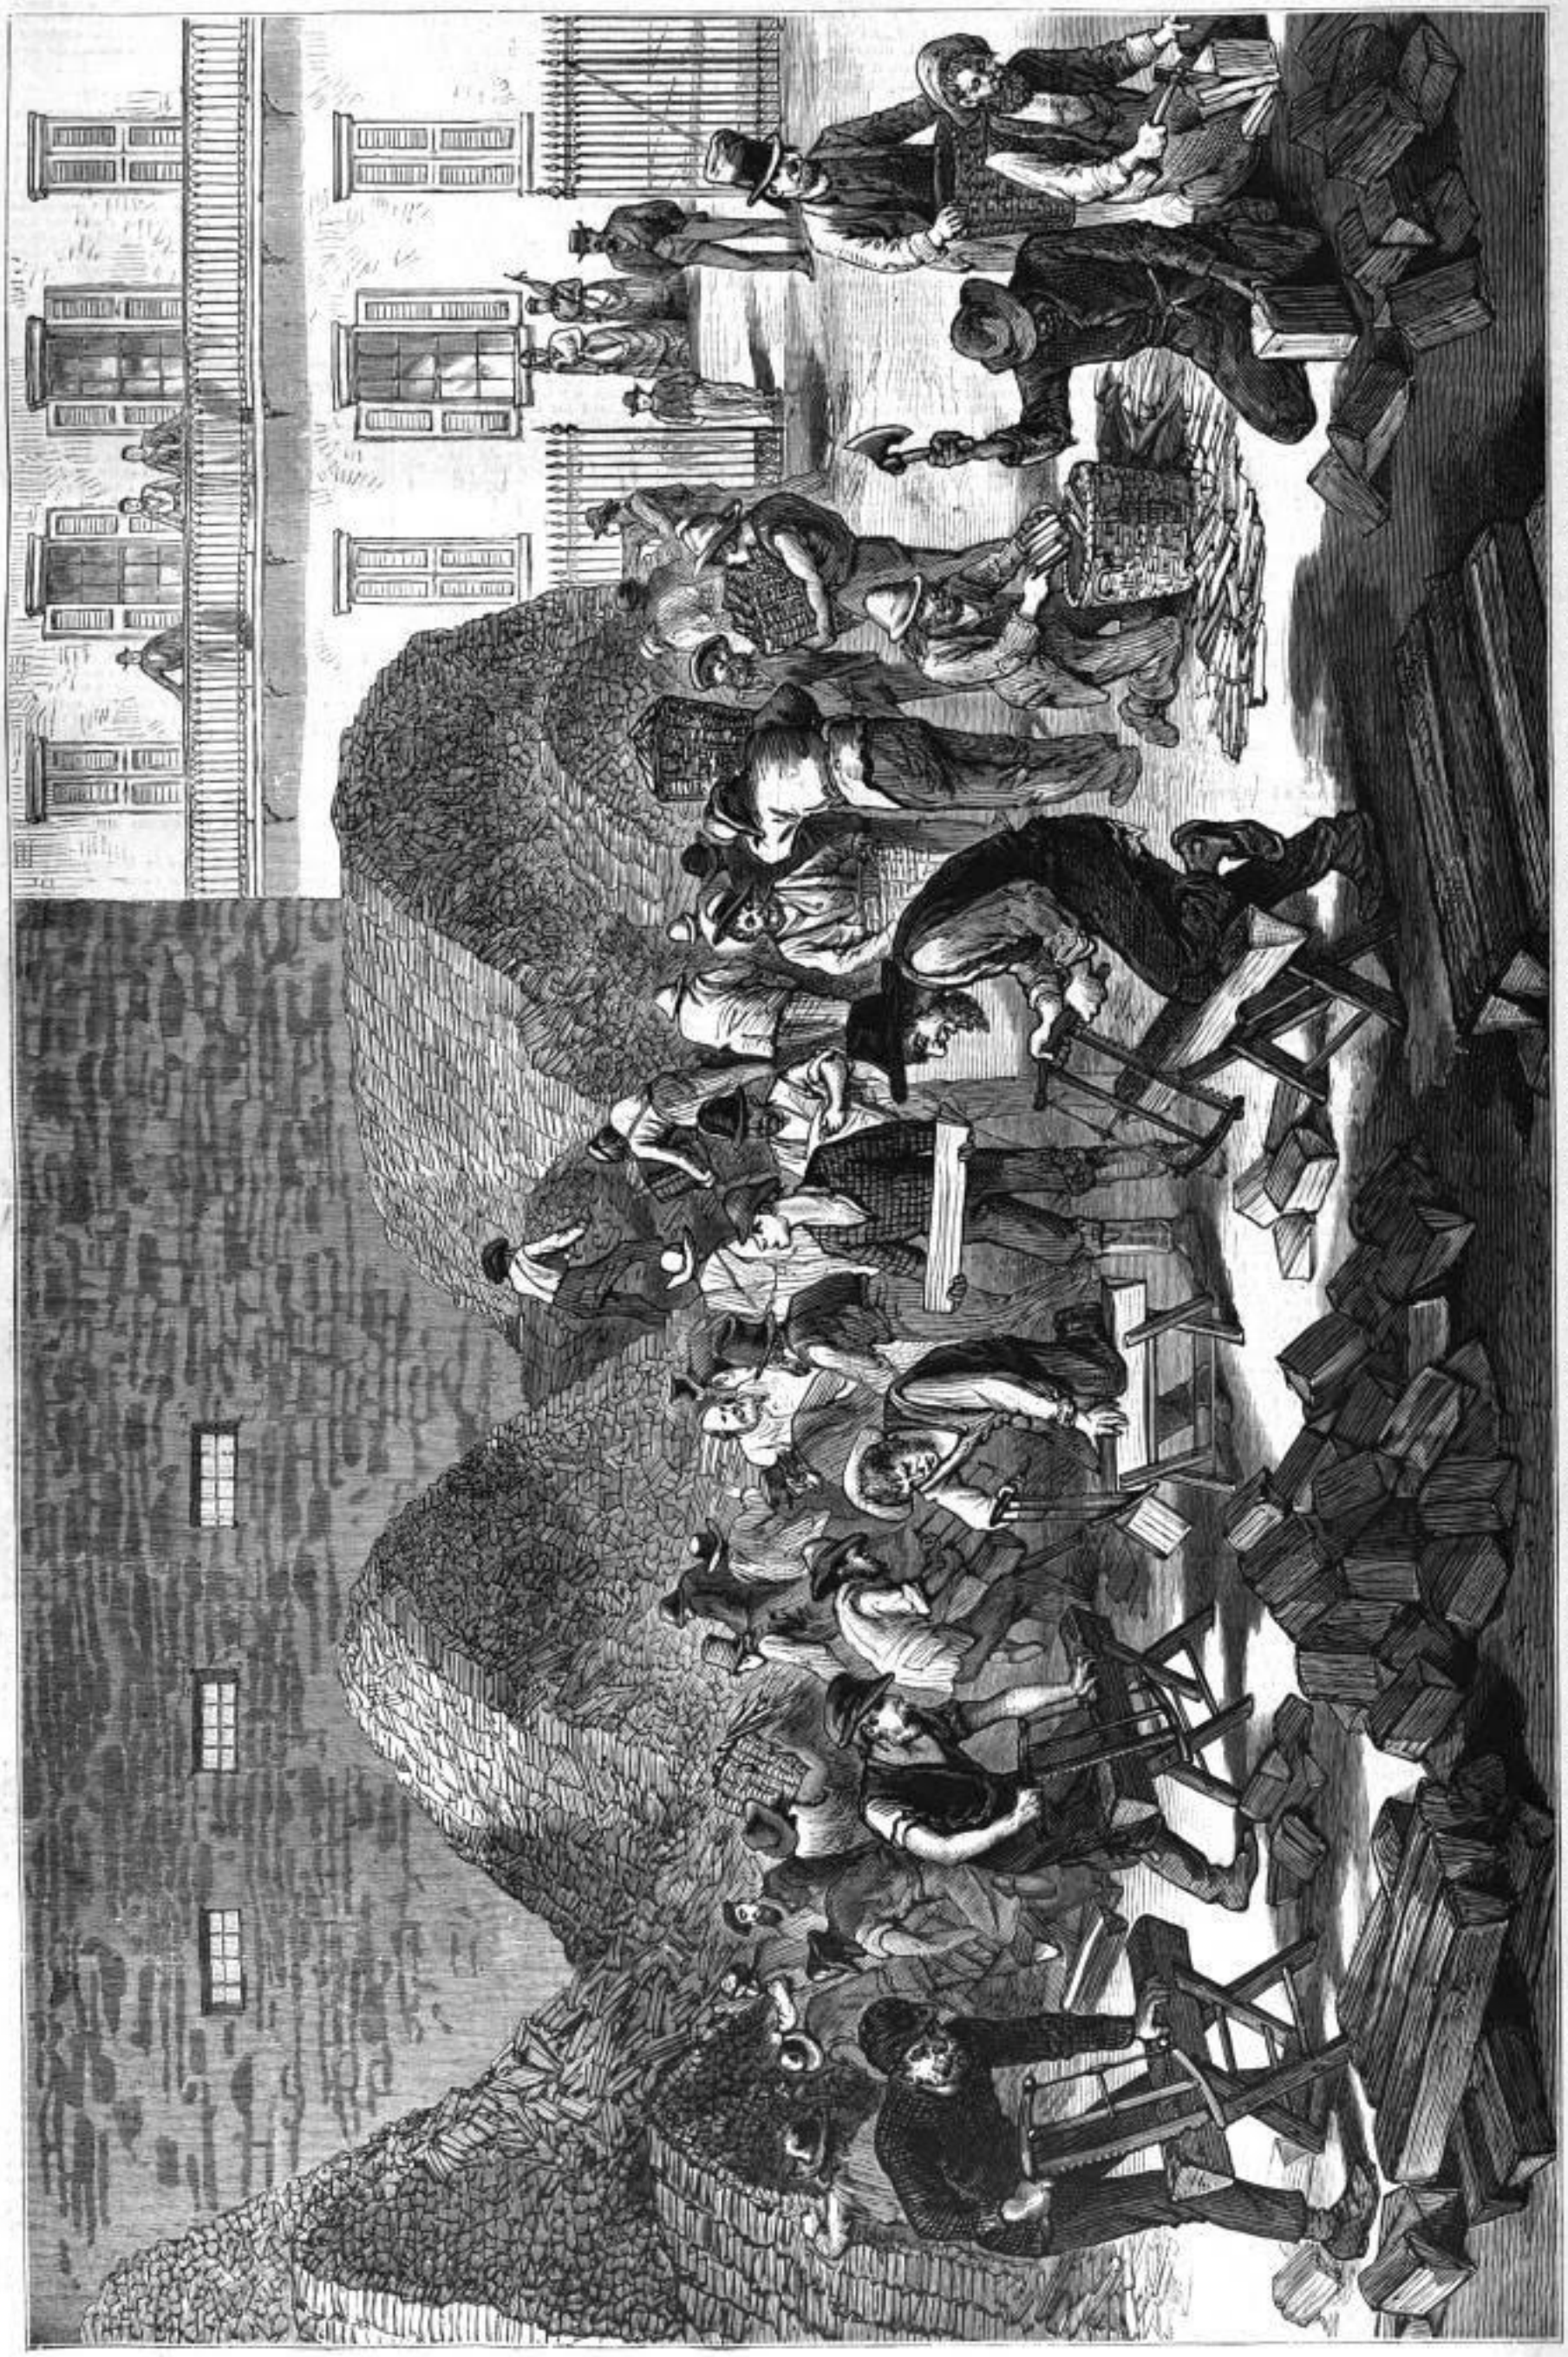
—FUNERAL services in Troy, N. Y., according to a recent agreement between the clergymen, will hereafter be limited to prayer, singing and scriptural readings.

—A MEDAL struck by order of the Czar, displaying a red cross surmounted by a silver wreath, has been presented to eighteen members of the German Central Committee of the societies for tending the wounded in the field, in recognition of special services rendered during the Russo-Turkish war.

—THE last Missouri Legislature passed a law making it a felony for any officer of a bank to accept deposits in the institution if he knows it to be in a failing condition, and imposing the same punishment as that for stealing money. Under this statute several St. Louis bankers are to be tried.

—REPORTS from Australia represent that the three American locomotives that were sent there a short time ago have given eminent satisfaction, and orders have been received for more. They are found to be superior to English locomotives, to require much less fuel, and to be cheaper than English engines of similar capacity.

—IOWA continues to send cheering news about her tremendous crop of wheat. Having gathered all the Fall planted crop, her farmers are now harvesting the Spring grain. The aggregate is estimated at fifty millions of bushels—a bushel for every man, woman and child in the United States for a single State. Iowa takes rank as the Empire State for wheat.



—IN 1860 the town of Gravesend, L. I., which own a portion of Coney Island, leased a piece of ground on the sea-front for ten years and received therefor the sum of $60. The lease expiring in 1870, the authorities renewed it again for ten years for $60. To-day the value of the sea-front on Coney Island, with all of its improvements, is probably not less than $15,000,000.

—THE Dominion Government intends to make military instruction a part of the high-school course in the different provinces, and will form thirty-five companies of thirty-five boys each in Ontario, twenty-five companies in Quebec and fifteen in the maritime provinces. These companies will be furnished with instructors from the military college and with Government arms.

—THE lawsuit instituted by the heir of the late Dictator Rosas against Buenos Ayres, to recover sequestrated property valued at $10,000,000, has been finally decided in favor of the plaintiff. This decision was quite unexpected, and is looked upon as creditable to the purity and independence of the bench. The suit lasted fifteen years. Mrs. Terrero, daughter of General Rosas, is the successful litigant.

—A REUNION of the members of the Independent Order of Odd Fellows is to be held at Long Branch, on July 29th, 30th and 31st. Besides social attractions, there will be addresses by prominent members of the Order; those on the first day being in the interest of the subordinate lodges; on the second of the lodges of the Rebekah Degree, and on the third of the Encampment. A large number of Uniformed Patriarchs will go into camp on the second day, and on the third will take part in a competitive drill for prizes. The first prize, which must be won three times by a battalion to be held, is an elegant silver cup, the bowl being supported by crossed crooks, while four Patriarchs in full uniform stand upon the pedestal. The other prizes are guidon flags of heavy purple silk, with gold bullion ornamentation. The battalions that are expected to contest for the prizes represent New York, Rochester, New Haven, Philadelphia, Detroit, Baltimore and Newark, and during their stay at the seaside will dwell in tents pitched on the lawn near the bluff. Under the reduced rates of transportation, many thousands of people are expected to gather at the reunion.

ASTERS AND GOLDEN-RODS.

OH, lovely in her laughing grace,
With rounded arms and rosy face,
With hair of amber glow,
Was the first Summer whose white feet
First walked the young world, gay and sweet,
Long centuries ago!

But when her joyful reign was o'er,
When bitter winds had hurt her sore,
When grief had marred her mirth,
She drooped, one evening, faint and pale,
As twilight wrapt its dusky vail
About the faded earth.

And now, with failing breath, she said:
"Ah, one by one my flowers have fled
From beauteous garden-ways!
How quickly their false love has flown,
And doomed me here to die alone,
Their Queen in happier days!

"Weak flatterers of my perished fame!
Unfaithful courtiers! go in shame,
And leave me to my woes!
Who find, of royal power bereft,
No more the lily on my left,
Nor on my right the rose!"

Then, while the dying Queen lay still,
And felt her weary heart grow chill
With death's destructive blight,
There, at brief distance from her gaze,
Two common weeds upreared their sprays
In the sad sinking light.

Two wayside weeds, that only knew
Those kind endearments that the dew,
The rain, the sunshine make;
And though they looked of differing leaves,
Yet each was fraught with fragile sheaves
Of buds that soon would break.

Then the pale Queen, in thankful pride,
Blessed these poor wildflowers ere she died,
And said to them:—"Behold,
Henceforward, while on earth I live,
To one my purple robe I give,
To one my crown of gold!"

EDGAR FAWCETT.

THE FALLEN LEAVES.

BY WILKIE COLLINS.

CHAPTER XLIV.

THE day on which worthy old Surgeon Pinfold had predicted that Sally would be in a fair way of recovery had come and gone—and still the medical report to Amelius was the same: "You must be patient, sir; she is not well enough to see you, yet."

Toff, watching his young master anxiously, was alarmed by the steadily-progressive change in him for the worse, which showed itself at this time. Now sad and silent, and now again bitter and irritable, he had deteriorated physically as well as morally, until he really looked like the shadow of his former self. He never exchanged a word with his faithful old servant, except when he said mechanically "good-morning" or "good-night." Toff could endure it no longer. At the risk of being roughly misinterpreted, he followed his own kindly impulse, and spoke. "May I own to you, sir," he said, with perfect gentleness and respect, "that I am indeed heartily sorry to see you so ill."

Amelius looked up at him sharply. "You servants always make a fuss about trifles. I am a little out of sorts, and I want a change—that's all. Perhaps I may go to America. You won't like that; I shan't complain if you look out for another situation."

The tears came into the old man's eyes. "Never!" he answered fervently. "My last service, sir, if you send me away, shall be my dearly-loved service here."

All that was most tender in the nature of Amelius was touched to the quick. "Forgive me, Toff," he said; "I am lonely and wretched, and more anxious about Sally than words can tell. There can be no change in my life until my mind is easy about that poor little girl. But if it does end in my going to America, you shall go with me—I wouldn't lose you, my good friend, for the world."

Toff still remained in the room, as if he had something left to say. Entirely ignorant of the marriage-engagement between Amelius and Regina, and of the rupture in which it had ended, he vaguely suspected, nevertheless, that his master might have fallen into an entanglement with some lady unknown. The opportunity of putting the question was now before him. He risked it in a studiously modest form.

"Are you going to America to be married, sir?"

Amelius eyed him with a momentary suspicion. "What has put that in your head?" he asked.

"I don't know sir," Toff answered humbly—"unless it was my own vivid imagination. Would there be anything very wonderful in a gentleman of your age and appearance conducting some charming person to the altar?"

Amelius was conquered once more; he smiled faintly. "Enough of your nonsense, Toff! I shall never be married—understand that."

Toff's withered old face brightened slyly. He turned away to withdraw, hesitated, and suddenly went back to his master.

"Have you any occasion for my services, sir, for an hour or two?" he asked.

"No. Be back before I go out myself—be back at three o'clock."

"Thank you, sir. My little boy is below, if you want anything in my absence."

The little boy, dutifully attending Toff to the gate, observed with grave surprise that his father snapped his fingers gayly at starting, and hummed the first bars of the "Marseillaise." "Something is going to happen," said Toff's boy, on his way back to the house.

* * * * * *

From the Regent's Park to Blackacre Buildings is almost a journey from one end of London to the other. Assisted for part of the way by an omnibus, Toff made the journey, and arrived at the residence of Surgeon Pinfold, with the easy confidence of a man who knew thoroughly well where he was going and what he was about. The sagacity of Rufus had correctly penetrated his intentions; he had privately followed his master and had introduced himself to the notice of the surgeon—with a mixture of motives, in which pure devotion to the interests of Amelius played the chief part. His experience of the world told him that Sally's departure was only the beginning of more trouble to come. "What is the use of me to my master," he had argued," except to spare him trouble, in spite of himself?"

Surgeon Pinfold was prescribing for a row of sick people, seated before him on a bench. "You're not ill, are you?" he said, sharply, to Toff. "Very well, then, go into the parlor and wait."

The patients being dismissed, Toff attempted to explain the object of his visit. But the old naval surgeon insisted on clearing the ground by means of a plain question first. "Has your master sent you here—or is this another private visit, like the last?"

"It is all that is most private," Toff answered; "my poor master is wasting away in unrelieved wretchedness of suspense. Something must be done for him. Oh, dear and good sir, help me in this most miserable state of things!—tell me the truth about Miss Sally!"

Old Pinfold put his hands in his pockets and leaned against the parlor-wall, looking at the Frenchman with a complicated expression, in which genuine sympathy mingled oddly with a quaint sense of amusement. "You're a worthy chap," he said, "and you shall have the truth. I have been obliged to deceive your master about this troublesome young Sally—I have stuck to it that she is too ill to see him or to answer his letters. Both lies; there's nothing the matter with her now but a disease that I can't cure, the disease of a troubled mind. She's got it into her head that she has everlastingly degraded herself in his estimation by leaving him and coming here. It's no use telling her—what, mind you, is perfectly true—that she was all but out of her senses, and not in the least responsible for what she did at the time when she did it. She holds to her own opinion, nevertheless. 'What can he think of me, but that I have gone back willingly to the disgrace of my old life? I should throw myself out of window if he came into the room!' That's how she answers me, and, what makes matters worse still, she's breaking her heart about him all the time. The poor wretch is so eager for any little word of news about his health and his doings, that it's downright pitiable to see her. I don't think her fevered little brain will bear it much longer—and, hang me, if I can tell what to do next to set things right! The two women, her friends, have no sort of influence over her. When I saw her this morning she was ungrateful enough to say, 'Why didn't you let me die?' How your master got among these unfortunate people is more than I know, and is no business of mine—I only wish he had been a different sort of man. Before I knew him as well as I know him now I predicted like a fool that he would be just the person to help us in managing the girl. I have altered my opinion. He's such a glorious fellow—so impulsive and so tender-hearted—that he would be certain, in her present excited state, to do her more harm than good. Do you know if he is going to be married?"

Toff, listening thus far in silent distress, suddenly looked up.

"Why do you ask me, sir?"

"It's an idle question, I dare say," old Pinfold remarked. "Sally persists in telling us she's in the way of his prospects in life—and it's got somehow into her perverse little head that his prospects in life mean his marriage, and she's in the way of *that*. Hullo! are you going already?"

"I want to go to Miss Sally, sir. I believe I can say something to comfort her. Do you think she will see me?"

"Are you the man who has got the nickname of Toff? She sometimes talks about Toff."

"Yes, sir, yes! I am Théophile Leblond, otherwise Toff. Where can I find her?"

Surgeon Pinfold rang a bell. "My errand-boy is going past the house to deliver some medicine," he answered. "It's a poor place; but you'll find it neat and nice enough—thanks to your good master. He's helping the two women to begin life again out of this country; and, while they're waiting their turn to get a passage, they've taken an extra room and hired some decent furniture, by your master's own wish. Oh, here's the boy; he'll show you the way. One word before you go. What do you think of saying to Sally?"

"I shall tell her for one thing, sir, that my master is miserable for want of her."

Surgeon Pinfold shook his head. "That won't take you very far on the way to persuading her. You will make *her* miserable, too—and there's about all you will get by it."

Toff lifted his indicative forefinger to the side of his nose. "Suppose I tell her something else, sir? Suppose I tell her my master is not going to be married to anybody?"

"She won't believe you know anything about it."

"She will believe, for this reason," said Toff, gravely; "I put the question to my master before I came here; and I have it from his own lips that there is no young lady in the way, and that he is not—positively not—going to be married. If I tell Miss Sally this, sir, how do you say it will end? Will you bet me a shilling it has no effect on her?"

"I won't bet a farthing! Follow the boy—and tell young Sally I have sent her a better doctor than I am."

While Toff was on his way to Sally, Toff's boy was disturbing Amelius by the announcement of a visitor. The card sent in bore this inscription: "Brother Bawkwell, from Tadmor."

Amelius looked at the card, and ran into the hall to receive the visitor, with both hands held out in hearty welcome. "Oh, I am so glad to see you!" he cried; "come in, and tell me all about Tadmor."

Brother Bawkwell acknowledged the enthusiastic reception offered to him by a stare of grim surprise. He was a dry, hard old man, with a scrubby white beard, a narrow wrinkled forehead, and an obstinate lipless mouth; fitted neither by age nor temperament to be the intimate friend of any of his younger brethren in the Community. But, at that saddest time of his life, the heart of Amelius warmed to any one who reminded him of his tranquil and happy days at Tadmor. Even this frozen old Socialist now appeared to him, for the first time, under the borrowed aspect of a welcome friend.

Brother Bawkwell took the chair offered to him, and opened the proceedings, in solemn silence, by looking at his watch. "Twenty-five minutes past two," he said to himself—and put the watch back again.

"Are you pressed for time?" Amelius asked.

"Much may be done in ten minutes," Brother Bawkwell answered, in a Scotch accent which had survived the test of half a lifetime in America. "I would have you know I am in England on a mission from the Community, with a list of twenty-seven persons in all, whom I am appointed to confer with on matters of varying importance. Yours, friend Amelius, is a matter of minor importance. I can give you ten minutes."

He opened a big black pocket-book, stuffed with a mass of letters; and, placing two of them on the table before him, addressed Amelius as if he was making a speech at a public meeting.

"I have to request your attention to certain proceedings of the Council at Tadmor, bearing date the third of December last; and referring to a person under sentence of temporary separation from the Community, along with yourself——"

"Mellicent!" Amelius exclaimed.

"We have no time for interruptions," Brother Bawkwell remarked. "The person is Sister Mellicent; and the business before the Council was to consider a letter, under her signature, received December second. Said letter," he proceeded, taking up one of his papers, "is abridged as follows by the Secretary to the Council. In substance, the writer states (first): 'That the married sister under whose protection she has been living at New York is about to settle in England with her husband, appointed to manage the branch of his business established in London. (Second): That she, meaning Sister Mellicent, has serious reasons for not accompanying her relatives to England, and has no other friends to take charge of her welfare, if she remains in New York. (Third): That she appeals to the mercy of the Council, under these circumstances, to accept the expression of her sincere repentance for the offense of violating a rule, and to permit a friendless and penitent creature to return to the only home left to her, her home at Tadmor.' No, friend Amelius—we have no time for expressions of sympathy: the first half of the ten minutes has nearly expired. I have further to inform you that the question was put to the vote in this form: 'Is it consistent with the serious responsibility which rests on the Council to consider the remission of any sentence justly pronounced under the Book of Rules?' The result was very remarkable. the votes for and against being equally divided. In this event, as you know, our laws provides that the decision rests with the Elder Brother—who gave his vote thereupon for considering the remission of the sentence; and moved the next resolution that the sentence be remitted accordingly. Carried by a small majority. Whereupon Sister Mellicent was received again at Tadmor."

"Ah, the dear old Elder Brother!" cried Amelius—"always on the side of mercy!"

Brother Bawkwell held up his hand in protest. "You seem to have no idea" he said, "of the value of time. Do be quiet! As traveling representative of the Council, I am further instructed to say that the sentence pronounced against yourself stands duly remitted, in consequence of the remission of the sentence against Sister Mellicent. You likewise are free to return to Tadmor, at your own will and pleasure. But—attend to what is coming, friend Amelius!—the Council holds to its resolution that your choice between us and the world shall be absolutely unbiased. In the fear of exercising even an indirect influence, we have purposely abstained from corresponding with you. With the same motive we now say that if you do return to us, it must be with no interference on our part. We inform you of an event that has happened in your absence—and we do no more."

He paused, and looked again at his watch. Time proverbially works wonders. Time closed his lips.

Amelius replied with a heavy heart. The message from the Council had recalled him from the remembrance of Mellicent to the sense of his own position. "My experience of the world has been a very hard one," he said. "I would gladly go back to Tadmor this very day, but for one consideration——" He hesitated; the image of Sally was before him. The tears rose in his eyes; he said no more.

Brother Bawkwell, driven hard by time, got on his legs, and handed to Amelius the second of the two papers which he had taken out of his pocketbook.

"Here is a purely informal document," he said, "being a few lines from Sister Mellicent which I was charged to deliver to you. Be pleased to read it as quickly as you can, and tell me if there is any reply."

There was not much to read; "The good people here, Amelius, have forgiven me and let me return to them. I am living happily now, dear, in my remembrances of you. I take the walks that we once took together—and sometimes I go out in the boat on the lake, and think of the time when I told you my sad story. Your poor little pet creatures are under my care; the dog and the fawn, and the birds—all well, and waiting for you, with me. My belief that you will come back to me remains the same unshaken belief that it has been from the first. Once more I say it—you will find me the first to welcome you, when your spirits are sinking under the burden of life, and your heart turns again to the friends of your early days. Until that time, think of me now and then. Good-by."

"I am waiting," said Brother Bawkwell, taking his hat in his hand.

Amelius answered with an effort. "Thank her kindly in my name," he said; "that is all." His head drooped while he spoke; he fell into thought as if he had been alone in the room.

But the emissary from Tadmor, warned by the minute-hand on the watch, recalled his attention to passing events. "You would do me a kindness," said Brother Bawkwell, producing a list of names and addresses, "if you could put me in the way of finding the person named, eighth from the top. It's getting on towards twenty minutes to three."

The address thus pointed out was at no great distance, on the northern side of the Regent's Park. Amelius, still silent and thoughtful, acted willingly as a guide. "Please thank the Council for their kindness to me," he said, when they reached their destination. Brother Bawkwell looked at Friend Amelius with a calm, inquiring eye. "I think you'll end in coming back to us," he said. "I'll take the opportunity, when I see you at Tadmor, of making a few needful remarks on the value of time."

Amelius went back to the cottage to see if Toff had returned in his absence, before he paid his daily visit to Surgeon Pinfold. He called down the kitchen-stairs, "Are you there, Toff?" And Toff answered briskly, "At your service, sir."

The sky had become cloudy, and threatened rain. Not finding his umbrella in the hall, Amelius went into the library to look for it. As he closed the door behind him, Toff and his boy appeared on the kitchen-stairs; both walking on tiptoe, and both evidently on the watch for something.

Amelius found his umbrella. But it was characteristic of the melancholy change in him that he dropped languidly into the nearest chair, instead of going out at once with the easy activity of happier days. Sally was in his mind again; he was rousing his resolution to set the doctor's commands at defiance, and to insist on seeing her, come what might of it.

He suddenly looked up. A slight sound had startled him.

It was a faint, rustling sound; and it came from the sadly silent room which had once been Sally's.

He listened, and heard it again. He sprang to his feet—his heart beat wildly—he opened the door of the room.

She was there.

Her hands were clasped over her fast-heaving breast. She was powerless to look at him, powerless to speak to him, powerless to move towards him, until he opened his arms to her. Then all the love and all the sorrow in the tender little heart flowed outward to him in a low murmuring cry. She hid her blushing face on his bosom. The rosy color softly tinged her neck—the unspoken confession of all she feared, and all she hoped.

It was a time beyond words. They were silent in each other's arms.

But under them, on the floor below, the stillness in the cottage was merrily broken by an outburst of dance-music—with a rhythmical thump-thump of feet, keeping time to the cheerful tune. Toff was playing his fiddle, and Toff's boy was dancing to his father's music.

CHAPTER XLV.

AFTER waiting a day or two for news from Amelius, and hearing nothing, Rufus went to make inquiries at the cottage.

"My master has gone out of town, sir," said Toff, opening the door.

"Where?"

"I don't know, sir."

"Anybody with him?"

"I don't know, sir."

"Any news of Sally?"

"I don't know, sir."

Rufus stepped into the hall. "Look here, Mr. Frenchman, three times is enough. I have already apologized for treating you like a tee-totum, on a former occasion. I'm afraid I shall do it again, sir, if I don't get an answer to my next question—my hands are itching to be at you, they are! When is Amelius expected back?"

"Your question is positive, sir," said Toff, with dignity. "I am happy to be able to meet it with a positive reply. My master is expected back in three weeks' time."

Having obtained some information at last, Rufus debated with himself what he should do next. He decided that "the boy was worth waiting for," and that his wisest course (as a good American) would be to go back and wait in Paris.

Passing through the Garden of the Tuileries, two or three days later, and crossing to the Rue de Rivoli, the name of one of the hotels in that quarter, reminded him of Regina. He yielded to the prompting of curiosity, and inquired if Mr. Farnaby and his niece were still in Paris.

The manager of the hotel was in the porter's lodge at the time. So far as he knew, he said, Mr. Farnaby and his niece, and an English gentleman with them, were now on their travels. They had left the hotel with an appearance of mystery. The courier had been discharged, and the coachman of the hired

Digitized by Google

carriage which took them away had been told to drive straight forward until further orders. In short, as the manager put it, the departure resembled a flight. Remembering what his American agent had told him, Rufus received this information without surprise. Even the apparently incomprehensible devotion of Mr. Melton to the interests of such a man as Farnaby failed to present itself to him as a perplexing circumstance. To his mind, Mr. Melton's conduct was plainly attributable to a reward in prospect, and the name of that reward was—Miss Regina.

At the end of the three weeks Rufus returned to London.

Once again he and Toff confronted each other on the threshold of the door. This time, the genial old man presented an appearance that was little less than dazzling. From head to foot he was arrayed in new clothes; and he exhibited an immense rosette of white ribbon in his buttonhole,

"Thunder!" cried Rufus. "Here's Mr. Frenchman going to be married!"

Toff declined to humor the joke. He stood on his dignity as stiffly as ever. "Pardon me, sir, I possess a wife and family already."

"Do you now? Well, none of your know-nothing answers this time. Has Amelius come back?"

"Yes, sir."

"And what's the news of Sally?"

"Good news, sir. Miss Sally has come back, too."

"You call that good news, do you? I'll say a word to Amelius. What are you standing there for? Let be by."

"Pardon me once more, sir. My master and Miss Sally do not receive visitors to-day."

"Your master and Miss Sally!" Rufus repeated. "Has this old creature been liquoring up a little too freely? What do you mean," he burst out, with a sudden change of tone to stern surprise—"what do you mean by putting your master and Sally together?"

Toff shot his bolt at last. "They will be together, sir, for the rest of their lives. They were married this morning."

Rufus received the blow in dead silence. He turned about, and went back to his hotel.

Reaching his room, he opened the dispatch-box in which he kept his correspondence, and picked out the long letter containing the description by Amelius of his introduction to the ladies of the Farnaby family. He took up the pen, and wrote the indorsement which has been quoted as an integral part of the letter itself, in the sixth chapter of this narrative:

"Ah, poor Amelius! He had better have gone back to Miss Mellicent, and put up with the little drawback of her age! What a bright, lovable fellow he was! Good-by to Goldenheart!"

THE END.

FISHING IN LABRADOR.

THE SUMMER EXPERIENCES OF SOTHERN AND FLORENCE.

HERE we are at last. His Grace the Duke of Beaufort, Sir John Rae Reid, Mr. Sothern, Mr. Florence, four servants, eight Indian canoe-men, four Indian guides, a steward, a cook, and your correspondent. We "put up" the river in three canoes, two floats or barracs, while a large scow followed in our wake conveying "victuals for the fortress, my liege." Sixteen miles of grinding, bumping, scooting and dodging brought us to our ranche, a commodious, comfortable box, with a cozy air of civilization and brandy and soda about it, albeit ten thousand miles away from everything. Imagine, or can you imagine, being utterly free from the ghoul-like newspaper that sucks the life-blood of morning and evening; from telegrams that cause the heart to beat backwards; from the post that for one ray of pleasure brings us miles of banked-up clouds of worry. Thank heaven, we can only receive letters twice a month, and these are dropped sixteen miles away at the mouth of the river by a passing schooner. At first this fasting seemed passing strange, but now we are anchorites by acclamation. Imagine if you can the glorious sensation of being disregardful of linen and unmindful of shirt-collars. Imagine if you can—and this I'll warrant me will reach the brim of your imagination if the cup run not over—good company, good wine, good 'bacey, good beds, lots of brand-new air, any amount of primeval wood, a quantity of water, and salmon rising as regularly as the beam of a Hudson steamboat. We have flung conventionality to the winds and have openly insulted Mrs. Grundy. The rod levels all ranks low, and places the ducal strawberry by the "players buskin," the masonry of the "gentle craft" recognizing as the best man the lucky individual who lands the heaviest fish with the lightest tackle. Oh, it is a splendid life this, and one well worthy the living for. Such breakfasts as are eaten! such luncheons! such dinners! such stories from Mr. Sothern and Mr. Florence! such anecdotes of tooling cracks, and of runs with the Pytchley and Quorn from the Duke of Beaufort! such tales of stalking the red deer from Sir John Rae Reid! Our artifices for coaxing the fish are as numerous as they are designing, and comprise everything from a needle to an anchor. The impudence of the seals annoys us considerably. These *gourmets* go for the best salmon, and, taking the choicest bit out of the back of the neck, leave the fish to be borne away to the ocean. We trap them, and the accompanying illustration will explain the *modus operandi*. When we fail to trap we shoot. Mr. Florence came to grief this morning. He had struck a very fine fish, and was *playing* with as much verve as if he were on the boards, when his split bamboo rod, warranted to stand the strain of a Fairlie locomotive, and for which he paid $75, snapped like a stick of sealing-wax, and this unexpected relaxement of strain threw Mr. F. from the centre of gravity, head over heels into the foaming rapids. He did not care a piastre for the wetting, but the treachery of the rod, in which he had placed so much reliance, caused him to utter full-flavored language of the most vivid character.

His Grace of Beaufort is an indefatigable fisherman, and he "wets a line" with the "flick" of a thoroughbred piscator. He, too, has been more than gaiter-deep in the river. My Lord Dundreary's attire resembles that of the time-honored old Izaak—a jerkin, baggy breeches, homespun stockings and shoes. He is waited upon by a melancholy Indian, cheaply majestic, the very counterpart of the Crushed Tragedian, or of George the Count Joannes. His lordship's felt hat is a veritable "hornets' nest," as it bristles with hooks of all sorts, shapes, sizes and dimensions. The chaff between Mr. Florence and Dundreary is as bright as a Jablochoff candle, commencing at tub-time and ending only in the wee sma' hours. Our cook, a *chef*, if not a *cordon bleu*, is put to his wits' end to serve up salmon so as to cause it to taste like anything but salmon, and the entries of Saumon à la Beaufort, à la Dundreary, à la Florence, à la Rae Reid, succeed each other with startling rapidity, though each possesses a varying flavor with just the faintest suspicion of the presence of the lordly fish. What champagne flows in the veins while living this out-of-the-world life. The Duke laughs when he thinks of the starched old peers seated in the crimson morocco-seats in the House of Lords, deliberating upon some unsavory Bill sent up from the unruly Commons, or listening to the spasmodic grumblings of Lord Granville or Lord Derby. Sir John Rae Reid laughs when he thinks of his "pals" who are "swelling" the season, riding in the Row, on their knees to Sarah Bernhardt, or imagining themselves free as air in doing *petit diners* at the Star and Garter at Richmond. Sothern laughs when he thinks of Irving playing *Hamlet* in the morning and *Claude Melnotte* at night. Florence laughs as he exclaims, as *Bardwell Slote*, "We are having a h. o. t," or when he apostrophizes the luckless salmon which he has just admirably struck, by "Don't try any g. g. on me, o. m.;" and your correspondent laughs upon discovering that he has nothing particular to do, and that his unprepared faculties enable him to do "that sort of thing, you know, to perfection." A horrible rumor has reached me that we are about to communicate with the outer world, through the medium of an Indian runner, and so for one calendar month I shall say, adios.

THE "LODGE FOR WAYFARERS" IN BOSTON.

THE benevolence of Boston is always practical. One of the most striking illustrations of this tendency is furnished in the charity known as the "Lodge for Wayfarers," located on Hawkins Street. This institution, while comparatively young, has established a reputation for genuine usefulness which entitles it to a high place among municipal charities. It occupies a large building, formerly used for school purposes, and which, as reconstructed, is provided with a large kitchen, dining-room, visiting-room, dormitories, etc. Lodgers are supplied with plain, well-cooked food, but in order that the self-respect of the most sensitive may not be wounded, all are required to work for what they receive. So far as possible the labor of the applicants is utilized in the direction of their peculiar qualifications. Every lodger is required to cut one-eighth of a cord of wood in payment for lodging and breakfast—the wood being sold under contract, and the expenses of the "Lodge" being thus in part reimbursed. Every lodger is furnished with a clean night-shirt on retiring, and absolute tidiness is at all times insisted upon by the management. The "Lodge" is managed directly by the city, Mr. Edward Riley being the efficient superintendent. From January 30th to June 4th of the present year, 6,286 lodgers were furnished beds and breakfast. The largest number entertained at one time was 100. On applying for lodgings at a police-station, a card is filled up showing the date, name, age, nativity, residence, occupation, etc., of the applicant, with the name of the officer in charge of the station, with the number of the bed to which the bearer is assigned, and with these credentials, the latter, presenting himself at the "Lodge," is received and properly cared for. The system is simple but complete, and is believed to afford an effectual guard against imposition on the part of the unprincipled.

Astrology.

THE following is a brief sketch of the outlines of astrology, its leading principles and mode of practice: The heavens above and below the horizon were divided by imaginary circles, drawn through its north and south points, into twelve equal parts, which were called the twelve houses of heaven. They were numbered in order from the division in the east immediately below the horizon which contained the part of the heavens about to rise in view. The lines of division were supposed to remain immovable, so that every part of the heavens passed through each house successively once in twenty-four hours. The term horoscope was given to the points of the elliptic about to rise. The first house was called the ascendant; it was the strongest, and also known as the house of life; the second was the house of riches; the third, of brethren; the fourth, of parents and relatives; the fifth, of children; the sixth, of health; the seventh, of marriage; the eighth, of death; the ninth, of religion; the tenth, of dignities; the eleventh, of friends; the twelfth, of foes. To each division one of the heavenly bodies was assigned as its lord, who was most powerful in his own house. The position of a planet in any house was its distance from the boundary circle, or cusp, of the house measured on the zodiac; and the part of the zodiac which chanced to be in each house was a point which especially demanded the attention of the astrologer in his consideration of the aspects of the various divisions. The relative position of the heavenly bodies in the different houses at any particular moment was called a theme, and to cast the nativity of any one was to form a plan of the heavens in the manner above indicated, at the moment of birth. The decline of astrology may be dated from the time of Copernicus, who revealed the cardinal fact that the earth is merely one planet, rolling with others around the sun.

SCIENTIFIC INTELLIGENCE.

A Zoological Station similar to that at Naples is about to be established at Messina.

The University Library at Strasburg has, according to the latest news, now reached the total of 470,000 volumes.

On June 3d the Dutch North Polar Expedition sailed from Amsterdam on board the *Willem Barendz*. The ship is equipped with all necessaries for ten months.

In Order that Science may have a voice in the deliberation of British national affairs, Sir John Lubbock suggests that one of the vacant seats in Parliament be allotted to the Royal Society.

A Caravan from Abyssinia has arrived at Marseilles, being destined for the Acclimatization Garden of Paris. It is composed of 15 men, 4 women, 2 children, 32 camels, 4 oxen, 2 zebras, 4 elephants, 8 ostriches, asses, and horses from Dongola and Abyssinia.

A Japan Paper mentions a curious instance of Japanese thrift at Osaka. The paper made at the mill there is mostly manufactured from blue rags, and the water in which they are boiled has hitherto only poisoned the watercourses; henceforth it is to be saved and the indigo extracted from it.

The Municipal Council of Paris has adopted a proposal made by M. de Villiers, Chief Engineer of Ponts-et-Chaussées, for establishing at the Trocadero a stone which will be the zero point of leveling for Paris and the Seine Department. It is stated that the Minister of Public Works will order such a stone to be erected in the chief city of each department.

Probably the Oldest Teacher in existence is the venerable M. Chevreul. This eminent chemist, who is about ninety years of age, has been advertised as lecturer on chemistry in the Paris Museum. The first part of his lectures will be devoted to the subject of contrast in colors. M. Chevreul enjoys excellent health, and exhibits admirable bodily as well as mental activity.

Rich Deposits of Gold have been discovered in various parts of Nova Scotia, where its existence has hitherto been scarcely suspected. The most important discovery made has been near Bannockburn, in the township of Madoc, where a large nugget of gold of fine quality was recently found, and an extensive gold field is being opened out. Coal and iron are also plentiful in the province.

M. Cosson, of the Geographical Society of Paris, has endeavored to maintain that the Algerian Sea proposed by M. Roudaire would not improve the climate of the Sahara, that in case any alteration were possible it would be detrimental to the health of the inhabitants; that it would create dissatisfaction among the Tunisian and Algerian tribes and the Algerian colonists, and that it would have no effect in attracting to Algiers the trade of the Soudan.

What with its Museums and learned societies Berlin is fast becoming a highly favorable centre for the study of ethnology. Some time ago a tribe of Esquimaux attracted large crowds to their quarters in the Zoological Gardens. A family of Patagonians have been recently introduced by Professor Virchow to the Anthropological Society, while the latest phase of enterprise in this respect is nothing more nor less than the importation of half-a-dozen live Zulu Caffres.

At the Last Meeting of the Geological Society, Professor Prestwich announced that the next International Geological Congress will be held at Bologna in September, 1881, and that the President of the Committee, Professor Capellini, had written requesting co-operation on the part of the Geological Society and its Fellows. Among the matters which would be brought forward at this Congress would be the unification of geological nomenclature and the symbols used in geological mapping.

An Interesting Ceremony has just taken place at Paris. The pupils of the Ecole Centrale, which was founded at Paris in 1829, by MM. Dumas, Lavallé, Perdonnet, and a number of engineers for promoting education in practical science, has celebrated the fiftieth anniversary of that event. The new institution was so prosperous that a few years ago it was purchased by the Government and made a public institution. It may be said without any exaggeration that the pupils of the Ecole Centrale have been employed in the construction of almost every railway in France and perhaps on the Continent.

The Success of the Jablochkoff Lights at the Palais de l'Industrie is nightly increasing. The number of visitors exceeds 6,000 nightly, exclusive of press men, artists, and bearers of free tickets. The *salons* are rather more crowded than in daylight. No extinction at all has been noticed since the first night. The change of candles is effected by keys worked from the engine-house, and takes less than a second for each series of lamps. Several places of public entertainment in Paris are adopting the Jablochkoff light, principally to avoid the heat which results from burning gas, and is so obnoxious in Summer time.

The Arrangements for the annual meetings of the principal foreign associations are announced. The German Anthropological Society holds its yearly meeting at Strassburg on August 11th, 12th and 13th, and the fifty-second meeting of the German Association of Naturalists and Physicians will be held at Baden-Baden from September 16th to 24th. The French Association for the Advancement of Science will hold its eighth session at Montpellier, commencing on August 28th. The president is M. Bardoux, late Minister of Public Instruction. The American Association meets this year at Saratoga, on August 27th, the president being Mr. George F. Barker, of Philadelphia.

The Clothworkers' Company have voted £3,500, over and above £10,000 previously voted, to cover the complete cost of the site, building, furnishing, and fitting with all necessary appliances, of the textile industries and dyeing instruction departments of the Yorkshire College, Leeds, and they have further agreed to maintain the building and its operations in full effect without extraneous or adventitious aid, for a period of five years from January 1st next, at a cost of £1,200 per annum. This increased annual subvention has been necessitated by the addition of instruction in dyeing and applied chemistry connected with the finishing of textile fabrics. The new buildings will be completed about October next.

Hormuzd Rassam has completed his second Assyrian expedition. He explored the mound of Nebi Younus, the prophet Jonah, and discovered remains of palaces erected by Esdarhaddon and Sennacherib. His labors on the mounds of Nineveh resulted in the recovery of a large number of inscriptions of extreme interest. Passing southward, he visited Nimroud and its Temple of Venus. The explorations in Assyria have discovered many valuable monuments. Mr. Rassam extended his operations into fields untouched since the time of Layard's expedition, and he was able to carry out a series of explorations on the mounds of ancient Babylon. Here his discoveries were most brilliant. In a mound hitherto untouched he discovered a palace of Nebuchadnezzar's, with rich enameled columns, beams of Indian wood, and every indication of having been a most splendid edifice. His excavations in the mound of the Birs Nimroud, the site of the supposed Tower of Babel, have proved that the destruction of this great edifice was due, not to lightning or hostile attack, but to a volcanic eruption.

PERSONAL GOSSIP.

Prince Leopold has become President of the London Musical Society.

Already more than £1,000 have been contributed to the Burt Testimonial Fund in Dublin.

The Rev. Dr. Mathews, of New York, has received a call to the Chalmers Church in Quebec.

Herr von Gerlach has been appointed to succeed Dr. Falk as Minister of Ecclesiastical Affairs.

Rutgers College has conferred upon Mr. Edison the honorary degree of Doctor of Philosophy.

Baron Lionel Rothschild bequeathed to George Fordham, his jockey, $10,000, and an annuity of $1,500.

The venerable George Bancroft has sufficiently recovered his health to be enabled to resume his great literary labors.

Professor Swift is to receive two gold medals from the Austrian Academy of Sciences for his discoveries of comets.

The statue of Victor Emmanuel, to be erected in Turin, will rest on a pedestal of four Doric pillars, with symbolic figures.

Prince Charles, of Roumania, being childless, intends to adopt the second son of his eldest brother, the hereditary Prince of Hohenzollern.

Convicts are inclosing Senator Hill's forty-thousand-acre sheep ranch in Georgia with a stone wall. Seven miles of the wall are now finished.

Henry Varley, the evangelist, has returned to England after two years' successful labors in Australia, and will spend the Summer preaching in London.

Despite threats of assassination, the King of the Belgians has signed the law on the reform of primary education, which will be promulgated shortly.

Major Serpa Pinto, the Portuguese Stanley, is reported as strong and muscular, although of light limb and frame, and of a genial disposition, not easily overcome by difficulties.

Bishop Hendricken (Roman Catholic) of Rhode Island, in order to raise funds for the new cathedral at Baltimore, is arranging a grand diocesan picnic, to include all the Roman Catholic societies in that State.

Lewis B. Monroe, Dean of the School of Oratory of the Boston University, died at Dublin, N. H., June 13th, after a short illness. He was about fifty years old, and was the best known teacher of elocution in Massachusetts.

The cost of transporting Lord Lorne and Princess Louise from England to Canada—$10,000—is a bill that no one seems willing to father. The Home Colonial Office refused to pay it, and the Canadian Treasurer has also repudiated the bill.

A case of love at first sight is reported from Alaska. A sergeant of the Marine Corps is about to lead to the altar the daughter of the Indian chief, Sitka Jack. The bride having paddled alongside the *Alaska* with her little canoe loaded with fish, the gallant sergeant was immediately smitten and fascinated.

In the list of the new "Chevaliers of Honor," published in Paris, are the names of two Americans—William A. Cole and Dr. Warren Bey. The latter, before entering the service of the Khédive, became well known by his expert testimony in the famous Wharton poisoning case in Baltimore, a few years ago.

Dr. Arvid Arnfelt, a well-known Swedish bibliographer, has completed a biographical and critical memoir of Leonhard Fredrik Rääf, the antiquary, who died in 1872, in his eighty-sixth year. The volume contains a great deal of new matter regarding Swedish literature in the first half of the present century.

The Prince of Wales stood sponsor to Captain and Mrs. Arthur Paget's baby when it was christened at the Chapel Royal, St. James's Place, two weeks ago. Mrs. Paget was formerly Miss Minnie Stevens, of New York, daughter of Mrs. Paran Stevens. This is the first child of American-born parentage who has had the honor of having an heir to a crown as a godfather.

Georgia has a Hicks-Loed case in the marriage of Dr. James S. Sims, a man of seventy-five, worth some $25,000, to Mrs. Adkins, a widow of forty, worth $15,000. Relatives tried to prevent the marriage, and the doctor's son, Mississippi's Lieutenant-Governor, got his father declared a lunatic. A judge, however, set the judgment aside, and the old couple eluded the young folks and were married before they knew it.

Miss Mary H. Packer is the late Judge Packer's youngest daughter. She is a most devout Episcopalian, and has done much in the way of charity. As she is now the richest woman in this country, with the exception of Mrs. A. T. Stewart, the public will no doubt hear more frequently of her deeds of kindness. She is known as a very thorough business woman, and the fact that her father, in the disposition of his great estate, put her on a level with her brothers, is a high compliment to her business sagacity.

Colonel Hee, the Chinese Consul in San Francisco, explains the increased arrivals of Chinese at that port on the ground that the belief in China is that the Bill restricting emigration from that country to the United States had actually become a law, and that subsequent to the 4th of July only fifteen persons would be allowed to take passage on one steamer. The Chinese, having learned that the measure had passed both Houses of Congress, concluded that the question was settled, and hastened to start for the golden shore while there was yet an opportunity.

The death record of the past week includes the names of Lewis B. Monroe, Dean of the School of Oratory of the Boston University, July 14th; Thomas M. Dale, one of the pioneer silk manufacturers of Paterson, 17th; General Peter Lyle, of Philadelphia, 17th; Colonel Alexander MacW. Cumming, of Princeton, 17th; Civil Engineer Franklin A. Stratton, U. S. N., 17th, at Philadelphia; the Rev. William C. Mead, D.D., LL.D., Rector of St. Paul's Church, Norwalk, Conn., 17th; General Wm. F. Barry, in command of Fort McHenry, 18th; M. Favre, contractor of the St. Gothard tunnel, 19th; and Henry D. Palmer, the theatrical manager, 19th, in London.

An evidence of the advance of civilization in India will be found in the fact that a widow marriage was celebrated on May 5th, in Girgaum, under the auspices of the Widow Marriage Association. The bridegroom, Mr. Dinkur Punt, is the head master of the Belgaum Girls' School, and is a Chitpavan by caste. He is about thirty-six years of age. The bride, Sakheo Bai, who is only eighteen years of age, is a Deshasth by caste, and she lost her first husband when she was quite young. There was a goodly number of educated natives present at the wedding, and everything passed off quietly and well. It will interest our readers to know that this is the twenty-second widow-marriage on this side of India, the first having taken place in June, 1869. It is scarcely possible that widows will hereafter be burned with the dead bodies of their husbands.

MLLE. SARAH BERNHARDT.

MLLE. SARAH BERNHARDT, who has been playing in London with the company of the Comédie Française of Paris, is a Jewess; her mother was Dutch, her father was a Frenchman. She was a pupil of Messrs. Provost and Samson, professors of elocution. In 1862 she made her début at the Comédie Française in Racine's "Iphigénie," and the "Valérie" of Scribe. She was not successful then, and played at the Gymnase and the Porte St. Martin in burlesque parts. In January, 1867, she returned to high art at the Odéon, playing several minor parts with much applause, till she achieved a notable success in that of *Marie de Neuberg*, in "Ruy Blas." She was thereupon recalled to the Comédie Française, and first showed her higher powers in "Andromaque" and "Junie"; but it was in *Berthe de Savigny*, in the play of "Le Sphinx," performed in March, 1874, that she won the greatest applause. Her magnificent rendering of *Zaire* and *Phèdre* have been most generally admired. Mlle. Bernhardt has remarkable versatility of talents, being a tolerable sculptor, painter, musician, and literary writer. She is of an enterprising disposition, served as an ambulance nurse with the French Army during the siege of Paris, and has made several balloon ascents, of which she wrote an account. Her genius is beyond dispute and partakes of many eccentric illustrations. It is doubtful if any actor or actress has ever furnished so much rich food for the public palate as she; and while the press of Europe and America have been overflowing with narratives of her life, habits and manners, she has almost daily added to the list of her surprising abilities.

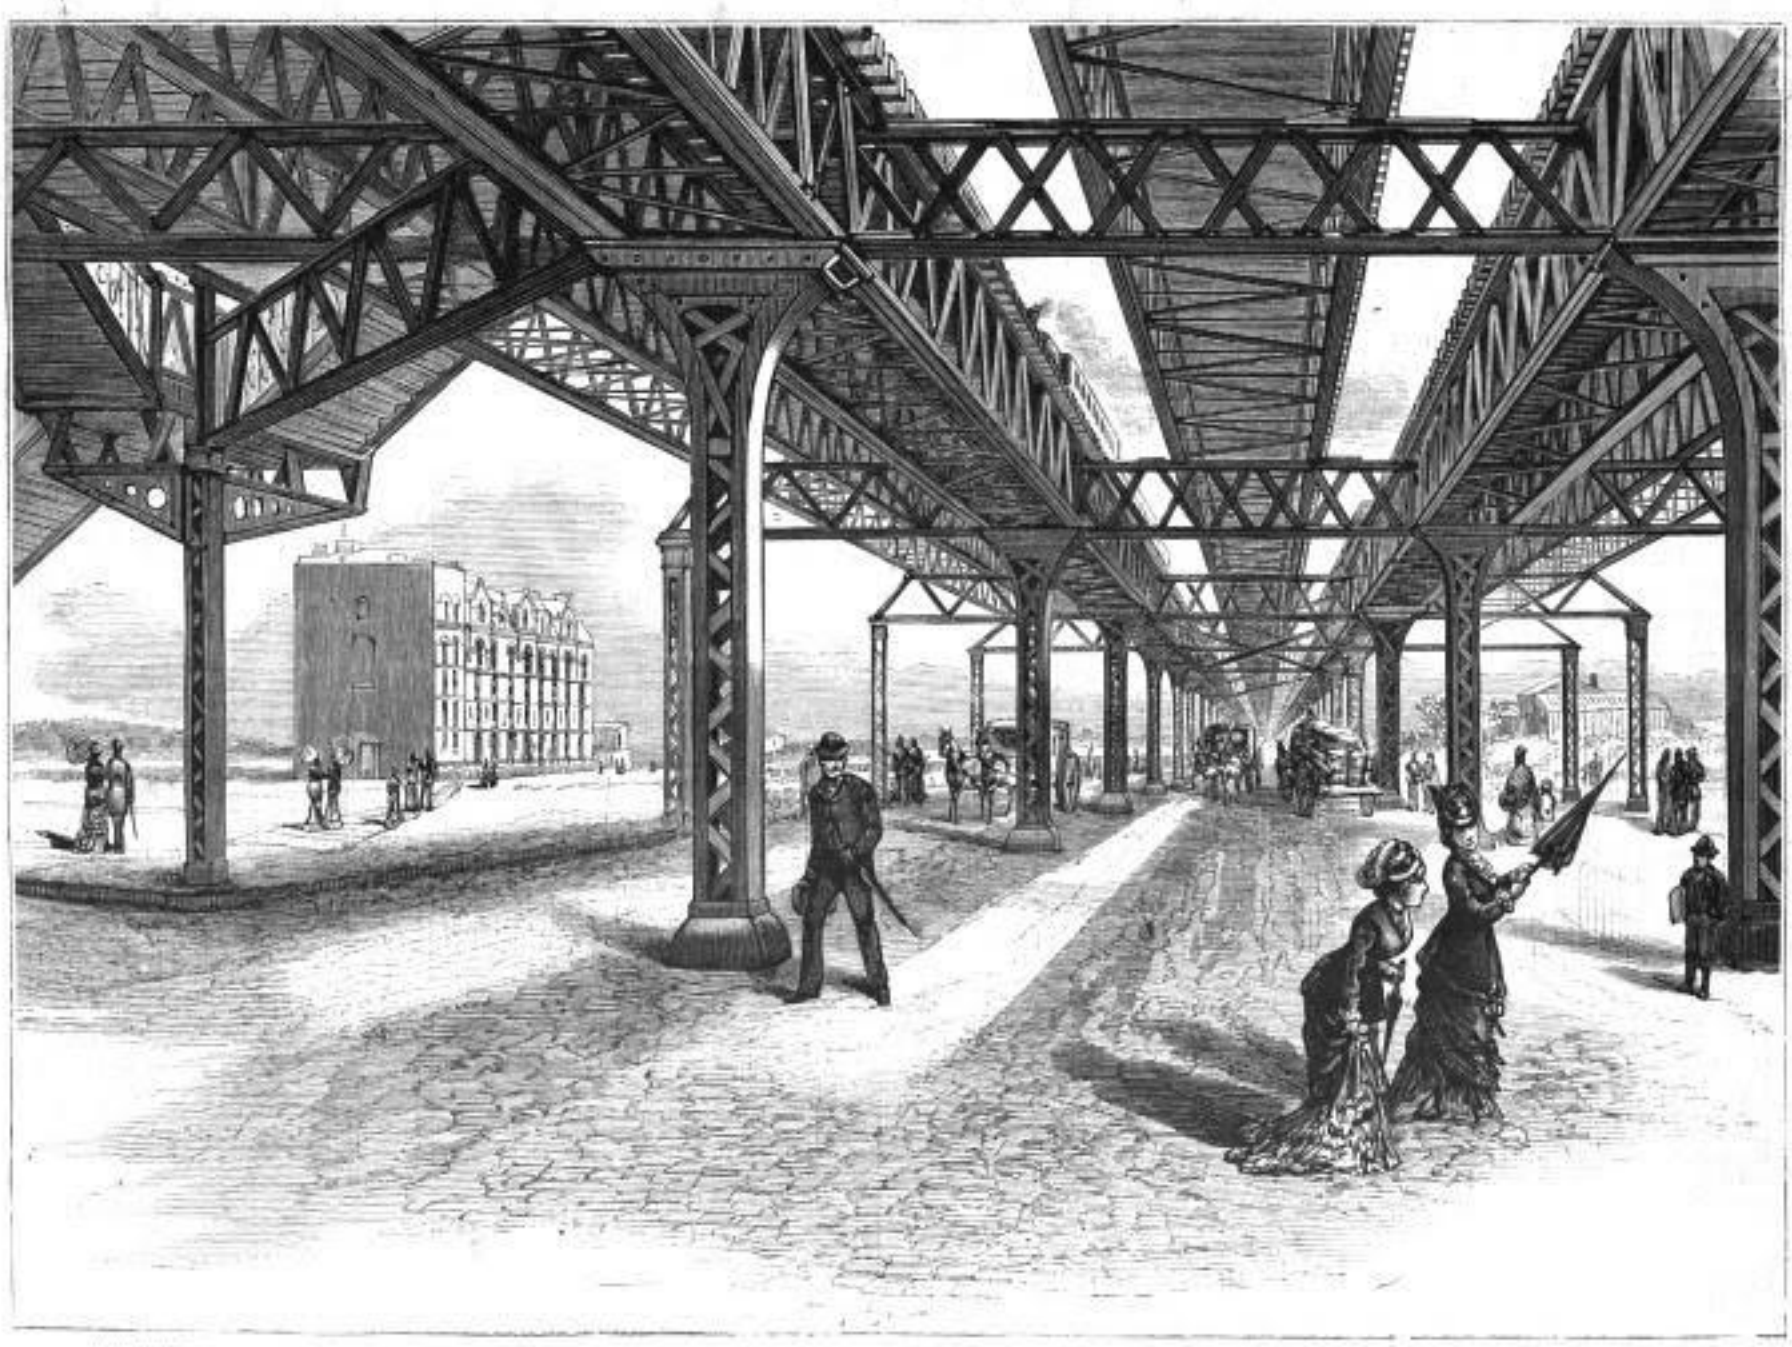
While all London was growing wild over her performances on the stage, in her studio, and in the social parlor, she created a new sensation about the first of July by handing in her resignation as a Sociétaire of the Comédie Française. This action is said to have been prompted by the cabal organized against her in Paris during her absence. The *Figaro* published an article in which all her peculiarities were held up in an unenviable light, and many strange freaks were ascribed to her. In a lengthy telegram she denied all the points raised, and expressed sorrow at the treatment she had received. It is believed that the real cause of her resignation is her desire to travel independently of the Théatre Française, which has a first claim upon her during the time she remains a Sociétaire. It has been definitely announced that she proposes to make a professional tour of the United States; but she must "put off the old love before she goes on with the new." It is not unlikely, therefore, she has been seeking a cause for withdrawing from the company ever since her brilliant reception in London, as she is sure, by independent performances, to double her present income many times.

MLLE. SARAH BERNHARDT, EX-SOCIÉTAIRE OF THE COMÉDIE FRANÇAISE.

PROGRESS OF RAPID TRANSIT TOWARDS HIGH BRIDGE.

FROM present indications it is likely that our citizens will be able to reach High Bridge—One Hundred and Seventy-fifth Street—by elevated railroad during the coming Fall. The general instructions given to contractors are to spare no time, trouble nor expense in pushing the work; at the same time it is expected that the road will be built in such a thorough manner as to last for ages. The first train to Eighty-first Street and Ninth Avenue, on the Metropolitan "L" was dispatched on June 9th, and made the distance from Rector Street in twenty-eight minutes. This station is near the American Museum of Natural History, and the trains on the first running day bore hundreds of citizens to the Spring reception of this admirable institution. A smooth and easy run of half an hour brings the visitor to One Hundred and Fourth Street. Here he finds a station rapidly nearing completion. The road structure at this point is very low, perhaps the lowest on the entire line. A few blocks above is Lion Brewery, and from this point the road, at One Hundred and Tenth Street, curves into Eighth Avenue. The sharp descent down One Hundred and Tenth Street has compelled the company to raise great brick and stone piers over the foundation bases, and the columns when placed on top of these piers will form quite a novel feature in "L" railroad building. As the road passes from One Hundred and Tenth Street into Eighth Avenue, and continues along that avenue over the horse-car tracks, the structure becomes higher and higher till it makes one almost giddy to look up to it.

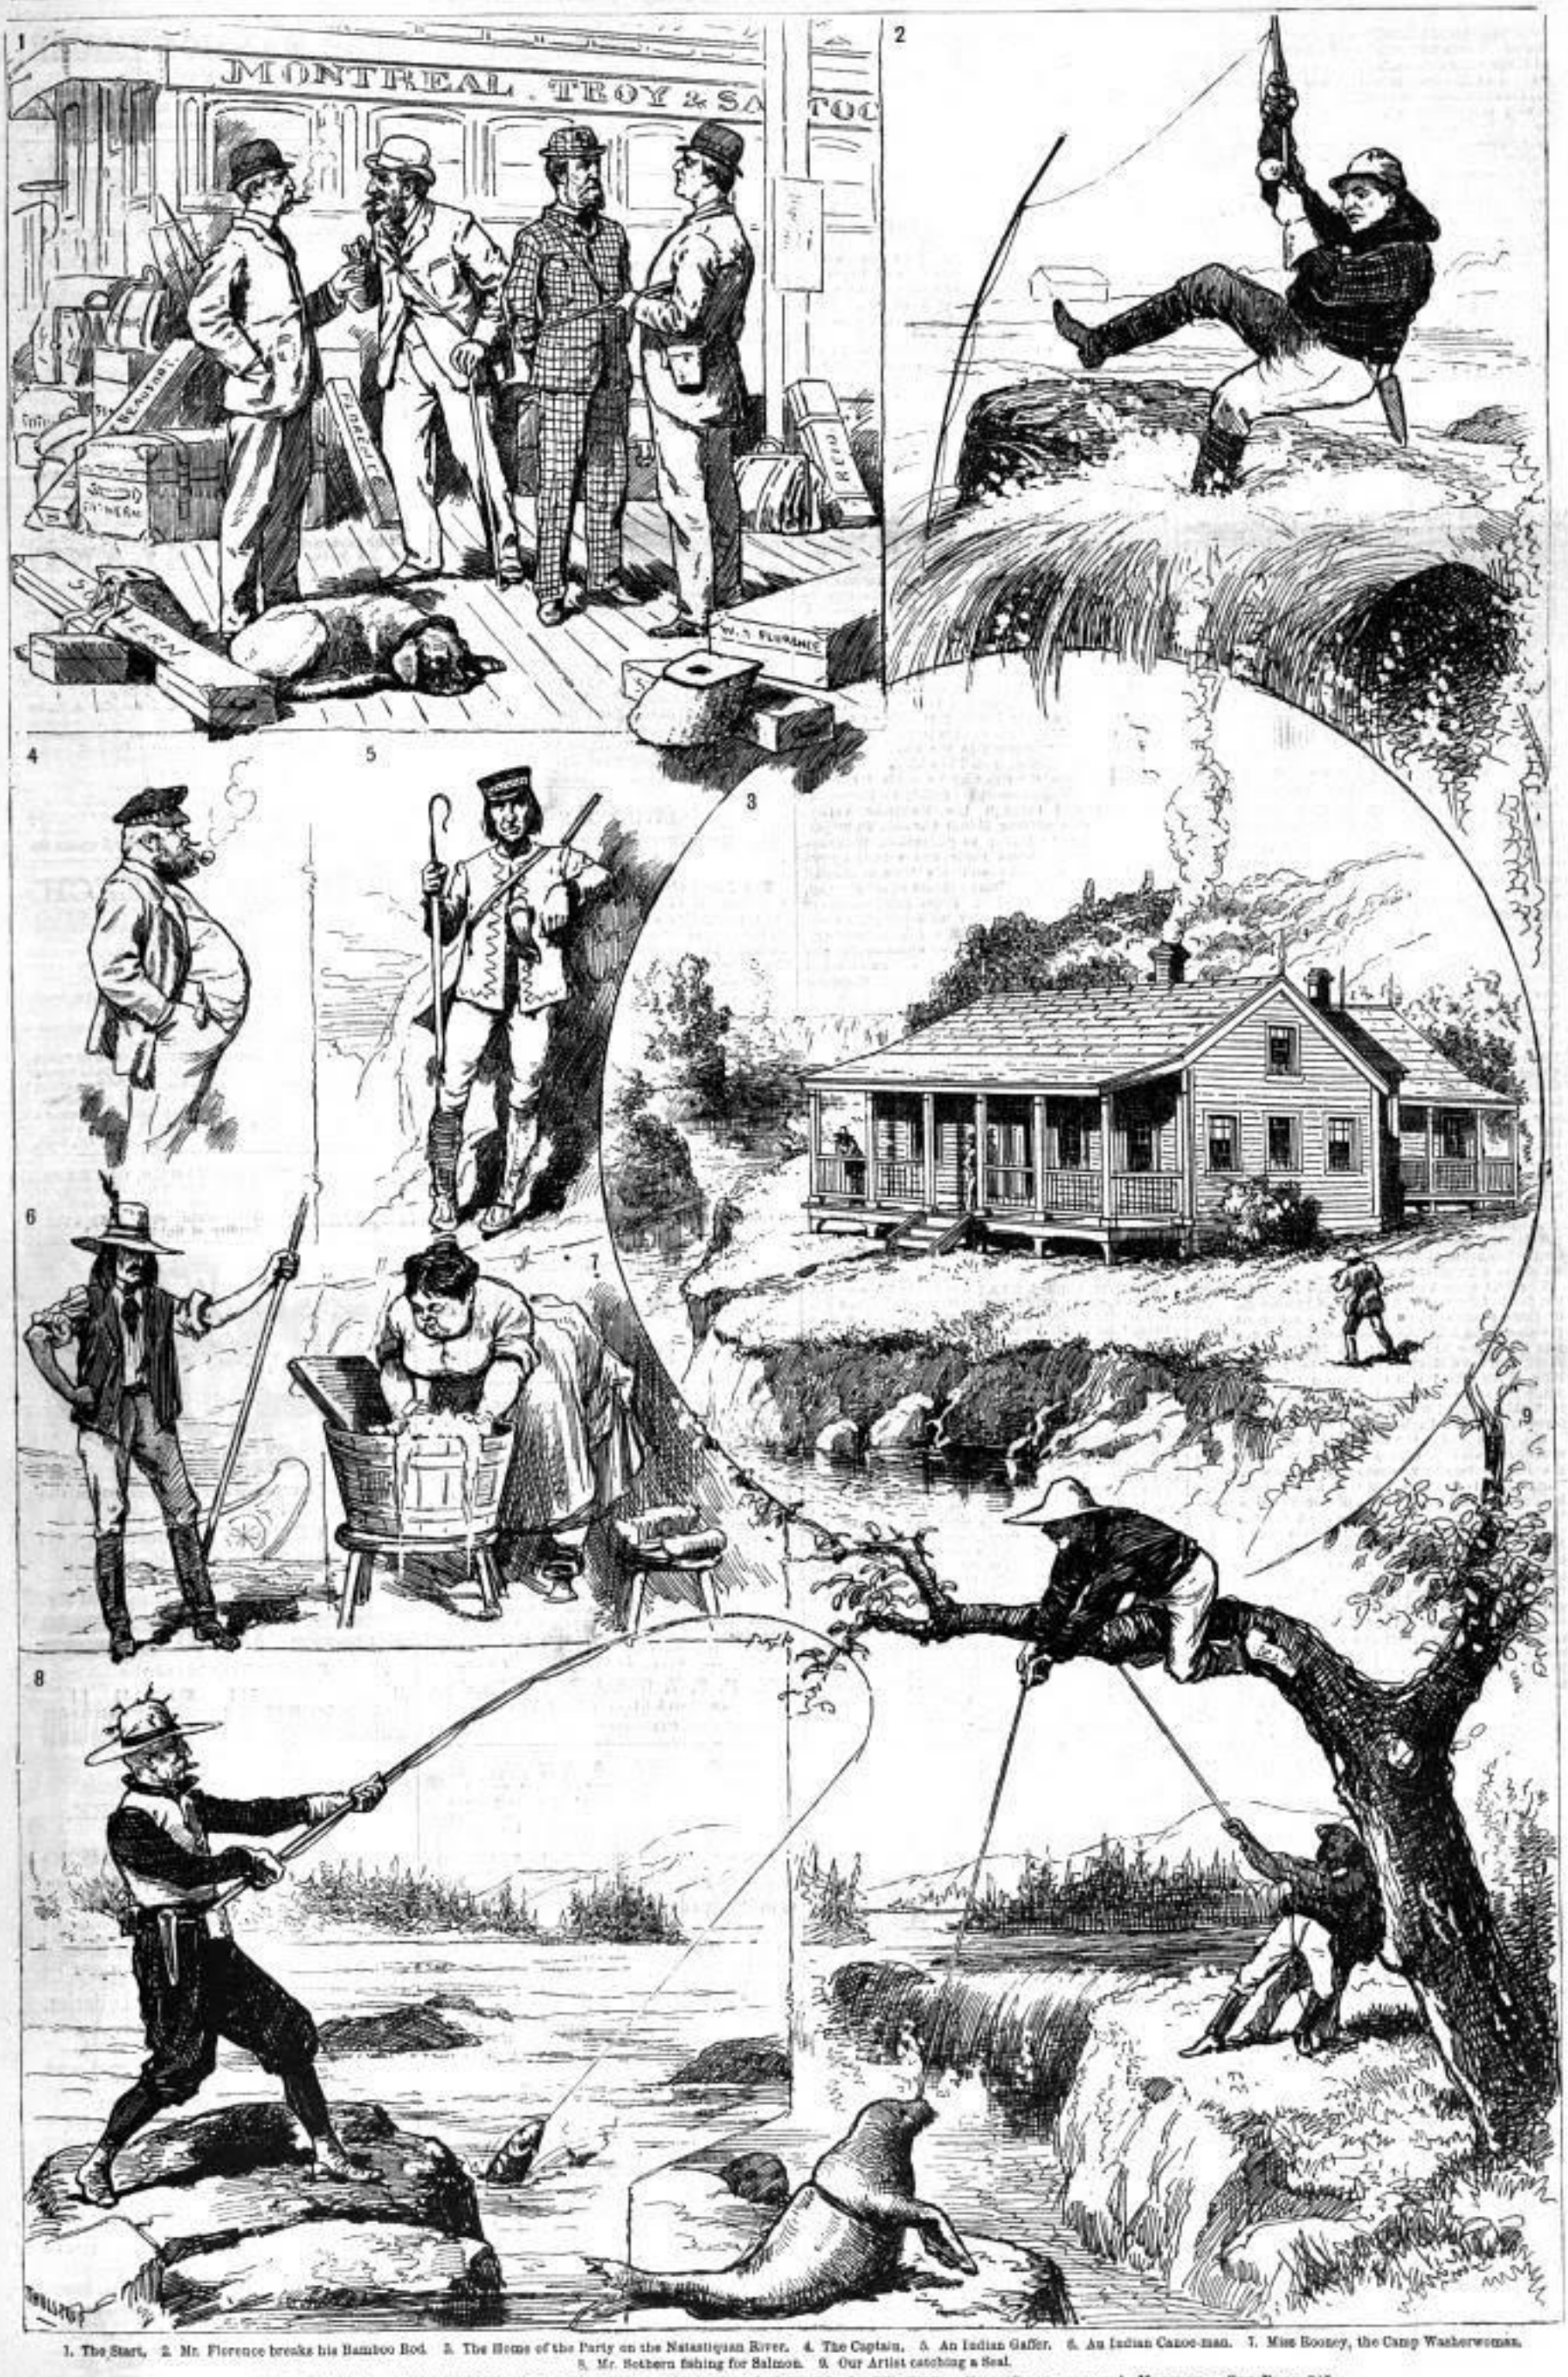
The foundations, from One Hundred and Fourth Street and Ninth Avenue to One Hundred and Fifty-fifth Street and Eighth Avenue (Harlem River), are all either completed or fairly under way. On Eighth Avenue the digging has been comparatively easy as far as One Hundred and Forty-fifth Street, owing to the sandy character of the soil, and many of the excavations are only seven feet deep. But from One Hundred and Forty-fifth to One Hundred and Fifty-fifth Street the obstacles encountered have made the work extremely cumbersome. It was considered necessary to unearth all the great boulders of rocks that had been sunk to fill up the marsh, and remove them, and, as water was frequently met with, to drive in piles, sometimes to the depth of forty and fifty feet below the surface of the avenue. The piles are of yellow spruce timber, which, while resting under water, is absolutely secure from rot or decay, and after the piles are filled in with concrete the brick piers and foundations are erected in the most solid manner and exactly like those on Second Avenue.



It is believed that the One Hundred and Twenty-fifth Street station will be opened for travel by August 1st, and during the same month the road is also to be in operation as far as One Hundred and Forty-fifth Street. The soundings are now being taken from One Hundred and Fifty-fifth Street to High Bridge (One Hundred and Seventy-fifth Street), where the road continues along the marshy westerly bank of the Harlem, and where most of the structure will also have to be raised on piles, thus adding immensely to the difficulty and expense of the work.

The structure on the portion of Eighth Avenue above One Hundred and Tenth Street, where the iron is already erected, is quite different from any that has yet been seen in the city—quite apart from its extraordinary height, which, in some places, exceeds sixty feet. To brace the lofty iron columns, longitudinal and lateral cross-girders of great strength and elaborate workmanship have been placed midway, both as to the height and width, and the highly wrought ironwork, when it is painted, will make the structure look like some artistic piece of bridge-architecture, conceived as much with a view to beauty as to solid use.

There have been many interviews of late with knowing ones concerning the extension of the hours for five-cent fares on all the elevated lines, and the possible abolition of the ten-cent rate entirely. Assertions and denials have been freely made that the officers had ordered a reduction, but at the present writing the public is in ignorance of the exact state of affairs, loud as the clamor is for cheaper rates. Quite an army of men is employed on the east and west side roads, and there seems to be no hitch in their work.



BISMARCK AS AN ORATOR.

THE Berlin *Tagblatt* furnishes the following sketch of the German Chancellor delivering his great speech in the Reichstag on the Customs tariffs: "Hush! Bismarck is speaking!" With these words you are ushered into the Reichstag. And it is so. Before even hearing a word you can tell by the aspect of the Chamber that it is the Chancellor who is speaking. With their bodies stretched out, and ears wide open, everybody leans forward to listen. The pencils of the short-hand writers fly over the paper with the rapidity of lightning, and you

hold your breath involuntarily that you may hear better. From below is heard a feeble voice—one of those voices which, by its nervous tone, suggests excess of intellectual work. The words come by jerks, each sentence being laboriously formed. The orator is sometimes hurried, sometimes hesitating in his speech. He recalls each sentence, twists it, and turns it about until he has eliminated all the points which an adversary might attack. It is then only that he abandons it to the House. In listening to him you experience a strange excitement, for while this strong man continues his speech you are momentarily feeling that he will suddenly stop short in the middle of his discourse. Not that ideas are likely to be wanting, but one fears lest the weakly voice which issues so laboriously from the Chancellor's robust frame may fail in the midst of a peroration without the possibility in the hurry of picking up the broken threads. The Chancellor himself looks ill at ease while speaking, his thin white hands fidgeting now with one, now with another button of his modest dark blue cuirassier's uniform. Then they catch feverishly at the long pencils so much talked about; seek refuge on the table; and at last rest on the glass of water which stands on the tribune. You might fancy that it was only this resting-place that was wanting, for presently his speech grows firmer, more severe; words flow from his lips with greater clearness; his thick eyebrows are lowered still more upon the gray eyes which seem to penetrate the ranks of the Deputies. It is now evident that the orator is approaching the end of his speech; the sentences become shorter and more vigorous. And then the Chancellor draws himself up to his full height; the voice, so weak at first, gains a clear hard ring, and he throws his last sentence like a bomb into the midst of the Chamber, resuming his seat amid the loud applause of his friends.

OUR SUMMER RESORTS.

SHARK-FISHING OFF THE COAST OF NANTUCKET.

FEW places within easy reach of Summer tourists have undergone so great a transformation as the Island of Nantucket. In one respect it has long been in a state of decay; in another it is rapidly rising in popular esteem. The whale-fishing on this continent had its origin, and for many years was exclusively pursued, there. Fifty years ago there were over a hundred vessels engaged in this business and in the coasting trade which was consequent and dependent upon it. Its ships and its sailors visited every part of the globe in pursuit of their gigantic prey, and the name of Nantucket became a familiar sound wherever winds blew and waters rolled. Her prosperity was due to commerce exclusively, and to one particular branch of commerce. To borrow a homely phrase, "All its eggs were in one basket," and when the bottom of this basket dropped out its fortune and its occupation were gone.

While the island has fallen into decay with respect to the whale-fishery, it has of late been reviving under the influence of Summer tourists, attracted to the locality in the first instance by the luxuries of Martha's Vineyard. It is easy to extend one's journey, when it is once begun, from one island to the other. The two or three hours of sea-voyage which separate them become attractive in fine weather and in a comfortable boat. Of the crowds that visit Martha's Vineyard, many are tempted by curiosity or restlessness to prolong their excursion to Nantucket. This last is consequently fast assuming the character and aspects of a watering-place, and several excellent hotels and comfortable boarding-houses are ready to give the wanderer a hospitable welcome.

The first aspect of Nantucket as you see it from the deck of the steamer is fine and imposing. Two or three church-spires, standing in a commanding position, form with the other buildings a combination agreeable to the eye. A few rods from the shore there is a steep bluff some forty or fifty feet high, along which is a continuous row of houses, while in like manner the low ground at the bottom is thickly covered with dwellings, so that there is a foreground and a background to the landscape.

When you land in the town and look about, you are struck with the compactness of the place and the limited territory which the houses occupy. Nantucket is really a town of four thousand inhabitants, but it has the look of a section of a large town or even city. The houses most remote from each other are not much more than a mile apart. Main Street, the principal business street, looks like a street in Boston, with its many shops and its continuous blocks of buildings. This street, and Orange Street—which runs at right angles with it—are paved. It is one of the noteworthy facts of both Martha's Vineyard and Nantucket that the few names of the first settlers are extensively perpetuated; while by intermarriage the inhabitants are bound in a network of relationship. About 1806, after nearly two hundred years, thirty-two names made three-fourths of the population—Lace, Norton, Mayhew, Smith, Allen, Peace, Tilton, Butler, Dagget, Dunham and Coffin being chief. Thomas Mayhew, of Watertown, received the grant of the islands, Martha's Vineyard and the adjacent ones, with the right and title of Governor, wholly independent of the Massachusetts Bay Colony, in 1642. The spot where he was buried—though no stone marks it—is in the yard, just between Water Street in Edgartown, Martha's Vineyard, and the harbor, almost under the windows of the old mansion, yet occupied by a Mayhew, which stands on the site of his house.

Nantucket Island is about one hundred miles south-southeast of Boston, and thirty miles from Hyannis, the terminus of the Cape Cod Railroad, is crescent-shaped and about fourteen miles long by three and a half broad.

There are now abundant facilities for surf-bathing and fishing, and few travelers would visit the island without indulging in the exciting sport of shark-fishing. While fine specimens of the white shark and the man-eater are occasionally encountered, the principal species is that known as the dogfish, averaging from four to eight feet in length. Catboats and ordinary rowing-boats are used in the exercise, and it is always well for a party to engage the services of an expert skipper. The line is a stout rope to which some nine feet of chain bearing a huge hook is attached. The hook is baited with meat. Reaching the desired locality, the anchor is cast and the line thrown out. When a bite is had all hands but the skipper haul in until the head of the shark appears above the water at the side or stern of the boat. Then the skipper, watching his opportunity, strikes the shark on the head with a heavy club, generally killing it with the first blow. The larger sharks are towed ashore, where considerable oil is obtained from them.

Another exciting sport is to "lay" for one of the numerous small whales that frequent the harbor, plunge a harpoon into its body, make the line fast to the boat, and allow yourself to be propelled about the harbor in all directions by the captive, who seeks in his rapid movements not to please you with an exhilarating sail, but to free himself from the fatal barb. When the whale becomes exhausted you can either cut loose, or hold the body in tow, and row back to the shore.

Under the potent sovereignty of fashion, the advancing prosperity of this charming island will be made apparent by illustrations in succeeding issues of this newspaper.

THE READING SUMMER ROUTES.

AMONG the very numerous and enticing Summer excursion route-books put forth by the important railroad lines none offers a more varied and attractive list than that of the Philadelphia and Reading Railroad. Its accurate illustrations of important towns and cities are a unique and especially valuable feature; while in all the details of paper, printing and handsomely ornamented cover, the work is really artistic. No State in the Union surpasses Pennsylvania in its natural attractions and its inducements to health and pleasure-seekers, and no road penetrates more of the choicest and most interesting localities than the Philadelphia and Reading. By its recent acquisition of the North Pennsylvania and the Bound Brook railroads the sphere of the Reading becomes immensely enlarged, and it enters at once into competition with the most favored roads for its share of the passenger and pleasure traffic from the great cities of the Atlantic Coast. The valleys of the Delaware, the Schuylkill, Lehigh, Perkiomen and Susquehanna, all romantic and historic—the coal and iron regions of Pennsylvania in all their vast extent—hundreds of quiet, retired resorts for families—of health-giving springs for invalids—of forests and streams for sportsmen—are reached directly by the Reading system; while in close connection with it are direct lines to all the important Summer resorts, from the valley of the Ohio to the shore of the Atlantic. To people of moderate means, the Reading route-book offers inducements which should not be overlooked. From its proximity to the principal towns and cities of the mining region, the Reading is able to offer its tickets at a very low price, thus putting a delightful Summer excursion within the reach of limited purses. For instance, from Philadelphia to Wilkesbarre and return, the trip may be made for $6.50, or by way of Williamsport for $9.30; to Pottsville, Frackville and through the Mahanoy Valley, for $1.40; or, including Mount Carmel, Tamaqua, and Williamsport, $9.35; to Shamokin, Williamsport, via the Catawissa route, and return by the wonderful Glen Onoko and the "Switchback" Railroad for $11.65, and many others equally cheap, interesting and instructive. From Philadelphia to all the favorite and popular watering-places the Reading answers all the demands of the most exacting traveler. Roadbed, route, equipments and operating details are all in the hands of an able and experienced force, whose standard of excellence is simply perfection, and no pains or expense are spared to lead in every improvement and advantage worth having. The new route between Philadelphia and New York, with its quick time and sure connections, is rapidly gaining favor among business men, and under the new management the Reading will be more popular than ever. The Reading Summer-book, of which we began to write, may be obtained of all agents of the company at important points, or by addressing Mr. C. G. Hancock, General Passenger and Ticket Agent, Philadelphia.

FUN.

UPON the adjournment of Congress, Aleck Stephens, it is said, crawled into an envelope and franked himself home.

A DANSEL applied for a place behind a counter. "What clerical experience have you?" asked the man of drygoods. "Very little," she said, with a blush, "for I only joined the church last week."

MISTRESS (to new cook): "Now, Sarah, remember if you are strictly honest and economical in your marketing I will give you a few shillings extra per month." *New Cook*: "Thank you, ma'am; I will think it over, and let you know in the evening."

A LOWELL lady, sending a basket to her daughter in Boston by express, was so solicitous that it should go through expeditiously that she inclosed a note in the basket requesting her daughter to leave an order for the expressman to meet the basket at the depot. Fact!

A CLEVER Tuscaroran was tried at Elko, Nev., for cattle-stealing. The jury acquitted him without leaving the box. Upon his return home a friend inquired as to the result of the trial. "No cause of action," said the party; "I merely killed the ox in self-defense, and ate him for spite, and, of course, I was acquitted by the intelligent jury."

IN a recent trip of one of the steamers running to San Francisco, there was, at dinner, bread served which tasted strongly of coal oil. The captain afterwards asked the baker if he did not know that kerosene had got into the flour. He admitted that he did. "Why didn't you feed the flour to the chickens, then?" was asked. "Oh," he replied, "I was afraid it would kill 'em."

THE small boy of a clergyman in Portland was detected by his mother in the act of "ornamenting" with a jack-knife a costly inlaid table by a deeply-cut carving of his ideal steamboat. A day or two after the lady saw him from the door looking with admiring eyes at his partially completed work, and heard him sigh, "By George! I wish I had got the smokestack on before she licked me!"

"BOYS, I've never made a bet in my life; but I'll do so now," said Uncle Zeke at the Forks' tavern. "Hooray! I thought he'd come to it," shouted the laziest lounger in the place. "Now, what is it? I'll bet with you." "Well, it's this: Peer may be able to jump from the suspension bridge into the Niagara River, but I'll bet a pair of shoes he can't jump from the river onto the suspension bridge."

DURING a recent trial in New London a rural juror appealed to the Court to know "if the lawyers could not be stopped from bothering the jury." He had become bewildered in the maze of technicalities and subtleties with which the lawyers had apparently mystified the case, and he cried in anguish of spirit, "Them lawyers come here on purpose to bother and confuse us jurors, don't they, judge?" "I suppose they do, my friend," wearily answered his honor.

A GLASGOW minister was recently called in to see a man who was very ill. After finishing his visit, as he was leaving the house, he said to the man's wife: "My good woman, do you not go to any church at all?" "Oh, yes, sir, we gang to the Barony Kirk." "Then why in the world did you send for me? Why didn't you send for Dr. Macleod?" "Na, na, deed no; we wadna risk him. Do ye ken it's a dangerous case of typhus."

A YOUNG lady was sitting with a gallant captain in a charmingly-decorated recess. On her knee, was a diminutive niece, placed there *pour les convenances*. In the adjoining room, with the door open, were the rest of the company. Says the little niece, in a jealous and very audible voice, "Auntie, kiss me, too." I leave you to imagine what had just happened. "You should say *twice*, Ethel dear; that is not grammar," was the immediate rejoinder. Clever girl, that!

A COLLEGE professor once said that "he who *expects to rate* high in his class must not *expectorate* on the floor." Much of the hawking and spitting was, no doubt, caused by catarrh, which the professor knew could be readily cured by the use of a few bottles of Dr. Sage's Catarrh Remedy.

FRAGRANCE the most lasting!
Fragrance the most delicate!
Fragrance the most exquisite!
Fragrance the most refreshing!
Are all combined in MURRAY & LANMAN'S FLORIDA WATER—the only recognized perfume of fashion.

ASTHMA.—Thousands of the worst cases of Asthma have been relieved by JONAS WHITCOMB'S REMEDY. In no case of purely asthmatic character has it failed to give relief.

CINCINNATI, January 31, 1878.
Messrs. JOSEPH BURNETT & Co., Boston:
Gentlemen—I am happy to be able to recommend to those suffering from the distress of Asthma your valuable relief, JONAS WHITCOMB'S ASTHMA REMEDY. So far as I have used it my statement concurs with others with whom I am familiar, as to the most favorable results derived from its use.
J. N. DEAN,
Student at Cincinnati Law College

HOP BITTERS cures by removing the cause of sickness and restoring vitality.

THE suffrages of travelers, if honestly taken, would rank the ST. NICHOLAS HOTEL in New York as inferior to none in the world for superb luxury of table, apartments, and general conveniences and accommodations. It is so well known, in fact, that any description would be almost like "gilding refined gold or painting the lily."

DIVIDEND No. 3.

LITTLE PITTSBURG CONSOLIDATED MINING CO.,
113 & 115 BROADWAY,
NEW YORK, July 17th, 1879.

CHIMNEY CORNER,
Issued July 21st. Issued July 21st.
Issued July 21st.

"THREE WOMEN AT ODDS" is a short serial, unaffected in style, of great power in portraying character, and highly dramatic in plot. The dialogue is natural, with bright flashes of wit, and always exciting in a healthy and legitimate way.
No story can claim attention more deservedly during the idle hours of Summer than
"THREE WOMEN AT ODDS."
Frank Leslie's Publishing House,
53, 55 & 57 Park Place, N. Y.

Frank Leslie's
Boys' & Girls' Weekly
The following admirable serial stories are now in course of publication in this, the
OLDEST & BEST OF THE JUVENILE PUBLICATIONS.
"Long Jim, the Scout; Or, The Death Valley of the Apaches," by Henry H. Bristake.
"Minnie's Rescue from the Wilds of Siberia; Or, The Daring Adventures of Two Brave Boys," by Roger Starbuck.
"Roy, the Ranger: A Tale of the Mexican War."
"Young Pickwick's Schooldays."
A new and splendid story, equal to Jules Verne, entitled,
"TOPSY TURVY; Or, THE BOY EXPLORER."

SOLD BY ALL DRUGGISTS.

Attractive, Useful & Interesting Reading for Everybody.

Frank Leslie's

SUNDAY MAGAZINE.

The Best and Cheapest Sunday Periodical in the World.

THE AUGUST NUMBER NOW READY.

"The ample size of the page of the SUNDAY MAGAZINE enables the conductors to give a larger amount of reading matter in each number than is furnished by any of its American or European contemporaries; while the price is lower by one-third than that of any one with which it comes in competition."—*Cumberland Presbyterian, Nashville, Tenn.*

"First, by long odds, among all magazines of its class. About seventy articles and as many illustrations, besides 'At Home and Abroad,' 'Editor's Portfolio,' etc., etc., and the many articles in these grand divisions. Twenty-five cents a single number, and $3 a year."—*Presbyterian, Wilmington, N. C.*

"Probably this is one of the most pleasing magazines published—containing a greater variety of reading matter and more illustrations than any other periodical. It is full of life, and is always in advance of the other monthlies."—*The (N. Y.) Methodist.*

"To attempt to quote the titles, even, of articles, would exceed our limits. It has about sixty articles, comprising travel, history, poetry, biography and moral tales. The Editorial Miscellany is of sterling merit. The amount of matter puts every similar publication at a disadvantage in comparison. It is cheaper than dime novels. It has 128 royal octavo pages, fully illustrated, for 25c."—*Michigan Christian Advocate.*

CONTENTS.

Articles, Descriptive, etc.—"Emigration to the Holy Land," by Prof. Wm. Wells.—(Illustrations: Sir Moses Montefiore; The Cedars of Lebanon; The Mount of Olives; Jericho and the Jordan; Mount Lebanon.) "The Crusades against the Albigenses and the Waldenses," by Alfred H. Guernsey.—(Illustrations: Pope Innocent III.; Torture in the Inquisition; Peter the Hermit; Crusaders and Saracens; Slaughter of the Albigenses; The Four Martyrs at Seville; The slaughter at Cabestens; Waldensian Refugees in the Alps.) "Sketches in Uruguay."—(Illustrations: View of Higueritas; Uruguayan Fruit-sellers; Uruguayan Girl going to Market; View of Colonia; View of Montevideo.) "The Opening of the New York Cathedral," by Mary E. W. Sherwood. "Indian Students at Hampton, Va.—(Illustrations: A Classroom in the Institute; A Young Indian as Engineer; Indian Students as Carpenters; The First Lesson in Arithmetic.)

CAUTION.

Subscribers, in ordering our publications, should be careful to write the name of FRANK LESLIE *in full, and direct their letters to 53, 55 and 57 Park Place, New York, from which address all our publications are issued.*

THE ISTHMUS CANAL AND THE "MONROE DOCTRINE."

IT is announced that M. de Lesseps, on behalf of the company organized for the construction of the Darien Ship Canal, has deposited in London $150,000 as an earnest of the sincerity which presides over the undertaking and in pledge of the zeal with which it will be pushed to a successful completion. This preliminary deposit was required by the Colombian Government in requital for the concession it is ready to make to any company which is willing to prove its faith in the practicability of the Isthmus Canal by something more substantial than plans and specifications. The fame of the eminent French engineer under whose auspices the present company is organized, the success which has already crowned his labors in connection with the Suez Canal, the irrepressible energy of his character, and the enthusiasm with which he inspires his associates, would seem to indicate that we now stand at the threshold of an honest and earnest attempt to realize a dream which for more than two generations has filled the visions of statesmen, diplomatists, engineers and geographers.

And yet, at the very inception of the project, as now formulated in Paris, some grave objections of a diplomatic and dynastic nature have been interposed by the susceptible spirit of some among our countrymen, who are disposed to arrogate for the United States a recognized preponderance in selecting the route of the proposed canal, in forming the company organized to build it, and in controlling it after the work shall have been completed.

Foremost among the grounds on which these objections are based is the assumption that it will be an infraction of the "Monroe Doctrine" to allow an European company to take the initiative in such a work on soil which forms an integral part of the North and South American Continents. During the late extra session of Congress, immediately after the announcement that the scheme of M. de Lesseps had taken a definite shape as the result of the recent deliberations in Paris, Senator Burnside introduced a resolution into the Senate directing the Committee on Foreign Relations to inquire how far the proposed movement was compatible with the declaration made by Mr. Monroe in his Message of 1823, when he asserted "as a principle, in which the rights and interests of the United States are involved, that the American continents, by the free and independent condition which they have assumed and maintained, are henceforth not to be considered as subjects for future colonization by any European power." Instead of the word "colonization," Senator Burnside has substituted the word "occupation," and so has missed the true sense and historical gist of the declaration made by Mr. Monroe in 1823. By that declaration it was simply affirmed that the waste and unsettled parts of the New World were, then and thereafter, no longer open to colonization by right of discovery, proclamation and partial settlement in the name of any European power.

It was in this way that the North and South American Continents had been originally parceled out by the leading nations of Europe—by Spain, France, England, Russia and Portugal. This work of "colonization" had gone on without let or hindrance from the first discovery of the New World by Columbus down almost to the beginning of the present century. But with the beginning of this century the work of colonization had practically come to an end; for, though large parts of the New World were still unsettled by civilized man, it was claimed by one power or another that its jurisdiction extended over the unoccupied as well as the already occupied portions of North and South America. The undefined nature and extent of these conflicting territorial claims led to frequent disputes between the nations interested in their assertion, and the history of diplomacy is filled with discussions on this topic down to a period so late as the administration of President Polk, when "the Oregon boundary controversy," so long pending between the United States and Great Britain, was finally settled in a way so little satisfactory to ardent patriots, who asserted the rightfulness of the claim advanced by our Government to the surrendered property lying between parallel 49° and 54° 40' of north latitude.

"The Monroe Doctrine," so-called, is subject to such perpetual misstatement in our current politics, and is so constantly imported into discussions where it has no legitimate place, that it seems appropriate to recall its real significance and bearing to the notice of our readers, now that it has again been invoked as a *cavet* against the project of M. de Lesseps and his associates.

By the terms of the Nootka Sound Convention, concluded between Great Britain and Spain in the year 1790, it had been agreed with respect to the eastern and western coasts of South America, and the islands adjacent, that no new colonies should be planted by the subjects of either power, south of the parts already occupied by Spain. When, by their successful revolution, the Spanish-American States became free and independent of the mother-country, it followed that they severally and collectively succeeded to the territorial right of eminent domain which had formerly vested in Spain; and hence, in 1823, when the independence of these States was formally recognized by the United States as being definitively established, it was judged by Mr. John Quincy Adams, Secretary of State under President Monroe, that the time had come for promulgating, as a principle of fact and right, the doctrine that no part of the American Continent would *thereafter* be subject to "colonization" as waste and unoccupied territory. The whole territory of these Continents was then covered by the flag of some recognized country, and would, argued Mr. Adams, be henceforth "accessible to Europeans, and to each other, on this footing alone."

This doctrine was first formulated by Mr. Adams in the course of some negotiations between our Government and Russia with regard to the conflicting territorial pretenses of the United States, of Great Britain and Russia in the northwestern parts of North America, and Mr. Monroe did but reiterate and generalize the declaration of his Secretary of State when he incorporated in his message of 1823 the statement which has subsequently come to be called "the Monroe Doctrine." It was directed simply and solely to a denial of the right of any European Power to plant new colonies in the North and South American Continents, and what was denied to European Powers was equally denied to the existing Powers on this side of the Atlantic. The New World was henceforth to be occupied and settled by the nationalities among whom it was parceled out; or if existing rights were disturbed, they were to be disturbed by cession, by purchase or by conquest, as is done in other parts of the world.

The meaning and application of "the Monroe Doctrine" being thus limited by the history of its origin, it follows that to cite it as being antagonistic to schemes of internal improvement like the Darien Ship Canal is entirely to mistake its real significance. It is to conjure with words which have no meaning, and to impose a delusion on the popular credulity. The "Monroe Doctrine" of 1823 had a definite purpose, and that purpose has been fully accomplished; for from the date of its utterance no European Power has assumed to exercise the rights of "squatter sovereignty" on the soil of the North or South American Continents.

If it be just and proper that the United States Government should arrogate to itself a pre-eminent control over the construction and operation of the Isthmus Canal, it is a pretension which must be arrogated in the name of our living political and commercial interests, not in the name of a "doctrine" which has already spent its force and whose applicability to the North and South American Continents is no longer disputed by any Power under the sun.

We had supposed that all disputed questions of this sort, with regard to the proposed canal, were sufficiently settled by the Clayton-Bulwer Convention of 1850, between the United States and Great Britain. By the terms of that convention, after specifying certain routes then designated, the contracting parties proceed to hold the following language in Article VIII. of the convention: "The Governments of the United States and Great Britain, having not only desired, in entering into this convention, to accomplish a particular object, *but also to establish a general principle*, they hereby agree to extend their protection, by treaty stipulations, to any other practicable communications, whether by canal or railway, across the Isthmus which connects North and South America, and especially to the inter-oceanic communications, should the same prove to be practicable, whether by canal or railway, which are now proposed to be established by the way of Tehuantepec or Panama."

We are not insensible to the considerations which assert for the United States a pre-eminence of *interests* in the construction of the Isthmus canal, but we are at a loss to perceive how that priority of *interests* will be promoted by making us pre-eminently responsible for the protection of the canal against all comers. The Clayton-Bulwer convention proceeds on the assumption that our *interests* will be best subversed by the *neutralization* of the canal—by inviting all the world to co-operate with us and England in holding it "open on like terms to the citizens and subjects of every other State." This seemed the true *American doctrine* in 1850, and we can see no good reason for abjuring it in 1879. If we have any interests which can be promoted by charging the Government of the United States with a monopoly of *rights* and a monopoly of duties and responsibilities with respect to the proposed canal, we wait to hear them specified before we commit ourselves to their assertion on any grounds of mere political pride and national sensibility.

SECRETARY SHERMAN'S SPEECH.

A NOTABLE speech on the financial policy of the Government and its results was made by Secretary Sherman at Portland, Maine, on the 23d of July. Commencing with a brief sketch of the condition of the country in 1873, with a currency worth eighty-seven cents on the dollar, with an unnaturally high rate of interest, with wild and reckless waste and improvidence everywhere prevalent, with a depressed commerce and a heavy balance of trade against us, the Secretary proceeded to show that the country had extricated itself from all those embarrassements by the adoption of a sound financial policy, and resolute persistence, in the face of violent partisan opposition, in its enforcement, and is now more prosperous than it has been at any time since the panic. In this connection he demonstrated that within the last five years, while our imports have decreased thirty-two per cent., our exports have increased fifty-eight per cent. The tonnage transported on our railroads has increased in the same time thirty-seven per cent. As to the production of wheat and corn, the two leading cereal products of the country, which constitute the principal part of our exports of breadstuffs, it was shown that our corn crop, which was 932,000,000 bushels in 1873, had increased to 1,360,000,000 last year, and in the same time the wheat crop had grown from 281,000,000 to 425,000,000 of bushels. The cotton crop of last year was the largest ever grown, and our exports of cotton increased from 1,200,000,000 pounds in 1873 to 1,608,000,000 in 1878, while the quantity of wool produced increased from 158,000,000 pounds in 1873 to 207,000,000 in 1878.

Even our shipping interests, engaged in foreign trade—the industry most depressed—show some signs of hopefulness. Another indication of increased business is derived from a statement of the exchanges at the twenty-two clearing-houses in the chief cities in the Union, from which it appears that for the first five months of the year ending June 30th, 1878, the amount of exchanges in those cities was $11,936,373,274, and for the same period of 1879 it was $14,350,492,229, showing an increase of 20.2 per cent. this year.

These statistics, taken at random from a mass of figures embodied in Mr. Sherman's speech, constitute a conclusive proof of the wisdom of the financial policy which he has so successfully maintained against formidable opposing influences. Necessarily, in the recital of the financial achievements of the Administration, the Secretary is compelled to criticise the course pursued by the Democratic Congress in disturbing the public credit by unfriendly acts and propositions; but upon this point he speaks with judicial fairness, and shows quite as little of partisan feeling as can, under the circumstances, be expected of him. It cannot be doubted that the speech will make a very decided impression upon the country. In Ohio, Maine, and other States where the financial issue is especially prominent, it will no doubt form the text-book of the Republican canvass, supplying just the information needed by every writer and speaker who may enter actively into the work of educating the voters on this supremely important question.

BISMARCK AND THE VATICAN.

THAT the Pope was by no means shorn of all political power in Europe when the temporal authority vanished from his grasp is abundantly proved by the present attitude of Prince Bismarck. It may be said, indeed, that the political influence still wielded by the Pontiff has won a signal victory over the foremost statesman of the foremost Protestant State of Europe.

How has it come about that the stubborn-willed and conscientious Bismarck has not only thought it wise to treat with the Vatican, but has come to terms with it, and has virtually agreed to retreat from the memorable position against the Church which he took up three years ago? A moment's retrospect will show how much Bismarck has yielded in order to secure the political support of the German Catholics and the friendly countenance of their eloquent chief, Herr Windhorst.

The Church Reform Bills, better known, perhaps, from their author, as the Falk laws, were the result of a long and bitter struggle between the newly created German Empire, flushed with the victories that ushered in its birth, and the German Catholics, backed by all the influence of Rome. The purpose of those laws was to put the Catholic Church in Germany completely under the secular arm; to deprive it of its allegiance to the Pope, and to compel it to a single allegiance to the State; to subordinate all the ecclesiastical machinery to the mandates of a political and Protestant Minister, and thus to prevent Catholicism from becoming a centre and stronghold of conspiracy and reaction against the new order of things. By the Falk laws, the Minister of Public Worship received remarkable powers. He was authorized to maintain "discipline" over every clergyman of every sect and every congregation in Prussia. He could try, expel or inhibit any pastor or priest. He must arbitrate between the pastor and his flock, in case of disagreement between them. No bishop, priest or pastor could exercise his functions within the Emperor's dominions, unless he took an oath of exclusive allegiance to the Empire. Before any license to perform the rites of religion was issued, the Minister, or his subordinates, rigidly examined each candidate. A defiance of the Falk laws incurred for the offender not only fine and suspension from duty, but imprisonment; and when Archbishop Ledochowski, the ablest and most eminent of all the German Catholic hierarchy, refused to obey them, he was, in fact, incarcerated for many months. Jesuits were, moreover, incontinently expelled and prohibited from German territory.

Such was the rampart which Bismarck, aided by his earnest and indefatigable colleague, Dr. Falk, reared against the danger of that process of undermining the Empire which he believed the German Catholics to have at heart; and such are the laws which, up to this hour, have kept their Church under the control of the power of the State.

It did not, however, need the resignation of Dr. Falk to apprise us that the Chancellor has recognized the necessity of retreating from the position thus assumed three years ago. Dr. Falk could not remain in office when he saw that the cause to which he had devoted his utmost energies, and upon which his fame chiefly rests, had lost its hold on Bismarck's mind; and his retirement only serves to indicate that a reversal of ecclesiastical policy has been at last fully determined upon. It may still be that Bismarck's heart is in sympathy with the Falk policy, and that, were he entirely free from political entanglement, he would still firmly enforce it. But there can be no doubt that an overwhelming party necessity has driven him from it. Gradually Bismarck has been drifting away from that great Liberal Party by whose aid he has thus far been building up the fabric of the new German Empire. The Liberals have come to recognize that they have been assisting rather at the construction of a mighty bureaucratic despotism than at that of a constitutional *régime*; and again and again, within the past two years, they have opposed the measures which Bismarck has brought forward in the Reichstag. The breach has grown wider from month to month, until now the wearied and badgered Chancellor has turned in another direction for the support he needs and must have if he is to continue at the head of German affairs. He now aims to receive that support from the Conservative and Catholic Parties. The Conservative or Junker Party, representing the aristocracy and the old reactionary element in German politics—the Tories, in a word, of Germany—do not and cannot control a majority of the Reichstag. It remains, therefore, to conciliate the "centre," which is the technical party name of the Catholic deputies. To do this, Bismarck must sacrifice the principle of the Falk laws, and win the ostensible friendship, at least, of the Roman Pontiff. According to the information recently made public, it seems probable that this reconciliation has already been effected; or, at least, that an understanding has been arrived at. Germany will have a veto on the appointments of German bishops; on the other hand, the Falk laws, though not repealed, will be winked at and not enforced. It will be very easy to ignore them, in such a *régime* as Bismarck has established and still rules; and his reward will come in the shape of the united support of the Catholic centre.

These events foreshadow more stirring political times in Germany than have occurred since the promotion of William of Hohenzollern to the Imperial dignity. The Liberals will not sit submissive under what they regard as Bismarck's desertion of his declared principles and party allegiance. We may look for an agitation which will

Digitized by Google

have for its aim the downfall of the great Chancellor; who may find that even his vast influence and prestige must yield before the reforming forces of the time.

EVENTS ABROAD.

THE British were bound to beat the Zulus in the long run, and the battle of the 4th of July, in which the blacks suffered enormous loss and fled in dismay, ought to realize peace. The solid square that saved Quatre Bras and won Waterloo again proved of signal service to England, while the dusky warriors would seem to have flung themselves against the "hedge of steel" with a valor that has earned for them the reputation of a brave and a fighting nation. This slice of luck came never a whit too soon to Lord Chelmsford, and just in time to save his impeachment by the Radicals, and through them by the country. Should Cetewayo persist in fighting, his brother Okan, who surrendered some time ago, will be used as a bulwark between him and the British Colonies. Cetewayo is said to have retired to a new kraal, built when the war first broke out, fifteen miles north of Ulundi, and approached only through a long and narrow ravine, and where he has some of his chief regiments with him as a body-guard.

John Bright has declared, what everybody has known for many a long day, that the British rule in India is a gigantic failure, and to govern Asia by rules sent from Downing Street amounts to a farce. Twenty-five millions sterling deficit in four years! Mr. Bright is, of course, bitterly assailed by the Government organs; but invective is not argument, nor will scathing, polished periods save Asia from bankruptcy. The Hindoo, too, loveth not the imperious servants of his Imperial mistress, and another famine may reproduce the uprising of '57.

"Jimmy" Lowther, the Chief Secretary for Ireland, has announced in the Commons a tag to the University Bill which will provide exhibitions, prizes, scholarships and fellowships similar to those conferred by the London University. This proposition is generally accepted as calculated to lead to a settlement of the question on a satisfactory basis.

The Italian Senate has abolished the grist-tax, which has long been a grievous burden on the food, and therefore on the industry, of the people. The King of Italy is sorely troubled with a hacking cough, accompanied by blood-spitting, and although his physicians urge him to give up smoking, His Majesty very distinctly refuses. No immediate danger is apprehended, but King Humbert is, undoubtedly, in a very delicate condition.

A divided house cannot stand, and the House of Bonaparte is sorely divided within itself. The recent caucus, at which but 54 Bonapartist Senators and Deputies, out of 115, put in an appearance, demonstrated very clearly that "Plon-Plon" is not their man, nor do they care for the issue of his loins either. The idea of a *plébiscite* is gaining solidity, and it is being urged "breast high" by De Cassagnac in the *Pays*. Prince Jerome is taunted with having the fear of exile before his eyes in the event of his issuing a manifesto, for he would receive orders to pack up within an hour of its appearance. The Government who refused permission to MacMahon, Canrobert and Le Bœuf to attend the funeral of the Prince Imperial would be but too glad to pounce upon "Plon-Plon" and banish him with "his brats" from French soil.—It is stated that most of the Bonapartist papers in France, chiefly in the provinces, are on the point of suspending publication, in consequence of the Prince Imperial's demise. They lived chiefly on subsidies sent from Chiselhurst, which the ex-Empress has no intention of continuing for the benefit of her beloved cousin.—Blanqui, the veteran revolutionist, is again a candidate for the Chamber of Deputies from Bordeaux, and special efforts are to be made to secure his election.—Four ladies of the best French society are recorded amongst the successful exhibitors at the Paris Salon, whose works have been bought by amateurs.—The announcement that Von Moltke is about to retire from his post as chief of the general staff of the German army is officially denied. He will remain in command until the estimates applicable to the proposed reforms in the army shall have been prepared.

It is announced that as the result of an agreement between England and France as to the Egyptian Question, the Commission of Inquiry will be re-established, with Mr. Rivers Wilson as its President, and Messrs. Baring and de Blegnières as Controllers. A counter project is said to be on foot for the appointment of an international commission of all the great Powers to control the finances of Egypt.—M. de Lesseps continues his agitation of the Darien Canal project. In a recent speech at Bordeaux he declared that American support had been secured for the enterprise, and that nine of the principal financial establishments in Paris had promised their aid. He added that he would have the co-operation at Panama of the same engineers who accompanied him to Suez.—An evidence of growing moderation in Russia is furnished in the fact that a commission has been appointed to examine whether the censorship of the newspaper press cannot be replaced by some system of supervision which shall allow of greater latitude to the press, while at the same time preserving the Government's control.—An American, Mr. Milton Farrow, won the Albert Prize in the shooting at Wimbledon, July 23d.—The probabilities of a war between Greece and Turkey are increasing. England refuses to interfere to compel the Turks to rectify the Greek frontier, and carry out the reforms provided for in the Berlin Treaty.

It is settled that Mlle. Bernhardt, after her European tour, will come to this country, where she proposes to remain at least a year. Her purpose is to give her first performance in New York in November, 1880. It is understood that she will receive $600 for each representation, with $20 a day in addition for expenses. The best talent procurable will be employed, and the company will have the advantage of training and supervision at the hands of the first living actress. It will perhaps also enjoy the benefit of acting together for some time before going to America.

The labor depression in England continues. In the Oldham district, where $10,000,000 have been lying unproductive for three years, the disastrous features of the cotton trade are shown in one hundred and twenty thousand pounds of debt, a twenty per cent. reduction in the operatives' wages, mills running short time or closed, numerous failures, and a decrease of fifty per cent. in the value of house property.

CAREFUL estimates place the production of coal during the present year at 30,000,000 tons. Up to this date 12,750,000 tons have been mined, against 7,300,000 tons for the corresponding period last year. The amount of coal mined in 1877 was 21,000,000 tons.

THE exportation of breadstuffs during the eleven months ending with May last exceeded in value, for the first time in the history of the country, the combined value of the cotton and tobacco exports, the two great staples of the South. It would seem, if this statement be correct, that King Cotton is at last dethroned, indeed.

THE cental system which goes into effect in this city on the 1st of October is likely to be generally adopted throughout the country. Under this system all dealings in grain, flour, meal, provisions, and a great variety of other articles, will be exclusively on the basis of weight, the unit of transactions to be the pound avoirdupois, and the multiple thereof to be the cental of 100 pounds avoirdupois.

FOUR HUNDRED Russian Mennonites, who arrived at this port last week, proceeded at once to the Northwest, where they will settle as farmers. These immigrants brought with them $400,000 in money, with other effects, and, should the present disorders in Russia continue, they will no doubt be followed by thousands of others, anxious to enjoy, unmolested, the blessings of free government.

THE Board of Health has at length taken steps to secure a survey of the tenement-houses of this city, with a view of ascertaining the internal arrangements of the buildings, the means of ventilation, number of persons living in the various rooms, and the manner in which the sanitary regulations are observed. Had this work been performed earlier in the season the results would have been much more beneficial in averting possible disease than they are now likely to be.

LATE dispatches from Mexico represent that President Diaz has shown unusual firmness in dealing with parties implicated in the recent attempt at revolution, without regard to their rank or condition. His action introduces a novel era in Mexican history, and respect for legal authority and established government is increasing. Joaquin Baranda, who was Governor of Campechi during the administration of President Lerdo, and several other leading men of that State, are charged with taking part in the conspiracy, and have been taken to the City of Mexico for trial.

THE reports of the fabulous mineral deposits developed in Colorado and other Western States and Territories are likely, it is believed by shrewd observers, to lead to another era of wild-cat speculation. The low rates ruling for money, and the difficulty of making profitable investments, will stimulate the fever in the blood of speculators, and it will not, perhaps, be difficult to dispose, upon the stock-market, of shares in companies representing claims of only moderate if not altogether fictitious value. The public should be warned in time of the possible dangers of "buying into" corporations of this sort, and no person should make investments in any of them without careful inquiry as to their character and the value of the property they put upon sale.

THE health authorities of Little Rock, Ark., assert the doctrine of "States Rights," in a very positive form. They have refused to permit the United States mails coming from fever-infected districts to be taken from the cars, and have prohibited all agents handing the mails from stopping at that city, thus directly antagonizing the efforts of the Post Office Department to keep mail communication open in all parts of the South. This action is in curious contrast with that of the Southern Congressmen who, at the recent session, insisted upon the broadest application of the doctrine of national sovereignty in the establishment of the National Board of Health. This Board, by-the-way, appears so far to have failed utterly to realize the expectations of those who urged its creation.

THE prediction that the jury in the case of Colonel Thomas Buford, recently on trial at Owenton, Ky., for the deliberate murder of Judge Elliott, would, on account of the social standing of the accused and the pressure brought to bear in his behalf, render a verdict of acquittal, has not been justified by the event. Buford has not been acquitted, but convicted, and his punishment fixed at imprisonment for life, and so far as appears, the verdict meets with very general approval. It is gratifying to find that the quality of Kentucky justice has been underrated, and that assassination and murder can no longer be perpetrated with impunity by bullies who fancy themselves to be so securely entrenched socially as to be beyond the reach of the law.

THERE are intimations that the exodus of negroes from the South is likely to be renewed in the coming Autumn on a vastly greater scale than has been anticipated. In one district of Alabama it is said that not less than 15,000 are preparing to leave. The same rate from other districts would take 100,000 from Alabama alone. A colored member of Congress from that State says "his people are infatuated with the idea of going North this Fall, and no earthly power can prevent them. No matter if they have to walk and beg bread, they are going. It is as useless to argue with them about it as to debate with the east wind." Committees are now in Kansas looking for a location for one or two thousand families, and other committees will probably go to southern Illinois, Indiana and Ohio for the same purpose.

IT is announced that a syndicate of French capitalists are prepared to cut a canal across the Florida peninsula, provided the Legislature of that State will make to the company certain concessions, including exemption from taxation for a certain number of years. The capital at hand for the purpose is said to be $30,000,000. Such a water-way would be of immense service to the traffic of the Mississippi Valley and to our general commerce. The route found most desirable by preliminary survey lies across the State of Florida, from the vicinity of Cedar Keys to the vicinity of St. Augustine or Jacksonville, a distance of about one hundred and ten miles, and will effect a saving of about five hundred miles, as against the distance now traversed by vessels between the ports of the Gulf States and those of the Atlantic States. It is roughly estimated that the cost of constructing the canal will be from $20,000,000 to $40,000,000. It remains to be seen whether Florida will grant the concessions asked for.

AN Indian employed as an agency blacksmith in the Indian Territory has made himself an object of national curiosity by actually asking a reduction of his salary. He was once a "blanket Indian," a nomad of the Plains, living from hand to mouth; but, having some ambition, he abandoned his roving habits, applied himself to industrial pursuits, gradually rising in the scale, until now he is in receipt of an annual salary of $700. By economy and industry, he has acquired one hundred head of cattle, besides mules and horses; forty acres of good land, adjoining the agency, twenty of which are in corn; a good house, barn, and a well. In consequence of these agreeable surroundings, he feels that he can live with less salary than he has been receiving, and that the remuneration for his services as blacksmith for this fiscal year may be $600 instead of $700 as heretofore. The example afforded by this "barbarian" is as novel as it is commendable; but it would be rash to conclude that it will be emulated by any overwhelming number of public officials of the "more favored race."

THE iron trade is more active and prosperous than it has been for years. The secretary of the Iron and Steel Association of the United States gives it as his opinion that more iron and steel will be turned out in this country this year than in any one year in our history. What is better, this large production is in answer to the demand, and manufacturers are not, as in many past years, piling up stocks in order to keep the furnaces in blast. Prices have not advanced to any considerable extent, yet they are from ten to fifteen per cent. higher than last Fall, when figures were lower than ever before in this country. The Philadelphia *Record* says on the subject:

"The condition of the Philadelphia market at the present time is highly encouraging. The demand for pig iron and muck bar is very active, and lots are taken as soon as offered. The makers of structural iron have their hands full, and prospects of great activity for some time to come. The amount of business done in sheet iron in this locality for the past six months is without precedent, and a heavy Fall trade, combined with a general advance in prices, is anticipated. The same applies to bar iron. A considerable amount of business is being done in steel rails. High prices could be obtained for present deliveries, but the mills have their capacities engaged to such an extent that orders can only be taken for delivery many months hence. The demand for the delivery of iron rails during the next quarter is very urgent."

NEWS OF THE WEEK.

Domestic.

CHARLES P. JAMES has been appointed Chief Justice of the District of Columbia.

THE Louisiana Constitutional Convention finished its labors and adjourned on July 23d.

THE Republicans of Pennsylvania have nominated Samuel Butler for State Treasurer.

SECRETARY SHERMAN addressed Republican mass-meetings at Portland, Augusta, Bangor and Lewiston, Maine, last week.

THE Government is unable to buy silver for the Mint in California, owing to the high prices demanded by Western bullion-dealers.

HEAVY rains have fallen in Virginia and Tennessee, where the corn and other crops were threatened with destruction by drought.

IT was announced July 28th that in consequence of domestic bereavements Hon. John Welsh had resigned the English Mission.

THE New Jersey Court of Errors and Appeals, by a vote of 12 to 3, granted a new trial to Mrs. Smith and Mr. Bennett on July 28th.

THE business part of Petrolia, Pa., was carried away by a flood on July 26th. Much property was destroyed, but few lives were lost.

THE Congressional Labor Committee has started for California to investigate the condition of industries there, and will stop *en route* at Chicago and other points.

THE negotiations between William H. Vanderbilt and certain Western roads for the joint use of the Lake Shore Road between Toledo and Detroit have come to an end.

THE American Otological Society held its twelfth annual session in Newport, R. I., July 22d. There was a large attendance from all parts of the country, and a few delegates from Canada.

A CONVENTION of the friends of General Butler who desire his nomination for Governor of Massachusetts, will be held at Worcester, September 24. General Butler has consented to run.

OWING to the inability of the Government to continue revenue operations, illicit distilleries are starting up again in North Carolina, and licensed establishments are forced to suspend.

SECRETARY SHERMAN has issued orders directing that the large supply of silver dollars in the vaults of the Sub-Treasuries shall be paid out in settlement of accounts with the Government.

THE City of New York has been enjoined from enforcing a judgment, recently obtained in the United States Supreme Court, against the Pacific Mail Steamship Company for $150,000 personal taxes.

THERE arrived at this port during June, 1879, 16,929 immigrants, against 9,506 for the corresponding period of 1878. The arrivals for the year ending June 30th last were 99,224, against 72,163 during the year preceding.

THE Republicans of Wisconsin held a State Convention at Madison, July 23d, and re-nominated Governor Smith on the first ballot. All the other State officers were re-nominated by acclamation. The 23d being the twenty-fifth anniversary of the formation of the Republican party of Wisconsin, two large meetings were held, at which speeches were made by the officers of the Convention of 1854, by Senator Chandler, Mr. Garfield and others.

A MUTINOUS convict at Sing Sing, named John Barrett, on July 25th stabbed and seriously injured Keeper Patrick Mackin. An exciting pursuit followed, and while in the act of throwing a heavy hammer at Keeper John H. Good, Barrett was shot and instantly killed by that officer. A coroner's jury declared the killing justifiable. A revolt of the prisoners, many of whom rallied in defense of Barrett, was only prevented by the courage of the posse of officers.

THE yellow fever continues to spread in Memphis, Tenn., where over 100 cases have been reported, and many others, not reported, are known to have occurred. The disease is of a less violent type than last year. The exodus from the city has been very general, 25,000 persons having fled, and the fever has been carried to several points in Mississippi, and to Louisville in Kentucky. Eleven refugees arrived in New York, July 22d; three days after one of the number died, and two others are sick with yellow fever. The survivors were sent to Quarantine.

Foreign.

THE trial of 200 Nihilists by court-martial will begin at Odessa in August.

CHARLES LANDSEER, the painter, brother of the late Sir Edwin Landseer, is dead.

THE Marquis of Hartington has declared his belief that a dissolution of the British Parliament is imminent.

ADVICES from Valparaiso report that large reinforcements have been sent to the Chilian Army on the Peruvian frontier.

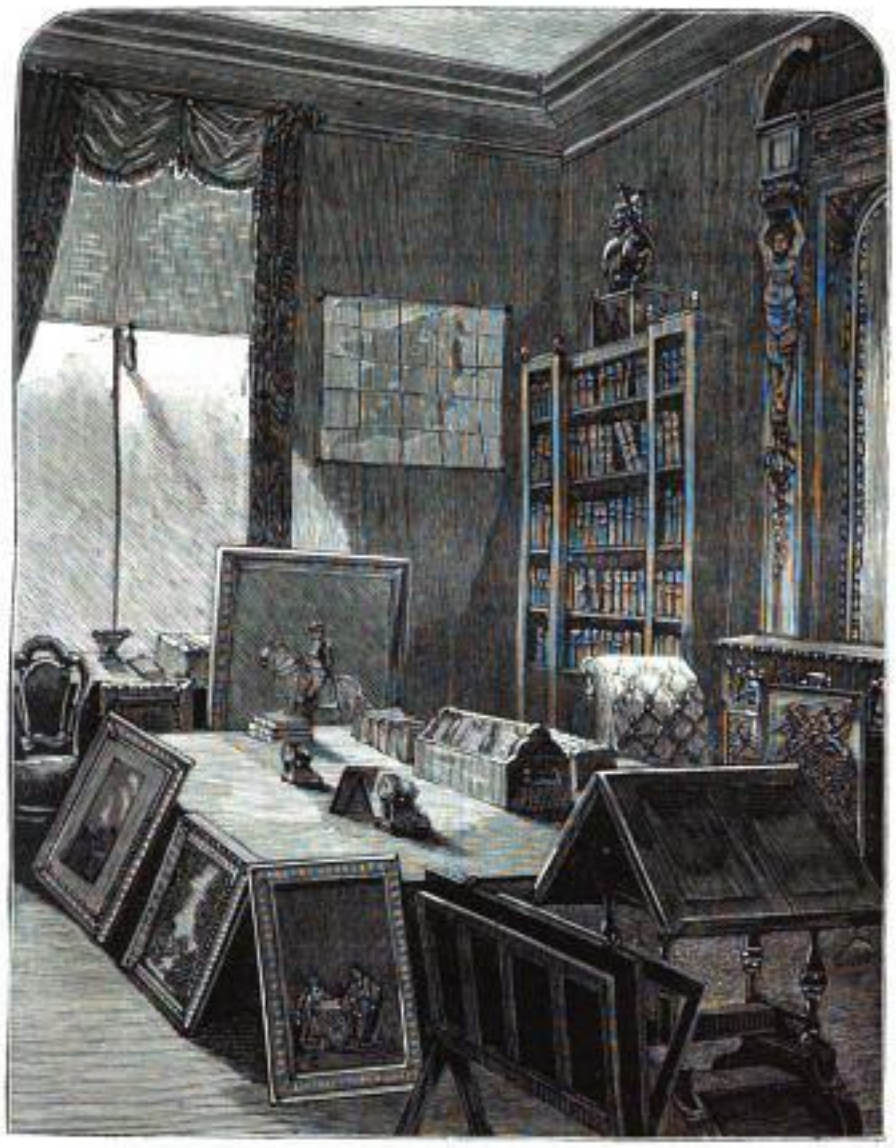
THE British House of Commons has ordered the arrest of two persons who offered to sell the decision of a committee of that body.

GOVERNOR-GENERAL LORNE has removed Lieutenant-Governor Letellier of the Province of Quebec, and appointed Dr. Robitaille as his successor.

AN exhibition of inventions, exemplifying the application of science to industry, has been opened in Paris under the Presidency of M. Jules Simon.

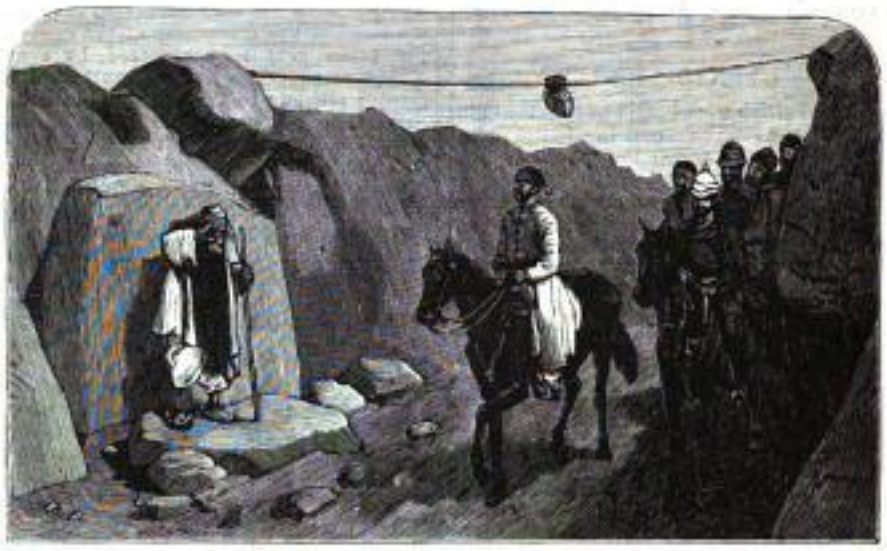
PRESIDENT CAVAIL, of Hayti, has abdicated. Three hundred persons were killed and 130 houses burned during the riots in Port-au-Prince, June 30th and July 1st and 2d.

A BERLIN correspondent declares that there is no serious misunderstanding between Germany and the United States on the subject of compelling American citizens of German birth to do military service.



A COUNCIL of foreign bondholders in London has telegraphed, on behalf of the holders of Louisiana bonds, a strong protest against the measures of so-called repudiation proposed by the Louisiana Constitutional Convention.

AN epidemic resembling cholera has made its appearance at Hiogo, Japan. The number of cases in the Hiogo district at the latest dates was 634, of which about one-third had proved fatal. The epidemic also prevails at Osaka.



ADMIRAL AMMEN, in his report upon the proceedings of the Inter-oceanic Canal Congress in Paris, recommends that the Government of the United States form a commission of the ablest engineers of the army, and invite the most eminent civil engineers of this country and of those European countries represented in the Paris Congress to meet and discuss the whole matter, unembarrassed by the rival personal interests which attached to the grants secured by the French engineers.

TEWFIK I., KHÉDIVE OF EGYPT.

ON June 27th, 1879, a firman was issued by the Sublime Porte, deposing Ismail Pasha, and appointing Prince Tewfik, his eldest son, successor. The new Khédive is twenty-eight years of age, and is Ismail Pasha's only son who has not received an education in Europe. Prince Tewfik, although a good horseman, has never taken much interest in athletic exercises, but has to a great extent led the life of a student, reading much, and taking a lively interest in Continental politics. He is the founder and president of the free schools at Cairo, which he conducts for the advantage of members of all nations and creeds. He lives entirely à l'européenne, and has only one wife, the Princess Emineh, by whom he has had one son, Prince Abbas-Bey, born July 14th, 1874.

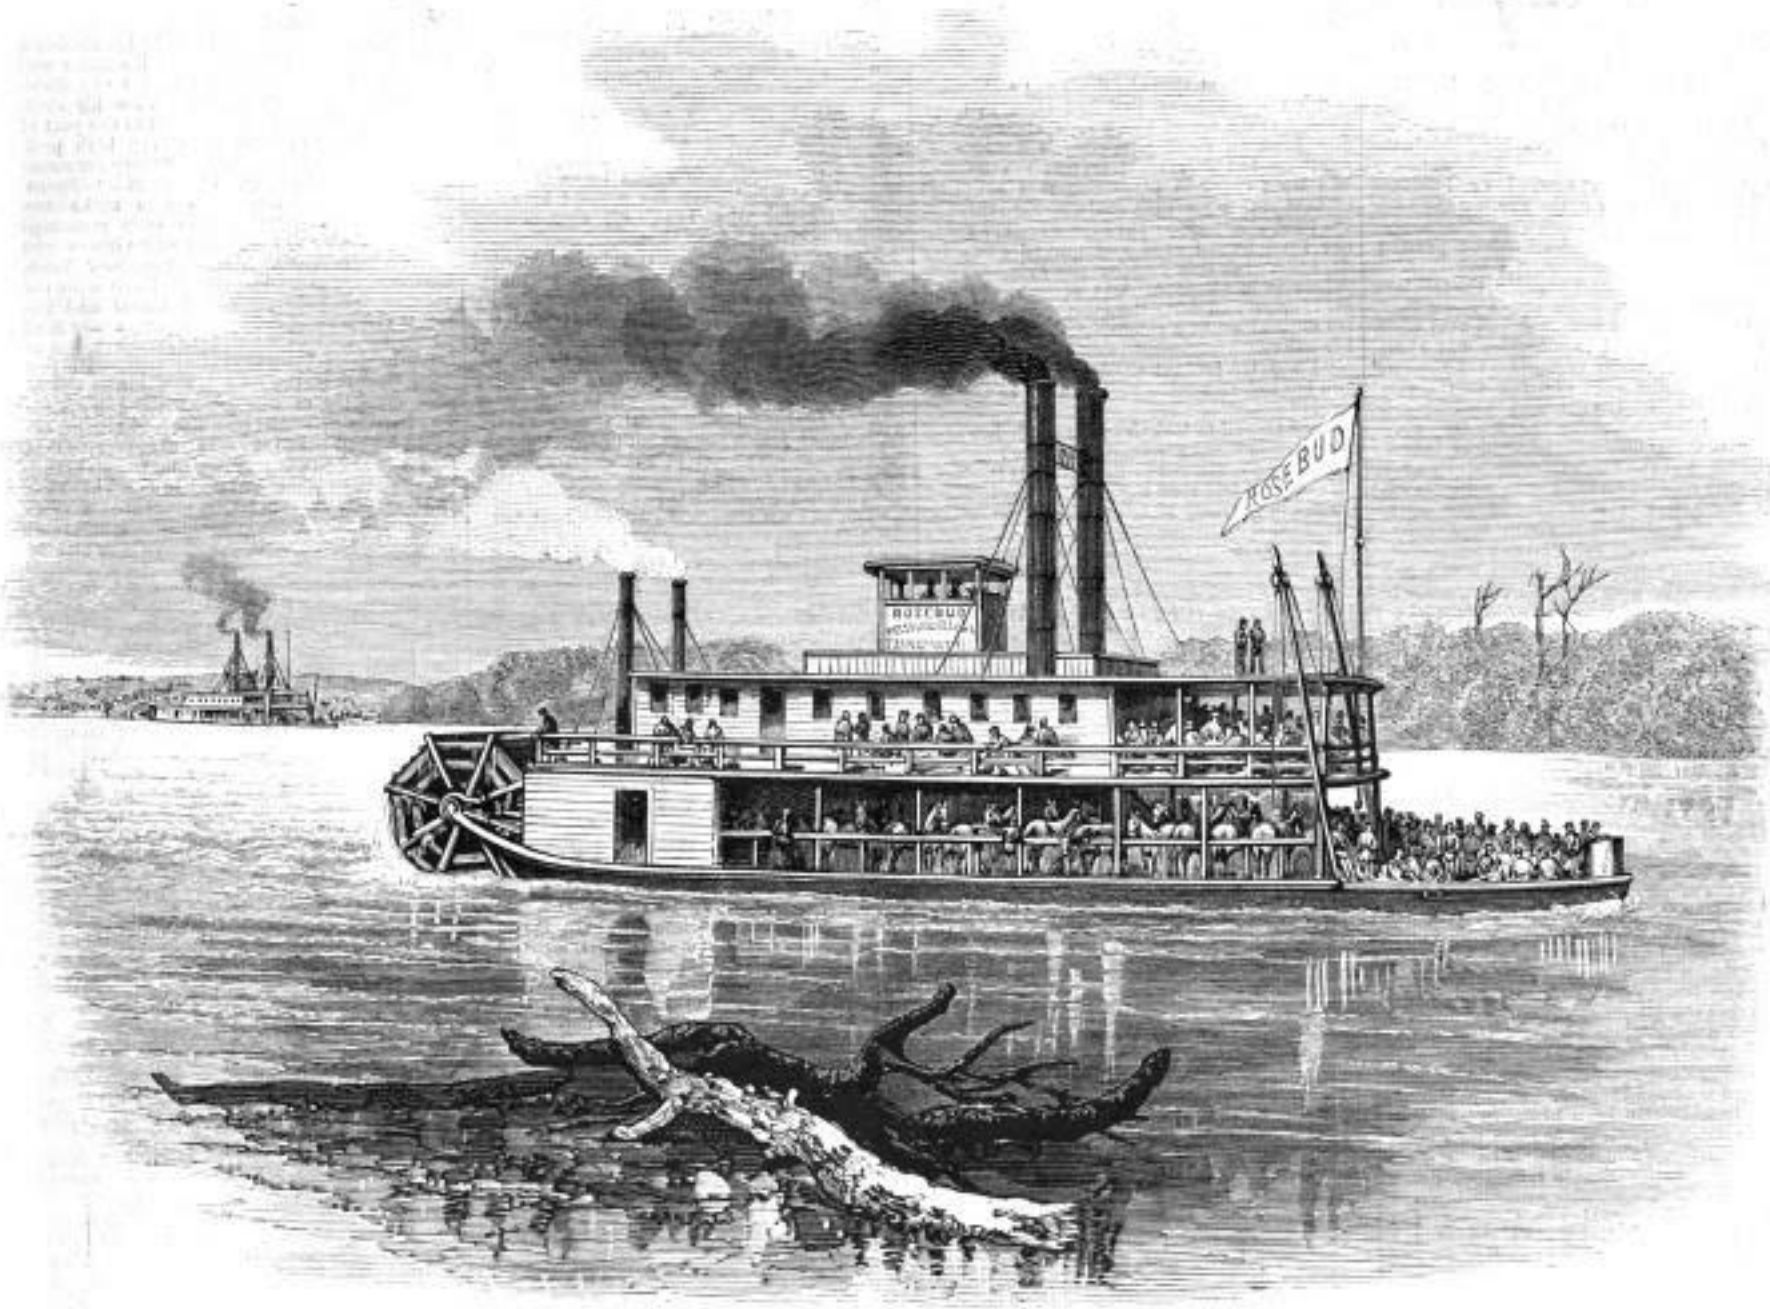
The firman revoked the rights heretofore invested in the Khédive of making treaties. This action gave grave offense to the English and French Ambassadors, and they presented identical notes to the Sultan on July 20th, confirming the representations they had previously made concerning the revocation, and declaring that the Sultan would be held responsible for any serious consequences created in Egypt thereby. An attempt having been made to secure the withdrawal of the notes, the Ambassadors on the following day emphatically refused, insisting upon the restoration of all the powers of the Khédive granted by the firman of 1873. The latest intelligence on the situation is a dispatch from Berlin, dated July 24th, which said: "As the firman submitted to the English and French Ambassadors at Constantinople curtails the Khédive's right to conclude treaties, Tewfik Pasha has signified his inability to conduct the Government unless this privilege is accorded him."

TEWFIK PASHA, KHÉDIVE OF EGYPT.

A SPIRITUALIST CAMP-MEETING.

A BEAUTIFUL grove near Willett's Station, on the Bound Brook Railroad, in Bucks County, Pa., was last week the scene of an interesting encampment of Spiritualists, held under the auspices of the First Association of Spiritualists of Philadelphia. The spot where the tabernacle and some fifty tents were set up is shut in by two hills in miniature; the shade was so perfect that only now and then a ray of sunshine found its way among the whispering leaves overhead. In the rear of the point on which the broad platform was erected runs the Neshaminy Creek, between banks overhung for three-quarters of a mile with spreading branches. Most of the residents of the neighborhood call it Chamounix. Two dozen graceful skiffs floated at a landing, and the entire scene was picturesque and enchanting.

The encampment opened on Monday, July 21st, when some 600 persons were present. The exercises consisted of singing, addresses, etc. Among others a Mrs. E. L. Watson, of Titusville, Pa., addressed the meeting, first putting herself in a trance by lifting her face to the sky and rubbing her forehead with her hands. She talked in a monotone, enunciating all the minor syllables and unimportant words with peculiar distinctness. Her theme was the relation of earth to the spirit-land. She said that none should escape the responsibility of parentage, even of unborn children. When a parent who had rejoiced that he had been freed from the cares of parentage crossed to spirit-land, he would find that even these littlest ones would be placed on his shoulders, and he would have to begin the task of bringing them up. Her language was fluent and often poetic. When she had finished she rubbed her hands across her forehead, gave two convulsive starts, and then opening her eyes wide, seemed to be startled to see an audience before her. Mrs. Watson opened both morning and evening sessions with prayers, or, as they were called, invocations. Each time she put herself in a trance before she began. We illustrate the scene in a full-page view.



The exercises on the opening day were duplicated on those that followed, possessing the features peculiar to all gatherings of this sort. Between the regular sessions, persons not on the programme as speakers frequently addressed knots of sympathizers gathered here and there about the grounds; but the Association was careful to disavow the somewhat remarkable views advanced by some of these volunteer expositors of the faith. The kitchens and dining-room of the regular attendants had no other roof than the umbrageous foliage, under which, or at the doors of their tents, they cooked and ate their food with perfect freedom and real enjoyment. The evenings were sometimes spent by the young people in dancing, promenading in the romantic walks of the grove, or in other amusements characteristic of the ordinary country camp-meeting. Colonel S. P. Kane is President of the Camp-meeting Association which had this assembly in charge, and much of its success is due to his energy and enthusiasm.

THE NEW CAMPAIGN AGAINST SITTING BULL.

IN consequence of the reports that bands of Sioux from Sitting Bull's encampment in Canada had crossed the line, and while ostensibly hunting buffalo were raiding isolated white settlements, orders were issued in the latter part of June to General Nelson A. Miles to organize and put in motion, with all haste, a strong column to drive the Indians back. With his accustomed alacrity the famous young Indian fighter proceeded to execute his orders, and as we write has already had an encounter with the invading hostiles. He established his supply depot at Old Fort Peck, using the steamers *Rosebud* and *Dakota* in gathering his men and materials. On the 8th of June two companies of the Sixth Infantry arrived at the camp, and a few hours later the *Dakota* appeared with supplies of all kinds for the expedition. On the morning of the 9th his scouts reported at the south bank of the Missouri. Throughout that day the boats were engaged in transporting troops, friendly Indians, guns, ammunition, etc., to the north bank. General Miles took his departure from Fort Benton, July 14th, with 800 men. He left a guard at Fort Peck and four companies at Mussel Shell, and started north with the rest. He has with him a battery of six Bodman and Hotchkiss guns, 140 boxes of shell, 22,000 rounds of revolver cartridges, 200,000 rounds of rifle cartridges, twenty-five travois and several ambulances.

The first intelligence from the moving column was in the form of a dispatch from Fort Keogh, which said an engagement took place near the mouth of Beaver Creek on the 17th, between two companies of troops and Lieutenant Clark's Indian scouts of General Miles's command, and 300 hostile Sioux. The troops lost four Indian scouts killed, and two soldiers were wounded. When General Miles's main column, which was twelve miles behind, came up, the Indians were pursued fifteen miles, but made their escape to Sitting Bull's camp, which was but a few miles off, and on this side the line. Bear Wolf's band of Crows, who are at Terry's Landing, report 300 lodges of Sioux on this side of the Missouri, on their way to Keogh to make friends with the whites.

On July 24th, Secretaries McCrary, Thompson and Schurz had a conference at the War Department with regard to the present Indian outlook in the Northwest. They were unanimously of the opinion that every precaution to prevent hostilities with the Indians should be taken, and as positive orders have been sent to General Miles to proceed cautiously and quietly, and not to bring on a war, no serious conflict is anticipated, although, of course, it cannot be known what action Sitting Bull may take should he perceive the soldiers near the Canadian line. It is thought to be the intention of

DAKOTA TERRITORY.—THE NEW INDIAN CAMPAIGN.—THE STEAMER "ROSEBUD" TRANSPORTING GENERAL MILES'S TROOPS FROM THE SOUTH TO THE NORTH BANK OF THE MISSOURI, JUNE 9TH. FROM A SKETCH BY HOLTER.

General Miles to approach the border with a view to reconnoitring Sitting Bull's camp. With reference to the reports from American sources that Sitting Bull's band is on the warpath, the Canadian Department of the Interior does not credit any such rumors. Recent advices from the Northwest say that Sitting Bull and his men are peaceably inclined. Their relations with the mounted police were never more satisfactory. It is believed there that General Miles has been misled by the traders and scouts, who are always anxious for a fight. All is quiet within the Canadian territory.

THEO'S MASQUERADE.

WHEN Miss Theobald Sturgis made up her mind to spend the Summer in Pluckaminia, she felt she had touched the sublime heights of the heroic. It is true, the motive which urged her to this decision was only a selfish, though sensible, regard for the laws of health. But the courage which could impel the young woman of fashion to give up a season at Newport and voluntarily exile herself to a season of rustic hermitage at West Brier Farms, she felt could not animate and sustain the usual young woman of fashion. And there certainly did seem a show of reason for the beautiful Miss Theo's good opinion of herself. There was no denying the fact that inside of that round, golden-crowned head was stored away an uncommonly weighty ballast of common sense. Two Winters of Germans, late hours, the whirl of a New York society career, the career, too, of a belle and beauty, having done their work, and the pallor of nervous exhaustion having set its seal of the lily on her cheeks, and its grasp of weary weakness on her strong young frame, she did what not one girl in a thousand ever does—she carried out to the very letter her doctor's prescription. The prescription was nothing worse than the strongest possible doses of rest of mind, plenty of vigorous exercise, and an existence under the open sky, where the sun and air could have their own way with her. All these could be taken in but one one place, and that place was West Brier Farms. And to West Brier Farms she went.

The Farms was the old homestead the Sturgis family had all been born in, and, in the usual migratory American fashion, had all gone away from. All but Aunt Kezia, who, having married a farmer, led the life of a farmer's wife. Theo had made yearly Summer visitations here in her childhood. But what seemed a heaven of fun at ten, was naturally a Paradise Lost at twenty. She could scarcely find hidden joys in stealing birds' eggs now, nor taste the sweet, keen rapture attendant upon raspberry-jam thieving exploits in dark pantries at her present advanced period. Thus, armed as she was with the best resolutions in the world to find pleasurable possibilities in the routine of farmhouse life, at the end of two weeks she was forced to face the sense of intolerable dullness. She could not read novels all day; there was a limit even to her sleeping capacities, and Aunt Kezia was busy milking, churning, cooking, sweeping, dusting, darning and mending from morning till night; while Cousin Den was in the very heart of his haying and mowing season.

"What's the matter? Be ye tired, child?" Aunt Keziah's shrill voice cried out one day above the clatter of her milkpails. For Theo lay curled up on the queer, crooked sofa in the queer, old stone kitchen, and had sighed a sigh which, whether uttered or breathed in all languages under the sun, means "Oh, dear!"

The two women offered a contrast presenting excellent artistic effects.

Aunt Kezia, spare and angular, the tall, lean figure on which the loose calico gown hung limp, showing all the bony outlines that work and labor had carved in shoulder, flat chest, and general lankness of build. On the face the same pinching lines of labor in the thin, hollow cheek, long chin, and prematurely wrinkled brow. But in the kindly, keen, quick eye, the mouth with its smile of helpful cheeriness, and the voice that for all its nasal twang was pitched on the key of human sympathy, these it was that uttered the softer messages of that eternal youth of a loving heart neither trouble nor trial can age.

In Miss Theo's appearance there was a grotesque incongruousness. She could scarcely be said to be in keeping with her "environment." She exhaled the very essence of the fashions of the period, and the seal of the last century was written in every corner of the old stone house.

"There's Cousin Den; why shouldn't he teach me to mow? That ought to be good exercise."

In another instant she was out of the house, standing bareheaded in the noonday sun, all her condemned lace-edged skirts caught with one hand, while with the other she tried to shield her eyes from the blinding light. To drop the skirts and seize the scythe was but the work of an instant. But to hold it and swing it was another matter. Mowing, naturally, proved too good exercise for a hand and arm that had never carried anything heavier than a Boston rosebud bouquet.

"Jes step inter the barn, meow, and take a look at thet there heifer, an' see ef yer ever see'l sech a milk-white beauty." was Cousin Den's advice of comfort to the lovely Miss Theo for her disappointment at not being able to swing a six-pound scythe.

Cows had hitherto been prominent in Miss Theo's country experience as something to be run away from. But the mild, bovine gaze from this particular cow in miniature put a new conception of a possible attitude towards the brindle species. If she wasn't strong enough to mow, why shouldn't she milk a cow? If Den would only hold their horns and feet so they would neither kick nor butt, she felt sure she could.

"Den!" she screamed, across the meadows of daisies and buttercups, which ran a river of flowers between them. "Den! I want to milk one of these cows. Won't you come and hold it?"

"Heow?" yelled back Den, as he rested on his scythe, wiping the falling beads of sweat.

"I-want-to-milk-a-cow!" accentuating the scream into clearer distinctness. If Miss Theo's arm was weak, no such fault was to be found with her voice.

"At this time o' day? Why, sis, there bean't nothin' ter milk. Ef yer must milk 'em yer'll hev ter wait till milkin'-time, I reckon." He stood beside her now, looking at her with that pitying expression with which the wisdom rusticity has earned is apt to contemplate city ignorance in common farmhouse matters.

"Will you let me, then?" was the persistent rejoinder.

"Oh, yes, yer may. Only I guess they'll never give yer a drop. They'd know yer was only funnin'."

"But if I take all these things off and wear some of Aunt Kezia's duds, would they let me then?"

"Perhaps they would—ef they didn't ketch a sight o' your young face, lass. Bless yer! them 'ere cows knows the difference 'twixt May an' December same as the rest on us," and Den chuckled a pleased chuckle at his powers of divination being great enough to know even a cow could not help admiring the beautiful fair face beside him.

The beautiful Miss Theo had no sooner had a nibble at the novelty of farmhouse fun than she decided that sort of work was better than her kind of play. She had taken a very prominent part in various private theatrical plays, but the part of a *poyesanne* was still to be performed. It is true she lacked an appreciative audience, but she was too true an artist not to rejoice in so perfect a *mise en scène*. She decided not only to play the *rôle* but to dress the part to perfection. A calico gown, pink, hideously pink, so plain it was even guiltless of an overskirt; shoes a mile too big and hose as thick as a board; puffs and curls replaced by long braids hanging down in true Maud Müller fashion; sun-bonnets and high check aprons—this was the costume of this elegant young woman whose toilets last Winter had set the fashion.

Her initiation in the mysteries of farmhouse life—its real life—was scarcely what might be termed slow, although it certainly was gradual; for at the end of a month she had learned not only to do but to like to do household drudgery. She rose with the morn, and to the early matins of the larks and the thrushes, she came in time to milk the cows, without their being held or awed into quietude by any rope attachments. Churning, perhaps, was her special delight, as she was possessed by the proud hope it might develop wondrous bicep curves and strength, and it was not long before she had won a reputation for having a fine hand with butter.

"Auntie, I think I'll milk the cows in the pasture this afternoon; it's too lovely to be shut up in the barn," remarked this experienced young person one beautiful July day.

"Jes' as yer please, dearie, only don't let Spot-Eye kick you. She's apt ter, unless she's in her stall."

"I'll look out that she don't get a chance," and off she started, pail and stool in hand, singing at the top of her young, strong lungs. She kept on singing, trilling, roulading, in anything but dairymaid style, for a fortune had been spent in perfecting that beautiful clear soprano. She sang as she walked through the long, shady lane; she sang when she sat on her three-legged stool and milked away for dear life. "*Je suis Titania*," the *Princess's* gay polonaise in "Mignon," was being given with great spirit and after the most approved Italian method, when a voice said, startlingly near her ear:

"I beg ten tousant pardons, mees, but will you not hab ze bonté address me to ze nearest road?"

Theo turned to look from beneath her sunbonnet, and faced a waxed mustache!

A waxed mustache in Pluckaminia!

If the girl had seen a gnome in human form she could scarcely have been more surprised. For what does not a waxed mustache suggest? It suggests a foreign accent, and a foreign look, foreign ways and a foreign manner, all of which were here embodied in the owner of this particular *circé* mustache. Theo's astonished eyes were confronted by a no less astonished expression, to be unmistakably read in the dark, deep, liquid eyes which were staring almost rudely into her own. She resented the rudeness before she had time to answer the question.

"Vill you not hav ze bonte?" he was beginning again, not quite so volubly as before, hat in hand now as if to pay that homage to her loveliness. But Theo interrupted him, standing proudly now, with a mantling color rising.

"Which way do you wish to go?"

"I do vish to go to ze village, charming mees."

"You must take the road to the left," the "charming mees" curtly replied, beginning to be half afraid, yet, reassured, in spite of her fear, by the stranger's really distinguished manner. His bow was certainly perfect. So were his eyes, she could not help thinking.

"To ze left? Ah! a touzand tanks, and I hab ze ver' great honor of vishing you good-day." Another bow, more elaborately perfect than the others. A very long, admiring gaze from the beautiful liquid eyes, a rapid twist of the waxed mustache, that gesture so habitual to a foreigner in moments of courteous agitation, and this particular foreigner was walking across the meadow with as much elegance as if he were crossing a ballroom.

Then, woman-like, Theo wished she had not been quite so curt. There had been really no excuse for her rudeness. His manner had been all civility, and the girl's quick intuitions and society training enabled her to jump to the certainty of a conviction that the man must be as distinguished as his manner. Breeding and pedigree assert themselves by a thousand subtle and unmistakable signs. She had read enough to assure her that he was no common adventurer. She slowly, regretfully sat herself down on the three-legged stool, beginning mechanically to milk Spot-eye's full udders. Somewhat too mechanically, perhaps; for Spot-eye having no wasted opportunities to regret, could give her whole mind to the situation, and her whole mind was one of resentment—a resentment so effective that, in another instant a loud, shrill cry rang out, and Theo's fair form lay supine on the green sweet grass. The next moment, so it seemed to her stunned faculties, two strong arms were lifting her tenderly from the ground, while the stiff, rigid ends of a waxed mustache were outlined before her gaze. The smooth foreign voice was saying, half in French, half in English:

"*Ah, mon Dieu, mademoiselle! Vous êtes-vous fait mal?* Aire you hurted? Aire you pained?"

Then she stood up, laughing, blushing.

"Oh, I'm not in the least hurt, thank you. I ought to be used to it now, I've been kicked over so often."

"Ah!" was all the response the stranger seemed to find. It was prolonged, however, into an eloquence of meaning by the pregnant French intonation, and emphasized by another profound bow. It was evident, the situation to him was full of most startling combinations. A *poysanne* with a face like an angel's, the manners of a duchess, a voice of artistic culture, and ways full of all the refinements of expression—a *poysanne* too, of such physical and nervous vigor that she took a kick from a cow as some Spanish beauty might a kiss from her cavalier! It was certainly amazing. It is true, he had always heard it said, American girls, even the poorest, were princesses. Now, the truth of the saying was being proved by actual demonstration.

"Can I do nozzin? Vill you not allow me to offaire you my arm? You vill feel faint."

"Thanks, I don't feel in the least faint," this time scarcely able to surpress a smile. For Miss Theo had a very quick sense of the ridiculous, and the grotesqueness of the situation was beginning to touch her. Such a picture as they must present! She in her calico dress, and fallen sun-bonnet, the empty milk-pail in one hand, a perfect sample of dairymaid rusticity; he, bowing and scraping, with all the airs of a courtier addressing a queen, presenting at this particular moment a Venetian glass *flacon* of white rose, fragile as a cobweb, glistening in its rainbow-spun colors—a *flacon* of white rose to a dairy-maid!

"I must go home now," she said, at length. "It is getting late. They will wonder where I am."

"May I pairmit myself ze liberty to demand where mademoiselle does live?"

"Over there," with American brevity, pointing to the wide, low, stone farmhouse, perched on the side of the opposite hill.

"Vould ze beautiful mees allow me to accompany her so far?"

The "beautiful mees" laughed outright now.

"Will you accompany the cows, too?"

"Ze cows!" with a puzzled stare at the waiting herd about them.

"Oh, yes, the cows are going home, too. That is what I came here for," with a mischievous smile. "I always drive them home," putting the words into action by switching a long willow wand over the nearest brindle's back, starting the beautiful, slow-moving creatures into the open lane.

This was evidently more than he had counted upon. But the hesitation was but momentary. Another second he was by her side, gallantly shouldering the three-legged stool and the empty tin pail. He was questioning her now, questioning her about the distance to the village, the number of inhabitants, how many cows they themselves kept, all the questions pitched in that low, musical speech of the Latin races, which sounds softer than the softest music to ears used to the shrill sound of New England voices.

"You do always live here?"

"Oh, no; not always," non-committal.

"And when you no live here, you live?"

"I live in Boston or New York, sometimes in Newport," determined to puzzle him to the uttermost.

"Ah, I do comprehend now," as if finding in that admission some explanation for whatever he found peculiar in her.

"But country folks can't stand city noise and racket, you know. I like it best here, it is so still and quiet. Then I love to work," willfully misleading him again.

"You do like to work?" looking suspiciously at the hand playing with the willow wand, which, for all its tan, was as delicately modeled as a statue's.

"Yes, I love it of all things. Churning and milking are such fun! Then there's nothing like skimming milk, you know."

Either his English or his experience were too deficient to enable him to grasp the full meaning of her rapture. But what he could understand was the language of her beaming, glorious, blue eyes, of her intoxicating, roguish smile, of her grace and beauty which were being played upon by all the heightening aids of flickering sunlight and shadow.

"You aire too beautiful to do ze work. You should be a queen, ze queen you aire, ze queen of beauty, and all ze world should be at your feet."

"Gentlemen don't talk to young girls in our country like that," with a touch of rustic dignity. Surely a dairymaid would have said as much as that. Then, "Ah! there's Aunt Keziah at the doorway. I must leave you now."

"Ah, mademoiselle! you vill no leave me like that? You vill give me one leetle minute to prostrate myself before you? *Au nom du ciel, mademoiselle, écoutez mes excuses—mes——*"

"*Soyez plus sage la prochaine fois*," answered the girl in as good French as his own; picking up pail and stool as she ran across the greensward to the wide-open door.

"Why Theo, child, who be thet with yer?" and Aunt Keziah's face was aflame with curiosity.

"I'm sure I don't know, auntie. He asked me the way to the village while I was milking Spot-eye. She kicked me while I was answering, he picked me up and walked home with me," determined to make a clean breast of the whole matter. "He seems to be a foreigner, a Frenchman I should think from his accent."

"A furriner, hey? Wall, like's not he be thet air count, or markiss or duke, or suthin' or other thet's been staying over to the Harts'. Colonel Hart's ben sint ter Congress this year, an' I hearn tell they'd hed some big bugs deown from Washington. Lucindy Ann, Uncle Joe's second gal, is livin' out ter service neow; she's there, an' she told Den she reckoned the one's staying there neow be an author or writer or suthin' of thet kind, his room being littered up with papers an' the like."

A count, a marquis, a duke, a writer, an author! She knew she could not have been mistaken. She knew no common man, bred in ordinary ways, could have his bow and his manners. If it takes three generations to make a gentleman, it takes several centuries to make a courtier. And a courtier he was, the kind of courtier that would go to the guillotine in full dress, with a ballroom smile.

Should she ever see him again, she wondered? It was likely, delightfully likely. The Hart place was but a few miles off at the furthest. What must he have thought of her? Of course he took her for a farmer's daughter doing a dairymaid's work.

Then this wicked young woman planned a very naughty plan. If it were true he were writing a book, and about America, she vowed she would furnish him with some astonishing literary material! It should not be her fault if the French nation were not edified with some remarkable features of American country life, if, indeed, the New England farmers' daughters should not be considered as the most wonderful product of the nineteenth century.

Foreign dukes, Italian marquises and French counts had, however, a disagreeable trick of turning into barbers or couriers. She would do nothing rash. So the wise Miss Theo wrote a letter to Washington that very night, to a friend who would put her *au courant* of all society news and gossip.

But there was little danger of Monsieur Armand Du Plessis de Neufchâtel turning into a courier, or indeed there being anything to be heard to his disadvantage. He was a kind of Frenchman the American mind, filled with prejudice against Gallic morals and character, is born to believe does not exist. He belonged to a very ancient and noble family. His own patent of nobility was not confined to his title. The courtly breeding, the chivalric devotion to the ideals of sentiment and honor, an ambition reaching beyond the triumphs of the ballroom or the boudoir, these had come down to him with the inheritance of his name and title. He had embraced the career of a diplomatist as offering the best arena for his abilities. Already he had advanced to the post of first secretary of legation, a very high position in the ranks of French diplomacy for a man just but turned thirty. Like most intelligent, critical, analytic foreigners who make any stay in our country, he was soon possessed with the desire to transcribe our virtues and publish our faults. Washington, New York, Boston, these cities had supplied him with the view of the political, social, moral and immoral virtues and vices any stranger may read as he runs. But he had been South, too, to learn what partisan misrule meant. He had been West to be taught a lesson in the Cyclopian energies of this growing country. He was here in this quiet New England village, because he had heard it repeatedly asserted that the highest types of genuine American character were to be met in just such towns. That New England women, especially, presented a combination of charms and capabilities, mental and domestic culture, to be found nowhere else in the world.

He had come prepared for much, but not for all this, that this bewitching, enchanting, this beautiful young milker and driver of cows had presented. What a remarkable country that could produce such a marvel! He had been in all the courts of the world, but where was there such a face, so instinct with refinement?—such a manner, so full of mingled dignity and coquetry, or a brighter, vivacious mind, a daintier ankle, or a smaller hand? Truly this was a most astounding country!

A day or two after this a very pretty tableau. A girl seated on a high stone fence in a pink calico gown; on her head no other covering save the wavy masses of golden hair; about her all the play of Summer air and sky, and on her face the play of a lovelier Summer yet, the Summer of youth, and fun and girlish mirth. By her side the figure of a man, a man with beautiful, soft, liquid eyes, saying in his beautiful, soft liquid voice:

"Vill not ze gracious mees accept ze homage, ze homage of a heart in penitence and accord her pardon?"

"I forgave you the other day, you know. So I will accept your rose for its own sweet sake," pinning it with charming grace at her snow-white throat.

She was knitting to-day, knitting a long, ugly woolen hose. No Normandy peasant tending her flocks and tricoting the family socks could ply the shining needle more deftly or look more industriously in earnest. She knew he would come. He went to the meadow yesterday, but it was part of her policy to make him "watch and pray awhile."

"Won't you sit up here, too? It is much more comfortable than standing," pointing to the round smooth stones, on the top of the high fence.

"Ze queen does bid her slave to mount?"

Oh, yes, she bade him to mount. And she laughed a wicked little laugh as she saw him struggling up the steep stones. When did the most elegant of Frenchmen ever climb a stile with grace? Their slight, supple bodies, and drawing-room manner of standing and walking are more suited to the boudoir than the barn. It was trying on the count's patent leather pumps; it was still more trying on his hands, the white slender hands of a diplomat; but he was up at last, looking as much out of place as would the gallant of a Watteau picture, Theo thought.

"We shall speak French now, n'est ce pas? And you vill tell me sometinks of yourself?"

Yes, she would speak French, and tell him anything he chose to know, with most enchanting good humor. Were all the young women who lived here as wonderful as herself? Did they all sing and speak French, did they all travel, and converse with such a beautiful grace? Indeed, it was a very common thing for the daughters of farmers to be sent to city schools, to be taught accomplishments, to travel and then settle down to the drudgery of farmhouse life. It was not all drudgery either; there were the huskings, quilting-parties, singing-schools and the like.

To this tableau succeeded many others. For Monsieur de Neufchâtel had the advantage of seeing the every day life of a New England girl most happily illustrated. There were days when this charming *paysanne* was busy, so busy—she would shell peas by the hour, skim milk in preternatural silence, and had not a soul above her churn. And Monsieur le Comte would go home to dream of Dutch kitchens and industrious Gretchens. But, behold! the next day and Gretchen the industrious had changed into the accomplished young woman, who sang in the most charming manner most difficult music, criticised Alfred de Musset's poems, talked modern art, and quoted pages of Longfellow. The next it was a coquette, the most arrant, witching, irresistible that ever teased a man into loving or tortured him with the sweet anguish of doubt.

It was about this time that a certain letter was written to a certain Monsieur Alphonse de Barpin, which caused that gentleman a good deal of amusement, and was laid down with an eloquent shrug of the shoulder.

"Mon Cher—You do well to reprimand me for my long silence. But you will pardon all when you know I am writing an *esquisse* of this wonderful people. They are truly wonderful; wonderful for their bad government, and the perfect law and order which does reign everywhere. Wonderful for their energy, colossal in material things, and creeping at a snail's pace in things of art. But, mon ami, the most wonderful of all are the women. I cannot tell you what a country this is for women. In Washington, in Boston, Philadelphia, New York, I have met such women—beautiful, accomplished, brilliant—but you, too, have met such in Paris and in Rome. But here, in this village, such a village as Millet would paint, all the inhabitants farmers, and the sons and daughters of farmers. I have met the most remarkable *paysanne*, no demoiselle, no *jeune fille*. Ah, bah! None of these describe her, and yet she is all of them in one.

"Imagine her tall, with the limbs and motion of a goddess. When she does move across the hills Diana herself could not move so freely, so swiftly, so majestically! Imagine her to thyself wearing a crown, a crown of gold in her blonde hair, which alone would set all Europe mad. Her face, it is the face of an angel and a woman's at once, with the eyes of a coquette, and the smile of a Sister of Charity. She sings, Alphonse, as only *cette divine* do with us, speaks French like a *Parisienne*, talks with the grace and wit of a Récamier—and her time, it is spent in the making of butter and the sweeping of rooms! Imagine a country where this young girl is not thought remarkable. You say I am *épris*?—that I must fly, that danger awaits me in the peril of her eyes, that Cupid himself is hovering in the air?—that I must be wise in time, for a *mésalliance* for a diplomat means ruin? And I respond that, '*L'amour est le seul bien ici bas*,' and that before now a De Neufchâtel has espoused a beggar maid. *A toi*, Armand."

It was somewhat unfortunate for Monsieur Armand that he should not have posted his letter the day it was written. It was equally unfortunate he should have carried it in his wallet the next day when he went on his way, with a heavy heart, towards the old stone house.

"Ah, mademoiselle, I have one great sorrow." He sat beside her now, in the sweet, short grass of the apple-orchard, where he found her demurely paring apples. "I must part. My chief, my ambassador, he does write me I must go to Newport. I do go to-morrow," looking mournfully in the deep-blue depths Theo lifted to meet his sad eyes.

"You are going away—to-morrow?" The girl was playing no part now. There was all the pathos of genuine sorrow in her trembling voice. The sweet face was robbed, too, of all its gay play of joyous coquetry.

"Yes, I do go," leaning towards her, taking her unresisting hands in his; "I do go, but my heart, my soul, it is here. Ah, *angele ma vie*," with Gallic suddenness of passion, the leaping flames of love kindling in his rich dark eyes, "do you not know, have you not seen that I luv' you, that I do adore you, that my life—you hold it in your leetle hands! See, I am at your knees; will you not have ze grace to bid me arise myself?"

For a moment's space there was no answer. Theo's face was hidden in her hand. He was beginning to draw the fingers away, and at his touch she trembled—trembled, when, as she slowly opened her half closed lids, her eyes fell on an open letter, and the words, "*Before now a De Neufchâtel has espoused a beggar maid.*"

In the ardor of a lover's movement the wallet had fallen, the open letter lying there, with these fatal words standing out clear and distinct. Just in time, thought Theo, for the woman was beginning to gain on the actress.

"You think you love me—*me*, a farmer's daughter?" she softly asked, but this time in a guarded voice. "You do not know your own heart, my friend. But go—go to Newport. If there you meet no woman whom you love better, then when you come back you shall have your answer. But I know you will never come for it!" gently disengaging her hands from his eager grasp, for his kisses were falling like rain on the little brown fingers. Then she laughed, the merriest, wickedest, most mocking laugh that ever greeted kneeling lover's ears. Then she rose and ran, the air still ringing with the merriment of her provoking, merry laugh.

To Newport Monsieur Armand de Neufchâtel went. But what he had said was true; his heart, his life, his soul, he had left in the old stone house, in a fair-haired maiden's keeping. No other woman seemed fair beside the memory of that lovely face. Even the torturing memory of her mocking laugh was sweeter music than the flatteries of these society women's soft voices. What had she meant by that laugh? Did she not believe him? Ah, but she shall, she must! He would teach his passion an eloquence she could not resist. And to-morrow; yes, it would be to-morrow that he should see her, for his week of official obligation was over. To-night a masquerade ball at the house of some New York merchant prince was the last social duty he owed to his chief. The ball? Oh, yes, it was very beautiful, he believed. Monsieur Armand, the artist, could admire the taste of the decorations, the sumptuous costumes of the women, their beauty, their loveliness; Monsieur Armand, the diplomat, could even frame his lips to flattering utterances; but Monsieur Armand, the lover, was counting the hours, the moments, that should bring him close to a pair of blue eyes, close to a soft, dimpled cheek, hidden in its sun-bonnet, like a bud in its calyx, when—

"Papa, will you please introduce me to Monsieur de Neufchâtel?" A ringing, singing voice in his ear, a glorious vision of glorious beauty, all shimmering sheen, all dazzling light, golden hair shining like sun-rays through its frost of powder, two eyes like stars—surely—surely—and the heart of Monsieur Armand stood still.

"My daughter, Miss Theobald Sturgis, Monsieur de Neufchâtel. Theo, my dear, you had better give the count this next quadrille." And the Queen of Light laid her hand on the lace-edged satin sleeve of the dazed, the stupefied Louis XV. courtier's arm.

"Do you care for dancing?" Into his eyes looked the two blue heavens. *Ciel!* was it true? Could this vision of splendor, ablaze with diamonds, irradiating magnificence, be the little *paysanne* he had loved in Pluckaminia?

He looked and looked, then grew so pale, pale to the very lips, she feared he would faint, and the Queen of Light was materialized into the woman of feeling.

"Come, come out upon the piazza," she hurriedly said, and the next moment they were in the dark and cool of the veranda. Still no voice, no word, no sound, till her hands were caught tight, and the pale, trembling, passionate lips pressed hers close in a rapturous kiss.

"*Oh, mon adorée! est ce bien vrai, bien vrai?* You aire the daughter of this gentleman? You aire not the little *paysanne?*"

"If I were, would you still be brave enough to add one more to the list of the De Neufchâtels who have espoused beggar maidens?"

The next Winter and Paris was ringing with the fame of the famous American beauty, Madame de Neufchâtel, the Ambassador's wife. But it was at a masquerade ball, where she appeared in the simple guise of a New England farmer's daughter, sun-bonnet and pink calico gown, and on her arm a shining tin pail, that she carried the Parisian world by storm.

"Can you tell me ze way to ze nearest road, beautiful mees?" sounded soft in her ear, above all the din of flattery.

"The nearest road? It is here—it is the road to happiness," she replied, as she passed her hand through her husband's arm and met his loving, adoring gaze.

THE BLOCK ISLAND BREAKWATER.

THIS vast and much-needed public improvement, begun by the Engineer's Department of the United States Army in October, 1870, was completed and formally turned over to the Lighthouse Board in May last. The breakwater now insures an admirable harbor of refuge for the steamboats, sailing vessels and fishing fleets that hover about this delightful island, and besides conferring almost inestimable benefits upon commerce, will do much towards adding Block Island to the list of our popular Summer resorts. The breakwater extends almost north from the steamboat landing on the east side of the island, and reaches into the ocean a distance of 1,250 feet. The main breakwater reaches at its northern extremity a depth of eighteen feet of water, and contains about 45,000 tons of rip-rap. A detached pier is located about 200 feet from the principal structure, which is about 300 feet in length, contains about 30,000 tons of rip-rap, and extends out to a depth of fifty-four feet. This detached pier serves to break the fury of the northeast gales which prevail at nearly all seasons of the year. There is a lighthouse on the main breakwater, which was greatly needed. The total cost of the Government work here is $185,000.

Block Island is eight miles long by from two to four miles wide, and is nearly cut in two by a great salt-water pond. It was named for Adrian Block, the Dutch discoverer, and was called by the Indians "The Isle of the Little God." With a splendid sea-coast, it had no harbor at all, and all the boats used in fishing had to be small enough to be drawn upon the beach when returned from a cruise. From this necessity resulted the build of the Block Island schooner, which is a little craft, very deep, sharp at both ends, rigged without a bowsprit, in which these fishermen make their voyages for fish. It is generally built without a deck. In these little craft, which suggest at once the tiny *Nina* of Columbus's first voyage, these men go anywhere. It is said that there is no known instance where one has been swamped in an open sea, so seaworthy are they. They are so small that, in the days of bounties to fishermen, these men cannot draw the bounties to which Eastern fishermen are entitled; but they are big enough to take their owners where they will, and to bring in all the food they need at home, besides very considerable amounts for export. The adult male population of the island cannot be more than three hundred men; but the annual money value of their fishery is estimated at $75,000. They are by no means confined to their fisheries. They have good farms, well stocked, and their seamen go over the world. The total population is about 1,300, holding allegiance to the State of Rhode Island.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

Studio of the Late Prince Imperial.

"I cannot easily afford you access to the Prince's rooms," said M. Pietri, to a newspaper correspondent, "for the Empress frequently visits the apartments which recall the memory of her son. At all events, you can see only his business office; you will find it in great disorder, for the Empress was just putting it to rights when the fatal news came." We then entered the study or working-room by a door opening from the saloon in which we stood. In the centre, on a large table covered with fawn leather, were heaped books, pamphlets and a host of miscellaneous articles. Among others, a small clock and a barometer supported by mortars; a photograph of the Emperor on a little easel, etc.; and all around the table were paintings ready to be hung in their proper places. Opposite the door we entered is a large window with a long table before it, that at which the Prince usually sat, and there is a second window opposite the fireplace. On the floor, ranged along the walls, leaning against the furniture, were a number of paintings from which the Empress was about to make a selection to adorn this apartment, her son's study. Among others were a watercolor, a Review at Longchamp; a Forest Path, by Protais; the Interview of Napoleon I. and Charles James Fox; an equestrian painting of the victor of Austerlitz. On a bracket were a white marble bust of the Abbé Deguerry, who prepared the Prince for his first communion; a bronze copy of the Vendome column; several of Fremiet's bronzes—a grenadier, an artilleryman, a guardsman, one of the Deux Cents Gardes. Near this is a large screen covered with comic English colored prints. This screen was a gift from Lord Cowley. The chimney-piece is of red porphyry with Egyptian figures. It is surmounted by a large mirror with oak caryatids at the sides supporting the ornamental top-piece. A little further on is a bookcase, with a cuirass and helmet of a Cent Garde, and around the rest of the room are cabinet bookcases with books bound uniformly.

The Eruption of Mount Etna.

We have already published a view of the last eruption of Mount Etna, showing the stream of lava pouring down into the valley from the cones, the mountain having broken out at three different points, distant from each other twelve or fifteen miles. The eruption began on May 25th last, and continued with unabated force until June 6th, when, having laid waste to thousands of acres of agricultural ground and destroyed several villages, it began to diminish in violence. On the following day the most remarkable of the streams exhausted its force, and its progress was stopped near the village of Mojo, the inhabitants of which had previously fled the place. Seen from a distance, the mass of cooling lava resembled a huge monster with a tail tapering to a point at the summit of the mountain.

The End of the Afghan War.

Mr. J. Burke, the photographic artist attached to the British Indian Army to illustrate the advance of the troops and the grand scenery of Afghanistan, was permitted by the Ameer of Cabul to take a series of pictures of himself and his suite at the camp at Gundamuk. After Mr. Burke had taken him in his gorgeous uniform of white and gold, the Ameer showed great anxiety to see the result, and Major Cavagnari explained to him the process of photography. The coat and trousers which the Ameer wore were of white cloth, heavily embroidered with gold, epaulets of gold, and a sash of blue, with three gold stripes through it, worn over the left shoulder. The head-gear was a steel helmet, with gold and a plume of feathers surmounting it. He was photographed with his helmet on, and then with it off, and when bareheaded the Ameer presented a curious likeness to the Duke of Edinburgh—all the more striking as he parts his hair down the middle. Not far from the place where Major Cavagnari met the Ameer on his way to the British camp, a Fakir had made a sort of *Arc de Triomphe*, by slinging a rope across the road over the heads of the procession, and hanging a Koran in the centre tied up in a very dirty rag. The Fakir salaamed as the Ameer passed under, but was evidently disappointed in that the new sovereign did not follow the usual custom and make him a present of money. The "Tiffin with an Afghan chief" was a breakfast given by the Khan of Gundamuk to Major Cavagnari and a few friends. Two large, flat cakes of unleavened bread were placed before each of the party, one to be eaten, the other to serve as a plate. After some hard-boiled eggs with pepper and salt had been placed on the cloth, the cooks brought in pieces of kid, fowl and mutton frizzling on long spits. A native officer, seeing that the British hesitated about the manner of taking the meat from the spits, unskewered the viands with his hands, and threw a piece across the table to each of the guests. One silver bowl was the drinking-cup of the whole party, from which snow-water was quaffed. Sweet tea, toasted cheese, and cheroots finished the repast.

Recovering the Wagons Lost at Isandula.

On the 21st of May, just four months after the massacre of the British at Isandula by the Zulus, General Marshall, with a strong detached force consisting of the Seventeenth Lancers, one wing of the King's Dragoon Guards, two guns of the Royal Artillery, and five companies of the Second Battalion Twenty-fourth Regiment, with some Natal Volunteers and natives, revisited the scene of the battle. The ground was strewn with brushes, toilet bags, pickle bottles, and unbroken tins of preserved meats and milk. Forges and bellows remained standing ready for the recommencement of work. The wagons in every case had been emptied, and the contents rifled. Bran lay spilt in heaps. Scarcely any arms were found, and no ammunition. There were a few stray bayonets and assagais, rusted with blood; no firearms. Skeletons of men lay on the open ground, bleaching under a tropical sun, along miles of country. The individuals could only be recognized by such things as a patched boot, a ring on the finger-bone, a particular button, or colored shirt, or pair of socks, in a few known instances. The Lancers went about all over the field, often here and there quietly lifting the clothes off the skeletons, or gently pushing them on one side with the lances, to see what regiment they belonged to. Some forty wagons were found to be sufficiently preserved to warrant removal, and at the end of the reconnoissance these were hauled back to camp

AT HOME AND ABROAD.

—The Wisconsin Democratic State Convention will meet at Madison on September 9th.

—Lexington, Ky., is contemplating the erection of waterworks at a cost of $175,000.

—It is no longer considered a disgrace to be blackballed in a London club, so frequent have been the events.

—The cities of Hamburg and Bremen have informed Prince Bismarck that they are not willing to renounce their positions as free ports.

—The *United Service Gazette* says the Empress Eugénie has written to the Queen begging that no penalty be inflicted upon Lieutenant Carey.

—Twenty-five lashes are henceforward to be the maximum of flogging in the British army, and this only when a soldier is on active service.

—A Calcutta dispatch says the British Residency at Mandalay will be removed to a safer position, and the guard around it will be increased to 500 men.

—Savannah has just shipped to Liverpool the largest cargo of resin ever exported from this country. It contained 8,650 barrels, which are valued at nearly $40,000.

—Dissenters from the Greek Church, hitherto unrecognized by the State in Russia, are now to have entire liberty of worship. This affects 12,000,000 Russian subjects.

—The American Bible Society has distributed 38,226 copies of the Scriptures in Texas during the last twelve months, and 810 criminals have escaped from the jails in that time.

—The Chamber of Deputies has, by a vote of 363 to 166, passed M. Ferry's second Educational Bill, which provides for excluding the religious element from the Superior Council of Education.

—A circular has been issued by Secretary Sherman revoking the order forbidding the importation of neat cattle. It permits a free importation, provided, however, that the cattle shall be quarantined for ninety days.

—The French Mint is now coining a special or trade dollar for circulation in Cochin China. It weighs twenty-seven grammes, while the five-franc piece only weighs twenty-five grammes. Its value is five francs, forty-four centimes.

—The Spanish Congress, by a vote of 152 to 33, has approved a Bill removing the legal disabilities of Cuban Senators. This Bill was necessary to enable the Senators to take their seats, as they do not all possess the qualifications required by law.

—It is believed in Georgia that the Legislature will repeal the law giving juries the right to recommend all persons found guilty of murder to the mercy of the court. The law as it stands on the statute-book practically does away with capital punishment in the State.

—King Humbert has just received a formal visit from several Morocco ambassadors. They read to him a letter in Arabic, conveying the congratulations of the Emperor of Morocco upon his accession to the throne. The King's reply expressed cordial friendship for the Moorish sovereign.

—The International Art Exhibition was opened at Munich, July 19th, with great ceremony. News was received that the French Chamber of Deputies had voted $7,000 in furtherance of French participation in the Exhibition. France having at one time refused to exhibit, this announcement gave much satisfaction.

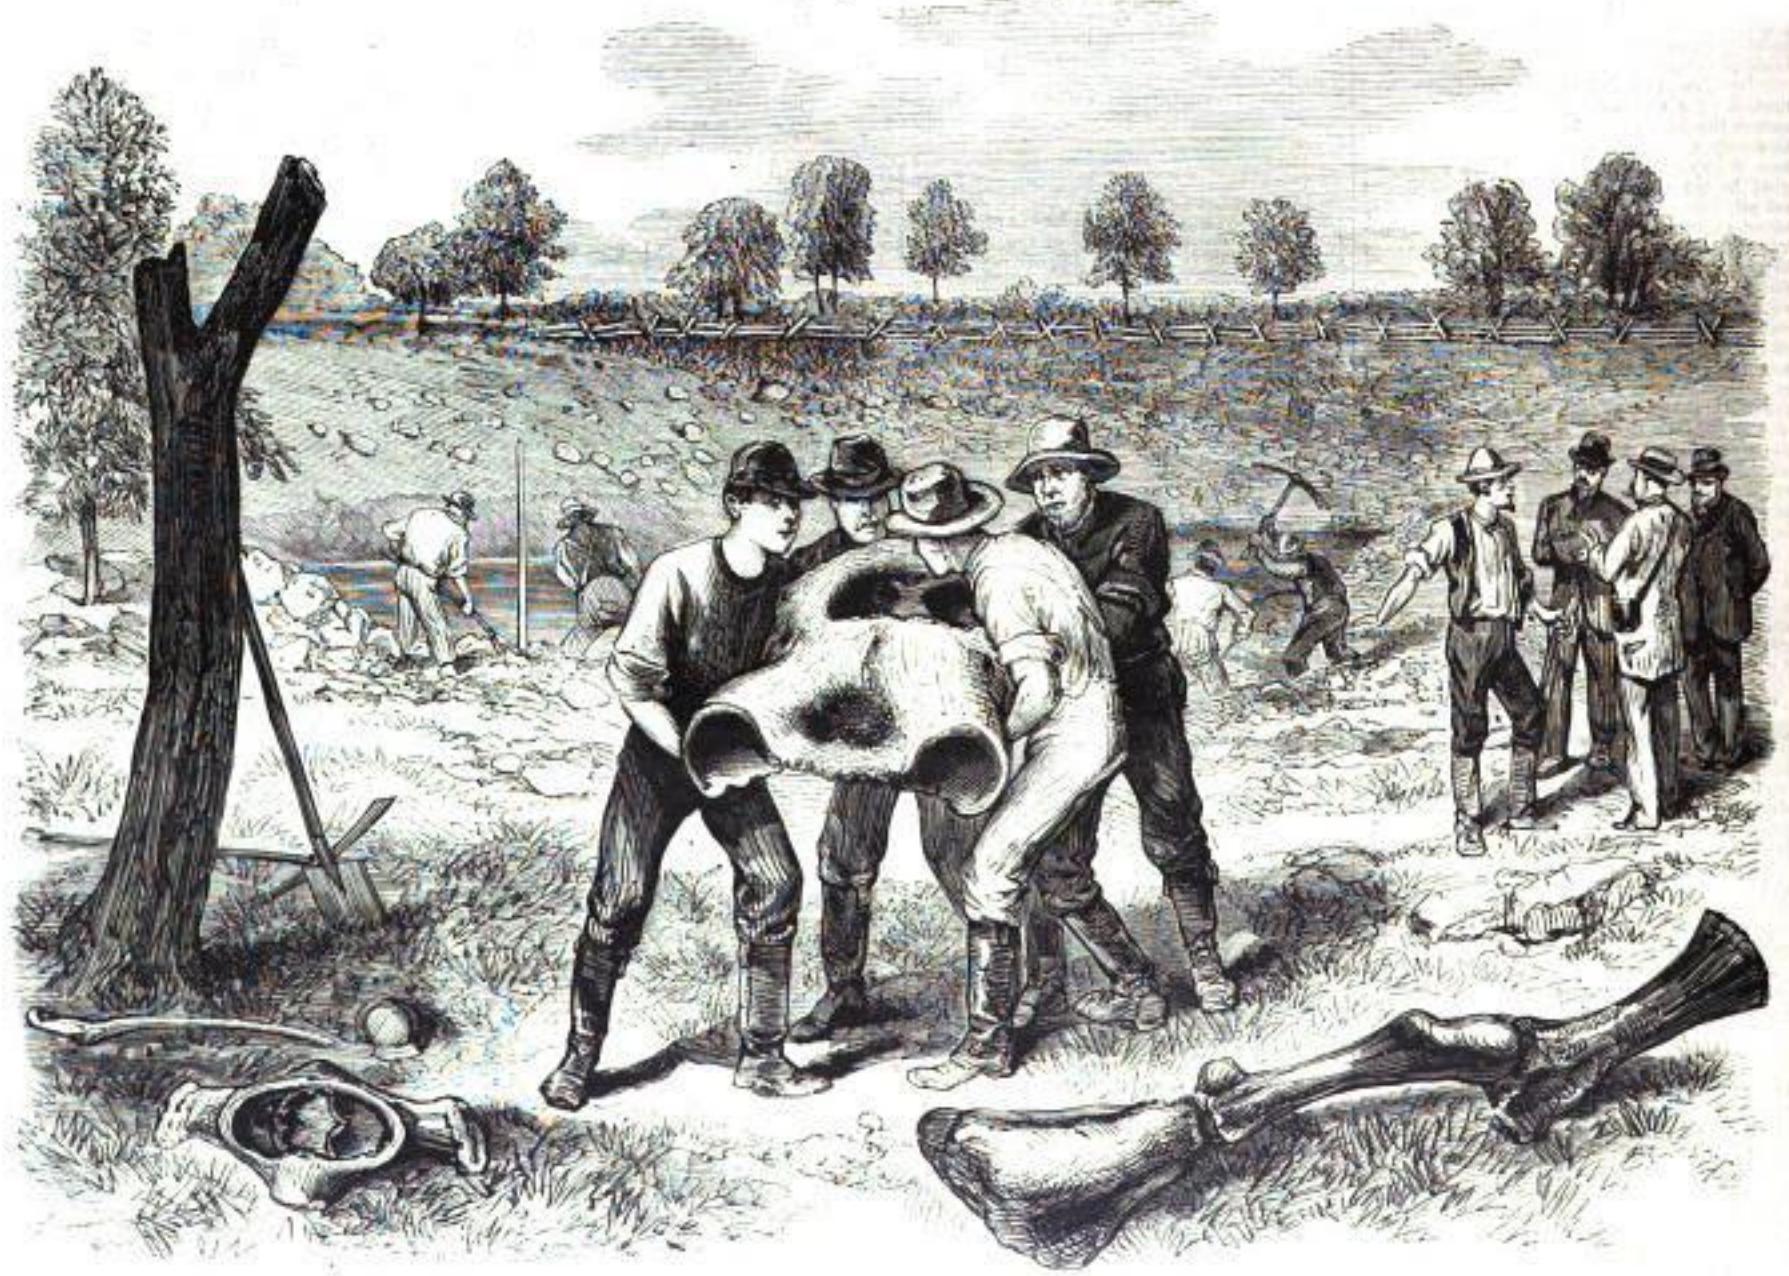
—A letter from Yokohama says that the Prime Minister has issued a decree that from July 1st export duties will be abolished on cotton and silk manufactures, silk and cotton mixtures, made dresses, porcelain, precious stones, lacquered wares, bronzes, manufactured bamboo, manufactured copper, paper fans and umbrellas.

—The British Lords of the Treasury have directed the Commissioners of Customs to allow all seized tobacco now available, except cigars, to be sent to Natal for the use of the soldiers, marines and sailors engaged in the Zulu War. The last occasion on which the Government issued a similar order was during the Crimean War.

—Groups of statuary will shortly be placed in several of the public squares in Paris. M. Barrias's "Premières Funérailles" has been selected for that in the Rue Monge, M. Gautherin's "Paradise Lost" for the garden of the Saint-Jacques Tower, and M. Soldi's "City of Paris" for the park of Montsouris. A bronze statue of Etienne Marcel is to be placed in the new Place de l'Hôtel de Ville. The Prévot des Marchands will be represented on horseback in the attitude of command.

—The world's supplies of gold, which twenty years ago were upwards of 200 millions a year, fell to 96½ millions in 1877, and 83½ millions in 1878. During the current year, it is believed, they will scarcely exceed 70 millions. California, Australia and Nevada have successively been the great gold-producing countries of the world. Now, strangely enough, Russia has assumed the front rank. The product of the entire Pacific Coast for 1879 will not exceed 16 to 19 millions, and of Australia 18 millions, while the gold crop of Russia, which was 19 millions in 1877, and 18 millions in 1878, is expected in 1879 to exceed 29 millions.

—From the last report of the London School Board it appears that the number of children registered in the national and other public schools of London now exceeds 600,000, and amounts to one-sixth of the population. The average cost of schoolhouses is £16 per scholar registered. The salaries of male teachers average £132 per annum; of female teachers, £102. Annual cost of each scholar, £2 12s. 6d.; average cost of same in Scotland, £2 1s. Nearly half the whole cost is met in London by fees from the parents. Attendance is compulsory, 350 summonses being issued during the year to parents neglecting to send their children to school.



—A statement has just been published showing something of the present overcrowded condition of the Russian jails. It appears that, besides the establishments in connection with the mines in Siberia, there are altogether eleven convict-prisons in the Empire. That at Irkoutsk, which, according to regulations, should only contain 1,500, is now occupied by 2,000 persons. In the Charkoff Government, two prisons—one, for 450; and the other, for 475 prisoners—contain respectively 600 and 500 unfortunate convicts. In spite of this overcrowding, it is stated that 500 miserable beings are lying in the ordinary town jails, awaiting vacancies in the central establishments.

—The United States Consul at Naples, in a dispatch to the Department of State, dated June 20th, 1879, reports that trials have been recently made in Naples of Pennsylvania anthracite coal for smelting iron. The experiments proved successful. There are at present several lines of steamers running from America to Italy, doing a fair business. They lack freight from the United States, while they have enough to this country. Cotton goods from the United States are imported to some extent. With an increase of the present importations, and the addition of coal, the trade of Italy with America may become extensive. The possibility of doing a profitable business in American cotton goods has been demonstrated.

AT SEA.

WORN voyagers, who watch for land
Across the endless wastes of sea,
Who gaze before and on each hand,
Why look ye not to what ye flee?

The stars by which the sailors steer
Not always rise before the prow;
Though forward naught but clouds appear,
Behind they may be breaking now.

What though we may not turn again
To shores of childhood that we leave,
Are those old signs we followed vain?
Can guides so oft found true deceive?

Oh, sail we to the south or north,
Oh, sail we to the east or west,
The port from which we first put forth
Is our heart's home, is our life's best!

A CAST OF THE NET.

THE STORY OF A DETECTIVE OFFICER.

CHAPTER II.—(CONTINUED).

I WAS amused at having the commission, for I wondered what Mr. Byrle would say when he saw me, and whether my disguise was so complete that he would not recognize me at all. That would be something like a triumph, and I almost made up my mind that it would be so. Had Mr. Forey seen me hurrying to the station, he might again have said that there did not seem much the matter with me; but I walked slowly enough through the street in which the Yarmouth Smack was situated, and had a pretty good trial of my disguise and my nerves as I passed it. Peter Tilley, dressed in a blue slop and cord trousers, so as to look like a dock laborer, or something of that kind, was leaning against the doorpost, lazily watching the passers-by. I made up my mind to try him, so stopping at a lamp-post just opposite to him, I took out my pipe, struck a match on the iron, coolly lit the tobacco, and after one or two puffs, threw the match into the road and walked on. He never knew me. It was all right.

The drizzling rain came down again as I got out at T——; but luckily Mr. Byrle's house was not more than a quarter of a mile from the station; and so resuming my limp, I got there without delay. The man-servant who answered the door took my letter, but told me that the old gentleman was not at home; then on finding Miss Doyle was to open the letter and send an answer, told me to wait in a little room which looked as if it was used as an office, having floor-cloth instead of carpet, wooden chairs, and so forth. He was a careful servant, and would not ask a stranger to wait in the hall, where coats and umbrellas might be had by a sharp party.

I had not waited long, when the door opened, and a young lady, whom I of course judged to be Miss Doyle, came into the room. She was a dark, keen-looking young party, and spoke rather sharply. "You are to take an answer back, I believe?" she said.

"Yes, miss," I answered, touching my forehead, for, as you may suppose, I held my cap in my hand.

"Mr. Forey only wishes me to send word; I am not to write," she went on; "he wants to know if Mr. Byrle will be at the works to-morrow. He will not. Tell Mr. Forey he will leave town to-night, and not return until the day after to-morrow. You understand?" She spoke very sharply; so I said: "Yes, miss," sharply, too, and touched my forehead again.

"You need not wait," she said, and, opening the door, I saw the servant waiting to let me out. I knuckled my forehead again, and putting on rather a clumsier limp than before, got out of the house into the rain and mud. Rain and mud! What did I care for rain and mud now?

"Sergeant Nickham," says I, when I got fairly out of the range of her windows, for I wouldn't trust *her* with so much as a wink of mine. "Sergeant Nickham," I said, "you are the boy! If you can't command your face, there isn't a man in the force as can. If you haven't got a memory for faces, find me the man who has, that's all about it!"

Why, of all the extraordinary capers that I ever tumbled to in my life, I never came near such a caper as this. Miss Doyle! *That* was Miss Doyle, was it? Right enough, no doubt; but if she wasn't also the sham clerk who came and found that I was put on the watch by Mr. Byrle, I didn't know a horse from a hedgehog—that's all. The quick look of her eye, her sharp, quick voice, the shape of her face, the very way she stood—lor! it was all as clear as daylight. But then I thought, and I kept on thinking till I had got back to the works, what could she have to do with stealing engine-fittings? 'Twasn't likely she had anything to do with that. It was past all question in my mind as to her being the same party. I knew it for certain; and then came the point—What did she dress herself up for and come a-spying on me and her uncle?—for she was Mr. Byrle's niece.

I hadn't got to the bottom of this by any means by the time I got back to the works; however, I gave my message very respectfully to Mr Forey, and offered Bob the gatekeeper his sixpence back, with many thanks.

"No, old chap," he says; "keep it at present. If you go on regular, I'll take it off you and a pint into the bargain the day you draw your first week's cash; but a fellow out of work knows the vally of a sixpence."

The same ferryman took me back; and his temper hadn't improved, I found. I fancied, too, that he was particular watchful of me, and so I was particular watchful of him; and from long practice I could do it better and more secretly than he could, although he *had* got a cross-eye. Lor! I could tell when we were nearing that same ship that the man climbed out of; I could tell it by the cunning way in which the boatman looked at me, to see if I would make any special notice of it. I didn't know what his little game might be, but I determined to spoil it; so I stooped down and was tying up my shoe, making quite a long job of it, till after we had fairly passed the craft, and then I looked up with an innocent face that quite settled him.

Just as we pushed up to the hard (that's the landing place), he says to me: "Do you often cross here?"

"Not often," I said; "at any rate, not yet. I generally cross a little higher up. But I have left my old quarters, and so I shall often go this way."

"Ah," he says, "you live at the Yarmouth Smack, don't you?"

"The what?" I said. "Where's that?"

"The Yarmouth Smack," he says again, pointing to the side we had come from. I knew where the Yarmouth Smack was well enough; but I shook my head and said: "No; I live on this side of the water; but I shall live anywhere when I can get work."

He did not say any more; I did not suppose he would; but there was something uncommonly suspicious in his talking about the Yarmouth Smack—something more than I could believe came from chance.

In the lane, just as I was about to turn into the side-door of the Anchor, I met the foreign-looking captain, who must have crossed the river before me, as I had last seen him on the other side. He knew me, I could tell well enough, and I knew him; but I was not going to let him see where I was going, so I passed the door of the Anchor, limping on till he was clear; then I hurried in, went up-stairs at once, and was out in the old ruined arbors I have spoken of in a minute. These overhung the river at high water (it was nearly high-tide now), and the landing-place of the ferry was close to them. The ferryman and the captain were talking, as I expected they would be, while the boat was waiting for passengers; and, by standing in the corner box, I could have heard every word they said, if they had spoken out, as honest people should speak. But they were that artful and suspicious, although they could not have known there was anybody listening, that they talked almost in whispers, and I only caught the last bit from the ferryman. "No," he says, "he's not the party; but I'll go up to the Smack to-night and make sure of the man."

Ah! as I thought; they were both in it somehow. But what a most extraordinary fuss and Gunpowder Plot sort of business there was about stealing a few bits of metal. I actually should have felt ashamed of the East-enders, who are really some of the sharpest folks I ever came across, if I had not felt there was a something behind, and that, by a lucky accident, I seemed upon the point of finding it out.

The night—my first night in the east, too—was not to pass without an adventure, and I had not seen the last of my new acquaintance, the captain. I got very tired of the company in the Anchor—not that I mind who I mix with—and if there had been any of the factory-hands about the place I would have sat with them until the house closed; but they only came there at meal-times, it seemed, or on their road home. So I walked about the neighborhood a bit; not because it was pleasant, for it was a wet night; and what with the rain and the mud and the drunken sailors and the fried-fish shops and the quarreling there was going on, it was anything but agreeable. The fact is, I like to know every court and alley in my district, and there *were* some pretty courts and alleys here. However, nobody thought me worth robbing, and, besides, I am always civil, so I never get interfered with. It's a capital rule, the best I know, and costs nothing.

When I was coming back, and had got pretty nearly to the Anchor and Five Mermaids again (it is very absurd to give such long signs to public-houses), I saw a very pretty girl, whom I had noticed before standing at a corner out of the rain, but it was not raining very much now. She wasn't—well, I won't say what she was not or what she was. She was very pretty, I say, and was doing no harm there; but two or three fellows coming by at the moment, one of them took hold of her roughly, and finished by almost pushing her down. She got away from him, and drew a door or two off; but his companions laughing at him for being bested by a woman, he followed her, and, on her pushing him from her, gave her a back-handed smack in the face. There were several men loitering about, smoking, and so forth, and I heard one or two say it was a shame; but none of them interfered; and I, being a little way off, and not wanting to get into a row, might have passed this over; but she called him a brute and a coward, and he went at her to strike her again. She ran across the road to where I stood, to avoid him, and he followed her. Then I saw it was my acquaintance, the captain.

He swore more horribly than ever I heard any one swear, and, springing forward, would certainly have hit her down, but I jumped between them and knocked up his arm. "Hrayvo!" said some women, who had been attracted by the girl's screams; and "Hrayvo!" said the men who hadn't interfered. At once the captain turned on me and let fly desperately at my head; but I was not to be had in that way, and I stopped him and returned a hit that I know must have loosened a couple of teeth; and then he swore again and began to pull of his coat. So did I.

"Don't fight wid him, my darlin'," said an old Irishwoman, who was selling herrings, laying her hand on my arm. "You're an honest English boy, and these fellows will have a knife in ye if they can't bate ye fair."

"No, Biddy, they sha'n't," said one of the men coming forward, followed by half-a-dozen more. "If there's to be a fight, it shall be a fair one; and, mates, we'll put any fellow into six feet of mud who only shows a knife."

His mates said so, too, and they were a rough and likely lot for it, and the river was within a score or so of yards. So, with a scowl at them (for I do believe now he meant murder; I didn't think of it then, although I was a policeman), he rolled up his sleeves and came at me.

He was a strong fellow, not so tall, perhaps, but certainly heavier than I was, and I dare-say, from his manner, fancied he could fight. But fight me! Why, a gent once offered through Alec Keene (he had seen me spar in private at Alec's) to make it worth my while to leave the police, and he would back me against any ten-stone-four man I fancied, for a hundred; and I was half inclined to take it, too, only something important turned up just then. Well, in two rounds I settled the captain. He tried to catch hold of me and throw me; but I knocked him clean off his legs each round, and then his friends took him away.

"There's one comfort, at any rate, in having had the row," I thought; "he'll never suppose I'm a detective after this."

I wished, however, it had never come off, there was such a fuss. Why, if I could have drunk shillings and sixpences, I might have had them, I do believe. In a place like that you get a crowd directly, and, although the affair did not last three minutes, there was a hundred men and as many women, too, anxious to treat me; and I was naturally obliged to drink with one or two—not at the Anchor, though.

The affair made such a stir that I read in one of the local papers the next week how Jem Mace had been down in the neighborhood of the docks, incog.; and that for once the brute strength of a boxer had been used in a good cause, and all that sort of nonsense. I know I have always found the best class of boxers very good fellows.

Of course I was vexed at this shindy having taken place so early, as the quieter I kept myself the better, and I would have given five pounds to have been out of it. My wishing this only shows you never know what is coming; and something came out of this street-fight that I never expected.

CHAPTER III.

THERE was nothing for me to do, that I could see, for a day or two, beyond improving my acquaintance with the factory hands, and keeping my eyes open generally; and in pursuance of this latter branch of the business, I got up very early on the following morning, and sat for an hour or two after daylight in the arbors or boxes I have so often mentioned. There was one great charm about the Anchor. It was low and dirty, decaying and disreputable, and the landlord was a drinking fellow, utterly bankrupt and hopeless, who troubled himself about nothing. His potman was sottish also, and too accustomed to riff-raff and queer doings of every kind to trouble himself about me; so I was thoroughly at my ease. All I saw which appeared worthy of notice was that the ill-tempered ferryman rowed out alone to the ship I have spoken of, and disappeared round its bows. I watched for some time, but did not see him come out into midstream; but just before I gave up my watch, he came into sight again. Whether he had crossed after rowing up a bit and had come back, or whether he had been lying all the time just hidden by the ship, of course I could not say.

I had told the potman that I was in hope of seeing a friend of mine who was going to Australia and had half promised to take me with him. I consequently showed a great deal of interest in the craft, and asked him lots of questions about them. This morning I guessed that the ship (the ferryman's ship) was an Australian liner; and this was just the joke for the potman, who laughed till his cheeks shook again at my mistaking a slow old Dutch trader for an Australian liner. He was quite severe in his way of poking fun at me; but he ought to have pitied my ignorance, not ridiculed it—and so I told him.

I thought I would pass away the morning by going over to T—— and watching Mr. Byrle's house. I had learnt that he was to be from home all day; Miss Doyle had told me so herself; so I knew *she* knew it also; and if she had any suspicious visits to pay, or queer company to receive, now was the time, that was evident. Accordingly, I went to T—— by rail as before, starting in the rain; but luckily, just as I got there it cleared up and the sun came out. To give me a chance of learning something, I got asking my way to a lot of places I didn't want to go to, just by way of starting a conversation, you know; and the man I pitched upon was employed in the goods-shed of the railway, but did not seem to have much to do just then; and when I asked him if he could spare time to run across to the public-house with me, he said yes, he thought he could; and he did.

We could see Mr. Byrle's house from this place, so it answered as well for me as any other; and while I was talking to the porter, I saw a tall young fellow, good-looking, but rather flash-looking, too, go past, and in three or four minutes I saw him ring at the gate of Mr. Byrle's house.

"Hollo!" I says to my railway friend, "isn't that Sims Reeves? Does he come down here to give lessons?"

He was no more like Sims Reeves than I am, but his was the first name I could think of.

"Sims Reeves!" said the porter; "why that's young Mr. Byrle, as gives his father no end of trouble. You wouldn't see him there, only the old gent is off somewhere for a while. He went from our station last night."

"Indeed!" I said (and then I saw the young man go into the house); "and what's the quarrel about?"

"Oh, his goings on," said the railway man. "Why, I have heard that his father has paid thousands on his account; and if he hadn't paid one time pretty heavily too, this young fellow would have been in Newgate for forging his governor's name. He's going abroad, I believe; and a good riddance, too, I say."

"And what does he do at the house when his father is away?" I asked; and I really felt that our conversation was getting quite interesting.

"Well, it's the old story; a lady's in the case," said the porter. "There's a niece there that's over head and ears in love with Mr. Edmund—that's his name—and he pretends to be equally sweet on her. But if she had seen only as much of him as we have seen at this here station, she would never —— There's my foreman agoing into the shed! Excuse me." With that the railway man finished his pint and was off.

I considered a minute, and then decided I was as well off where I was as anywhere; so I borrowed yesterday's *Morning Advertiser* of the barmaid, and, sitting down where I could watch the house, pretended to read. If any one had watched me, he must have thought I was most remarkably interested in the money market, for I had that part of the paper folded towards me without changing for a good half-hour. At the end of that time the door of Mr. Byrle's house was opened and the son came out. I was ready for a start after him, let him go in which direction he might; but he came towards the Railway Tavern, my post; straight on, nearer, nearer he passed my door. I peeped out after him, and saw him actually come into the tavern, entering by another door the compartment of the bar next to mine!

I was in the common place; he was in one of those divisions where "Glasses only are served in this department;" and so on. There was some one there already, for I had heard the occasional clink of a spoon and glass, and a cough; but there wasn't more than one, for I had heard no voices. I now heard some one speak; I judged it to be young Mr. Byrle, and I was right.

"Hollo, skipper!" he said, "what have you been doing to your face? Have you been fighting?"

"Fighting! Well, never mind my face; I don't want to talk about that; I shall settle that account some day," said the voice. (*I* knew what voice; *I* knew what was the matter with the man's face.)

His surly tone seemed to shut young Mr. Byrle up on the subject, for he gave a sort of forced laugh and said no more about it. "When do you sail?—for certain now. I must know to an hour to-day, for I don't like what I hear of things," said Mr. Byrle.

"Don't speak so loud," said the other; "you can never tell who is listening;" and there he was more thoroughly right than he suspected. However, they dropped their voices so completely after this that, though I sat right up against the partition, I could hear nothing more than a stray word or so, out of which I could make no sense, until at last Mr. Byrle said: "Time's about up, skipper."

"I suppose so," said the other. "Well, you feel quite confident about her then; her courage won't fail, you think?"

"*Her* courage fail! Ha! ha! skipper," said Mr. Byrle; "you don't know her, or you wouldn't say that. She'll come with the material, you'll see. From first to last she never wavered; and look what a penetrating mind she has got!"

"Yes; she's clever, I think," says the skipper.

"Clever!" Mr. Byrle repeated, with a deal of contempt in his voice—"clever! Who but her would have found out the scheme——"

"Hush!" said the skipper, stopping the young man just as his conversation was getting, I may say, instructive and important. Then Edmund Byrle said his train was due, and posted off to the station.

A minute or so after I heard the skipper put down his glass as though he had emptied it, and then he, too, left. I followed at a little distance, and got into the same train with him, and got out with him, and still following, saw him go to the ferry, pick out, as I knew he would, the surly waterman; and I saw him rowed to his own ship, where the waterman left him and then rowed over to the other side. Very good. Then the skipper had gone to T—— specially to meet Edmund Byrle; and Edmund Byrle had gone there specially because his father was away; and —— Then I couldn't follow it up any further.

I went boldly into the Yarmouth Smack, and not seeing Tilley anywhere about, I asked for him under the agreed name, and was told he had gone to work on Byrle's wharf; not for the firm, but for some lightermen who frequented the public-house. This looked well; and if I got taken on, as I expected, the next Monday, I thought it would be very odd if between us we didn't find something out. Yet my interest in the business seemed dying away, or drifting into altogether a new channel, for I could not believe for a moment that Miss Doyle and Edmund Byrle, and the skipper and the sulky ferryman, were all linked in with stealing a few paltry brass fittings.

I crossed over before the old ferryman came back, and had my dinner in the tap-room of the Anchor and Five Mermaids. It wasn't a nice place for a dinner, and I was always partial to having my things neat and tidy, which was by no means the rule at the Anchor, and the company was not to my standard. I was late to-day, so I missed the factory hands; and there were only two men in the room with me; one was a costermongerish-looking rough, in a velveteen coat and fur cap, which was about all I could see of him, for he was asleep all of a heap in a corner. The other was a man who had his dinner in a newspaper, and took it out, whatever it was, with his fingers, till he had finished it and then went away.

I was glad when he was gone, and I had the room as I may say to myself; so I sent my plate away, called for a little drop of rum-and-water (the only thing you could get fit to drink at the Anchor), and lighting my pipe, sat with my feet on the fender, to have a good smoke

Digitized by Google

and a good hard think. I had sat there perhaps half-a-dozen minutes, and had fairly settled down to my thinking, when a low voice said: "Mr. Nickham!" My name! It was a very low voice which spoke, but the roar of an elephant couldn't have startled me more. In an instant it flashed upon me that my disguise was seen through and all my plans understood. Robinson Crusoe was not so staggered when he saw the footprint on the sand as I was on hearing these two familiar words. I turned round, and there was that miserable-looking rough that I thought had been asleep, standing up and making signs to me. He was a regular rough and no mistake, with short hair, an ugly handkerchief twisted round his neck; his nose had been broken at some time or another, and he looked a complete jail-bird. "Mr. Nickham!"

It was he that spoke; no mistake about it this time; and he put his hand up to the side of his mouth to keep the sound straight.

"Who are you?" said I; for you know I didn't like to answer the name at once, in case he wasn't certain.

"My name is Wilkins—Barney Wilkins," said the man. "But you won't recollect me by that, p'raps, though I've been through your hands, sergeant; but I ger some other name then. You got me twelve penn'orth for ringing in shofuls." (He meant that he had been sent to prison for twelve months for passing bad money. I wasn't surprised to hear it; he looked fit for that or anything bad. But if he got it through me, why he should speak to me now was beyond my comprehension.) "I knowed you directly I see you, sergeant," he says, coming nearer, but still speaking in the same hoarse whisper as at first; "and though you're a tight hand, you're fair and square, and acted as such by me when you copped me. You are down here on business—you're after some rare downy cards. Now ain't you, sergeant?"

"If you know," I said, "what do you ask me for? And if you think I am what you say, you don't suppose I shall tell you my business, do you?"

"Sergeant," he says, coming nearer still, "you fought a man in the street last night, and gev him a thorough good licking. You was the only man there as would take the part of a poor gal as wasn't doing no harm to nobody; and I respect you for it, sergeant; I do. That gal was my sister—my young sister, as has been like a child to me, and was so tidy and pretty that I was proud on her, and hoped to—— Well, sergeant, whatever we are, we all have our feelings; and Sergeant Nickham, I'll do you a good turn. Look here!" With this he crept quite close and put his mouth almost to my ear. I watched him carefully, being much puzzled by his actions, yet I had seen such unexpected things occur in the police that I was quite ready to hear something of consequence from him. "You are down here about that bank paper what is said to be all got back, but which you know it isn't. You are on the right parties, and it does you credit; but you'll never get them nor the paper without me." *(To be concluded in our next.)*

A MASTODON UNEARTHED.

The Almost Complete Skeleton of an Extinct Monster.

On the 5th of July, a person engaged in digging a trench on the farm of Mr. Hugh Kelley, seven miles distant from Newburgh, N. Y., unearthed what he at first supposed to be a log, about two feet in length and several inches in diameter. Closer examination, however, by some persons whose attention was called to the object, showed that the supposed log was the leg of a mastodon, and further digging resulted in the discovery of a mastodon's skull, besides numerous other bones sufficient to make an almost complete skeleton of the extinct mammoth. The upper part of the skull was found about four feet six inches below the surface of the ground, and some idea of its size and weight may be obtained from the fact that it required the exertions of five men to lift it from its bed. The lower jaw was found at the same depth from the surface as the upper one, but about three feet away from it. There were also unearthed a complete fore-leg of the mastodon, sections of the spine, more than a score of ribs, and a large number of bones belonging to the feet. Altogether, over two hundred bones have been recovered and put together. They are in a wonderful state of preservation, and the skeleton will be a magnificent one, nearly, if not quite, as perfect as the one in the Albany State Museum, and much larger. After the skull and other bones had been placed in position, measurements were made and found to be as follows: The back of the skull measures 28 by 21 inches; the opening to the mouth, 9½ inches; the tusk-sockets, 7 by 6¾ inches; from the outside of tusk-socket to outside, 24½ inches; trunk-socket, 5 inches up and down and 11 inches across; eye-sockets, 7 by 5 inches; across the eyes, 26 inches; ear-sockets, 15 inches up and down and 14 inches across; across forehead from ear to ear, 15 inches; depth of forehead from trunk-socket to back of skull, 20 inches; length of skull, 47¾ inches; height of skull, 30½ inches; circumference of skull around the eye-bones and under lowest part of lower jaw, 8 feet 1 inch; circumference of skull around tusk-sockets and back part of skull, 10 feet 9 inches. The perfect fore-leg, including the shoulder-blade, measures 7 feet 4 inches; the hind-leg measures 5 feet 6 inches. These measurements do not include the feet or ankles, being only the first and second joints and shoulder-blade. The shoulder-blade measures 30½ inches in length and 31½ inches across; the thigh bones measure 39 inches in length and 26 inches in circumference. The ribs measure 4 feet 9 inches across, and around 8 feet 6 inches. Four teeth were found in each jaw, in an excellent state of preservation. The enamel is of a bluish tint, and unbroken. The four back teeth are eight-pointed, measure 7 by 3¼ inches, and stand 3 inches out of the jaw. The four front teeth are six-pointed, and measure 4½ by 3¼ inches. There are eight fangs on each back tooth and six on each front one.

It is a remarkable fact that the largest bones of the mastodon genus ever discovered came from the same section of country—a marshy region extending from Orange Lake, about four miles from Newburgh, into New Windsor, and known as the Great Swamp. They were found in 1845, on the farm of Nathaniel Brewster, and are now in the Boston Museum. The skeleton as articulated is 11 feet high, 17 feet from end of face to beginning of tail, the latter being 6 feet 8 inches long; circumference around ribs, 16 feet 5 inches; tusks about 11 feet, of which 8 feet 8 inches project beyond the sockets.

Remains of the mastodon were first found in this State, near Albany, probably as early as 1705. In 1740 large quantities of bones were found in Kentucky. The first remains of the mastodon found in Orange County, N. Y., were discovered in 1782, three miles south of the village of Montgomery. In 1794 other remains were found about five miles west of the same village. In 1800 more were found about seven miles northeast from Montgomery, on the farm of Dr. George Graham. In 1803 bones were found one mile east of Montgomery. In 1838 a tooth was found on or near the farm of Samuel Dixon, at Newburgh. In 1844 remains were found on the farm of Mr. Conner, at Wallkill, and a nearly perfect skeleton was found in Mount Hope about 1871. Remains have also been found in Goshen.

OUR POPULAR SUMMER RESORTS.

Manhattan Beach.

Ho, for Manhattan Beach, with its yellow sand flecked by the lace-like foam of caressing breakers! Ho, for the breeze that pats the cheek, and toys with the hair, and bids you welcome, coming to meet you at Sheepshead Bay, and keeping joyously along with you till it calls you all its own by the sad sea wave. Ho, for the palatial hotel, with its army of waiters, agile, anxious, intelligent—with its corps d'élite of cooks, its reserve of courteous superintendents, its legion of supernumeraries! Ho, for the piazza thronged with society with the big S—the piazza that is the home of the sea-breeze and towards which the Neversink Highlands peep dreamily over the flashing Atlantic! Ho, for the hand that murmurs delicious waltzes in its sea-girt cave, or revels in the mad waggishness of Offenbach, or gloats with fiendish glee over the familiar strains of the thrice-accursed "Pinafore"! Ho, for the bathing pavilion, with its luxurious surroundings, rendering a dip in the briny a joy for ever! Ho, for the picnic pavilion, with its commodious fixtures and its unrivaled coolness! Ho, for the monster balloon, that tempts one to leave dull earth behind him and to ho cloudwards! Ho, for the toy railway that runs along the beach, with its quaint little stations, and cars always *en fête*! Ho, for the thousand and one attractions of the shore, from the dull gaze of the confiding clam to the piquant smile of the shoeless, stockingless sea-nymph—from the vacant stare of the defunct jelly-fish to the facetious wink of the masher!

Who would fail to visit Manhattan Beach? Who would fail to enjoy the delightful sail to Bay Ridge, through the Upper Bay, past lordly ocean steamers, past yachts with snowy sails like the pinions of sea-birds, past saucy tugs, past palatial steamers en route for everywhere, past Staten Island in the distance, set like an emerald in the mirror-like bay! Where so commodious and easy a landing-place as at Bay Ridge! Where such holiday cars! What a ride through a country that will remind the Englishman of sunny Kent, the Irishman of the fertile plains of Kildare, the Scotchman of the country of the Mac Dougal, the Frenchman of La Normandie! The pace is exhilarating, champagny; and as we flash past white villages like bunches of lilies, or over plains arrayed in their glowing livery of green and gold, or through woods showing deep and shadowy vistas, we are but preparing for the picturesque and refreshing sight of the dancing billows bounded by the elegant structures which now span Manhattan Beach in such charming relief against sea and sky. What a rush from the train by excited bathers, madly anxious for the plunge, intoxicating in its nature as a beaker of wine! What clipping and clicking of tickets by white-capped officials! What a buzz, and hum, and clatter of human voices! What a stamping of human feet! What a rattle of knives and forks! What a popping of champagne corks! What shrill cries for nourishment! and, above all, the sweet boom of the ever-rolling surf, as it leaps madly to the stolid arms of the tawny sand!

Thousands of people decanted from the train, all in search of ozone, every one gazing seawards to where the lighthouse on the Hook seems like a white dot on the sky-line. Thousands of people seated on the far-stretching piazza, while a mad, merry chatter is flung out to the winds, and over the velvet grass, with its glowing ribbon-borders of dainty flowers. Thousands of people eating and drinking as people only can eat when at Manhattan Beach. Up in the balconies and verandas and quaint windows like niches fit for medieval saints are the gayly-attired of the sweeter sex, flinging dabs of color on the hodden-gray walls of the hotel. And what a hotel! with its accommodation for thousands; its superb and æsthetic furniture; its cooks, whose *chefs-d'œuvres* remind one of the triumphs of a Francatelli, or a Brillat Savarin; its cellar worthy of the Hapsburgs. And when the sun, which has lingered to the very last moment, sinks into the glowing arms of the west, and daylight dies, then shines forth the electric light, causing the pale and gentle Luna to hide her head behind every passing veil of cloud; then beads of fire dot the piazza, the reception-rooms, the dining-halls, the grounds, while the strains of the splendid band rise melodiously over the dreamy hum of the ever-throbbing surf. "See Naples and die!" Visit Manhattan Beach and live!

THE FIRST RAILROAD IN NEW MEXICO.

The fourth day of July possessed a peculiar interest and importance to the people of the northeastern portion of New Mexico, and especially to those of the town of Las Vegas. On that day the first railroad constructed in the Territory—the New Mexico and Southern Pacific Road—was completed and declared open to the public, and in celebration of the event and of the natal day of the Republic, a vast concourse of people assembled in the town, and were addressed from a gayly decorated stand in the Plaza by a number of distinguished persons, including Hon. T. Romero and General G. A. Smith. All the speakers dwelt upon the importance of free public schools as factors in promoting the welfare of the Territory. Two locomotives which came in on the new road were objects of general interest, being handsomely decorated with United States and Mexican flags.

Las Vegas, which lies about forty miles southeast of Santa Fé, and nearly one hundred miles south of the Colorado line, is a brisk, enterprising and growing town, and now that it is supplied with railway communication with the outside world, will no doubt speedily become one of the important centres of population in the Territory. Its present population is made up of Mexicans, Indians, and representatives of various nationalities, nearly all of whom speak the Spanish tongue. One of our illustrations shows the polyglot character of the population, while another gives a glimpse of the trade in pottery carried on by the Pueblo Indians.

SCIENTIFIC INTELLIGENCE.

A Dispatch from Zanzibar dated June 28th, announced that the Belgian exploring expedition, under M. Dutaits, was ready to start into the interior.

German Travelers and savants of wide repute are conducting explorations into various parts of Africa. Among them is Gerhard Rohlfs, to whom the German Emperor has sent complimentary presents for the Sultan of Widai.

From Data Collected by the Nares Polar Expedition in 1875-6, Professor Fries, of Upsala, infers that icebergs may exist at the very Pole if there is land there occasionally free from snow or ice. He has no belief in the existence of an open polar sea.

The Swedish Budget for 1880 sets aside a sum of 80,000 crowns for the purchase of the Hammarby estate, near Upsala, which originally belonged to Linnæus, as well as of a quantity of furniture he once possessed, to honor the memory of the great botanist.

In a Balloon Ascent which took place at Rouen on June 15th last, with a large balloon, the occupants of the car found at 12,000 metres from the earth a cloud where the cold was so intense that small icicles were seen suspended to the beards and mustaches of the travelers.

Ernest Marno, the well-known Austrian traveler in Africa, who originally formed one of the staff of the Belgian expedition under the late Captain Crespel, has recently been appointed deputy-governor of the province of Galabat in the Soudan. M. Stalin, another Austrian traveler, has gone to the region of the Upper Nile, the special object of his journey being meteorological investigations.

Dr. Falvre, the Dean of the Lyons Faculty of Sciences, has been run over by a cart when conducting a number of pupils to a botanical excursion. His constitution was so dreadfully shaken that he died after a few days of suffering. Dr. Falvre was opposed to the Darwinian theory, and has published books against the mutation of species. His most important publication was a review of Goethe's scientific works.

William Minis Fontaine, M. A., has been elected to the chair of Natural History and Botany at the University of Virginia, recently endowed by the Hon. William W. Corcoran, of Washington, D. C. Professor Fontaine was a student at this institution during the sessions of 1856, 1857 and 1858, being graduated with the degree of Master of Arts. He afterwards studied in Germany. He is now a professor in the University of West Virginia, at Morgantown.

James Samuelson, a distinguished English scientist, who has been the editor of the *Popular Science Review* and the *Quarterly Journal of Science*, and is the author of many popular scientific works, contemplates a visit to this country early in August. He has accepted an invitation to visit Salem, and will probably deliver a couple of lectures upon Natural History before the Essex Institute, and may speak in some of the larger cities of the country upon the subjects of biology or zoology.

An Elaborate Exhibition by the Royal Agricultural Society, of which the Prince of Wales is President, was announced at latest steamer dates to be opened near London, June 30th. Among the foreshadowed novelties were to be specimens of the plows and other agricultural implements in use for the past hundred years in the various countries of Europe, including those of Cyprus, and also a series of dairies, worked by imported residents of all European countries, with the view of instructing the English in the several modes of foreign butter and cheese making.

An International Convention under the auspices of the King of Belgium and the honorary presidency of the Court of Flanders is to assemble in Brussels this year to discuss the latest advances in the knowledge of American ethnology, philology, history, geology, and, in fact, of everything appertaining to America that is of interest to mankind. New light is expected to be thrown upon the discovery of the North American continent and upon its primitive inhabitants. There are in Europe many students of American history and science, and this will be their third congress.

The Fine Mural Paintings discovered in the grounds of the Palazzo Farnesina, in Rome, during the excavations for the Tiber works, have now been nearly all detached from the walls. Two experienced artists were summoned from Pompeii to perform the delicate operation. These frescoes, great and small together, are thirty-two in number. They are fine works in the Greco Roman style. The lower portion of the wall is devoted to landscapes. Above are dramatic, historical, or mythological scenes, which the archæologists are endeavoring to interpret. The figures have marvelous artistic merit. Of very correct draughtsmanship, in color and effect they resemble Dutch sketches, and, although at least twenty centuries old, they are as fresh as if recently painted. Each painting when detached, with the plaster adhering to it, is carefully packed in a separate case.

At the Last Meeting of the Berlin Geographical Society the President, Dr. Nachtigal, communicated the latest reports received from the German African travelers. Engineer Schütt has started on his journey into the interior and believes that he has now succeeded in overcoming all the difficulties which at first presented themselves to his further progress towards the East and North; he now intends entering the country of the Adjellengo tribe. Dr. Buchner was detained at Cassange through the rainy season. He intended leaving for the interior at the beginning of May. Dr. Gerhard Rohlfs has had much to endure from the fanaticism of the natives at Djalo, where he is still staying, and has also been unable to obtain a guide through the Wadai desert on account of the unfriendliness of the Bengazine Government. His companion, Dr. Strecker, has returned to Bengazi in the meantime in order to attempt to make the Government more favorably disposed towards Dr. Rohlfs undertaking.

The Interest of the Anthropological Exhibition at Moscow, Russia, is on the increase. There are already over one hundred Russian types of the old times, beginning with the tenth century. There are many holy pictures representing the saints; also portraits, engravings, and casts of the Czar, statesmen and other notable persons, by Russian artists, as well as by those foreign artists who, in the sixteenth century, were brought to Russia by order of the Czars, along with other European rarities. Perhaps the most interesting exhibit in the department of types is that of living typical persons of different Asiatic tribes under the sceptre of the Czar: Sarts, Tashkentzi and Egyptians are to be seen, placed amid their usual home surroundings. Besides the Russian types there are types of Oriental tribes that existed thousands of years ago, but are now extinct. Among these are contemporaries of Moses; there is Nehta, the daughter of Sesostris, and there is Pharaoh Menephtes. There are also many casts from the ruins of ancient cities, and from temples and monuments.

PERSONAL GOSSIP.

A statue will be unveiled to the memory of M. Thiers at Nancy, France, on the 2d of August.

Rev. George Vosburgh, of Jersey City, who was tried and acquitted on a charge of attempting to poison his wife, has obtained a divorce in Fargo, Dakota.

Congressman Ray V. Pierce, of Buffalo, is rapidly convalescing, and hopes soon to be able to leave with his family for Europe, intending to be gone several months.

The Duke of Sutherland, who is a thorough practical engineer, drove the locomotive attached to the train which conveyed the Prince and Princess of Wales around the Royal Agricultural Show.

Paraguay has changed the name of Villa Occidental to Villa Hayes, in honor of the President of the United States, who, as arbitrator, recently awarded a strip of land to that country.

The Archbishop of Canterbury and the Bishop of London have recommended to their clergy to use the "prayer for fair weather" in their churches. It has lately been very rainy in England.

The Austrian Archduchess Mary is going to stay at Biarritz with her mother; and her prospective husband, the King of Spain, will visit them there. The marriage will possibly take place late in the Autumn.

Dr. H. von Holst, of the University of Friedburg, Germany, the author of "Constitutional and Political History of the United States," a work not yet complete, has been elected Professor of History in Johns Hopkins University, Baltimore.

The Sultan is an enthusiastic musician. He took, consequently, a great fancy to Baron Ring, one of the members of the Eastern Roumelia Commission. The two spent a number of hours together in the peaceful pastime of playing duets on the piano.

An announcement is made of the acceptance of the Secretaryship of War by ex-Senator Ramsey, of Minnesota, when the place shall become vacant by the confirmation of Mr. McCrary as Judge of the United States Circuit Court, of which event there is little doubt.

Mr. William B. Aston, at the head of a New York and Boston company, has offered Georgia the sum of $1,250,000 for the Macon and Brunswick Railroad. If they can buy this road it is said that they will put on a line of steamships at Brunswick, Ga., plying to South America.

Miss Gardner, of Boston, who obtained an honorable mention for her picture, "At the Fountain," exhibited at the Paris Salon this year, is believed to be the only American lady who has ever been granted this distinction, or a prize of any kind, at a French exposition of fine arts.

The Sumner Monument Committee, after erecting and paying for the statue by Thomas Ball, on the Public Garden in Boston, having a balance on hand, have concluded to appropriate it to the erection of a handsome sarcophagus of white Concord granite on the lot at Mount Auburn where Mr. Sumner is buried.

James Winthrop Harris, for the past ten years secretary of Harvard College, has just died. He was not a literary man, but showed an extraordinary ability for his duties. He was especially noted, too, for his punctuality; for the ten years of his service he failed scarcely a day of being in his office at precisely the appointed hours.

Two French engineers, accompanied by Dr. Kenworthy, of Jacksonville, have been visiting Lake City, Fla., and prospecting in view of building a canal across the peninsula. The two gentlemen, Messrs. Baron and Guenberg, represent large capitalists in France, who are amply able to build a ship canal across the State if a feasible route can be found and proper encouragement is given by the State.

Professor L. Whiting Mason, of Boston, having been appointed by the Imperial Government to found a national conservatory of music at Tokio, Japan, in January next, has nominated Mr. Benjamin Cutter, now studying and teaching at Stuttgart, for the violin department, and Mr. Ephraim Cutter, Jr., for the organ and piano, organist of the First Unitarian Church, Woburn, and late of the Shepherd Church, Cambridge.

Professor Bruck, a Protestant, has just been elected "Rector Magnificus" of the six-century-old University of Vienna. He is the first Protestant who has held that office. The University has lately shown further religious liberality in electing two Hebrew gentlemen, Professors Grünhut and Hoffman, to the chairs of Law and Philosophy. A short time ago, it is said, a Hebrew could not so much as take a doctor's degree in an Austrian university.

The Shah has appointed an Austrian, Count Montefiore, to be Mayor of Teheran, having a prudent preference for Asiatics, as neither England nor Russia can be offended. The Shah was so greatly pleased with Francis Joseph's gift of a full length portrait, magnificently framed, that he declared that he would send his own likeness to Vienna in just such a frame of solid gold, but finding that a frame twelve feet by ten feet in solid gold would seriously inconvenience the Persian treasury, he abandoned the magnificent idea.

Senator Wagner has presented a very handsome hotel to his village of Cassjoharie; and ex-Governor Seymour writes concerning the gift: "I wish there was more of the spirit of Mr. Wagner in the valley of the Mohawk, for then the world would know that it has a history unsurpassed in value and in interest. May the example of Mr. Wagner teach the dwellers in the valley of the Mohawk that men do most to honor themselves when they show that they seek to honor their homes and the memories of their fathers."

Dr. Cumming's physicians have ordered him to relinquish all mental exertion. He is seventy-two, and has labored in London for forty-six years. The congregation desires to give him an annuity of from £300 to £500, but the funds are insufficient to do this and pay his successor's stipend, hence subscriptions to an annuity fund of £2,500 or £4,000 are invited. For many years Dr. Cumming has devoted a great portion of his income to enlarging his church and freeing the schools from debt, and thus, though he leaves the work of his parish in a thriving condition, he himself is penniless.

A fine portrait, in oil, of Samuel Dinsmoor, of Keene, who was Governor of New Hampshire in 1849, 1850 and 1851, has just been added to the collection in the Executive Council Chamber in the State House. This portrait completes the list of Governors from Governor John Langdon (1805) to Governor Prescott, (1879). It is a present to the State by the kinsmen of the Governor. The task of completing this collection was undertaken by ex-Governor Prescott in 1872, when he was Secretary of State, and, with untiring effort, it has now been accomplished. New Hampshire has had thirty-six Governors, and it is a little remarkable that all of them should have had excellent likenesses. It is more remarkable that the State should possess them all in so short a time. It shows, too, what well-directed and persistent effort will accomplish. No other State of the original thirteen has a complete collection.

A PRIVATEERSMAN OF 1812.

A LARGE brig lay in the harbor of the City of New Haven, Conn., on the afternoon of an Autumn day in the year 1812. Her decks seemed crowded with men, and sixteen guns were looking through their embrasures. For two or more hours a noisy firing sufficient to startle and alarm the inhabitants was kept up, and the whole city became restless under the loud but harmless cannonade.

Madison's proclamation of June 19th, declaring that war existed between our country and Great Britain, had surprised the New Englanders. Most

CAPTAIN W. W. UNQUHART, OF THE AMERICAN SHIP "ISAAC WEBB."—SEE PAGE 390.

of them regarded the war as a blunder, and the New Haven people believed that some of its first fruits were to be visited upon them in a repetition of the invasions of the Revolution. Although the national colors flew from the masthead of the brig, it was regarded by the public as a delusion and a snare. Soon, however, a small party of men landed and made known the import of the noisy demonstrations. The brig *Holkar*, of New York, had left that port to procure sixty men for a cruise to the West Indies and the coast of Brazil, or wherever the fortunes of war might lead. New York had already fitted out twenty-six privateers, and had manned them with over twenty-two hundred sailors, and no more were to be had. The young men of New Haven were asked to join the crew of the *Holkar*, already numbering one hundred. A public sentiment against privateering was then prevailing throughout the civilized world. Remonstrances were made by the conservative New Haveners against joining the crew of the "pirate," as they called the *Holkar*, but in spite of these half-hearted protests sixty young men responded to the summons of the "pirate," and joined the one hundred already on board.

Augustus Willoughby, the subject of this sketch, is the only survivor of that crew, and one of the very few left of those who did such good service to their country in wresting from Great Britain her boasted supremacy on the seas. He was born at West Haven, in Connecticut, February 1st, 1793. His boyhood was passed upon a farm, but he was a tanner's apprentice at the time of his enlistment as a privateersman, with some experience as a seaman gained by a voyage to the West Indies.

SILVER BEAKER PRESENTED TO CAPTAIN UNQUHART BY THE BRITISH GOVERNMENT.—SEE PAGE 390.

Vividly remembering the incidents of the captures made by the *Holkar*, as well as those relating to her final destruction by being driven ashore by the 74-gun ship *Romulus*, Mr. Willoughby relates with great interest some events peculiar to that cruise. One of these was the capture by the *Holkar* of the *Essex*, a British vessel with a novel cargo, if human beings may be so called. Female convicts of criminal courts of England were on board under sentence of transportation to Botany Bay. Most of them had been convicted of minor offenses, and they had more the appearance of voluntary colonists than convicts on their way into penal exile.

Botany Bay was then the supreme terror of the criminal classes, and these unfortunates were overjoyed at having their sentences commuted by the Yankee captain. The convicts, to their delight, and to the unbounded astonishment of the islanders, were landed at the Cape Verde Islands. As the landing crew effected their final return to the *Holkar*, they were saluted with rounds of parting cheers in the shrillest treble. Their fate seemed a notable exception to the truth that "the way of the transgressor is hard." They formed "entangling alliances" with the islanders, and no harm resulted from this complete reversal of their sentences. The cruise of the *Holkar* belongs to history. Its captures, though not numerous, were not insignificant in importance and value.

Losing his share of the prize money through the misdoing of a trusted agent, Willoughby abandoned the sea and sought to make his way in the world in more domestic pursuits. For nearly thirty years, while carrying on a business requiring most of his time by day, he was a member of the night police

AUGUSTUS WILLOUGHBY, A PRIVATEERSMAN OF 1812.

force of the City of New Haven, snatching his rest from the early hours of the morning. His exceptional constitution enabled him to endure great hardships, and his personal courage fitted him for any post of danger. He never knew fatigue or fear, and was always selected for the most dangerous positions. In those days the large West India trade brought great numbers of foreign sailors to the

Digitized by Google

port, and the "head of the wharf" was infested with dangerous characters, made up of rowdy residents and transient evil-doers of all descriptions. He would volunteer to make arrests where the bravest dreaded to go. His services were of great value in the "town and gown" riots in 1854 and 1858. He assisted in spiking the cannon that the infuriated firemen had seized to batter down the venerable walls of "Old Yale." On several occasions he or some one near has turned away some deadly implement aimed at his life, just in time to save it. These hairbreadth escapes served to enhance rather than to diminish his intrepidity and daring.

Laying hold of the worldly-wise maxims of Franklin, he has accumulated considerable property, and although nearly ninety years of age he is still attentive to his affairs, and no sharper can worst him in a bargain. Living now in strict retirement, he neither desires notoriety nor covets applause. He never boasts of having outdone his fellows and outlived his comrades of the war. He modestly discloses his name and residence, and consents, after an interval of nearly seventy years, to re-appear before the public as the subject of this sketch.

A GALLANT AMERICAN TAR PROPERLY HONORED.

WE publish on page 385 an illustration of the testimonial presented by the British Government to Captain W. W. Urquhardt, master of the ship *Isaac Webb*, of C. H. Marshall's line, for rescuing the crew of the British ship *Isolina*, when in a sinking condition at sea, in January last. The testimonial, a beautiful and costly silver beaker, gold lined and properly inscribed, was presented, May 6th, by Collector Merritt, who, in a few fitting words, coupled with the reading of a letter from the Secretary of State transmitting the gift, placed it in the hands of the gallant captain. This is not the only instance in which he has earned recognition by his brave and humane deeds. In November, 1873, when in command of the ship *Trimountain*, he took from the British ship *Lock Earn* some fifty of the survivors of the ill-fated steamer *Ville du Havre*, which sank in mid-ocean after colliding with the *Lock Earn*. After landing the passengers at Cardiff, Captain Urquhardt received from the citizens of Bristol, England, a handsome silver salver, which was presented in one of the public halls of that city, in the presence of a large assemblage of people, together with a large portrait of Mr. Samuel Plimsoll, M. P., "the sailor's friend." About the same time the French Transatlantic Steamship Company gave him a handsome gold chronometer and chain. The survivors of the ill-fated steamer also presented him with a fine silver tea and coffee service, and only a few months ago the French Government honored him with a gold medal of honor.

Captain Urquhardt is forty years old, and began his sea life in 1855. At twenty-three he was given the command of the Black Star line packet-ship *American Eagle*, in E. E. Morgan's London line. This was a remarkable command for a man so young. He afterwards commanded the ships *Villa Franca*, *Good Hope* and *William Tapscott*. Then, after a short interval spent ashore in business, he again went to sea in charge of the *Trimountain*, and four years ago assumed his present command.

Captain Urquhardt, who is a resident of Brooklyn, hails from Essex, Connecticut, a pleasant village on the Connecticut River, that a few years since numbered among its residents eighty shipmasters.

Germans on the Thrones of Europe.

DURING the last fifty years all the newly-created thrones in Europe, or those in which the male hereditary succession had from any cause lapsed, have been filled by Princes of German dynasties. A Prince of the house of Saxe-Coburg was elected ruler of the newly-formed Kingdom of Belgium, after he had shortly before refused the title of King of the Hellenes, which had been offered him.

Princes of the same house married the Queen of Portugal, Maria II. da Gloria, in the year 1836, and Victoria, Queen of England, in the year 1840; and their sons have become the heirs to the thrones of those States. All attempts to fill the thrones of Spain and Roumania with rulers not proceeding from German dynasties have proved a failure. Both King Amadeus I. of Savoy and Prince Couza, a born Roumanian, were, after a brief period of rule, compelled to leave the countries of which they had become the sovereigns. The throne of Greece was first occupied by a Prince of the Bavarian dynasty, Otto I.; and after his dethronement by George I., a Prince of the Schleswig-Holstein-Sonderburg-Glorksburg line. The present ruler of Roumania is a Prince of the house of Hohenzollern-Sigmaringen, and the new Prince of Bulgaria is also of German origin. Fifty years ago the privilege of filling vacant or newly-created thrones belonged almost exclusively to France and Austria; several thrones in Italy were held by Bourbons and Hapsburgs only twenty years ago. It must be admitted that the German Princes have understood their mission in the countries which they were called upon to rule better than the Bourbons and Hapsburgs, as is shown by the histories of King Leopold of Belgium, Ferdinand of Portugal, Prince Albert, King George of Greece, and Prince Charles of Roumania.

Chinese Tile Manufactory.

THE Chinese imperial tile manufactory is at Lien li ku, about fifteen miles west of Pekin. In this factory all the yellow tiles and bricks required for imperial buildings are made, as also large numbers of green, blue and other colored tiles for various ornamental purposes. The material used is a hard blue shale, nearly as hard as slate. This is allowed to lie in heaps for some time. It is then ground to powder by granite rollers on a stone floor thirty to forty feet in diameter. The powder is then stored in heaps and taken to the works as required. For ordinary work the powder is mixed with a proper proportion of water and molded into large bricks, which are laid out to dry for some hours, after which they are dealt with by the modelers. When bricks are to have a molding on them, say for coping a wall, the plan of operation is as follows: Two pieces of wood, each cut to the shape of the molding, are placed upright on a slab. The clay brick is placed between them, and two men run the moldings roughly along with chisels. They then apply straight-edges to test the accuracy of their work, and finally rub the edges with molds somewhat in the same way as plasterers make moldings at home. The brick is then passed to a third man, who cuts any necessary holes in it, and to a fourth, who trims it off and repairs any defect. The more ornamental tiles and bricks, representing fabulous animals, etc., are first roughly molded, and afterward finished off with tools exactly similar to those used for modeling in clay in Europe. Some of this work has some pretension to artistic merit. All the bricks and tiles are baked in ovens, and then, after having the glaze put on, they are baked a second time. All the work done at this manufactory appears to be first-rate, and the number of people employed is about five hundred.

Pinto, the Portuguese Explorer.

THE successful termination of the African journey of Major Serpa Pinto has already, thanks to the telegraph, gained him a European fame. He has been received with enthusiasm by all parties, and would seem to have revived traditions of old Portuguese glories, and to have put some new blood into their history. Major Serpa Pinto is physically well adapted for arduous and toilsome journeys. He is strong and muscular, although of light limb and frame, and, it is said, is of a genial and happy disposition, not easily overcome by difficulties—a good thing on a long African journey, for, as Antolycus sings: "A merry heart goes all the way; your sad, tires in a mile a'." It is related by Gonsalves, the most intelligent of the seven blacks whom Serpa Pinto has brought to Lisbon, and the one who acted as interpreter, that the last blanket at the close of the journey had to be bartered for the only food they could get, which was canary-seed, and on this they subsisted for some time. The Major still suffers from the results of African fever and fatigue. The Portuguese colony in Pernambuco have presented him with a valuable gold medal, the rim set with pearls and brilliants, and bearing a suitable inscription.

It is said that while the journey of Cameron cost $30,000, and that of Stanley about $45,000, Serpa Pinto has spent less than $5,000, all told. At his audience with the King of Portugal he remained four hours in confidential conversation, relating his experiences. He was afterward sent for by the Queen, who, since her illness, rarely quits her apartments. To the King he offered several skins of wild beasts; and he asked Her Majesty's acceptance of a splendid collection of ostrich feathers, which he had taken in the Desert of Calbari, and which in the Transvaal were reputed to be superior to those presented some years ago to the Queen of Holland by the Dutch merchants of that Republic.

FUN.

"YES, Agnes, I am going to have a cream-colored Summer silk, provided pa doesn't veto the appropriation bill ma has passed.

SMITH, who has always been a "tough one," just died. The physician is met coming from the house by Brown, who asks: "Doctor, how is Smith? Is he out of danger?" *Physician.*—"No; he is dead, poor fellow."

ON a homeward bound Charleston car a jolly-looking Irishman was saluted with the remark: "Tim, your house was blown away." "Deed thin, it isn't," he answered, "for I have the key in my pocket."

TWO for accent—A bridal couple. Three for ache water—a trio at the physicking springs. Four for a pound (£)—A quartet of pugilists. Five "for a song"—A quintet of vocalists. One for a crown—The Prince of Wales.

MRS. A.—"Somebody's in the next room. I wonder what they're doing." (Looking wistfully at the keyhole.) "I've a good mind to peek." *Mrs. B.*—"Oh, I wouldn't; 'tisn't right." *Mrs. A.*—"I don't care; I'm just dying to know." (Puts eye to keyhole, but immediately takes it away, disconcerted.) "Hm! the key is in." *Mrs. B.*—"Yes; so I found before you came in."

"GOOD afternoon, my dear friend: I am delighted to see you. And to what am I indebted for the pleasure of this visit?" "I'll tell you that, presently; but first permit me to embrace your charming child. Can't I, my little man?" "Yes, sir, if you'll promise me not to cut into papa." "Cut into your papa?" "Yes, 'cause papa said, when he saw you coming, 'Here comes that fellow to bore me again!'"

SIR WATKINS WILLIAM WYNNE, talking to a friend about the antiquity of his family, which he carried up to Noah, was told that he was a mere mushroom. "Ay!" said he. "How so, pray?" "Why," replied the other, "when I was in Wales a pedigree of a particular family was shown to me. It filled about five large skins of parchment, and about the middle of it was a note in the margin: 'About this time the world was created.'"

SCHOOL BOARD VISITOR—"May I ask the name of the tenant?" *Tenant*—"Mrs. Gubbins; that's me. But what's in a name?" *Visitor*—(noting the fact in his memorandum book): "*Gubbins!* Thank you. Have you any children?" *Tenant*—"One son." *Visitor*—"Does he attend school?" *Tenant*—"No." *Visitor*—"Dear me! What is the excuse?" *Old Lady*—"He's married, and his wife thinks he can be better employed."

HE was a Chinamen slightly over the bay, and he rushed into a Blake Street saloon, rushed up to the bar, and cried, excitedly: "Whiskee cocktee tailee for me, allee samee Melican man." The barkeeper arranged the mixture, and handed it out, and the Chinamen, pouring it down, started for the door, shouting, "Putee down on slatee, allee samee Melican man." And long before the barkeeper could get hold of a club, the Celestial was seen no more.

THE RICH CALIFORNIA BANKER.

SPECULATION IN STOCKS.

WHEN it became known that one of the richest California bankers had left the Pacific coast and transferred his base of operations to the New York Stock Exchange, all the shrewd financiers watched his course with keen interest to see how he would succeed. The result has emphatically proved his sagacity. Besides having a much wider and more promising field to operate in, he is known to have been in several stock combinations that paid immense profits. By the combination method of operating in stocks, Messrs. A. Simpson & Co., Bankers, New York, unite orders of thousands of customers, in different sums, into one vast capital, and operate them as a mighty whole, dividing profits pro rata among shareholders every thirty days. Capital in any amount from $10 to $100,000 can be used with great success in these pools. $25 will pay $100 profit. $500 can make $5,000 or ten per cent. on the stock during the month. Messrs. A. Simpson & Co.'s new circular (mailed free) gives "two unerring rules for success" with full particulars, so that any one at a distance can operate in stocks and make money. Government bonds bought and sold. Apply to A. Stearson & Co., Bankers, 49 Exchange Place, New York.

BOLDEST and blooming health in Hop Bitters, and no family can afford to be without them.

"LAUGH AND GROW FAT."

THIS ancient bit of advice is well enough for "spare" people, but how about those that are already too fat? What is to become of them? Sit still, and I'll tell you. After many experiments, extending through months of patient investigation and toil, the celebrated analytical chemist, J. C. Allan, has perfected and given to the world Allan's Anti-Fat. Thus far, in several hundred cases, this great remedy has never failed to reduce a corpulent person from three to six pounds per week. It is perfectly harmless and positively efficient. Sold by druggists.

FAIRBANKS' SCALES.

IT may almost be said that wherever in the world there is something to be weighed, Fairbanks' Scales are used. They have arrived at a standard of excellence which it would almost seem cannot be improved, and have followed their constantly extending reputation into every civilized country.

From the New York, Lake Erie & Western Railroad Company, through Messrs. J. T. Moulton & Son, the great elevator builders of the West, they have just received an order for the following large scales, to constitute the entire weighing apparatus for the new elevator to be built in this city: Three 30-ton patent iron frame railroad-track scales, nine 500-bushel hopper scales, and one 350-bushel hopper scale. The new elevator being built in Chicago—one of the largest, if not *the* largest, in the world—will be supplied with a full outfit of Fairbanks' Scales; also the new elevator being built in Detroit, Mich., by Mr. Wm. H. Vanderbilt. In fact, in the history of the representative house in this city, business has never been better or prospects brighter.—*Buffalo Courier, July 12th.*

THE Manhattan Beach standard for wines is acknowledged to be one of the highest in the country, and it is no small compliment to A. WERNER & Co's. "AMERICA," Extra Dry, that it is very largely used at the Manhattan. Several seasons' experience has established the merits of "AMERICA" at the seashore, and to those who seek a grateful, pleasant wine, healthful in all its effects, the "AMERICA" meets every demand. From other fashionable watering-places and resorts similar reports are received, indicating the steady and sure increase in popularity of this standard American champagne.

ONE of the most interesting pictorial works of the day is "Picturesque Ireland," edited by John Savage, the well-known author. It is published by Thomas Kelly, of Barclay Street, New York. It is issued in parts, and at a price which renders it accessible to all.

YOU can save doctor-bills and keep your family always well with Hop Bitters.

BURNETT'S COCOAINE allays irritation, removes all tendency to dandruff, and invigorates the action of the capillaries in the highest degree. The COCOAINE has earned a deserved reputation for promoting the growth and preserving the beauty of the human hair. Ladies dressing their hair elaborately for the evening will find that it imparts a healthy, natural gloss to the hair, and will cause it to retain its shape for hours.

WHEN a person is weak and faint, or fatigued and exhausted, there is nothing so refreshing and reviving as a little of MURRAY & LANMAN'S FLORIDA WATER. Rubbed on the hands and temples, and inhaled freely, it tones and braces the whole system.

THE ST. NICHOLAS, New York, is fully worthy of its magnificent reputation as one of the great hotels of the world. The ST. NICHOLAS has been known for a quarter of a century as one of the superb establishments of the world. Its table, apartments, and general conveniences are now, as ever, unsurpassed. Rates have been cut down to *ante-bellum* prices.

THE ASBESTOS ROOFING is the only reliable substitute for tin, it costs only about one-half as much, is fully as durable, is fire-proof, and can be easily applied by any one. H. W. JOHNS MANUFACTURING COMPANY, 87 Maiden Lane, New York, are the sole manufacturers.

THE VENERABLE PETER COOPER.

I cheerfully testify that I have been to the COLTON DENTAL ASSOCIATION, 19 Cooper Institute, and had two teeth extracted while under the influence of Laughing Gas. I felt no pain whatever, and the gas produced no injurious or even unpleasant effects. PETER COOPER.

Beware of Counterfeits and Imitations

BOKER'S BITTERS.

The best Stomach Bitters known, containing most valuable medicinal properties in all cases of Bowel Complaints; a sure specific against Dyspepsia, Fever, Ague, etc. A fine cordial in itself, if taken pure; it is also most excellent for mixing with other cordials, wines, etc. Comparatively the cheapest Bitters in existence.

L. FUSKE, JR., Sole Agent, No. 78 John Street, New York. P. O. Box. 1023.

COMFORT FOR THE FEET.

All who would have feet free from corns, dress the feet with a view to health, good taste and comfort. Shoes made on our lasts, modeled from nature—an essentially different style—and latest improvements. They press the foot evenly, giving elasticity in walking, and by the ingenuity of their construction, they appear smaller than they really are, giving an elegant appearance even to the largest and clumsiest feet.

JOHN HOLLAND'S Patent Record GOLD PEN
Patented Oct. 2, 1877.

Is the highest achievement in the manufacture of Gold Pens and the result of experiments for more than twenty years. The "RECORD" Pen is produced by a skillful combination of the two precious and non-corrosive metals: *16 kt. Gold* and *Platinum*, while the ordinary gold pen contains an alloy of copper, reducing its fineness without yielding that elasticity, density and steel like temper which the costly *Platinum* supplies. The "RECORD" Gold Pen *Points* are of the best *Iridium*, (Diamonds,) indestructible with fair treatment, and polished to glass like smoothness.

Steel pen writers have now every objection to gold fairly overcome, and every requirement is a Pen which will endure and not oxidize, squarely met. The "RECORD" Gold Pen is guaranteed to possess Durability, Permanency of Spring and Perfection of Point. Price, $2.50, sold by all Jewelers and Stationers in the United States. If not found order direct from *JOHN HOLLAND, Manufacturer, 19 W. 4th St., Cincinnati.*

Issued July 21st.

"THREE WOMEN AT ODDS" is a short serial, unaffected in style, of great power in portraying character, and highly dramatic in plot. The dialogue is natural, with bright flashes of wit, and always exciting to a healthy and legitimate way.
No story can claim attention more deservedly during the idle hours of Summer than
"THREE WOMEN AT ODDS."

DR. M. W. CASE'S CARBOLATE OF TAR INHALANT
FOR CATARRH, ASTHMA,
CONSUMPTION,
BRONCHITIS &
DEAFNESS.
Circulars, Etc.,
Sent Free.

Adieu.

It does not require ten minutes to demonstrate the value of **Carbolate of Tar**, the most healing remedial agent known to science. Balsamic and cordials of the most healing and soothing properties are so combined with Pure Tyne Tar, that the mere breathing converts them into a dense smoke or vapor. This is inhaled—taken right to the diseased parts. **No heat, no hot water,** simply inhaling or breathing it, and you feel its healing power **at once.** This treatment is endorsed by physicians everywhere, and highly commended by thousands, who have used it with perfect satisfaction. **FULL TREATMENT** sent. **Satisfaction always guaranteed.**

DELIGHTFUL SUMMER READING.
A. L. Noble's Brilliant Novel,
"Three Women at Odds,"
IN
FRANK LESLIE'S CHIMNEY CORNER.

Attractive, Useful & Interesting Reading for Everybody.

Frank Leslie's
SUNDAY MAGAZINE.
The Best and Cheapest Sunday Periodical in the World.

THE AUGUST NUMBER NOW READY.

"The ample size of the page of the SUNDAY MAGAZINE enables the conductors to give a larger amount of reading matter in each number than is furnished by any of its American or European contemporaries; while the price is lower by one-third than that of any one with which it comes in competition."—*Cumberland Presbyterian, Nashville, Tenn.*

"First, by long odds, among all magazines of its class. About seventy articles and as many illustrations, besides 'At Home and Abroad,' 'Editor's Portfolio,' etc., etc., and the many articles in these grand divisions. Twenty-five cents a single number, and $3 a year."—*Presbyterian, Wilmington, N. C.*

"Probably this is one of the most pleasing magazines published—containing a greater variety of reading matter and more illustrations than any other periodical. It is full of life, and as always in advance of its sister monthlies."—*The (N. Y.) Methodist.*

"To attempt to quote the titles, even, of articles, would exceed our limits. It has about sixty articles, comprising travel, history, poetry, biography and moral tales. The Editorial Miscellany is of sterling merit. The amount of matter puts every similar publication at a disadvantage in comparison. It is cheaper than dime novels. It has 128 royal octavo pages, fully illustrated, for 25c."—*Michigan Christian Advocate.*

CONTENTS.

Articles, Descriptive, etc.—"Emigration to the Holy Land," by Prof. Wm. Wells—(Illustrations; Sir Moses Montefiore; The Cedars of Lebanon; The Mount of Olives; Jericho and the Jordan; Mount Lebanon.) "The Crusades against the Albigenses and the Waldenses," by Alfred H. Guernsey—(Illustrations; Pope Innocent III.; Torture in the Inquisition; Peter the Hermit; Crusaders and Saracens; Slaughter of the Albigenses; The Four Martyrs at Seville; The Slaughter at Cabrières; Waldensian Refugees in the Alps.) "Sketches in Uruguay"—(Illustrations: View of Higueritas; Uruguayan Fruit-sellers; Uruguayan Girl going to Market; View of Colonia; View of Montevideo.) "The Opening of the New York Cathedral," by Mary E. W. Sherwood. "Indian Students at Hampton, Va."—(Illustrations: A Classroom in the Institute; A Young Indian as Engineer; Indian Students as Carpenters; The First Lesson in Arithmetic.)

Serial and Short Stories.—"Lady Vasari's Ward," by Edward Garrett; illustrated. "Bernard Graham: A Problem," by Rhoda Worthington (concluded); illustrated. "David Fleming's Forgiveness," (concluded); illustrated. "Joseph; or, The Silent Corner," by the late Joseph Ashworth; illustrated. "Snap's Two Homes—The First Home"; illustrated. "Toots and Scots—An Unfinished Tale"; illustrated.

Sketches.—"The Duchesse Dondeauville"; illustrated. "Dr. Guthrie's Bells and the Woman's Dream." "The Mysterious Treasure"; illustrated. "Captain Cole's Passenger," by James Parne; illustrated. "The Late Miss King, of Georgia"; illustrated. "Veracity the Best Policy"; illustrated. "A Sweet Little Dear"; illustrated. "Dolly"; illustrated.

Poems.—"Till Death do us Part," by Mrs. E. S. Skinner; illustrated. "The First Love Letter"; illustrated. "Credo," by Nellie C. Hastings. "Work Together," by Mary A. Kidder. "I Will Not Fear," by Jane E. Reeves.

Miscellany.—"Around Savannah"; "The Drummer Boy"; "The Cave of Torghatten"; "Pomerania"; "The Island of Elba"; "The Plague at Marseilles"; "Whitsuntide Plays"; "At Home Two Centuries Ago"; "The Legend of St. Brendon"; "Giant Trees of South America"; "The Tumult at Ephesus"; "Egg-breaking—A Belgium Pastime"; "The Coracle, or Wicker Boat"; "Oudenarde, Belgium"; "A Chinese Sermon Text"; "Go"; "Claude Gallot"; "Sir Francis Chantrey"; "Aching Hearts."

Popular Exegesis, by the Editor, explaining obscure passages of Scripture. "The Invalid's Portion and Thoughts for the Afflicted." "Wit, Wisdom and Pathos of Childhood." "At Home and Abroad" gives a résumé of religious intelligence from all parts of the world. "Editor's Portfolio," discussions of timely topics, etc., etc. Music—Quartette from Mendelssohn's Oratorio of "Elijah."

128 QUARTO PAGES---100 ILLUSTRATIONS.

THE
SUMMER FASHIONS
Just received from Paris, and published exclusively in
Frank Leslie's
LADY'S MAGAZINE.
With Accurate Descriptions of
THE NEW STYLES
OF SUMMER TOILETS, BONNETS, HATS, Etc., Etc.

The *Lyons (N. Y.) Republican*, referring to the merits of this periodical, remarks:

"FRANK LESLIE'S LADY'S MAGAZINE needs no special praise at our hands; it speaks for itself, and is a prime favorite to every household where it has ever gained a foothold. Its stories, its poetry, its sketches, its engravings, its fashions—all things about it, in fact—are first-class in their way; and, take it for all in all, we don't know of a lady's magazine in America that excels it, and few that come within cannon-shot of equaling it, in any of the departments we have mentioned. In point of cheapness it outranks them all, quality and quantity considered, the price being only $3.50 a year, postpaid."

Colored and Plain Fashion Plates are imported directly from Paris monthly exclusively for this Magazine.

The plates are beautiful impressions, colored and finished with the utmost artistic taste.

The Reports of the various changes in the styles of European toilets appear simultaneously with those in the Paris journals.

Pictures and Accurate Descriptions are also given of the

Latest American Styles of Ladies' & Children's Costumes, Hats, Bonnets, Etc., Etc.

The Literary Contents are of a varied and highly interesting character, comprising select Serial Novels and Short Stories by popular writers, Poetry, Society Gossip, Fashionable Intelligence, Anecdotes, and a Choice Miscellany embodying a fund of general information on timely subjects, etc., etc.

Published on the 15th of Every Month.
ANNUAL SUBSCRIPTION, $3.50, postpaid.

CAUTION.

Subscribers, in ordering our publications, should be careful to write the name of FRANK LESLIE *in full, and direct their letters to 53, 55 and 57 Park Place, New York, from which address all our publications are issued.*

SECRETARY SHERMAN'S "KEYNOTE."

WE ventured a few weeks ago to express gratification at the fact that Mr. Secretary Sherman was destined to strike the keynote of the Republican Party in the new issues which are to be joined before the people at the coming autumnal elections. It is of prime importance in every trial of political strength that there should be, as the lawyers say, no misjoinder of issues or parties, and in the present confusion of both we trusted that the Secretary of the Treasury, as a recognized leader of the Republican Party and an avowed candidate for the Presidency, would summon his followers to battle with no uncertain sound of the trumpet; and we ventured to cherish this hope with only the more confidence because of the vacillations through which he had won his way to the high and responsible position he now holds in the eyes of his countrymen.

We regret to say that these anticipations have not been entirely realized by the tenor of the Secretary's speech at Portland. As a statement of the results of the financial policy of the Government and the present condition of the national credit it was quite satisfactory, and we would not deny him a tithe of the credit to which he is entitled; but he was dealing with important principles, and, instead of seizing that high vantage-ground on the currency issue which, through the default of the Democrats, has been opened to the free and unobstructed occupation of the Republicans, he actually purposes to fight out the main political battle on that lower plane which the enemy has selected as its chosen battle-field, and, instead of sharply defining the monetary questions which are to be decided by the popular vote, he prefers to pare off their edges in the ensuing contest, and to postpone their ultimate settlement at some undefined date in the future.

Instead of giving priority and pre-eminence to the currency issue, he holds that the Democrats, by their recent agitations in Congress and elsewhere, have raised a question of national supremacy and of Constitutional order, "before which questions of money, labor or property sink into insignificance." Elsewhere in his speech he expresses the hope that the people of Maine will not be diverted from the paramount importance of *this* political issue "by divisions in our [Republican] camp about money matters while our old enemy is reviving the 'lost cause' and is sapping and mining the National Government."

It must have struck his hearers as both weak and unseemly that such panic outcries should now be re-echoed from the political hustings after they have been whistled down the wind by the accomplished facts of history. If it is unseemly for a Secretary of the Treasury to excite an unwarranted distrust about the credit of the Government, it is equally weak for the shrewd politician to indulge in rhetorical exaggerations which have been already discounted by the sound common sense of the people. And this attempt to fight the currency battle under cover of a cloud of dust thrown in the eyes of the voting public has for its tendency to transfer the scene of conflict to the precise arena selected by the Democrats, who hope to hide the dissensions in their ranks by raising another cloud of dust about their affected fears of Federal and military interference with the "freedom of elections."

And concurring as we do with nearly all that Mr. Sherman alleges by way of criticism upon the action of the Democratic majority of Congress in seeking to defeat or arrest the resumption of specie payments, we find ourselves quite unable to accept the adequacy of the ground on which he halts to make defense of the Republican faith in the premises. We do not believe that the position occupied by the Greenbackers is likely to be captured by men who seek to outflank it with professions of being more wisely devoted to the greenback than the Greenbackers themselves; yet this is the claim put forward by Mr. Sherman in behalf of the Republican Party, when he holds the following language:

"Resumption has enabled us to do this. It has accomplished every object which the Greenbackers sought to accomplish by the repeal of the Resumption Act. Should they not be content? What more do they want? Are not we who have brought about these results better entitled to the name of Greenbackers than they who would for ever keep the greenback as a dishonored and irredeemable note? We presided over the birth of the greenbacks, and guarded them in the cradle. The Democratic leaders denounced them as a fraud, with the mark of Cain on their brow, as worthless, to be bought some day by the cord. We have crowned them with honor. They are no longer depreciated, but may travel the circuit of the world equal to the best coin ever issued from the mint."

In so speaking Mr. Sherman allows no hint of misgiving to escape him about the perils which beset resumption so long as the three hundred millions of dollars in greenbacks are retained in circulation. So far from contemplating the earliest practicable withdrawal and cancellation of this flat-made currency, he proposes to install it in "the circuits of the world" and to "crown it with honor!" And yet he must know that so long as these legal-tender notes retain their present place in our currency, they cannot prove other than a disturbing element in the finances and business of the country. Not until the Government retires from the banking business and returns to its legitimate constitutional function of stamping coins according to their intrinsic value will the country be safe from the throes of the currency issue.

Equally unsatisfactory is Mr. Sherman's treatment of the silver question. At a time when the future success of resumption is placed in imminent peril by the clamor for silver dollars worth only 85 or 87 cents, we are invited rather to postpone the silver issue than to avoid it, in Jonah Barrington fashion, by "meeting it plump" on the ground of right and justice as well as of public economy. We cannot forget that the present House of Representatives voted at its late extra session by a majority of 142 to 75, and therefore by a majority embracing a considerable part of the Republican members, that the Secretary of the Treasury should pay out, without discrimination, the silver coins which may at any time be in the Treasury "the same as gold coin, in liquidation of all kinds of money obligations against the Government." And as these depreciated silver coins increase in number every month and accumulate in the Treasury, we may naturally expect that the pressure for their forced circulation will gather strength and volume from all who believe in the power of Congress to make 85 cents' worth of silver equal to a 100 cents' worth of gold. It is idle to hope that such a heresy as this can be scotched by imploring its advocates to abstain from the unlimited coinage of silver until the commercial nations of the world shall have agreed upon a market and mint ratio between silver and gold. Yet this is the only practical recommendation made by Mr. Sherman under this head, and he enforces the sufficiency of his argument by expressing the opinion that such an arrangement can be brought about by commercial treaties in answer to negotiations "now pending for that purpose."

We hear it said by defenders of the Secretary that in arguing in this wise he is but throwing a silver tub to the greenback whale, and that he means only the more surely to harpoon the monster while he is amusing himself in a game of politics. We question as well the wisdom as the frankness of such expedients. The theory of politics is something other and higher than a game, especially when private rights and national honor are equally at stake; and that both of these may be placed beyond the reach of peril we want a public policy which is as much in advance of the position assumed by Mr. Sherman as the position assumed by Mr. Sherman is in advance of that occupied by Mr. Ewing and other patrons of the "Ohio idea." Mr. Sherman's views are very good as far as they go, but they do not go far enough to meet the demands of the situation.

THE APOTHEOSIS OF MURDER.

SOME years ago, when the most eminent criminal lawyer this country ever produced—James T. Brady—had, by his brilliant defense, saved a malefactor from the extreme penalty of his crime, he was somewhat reflected on by an equally eminent member of another profession, the Press, for giving encouragement to crime by lessening the chances of conviction. Mr. Brady declared in reply that the newspapers were the great encouragers of the dangerous classes of society, and, in support of his view, instanced the undue space given to the exploits of every conspicuous offender. The more startling the crime the more absorbing was the public interest, until, at length, the perpetrator became the hero of the hour. The love of notoriety is planted in every breast, but more especially in those most accessible to the temptations of crime. Its greatest attraction is, of course, to those emotional natures who most easily surrender themselves to the impulses of unbridled passion.

That great crimes have a terrible fascination is evidenced by the interest taken by all in the reigning sensation of the day, whatever it may be. Whether it be a doubtful case like the Bennett and Smith, or a plain one like the Hull murder, observe the avidity with which the minutest particulars are devoured. How they looked, how they were dressed, even what they eat, every letter they ever wrote—all these particulars are dressed up with elaborate skill until we seem to know more of these criminals than we do of our most intimate friends. We begin to take an interest in them, although we may not carry it out to such a practical extent as a benevolent *prima donna* lately did, and canvass Wall Street for them. The old lady who told her physician that she must be ill since she did not relish her murders as formerly only confessed to a common weakness.

This universal curiosity is a provocation to crime, and has great attractions to vulgar natures; but when to this is added the supreme sanction of the pulpit—when certain clergymen, however low their position may be, make the mysterious *exception* of the thief on the cross the *rule* of every brutal murderer—the climax of absurdity has been reached, and it becomes the duty of the Press to denounce the outrage upon Christianity and common sense.

These remarks are provoked by the course pursued by the Rev. Mr. Dickerson, of this city, who said in his pulpit recently, that he had visited Chastine Cox, the murderer of Mrs. Hull, and that he was forced to say that he was not understood by the public. This remarkable preacher adds:

"My friends, that man stands alone. The people who come to see him are those who come out of curiosity, and care nothing for the soul that is so soon to be ushered into the presence of the Almighty. Cox has gone to the Father of all, and pleaded for pardon through the Saviour. *He has received that pardon and is saved.* . . . His seeming indifference to his impending fate is the God-given consciousness that when his earthly career is done he will be taken into the kingdom of the merciful Father, who never forgets the promises He has made to erring souls. He seems happy because he is happy, because his soul has been washed clean by the blood of the Lamb."

This is all very well, but what has this eulogist of a self-confessed murderer to say about the soul of his victim? As to Cox's seeming indifference to his coming fate, it arises, no doubt, from the belief that the chicanery of the law may eventually defeat the ends of justice.

If the subject were not too serious for a jest, we should recommend that it would be well to test Mr. Dickerson's faith by sending this murderer as soon as possible to his fate; but we presume before the law takes its course the public interest in this nine days' wonder will have died out, and the force of example destroyed. When will the community realize that upon the sure and speedy punishment of crime depend the lives of themselves and their households, and that this morbid sympathy with criminals loads the revolver and sharpens the knife of every assassin?

ILLEGAL PUBLIC DEBTS.

WE are a people professedly governed by constitutions. The metes and bounds of our governments, whether national or State, are absolutely determined by written organic laws. To disregard, in the administration of public affairs, the limits fixed by the Constitution, is to destroy the only guarantee possessed by the people for the protection of private rights.

In the whole domain of sovereignty bestowed by the Federal and State Constitutions there is no grant of power under or by which any departments of the governments created may become stockholders in any railroad or other private corporation. But in the face of this positive fact, the practice of granting public subscriptive aid to railroads obtains to a remarkable extent. Particularly is this true of counties, townships and municipalities. To their action, in this direction, is due much of the bonded indebtedness through which the professional projectors of railways have profited at the expense of suffering communities.

In 1870 the ascertained county indebtedness of the country amounted to $186,297,043, and that of cities, towns, etc., to $325,621,326, making a total of $511,918,369. An authorative compilation shows that one hundred and twenty cities and towns of the United States owed $221,312,000 in 1866, and $644,378,063 in 1876, an increase in ten years of $423,066,063. In 1877 the aggregate funded debt of the States amounted to $251,569,741, and the unfunded debt to $50,667,131. How much of all this indebtedness has been due to aid extended to railways we have no present accurate means of determining. Thanks, however, to the legislative investigation now going on, we have been furnished with some accurate data relative to this matter as connected with the State of New York. From information furnished the committee by our city Chamber of Commerce, it appears that the amount of State aid to railways has been $9,060,591.04, and that of counties, towns and villages, $30,978,905.78, making a grand total of $40,039,496.82. Of this there remained unpaid by the railroads, or rather the bonds were outstanding for, $29,953,115, on July 1st, 1875. At this latter date the population of New York, as per State census, was 4,705,208, thus showing a local indebtedness due on account of railways amounting to a fraction over $6.36 per capita for the entire population of the State. If a like ratio prevailed throughout the country in 1875, and estimating the population at 42,245,000, then the county, township and municipal responsibility on account of railroads could not have fallen short of $268,678,200 at that period.

Whence comes this power to bond the property of a community for the benefit of a private corporation? If there be no authority in the State to establish connection with the business of private individuals, whether associate or otherwise, how is it possible for *quasi* corporations, like counties or townships, to attain that prerogative? They possess no powers except those derived from the State, and must execute those powers under the statutes of the State. They are merely the chosen instruments for executing the laws of the commonwealth, and are not endowed with any special grants or privileges, nor can the State Government delegate to them a power not inherent in itself. Whatever is outside of the Constitution is clearly illegal. If, then, the Constitution confers no power, either direct or implied, upon the State Government to enter with private individuals into business schemes, where exists the authority through which county, township and municipal officials may take stock in railways to be held on public account, or to issue bonds of the communities they represent to pay for such stock? Such acts are not necessary to the administration of these several governments, and are wholly beyond the scope of powers conferred by the people. Nor can such acts be made legal by a majority vote of the people outside or independent of Constitutional restrictions.

In certain respects municipal corporations, such as cities and towns, may claim original sovereignty, but each derives its chartered rights and powers from the State, and can only act within the limits of the grant. A municipality is as thoroughly bound by the provisions of its charter as the State is by its Constitution. A municipal government may lawfully impose and collect taxes for the support of its administration, and for the purpose of promoting the happiness and general comfort of the governed. It may levy taxes for laying out and constructing streets and public highways, because these objects are for the public convenience, and are open to the free use of the entire people. Each citizen may use them at will; hence he is bound in common equity to contribute his just proportion toward defraying the expense incurred in the creation of a common benefit. But as yet no municipal corporation has been created for the purpose of entering into private speculation for gain, and whenever or wherever such a corporation has taken stock in a private railway and bonded the property of its people to pay for such stock, it has been through an exercise of power not properly granted by the State, and which the State itself may not exercise without overriding Constitutional law.

In the views here enunciated we are sustained by that sound jurist, Judge Dillon. He says, in his valuable work on municipal corporations: "They can exercise the following powers, and no others: First, those granted in express words. Second, those necessarily or fairly implied, or incident to the powers expressly granted. Third, those essential to the declared objects and purposes of the corporation—not simply convenient, but indispensable."

Touching the granting of aid to railroads, the same author, while admitting that the current of judicial decision is in favor of the principle that in the absence of special Constitutional restrictive provisions the legislature may grant such power to municipal corporations, says:

"Notwithstanding the opinions of so many learned and eminent judges, there remains serious thought as to the soundness of this principle, viewed simply as one of constitutional law. Regarded in the light of its effects, however, there is little hesitation in affirming that this measure to aid private enterprise has proved itself baneful in the last degree. Taxes, it is everywhere agreed, can only be imposed for public objects, and taxation to aid in building the roads of private railway companies is scarcely consistent with a proper respect for the inviolability of private property and individual rights. Fraud usually accompanies its exercise, and extravagant indebtedness is the result; and sooner or later the power will be denied, either by constitutional provision—as in Pennsylvania, Ohio and Illinois it already is—or by legislative enactment."

GENERAL EWING'S CANVASS.

GENERAL EWING, who formally opened his canvass for the Governorship of Ohio by a speech at Lancaster, his home, on July 24th, is reported to be somewhat despondent as to his prospects. It is certain that a good many difficulties hedge his path. One of the principal elements of danger is the indisposition of many old-fashioned Democrats to subscribe to his peculiar financial heresies, and the evident determination of some of the more cour-

Digitized by Google

ageous of the leaders to oppose his election. In the city of Cleveland this sentiment has crystallized in the organization of an Honest-money League which includes many prominent Democrats, the president being Mr. Virgil P. Kline, a lawyer of high rank and a life-long member of the Democratic Party. This gentleman, in a recent address before the League, strongly denounced the fallacies of the party platform, concluding his remarks with these significant words:

"The country has reached on its way to sound currency the point at which the road forks. The one leads to a wilderness of greenbacks, fiat, or State bank notes, the other to a uniform, well-secured, convertible-into-coin national bank note circulation. As a Democrat I choose the latter. It is Democratic. The Democracy of California, Oregon, Nevada, Colorado and Michigan, as well as the entire Democracy east of the Alleghany Mountains also, take that road. I am unwilling to see the party with which I have always acted, and with which I hope always to act, take a position upon so vital a question as that of the currency which cannot be defended. As for myself and thousands of other hard-money Democrats in the State, who, though interested in politics, are not politicians, but who have allowed the fear of injuring the party too long already to keep them silent, I protest against a longer and a further misrepresentation of sound Democratic doctrine upon the money question."

It is fortunate for the country and for the stability of our financial policy that the thoughtful men of the Democratic party, in Ohio and elsewhere, are thus taking their stand on this question, immovably and independently of all mere partisan considerations, on the solid ground of tested and approved principle. The political horizon has no brighter sign than this fact embodies.

THE BALANCE OF TRADE.

STATISTICS supplied on Government authority show that the total imports of goods into the United States during the fiscal year ending with the 30th of June last, amounted to $445,792,141 against $437,051,532 for the year preceding, and that the value of domestic produce and foreign merchandise exported last year was $710,428,743 against $694,865,765 in 1878. The same statistics show that during the nine years ending with June, 1873, our imports exceeded our exports by amounts annually fluctuating between $72,716,277 in 1865, and $182,417,491 in 1872, the year next preceding the panic. The average yearly excess being $98,800,000. During the six years succeeding the panic, the exports have, on the other hand, exceeded the imports, on an average, by $125,000,000 per annum. In other words, during the nine years preceeding the panic, we imported $889,467,923 more of goods than we paid for with goods; while, for the last six years, we have exported goods valued at $772,121,109 more than the goods we have imported. Taking into account the specie movement, we find that for the nine years preceding the panic, our net export of specie amounted to $527,000,000. Deducting this from the excess of merchandise imported over merchandise exported, we find the commercial balance against the United States to have been $362,467,923. For the six years following the panic, when our net export of specie amounted to $174,000,000, and our merchandise *exported* exceeded in value the goods imported by $772,121,109, we find, on the contrary that the commercial balance *in favor* of the United States was $946,121,109!

FOREIGN EVENTS.

THE English Government pays dearly for the privilege of teaching good manners to the Zulu king. It proposes to ask a vote of $15,000,000 on account of the expenses of the war, but frankly confesses that a further appropriation may be needed before the accounts are closed. The new credit will raise the expenditures for the Zulu war to $22,500,000, part of which the Government hopes, perhaps vainly, to recover from the South African colonies. Meanwhile, the weary, distracted Parliament hopes to be prorogued on the 16th. What will the "swells" do who live but for the grouse moors, and shooting commences on the 12th? Poor birds! the feebleness of the Government will give them a week's respite. The Liberals, in the face of the impending dissolution, are working with a will in "spotting" shaky Conservative seats, and in selecting fitting representatives. Who can select nowadays, when the Radicals can return a Kennealy, and the Obstructionists, in the very teeth of the Catholic bishops and priests, their own man, as in the recent case at Ennis, where the nominee of the clergy and a Home Ruler was badly beaten by the Obstructionists.

The order by the Admiralty that all the Indian troop-ships shall be in readiness for six months' continuous service, with a view to bringing home the troops from the scene of war in South Africa, is a goodly sign of peace. If peace can be gained, it will be the only redeeming feature in the whole miserable bungle. Mr. Gladstone would seem to command the pages of the *Nineteenth Century*. His article entitled "Country and Government," a general indictment of the Government's policy, is being read at this crisis with considerable avidity. There is but one man to take up the reins of office when Lord Beaconsfield flings them on the necks of broken-winded, broken-kneed backs, and that man is William Ewart Gladstone. This the country knows full well, and it is merely a question of 1880.

A committee has been formed in Paris for the purpose of erecting a chapel in honor of the memory of the late Prince Imperial in that city, and an appeal has just been made to the nation for aid. The leading Bonapartists head the committee, but "Plon-Plon" does not figure in the list, nor are they desirous of having him connected with the project. Prince Napoleon Jerome, in order to be consistent, will have to undergo a severe ordeal of both hatred and contempt. The Count de Chambord has issued a manifesto announcing that he is willing to "save France" by accepting the throne, but declaring that he "will never become the king of a faction or a party."

The committee of the French Senate has disapproved of the Ferry Education Bill. The Chamber of Deputies has adopted the recommendations of the committee to reduce the stipends of the Bishops and Archbishops, and to increase the stipends of the minor clergy. The Government opposed the proposition, but was beaten by a vote of 184 to 133. The question of reconstructing the Tuileries has been referred to a committee of the Senate.

The final decision of the German Government on the religious questions at issue with the Vatican is substantially what we predicted last week it would be. It is as follows: "All of the exiled clergy who ask permission will be allowed to return to Germany. The May Laws will be tacitly suspended, provided the clergy obey the common law, and all fresh nominations are to be submitted to the Government." The Pope is said to be satisfied with these terms.

Once more has the Kremlin at Moscow been set on fire, and this time not by the patriotic citizens, to save it from the clutch of the invader, but by the Nihilists. It would appear that this worthy confraternity are about to emulate the doings of the Commune, and we shall possibly hear of nothing for some time but of Russian public buildings being set on fire by petroleum. The St. Petersburg police last week made a descent upon the estates of the Grand Duke Constantine, brother of the Czar, and captured one hundred persons who are said to be concerned in a formidable conspiracy.

Russia is honorably fulfilling her obligations under the Berlin Treaty. The last Russian soldier has left Eastern Roumelia, and there are only three cavalry regiments left in Bulgaria.—The composer of "Pinafore," Dr. Sullivan, will come to the United States in October. His new piece chiefly develops a bit of burlesque of Italian opera.—A new American, or Anglo-American, weekly journal has lately appeared in Paris, called the *Parisien*.—Lieutenant Carey, who was made the scapegoat for the indiscretion of others in the matter of the death of the Prince Imperial, will not be shot, but permitted to return to duty.—Another effort is to be made to unlock the mysteries of the Polar seas. A committee has been formed in London, with forty-nine sub-committees in co-operation at other points, for the promotion of an expedition which is expected to leave England in the Spring of 1880. It will co-operate with those sent out by Sweden, Holland, America, Austria and Denmark.—The financial agent of the Russian Government at Philadelphia, Mr. Barker, has been decorated with the second rank of the Order of St. Stanislas for his services in connection with the purchase of vessels in America for the Russian Navy during the last year.

THE independent movement in the politics of Georgia appears to be gaining strength, and may result in the downfall of the intolerant partisan domination which has hitherto repressed free discussion and free voting. Practically there has been for some years past but one party in that State, and the people have suffered the evils which always exist in communities where there is not a strong minority to challenge and hold in check the arrogance of the ruling administration.

IT is stated that all the negroes who have gone to Kansas from the South, except about 300 who are temporarily cared for at Topeka, have found homes and employment. They have turned out to be very industrious, and, according to the representations of those who have watched their progress, stand a good chance to make their way in the world. It is not thought, however, that the State can advantageously absorb any considerable additional number of colored immigrants.

THE action of the War Department in dismissing six cadets of the third class at West Point for the offense of "hazing," will be very generally commended. Ten other cadets remain under arrest for the same offense, but whether they shall be dismissed or not, the discipline of the Academy must certainly be improved by the punishment inflicted upon their guilty comrades. The Government has hitherto shown a leniency and weakness in dealing with the brutal practice of "hazing," which has tended rather to encourage than repress it, and if President Hayes shall succeed in exterminating it, he will be entitled to the thanks of all who are not in love with blackguardism for its own sake.

THE experiment of gathering recruits for the navy from inland towns has proved eminently successful. During a cruise of two or three weeks up the Hudson the United States steamer *Minnesota* has enlisted one hundred and forty boys, who are in every way much superior to those usually obtained, being strong, healthy, intelligent, and withal essentially American in their tendencies and feelings. Heretofore recruits have been largely gathered from among the foreign-born; but under the system now adopted this element will in time be pretty effectually eliminated from the navy—possibly to the benefit of the service.

THE improving condition of the business of the country is satisfactorily shown by the receipts of the Internal Revenue and Post Office Departments. The increase in revenue receipts is especially marked, notwithstanding the reduction in the tobacco tax. The receipts from beer alone now exceed $10,000,000 per annum. As to the Post Office receipts, the last balance-sheet of the Department shows that for the first three months of the current year they were $7,930,068.09, the largest quarter's receipts in the history of the Government. This is nearly equal to the annual receipts in 1859 and 1860, showing four-fold growth. Estimating by the receipts of the first quarter of this year, the total will reach nearly thirty-two million dollars, or more than double the total receipts in 1867.

THE resignation of Hon. John Welsh, United States Minister to Great Britain, has provoked a lively scramble for the succession among the politicians of Pennsylvania and other States. The Pennsylvanians claim to have a mortgage upon the position, and have suggested ex-Governor Hartranft and other representative Republican partisans as worthy of appointment. If the nomination is to go to that State, it is to be hoped that it may fall to some one who has something more to recommend him than that he has been "useful" to the ruling dynasty in the politics of the State. Either Hon. Wayne McVeagh or ex-Speaker Grow would fill the place with credit to the country, and the interests of the public service would seem to demand that no person of a lower order of qualifications or less reputable character should be selected.

THE course of M. de Lesseps, in claiming that he has American as well as foreign sympathy in his Darien Canal project, is exposing him to very deserved criticism, the facts being, as shown by official advices from Paris and London, that the Panama scheme does not meet with the support mentioned by M. de Lesseps, and in London it will receive no support at all. The Bordeaux announcement that an American subscription had been secured for the Darien project is entirely speculative, and is denied by the leading capitalists of this and other cities. The Government has been unable to learn that any money has been or will be subscribed in this country. Public sentiment with us generally favors the plan proposed by Admiral Ammen for a commission of army and civil engineers and a visit of inspection by competent persons to look over the ground carefully and make a report upon which the initial steps of actual operations may be based. The Secretary of War is also heartily in accord with the suggestions of Admiral Ammen, and, with the approval of the President, will detail such engineers of the army as will do the subject justice.

THERE is an undoubted revival in the railway interest of the country. *Poor's Manual* states that during the year 1878, 2,694 miles of new line were opened, the total mileage in operation in the United States at that date being 81,841 miles. The same journal adds:

"There has been constructed in the United States since the great crash in 1873, and within a period of five years, 11,563 miles of railroad. In the same time the increase of population in the country has equaled fully 7,000,000. The greater part of this increase has been in the extreme Western and in the mining States and Territories. A corresponding demand has been created for the products of manufacturing and commercial industries of the Eastern States. Labor is in fact more productive in the new States and Territories than in the older States. With the general recovery witnessed on every hand, and with an enormous balance of trade with foreign countries in our favor, there is every reason to believe that the country, and particularly its railroads, are entering upon a career of unwonted prosperity. The gross earnings of all the roads whose operations have been reported have equaled $490,103,361, against $473,909,272 for 1877, $497,257,959 for 1876, and $503,065,505 for 1875.

THE Seaside Sanitarium at Rockaway is one of the most deserving and useful of all our Summer charities. For some time past it has been crowded to its utmost capacity by women and children of the poorest class, who are gathered from the tenement districts, many of them sick and destitute, and given an opportunity to recover health and strength under the most favorable sanitary conditions. Last week several excursion parties of mothers and children visited the Sanitarium, one party consisting entirely of infants from the Worth Street Nursery. In order to meet the growing demands for admission to the Sanitarium, and at the same time to discriminate in favor of the deserving poor, the President of the Institution, Mr. Henry King, has placed tickets of admission in the hands of the captains of police, to be distributed by them to the sick and destitute of their respective precincts. Persons who may be disposed to show their sympathy with the unhappy poor and sick cannot find a more worthy medium for the accomplishment of their purpose than is afforded in the Seaside Sanitarium.

NEWS OF THE WEEK.

Domestic.

THE Nebraska Republican State Convention will be held at Omaha, October 24.

THE entire sum appropriated by the River and Harbor Bill, $9,000,000, is in the Treasury, ready for use.

THE seventh annual session of the International Chautauqua Sunday-school Assembly held its first meeting August 5th.

THIRTY-FOUR failures were reported in this city in July, with aggregate liabilities of $640,553, and assets of $183,665.

MAYOR COOPER has served charges of irregularities upon Police Commissioner Wheeler of this city, who will probably be removed.

THE receipts from internal revenue for July amounted to more than $9,500,000, and from customs reached nearly $13,000,000.

SEVERAL steamboats which carried away large crowds of colored emigrants from Mississippi have been seized on technical complaints.

CONTRACTS have been awarded for furnishing and setting in place the iron-work required for the Washington Monument at the Federal Capitol.

A COMPANY of French capitalists are said to have agreed to furnish the money for the construction of an underground rapid transit road in this city.

REPORTS of cholera prevailing in Monterey, Mexico, with the death-rate 100 per day, are causing uneasiness at San Antonio and other points in Texas.

THE Massachusetts Republican State Convention will be held at Worcester, September 16th. It is believed that Governor Talbot will be renominated.

THE public debt statement for July shows an increase of $6,000,000. The increase was due to the payment of pension arrears and deficiencies for the fiscal year.

THE Rev. Dr. Graham, of Brighton, England, was drowned August 2d, while bathing at Cape May. His niece made a strenuous and very nearly successful effort to save him.

PRESCOTT G. PILLSBURY, cashier of the Lawrence (Mass.) National Bank, has been arrested for embezzling $34,000 of the money of the bank, lost in missing speculations.

THE President and Faculty of Princeton College have notified the parents and guardians of every member of the Sophomore Class that any student found guilty of hazing will be at once and irrevocably expelled.

A FIRE at Hamilton, Ontario, August 1st, destroyed buildings and stock valued at over $500,000. At Vincennes, Indiana, July 29th, Cosnigham's starch and sugar works were burned, entailing a loss of $200,000.

THE immigration statistics at this port give the number of arrivals of immigrants during July as 12,408 against 8,822 in July, 1878. The total arrivals since January 1st are 88,300, an increase of 21,550 over the same period last year.

THE President and Cabinet are declared to be distinctly opposed to the Panama Canal plan of M. de Lesseps, and to any plan whatever which would prevent the United States from assuming control over the canal should it become necessary.

IT is thought that the Minister selected to succeed Mr. Welsh will be charged with negotiations with the British Government on the fisheries question. And Secretary Evarts will certainly ask that a naval vessel may be sent to the fishery-grounds to secure the latest information respecting the value of the fisheries.

DURING July the standard silver dollars in the Treasury increased about $1,000,000, and fractional silver coin about $4,000,000. Nearly $3,000,000 of silver certificates have been issued, of which over $2,000,000 have been returned to the Treasury. The amount of silver dollars now in the Treasury is over $29,000,000.

FROM July 9th to August 1st 219 cases of yellow fever were reported in Memphis, with 54 deaths. At the last accounts the disease was still spreading. Among recent cases appear the names of two Catholic priests, Fathers Doyle and Fahey, both of St. Patrick's Parish. The ministers of this faith suffered terribly last year, twelve of the thirteen stricken with the fever dying. There was one death from the fever in New Orleans August 1st.

THE eighteenth annual session of the National Educational Association was held at Philadelphia last week. A resolution was adopted providing for the collection from State superintendents throughout the United States of statistics to show what proportion of the convicts in prison received instruction in the public schools and what proportion in the universities and colleges, the purpose being to ascertain the relation between education and crime.

Foreign.

AMERICAN capitalists have offered to construct a navy-yard at Sebastopol.

JULES FERRY'S Education Bill is considered certain of passing the French Senate.

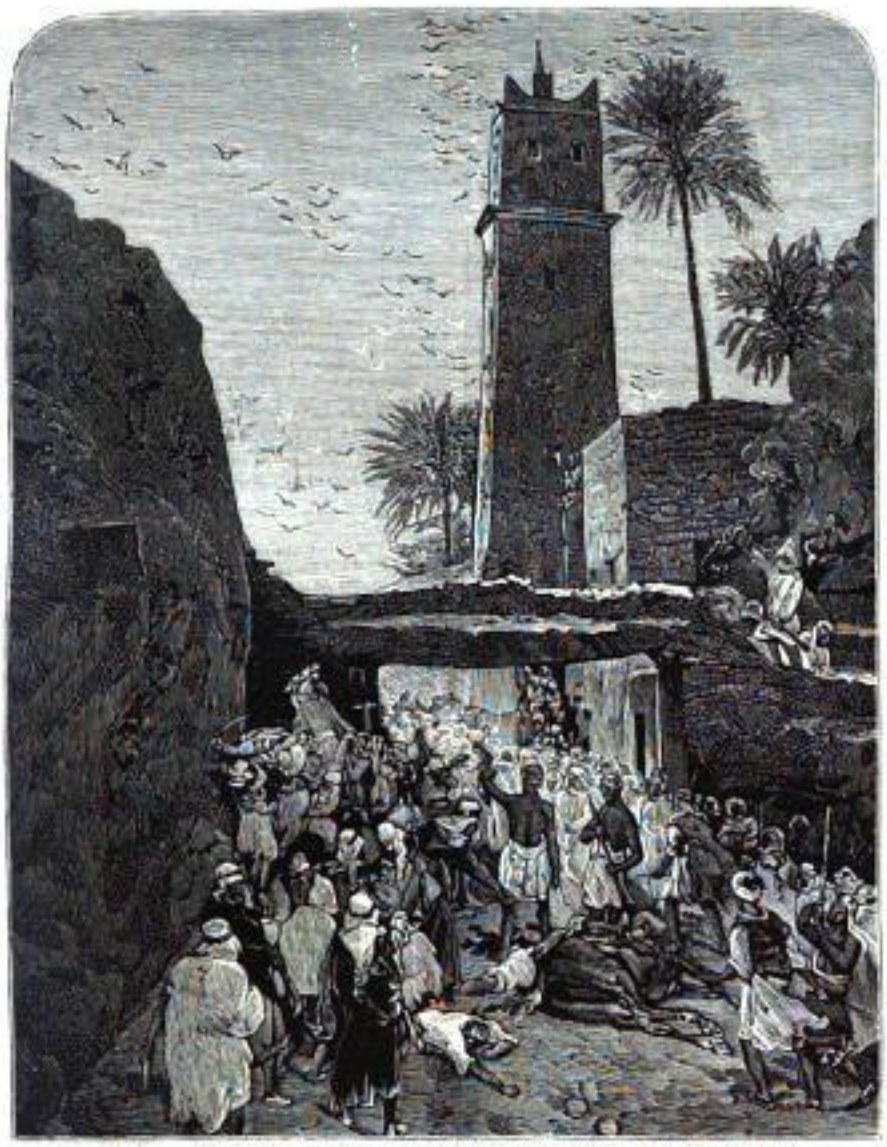
THOMAS BAYLEY POTTER, of Rochdale, is about to visit this country in the interest of free trade.

MR. LORILLARD'S bay filly Geraldine won the Lavant Stakes at the Goodwood Races, July 30th.

THE German Government has ordered the construction of four powerful corvettes and two gunboats.

THE consolidated Bank of Montreal suspended, August 1st. The suspension will affect many widows and orphans who own stock of the bank.

THE cholera is raging fearfully among the troops returning to India from Afghanistan. The Tenth Hussars lost forty men in one day, and the Seventeenth Foot 195 men by the epidemic.



WESTON and Rowell have signed articles for the next competition of the Sir John Astley long distance champion belt. The contest will take place at Gilmore's Garden in New York, beginning September 22d.

THE German Government has decided to propose a tax upon dividends on public funds in order to reimburse itself for the proposed reduction of taxation on landed proprietors. It is understood that the Government intends to insist upon the adoption of this tax.

IN the South American war the iron-clad *Huascar* had started off, at the latest accounts, on another cruise, while the Chilian vessels were scattered and likely to fall an easy prey to her. The hostile armies still stood facing each other with a practically impassable desert between them.

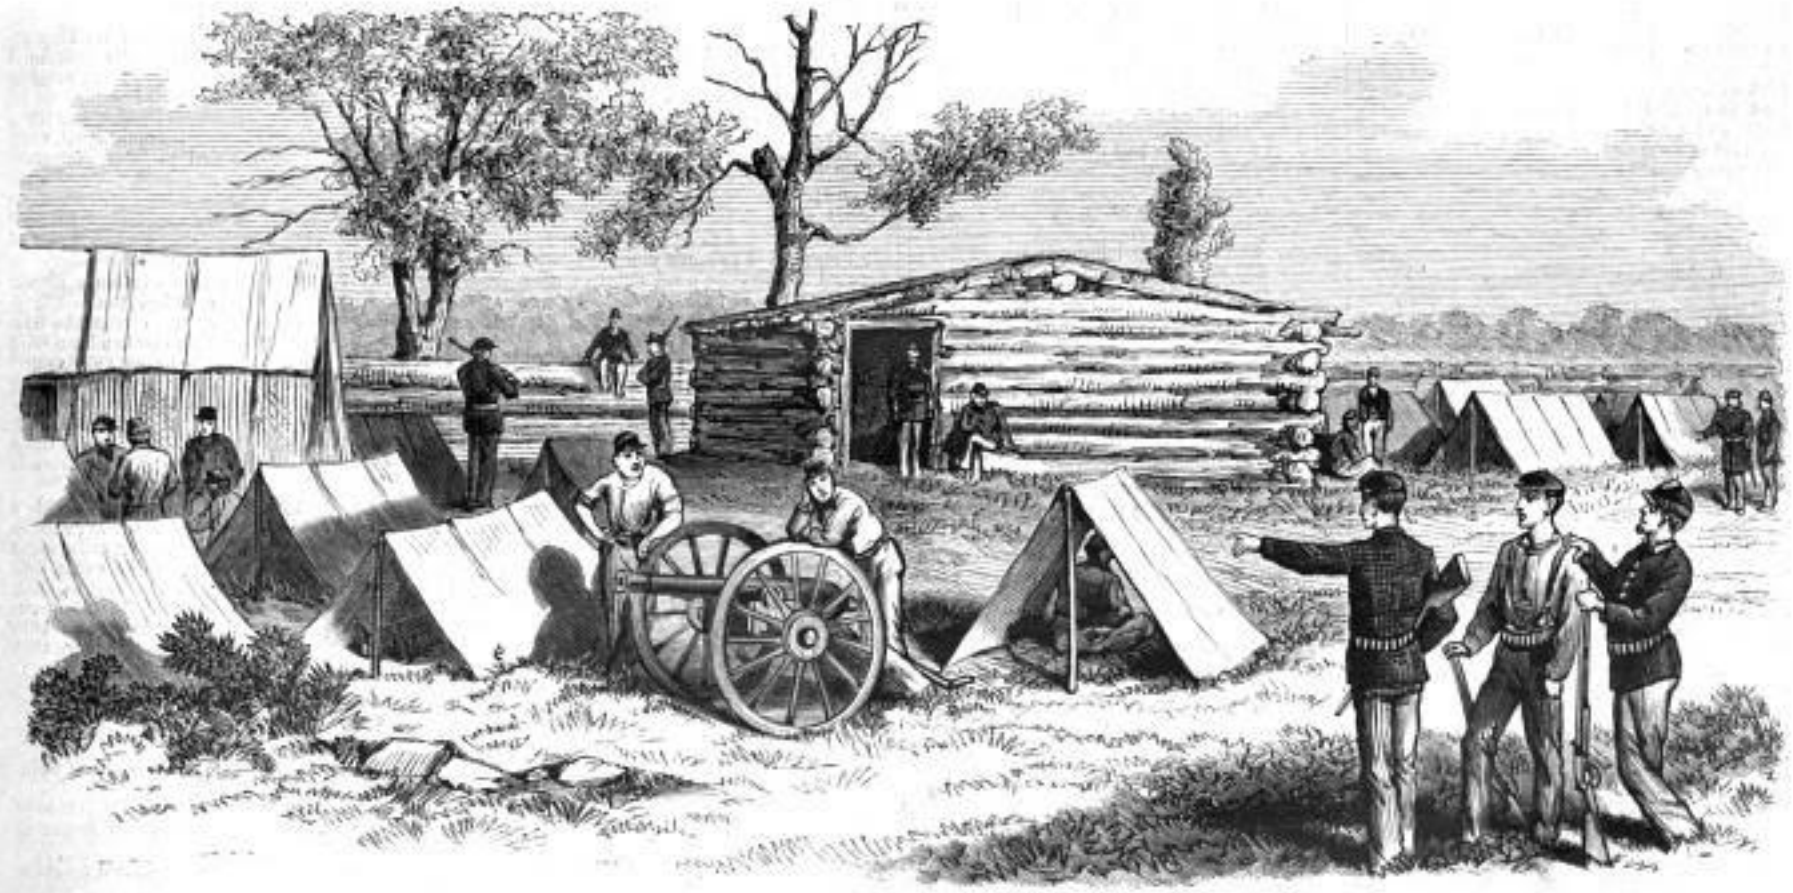
LANDING OF SUPPLIES FOR THE EXPEDITION AT THE CAMP, ON THE NORTH BANK OF THE MISSOURI.

THE INDIAN CAMPAIGN IN MONTANA.



WE published last week a brief account of General Miles's new campaign against Sitting Bull, with an illustration of the transfer of his troops across the Upper Missouri. In starting out upon his campaign, General Miles established a supply depot near old Fort Peck, in Montana Territory, where he left a guard for the protection of the stores which had been brought by the *Dakota*, and landed on the 8th of June. Our correspondent, writing July 5th, thus describes the camp and depot: "Our little log fortification is directly on the banks of the Missouri River, about two miles below old Fort Peck, of which latter place the old stockade is still standing. We have quite a stronghold here, which we built up in one day, and which is really necessary to our safety, as we are liable to be attacked at any moment. We have had two visits up to date from friendly (?) parties of Sioux (Assiniboines). At the latter visit they brought us quite a quantity of fresh buffalo meat in exchange for bacon, sugar, coffee, etc."

The latest intelligence from General Miles is furnished in a dispatch dated Camp on Rock Creek, eighteen miles south of the boundary line, July 27th, in which he reports that after the action on Beaver Creek the hostile Sioux engaged fled northward, leaving their property scattered along the trail for fifty miles. Their main camp stampeded and retreated across the line to Woody Mountains, in the British dominions, followed up and driven along by Miles's command. Major Walsh, Lieutenant Tilton, and all others who have passed through the hostile camp, estimate the number of Indians it contained at 5,000, of which nearly 2,000 are fighting men. General Miles halted at the line, and is now returning to Milk River, but scouting-parties are covering the country between Poplar Creek and Wood Island Creek, and interposing between the hostiles and the buffalo. General Miles says that his command is sufficient in strength and organization to drive any force Sitting Bull can gather. He expresses the belief that Lambert and his family, whose murder by Indians has been reported, were killed by a small war party of Uncapapas, returning north from below the Missouri. He reports many half-breed trains scattered over the country, selling ammunition to the hostiles. These half-breeds, it is well known, are British subjects, and Canada is a place from which a great deal of trouble comes. General Miles also reports that prior to moving north from Fort Peck he sent for the principal men of the Yanktonnais, and, with their assent, moved that tribe across to the south side of the Missouri, thus severing all connection between the hostiles and these Indians.

It is to be hoped that General Miles may be permitted to chastise Sitting Bull as he deserves, if the opportunity is offered.

AMERICA SPANS HALF THE GLOBE.

WEBSTER'S eloquent description of the British Empire is familiar to every reader, but we doubt whether it is generally realized that we, too, have a dominion on which the sun never sets. It will scarcely be believed, perhaps, without an examination of the map, that San Francisco, instead of being at the western limit of this dominion, is only about midway between our eastern and western limits; and yet it is a fact that the furthest Aleutian isle acquired in our purchase of Russian America is as far to the west of that city as Eastport, Me., is to the east of it. Between the north-

THE CAMP WITHIN THE FORTIFICATIONS, NEAR OLD FORT PECK.

MONTANA TERRITORY.—GENERAL MILES'S CAMPAIGN AGAINST THE SIOUX.—FROM SKETCHES BY HOLTER.

Digitized by Google

western limit of Washington Territory and the southeastern limit of Alaska there is a break of a few degrees, but, with the slightest deduction, our territory extends through 193 degrees of longitude, or 17 degrees more than half-way round the globe. Hence, when the sun is giving its good-night kiss to our westernmost isle on the confines of Behring's Sea, it is already flooding the fields and forests of Maine with its morning light, and in the eastern part of that State is more than an hour high. At the very moment when the Aleutian fisherman, warned by the approaching shades of night, is pulling his canoe towards the shore, the wood-chopper of Maine is beginning to wake the forest echoes with the stirring music of his ax.

CECIL CARLISLE.

CHAPTER I.

"I SEE no help for it, my son, but a wealthy marriage," and the speaker leaned back in her velvet armchair and looked up inquiringly into the grave, stern face opposite to her.

No one, drawing his conclusions from the surroundings of those two persons, would have supposed that there was any need for such words. The large drawing-room was magnificently furnished, paintings of great price adorned the walls, everywhere were evidences of graceful harmony of taste and wealth, and through the opened window could be seen a vista of grounds rich in foliage and Summer flowers. The occupant of the velvet chair was a stately, stylish-looking woman, whose aristocratic countenance and graceful pose bore "the stamp of Vere de Vere"; while the robe that swept the floor was of shining satin, and diamonds sparkled in her ears and in the bracelets on her arms. Her commanding beauty and her patrician bearing were reflected in the face and mien of her son, who stood leaning his arm on the mantelpiece and looking down on the mass of gorgeous flowers that filled the grate. He was a very handsome man, tall and slender, and with his mother's grace of movement; he had, too, her chiseled harmony of feature; but, stern though the compressed lips now were, there was a tenderness in their lines to which hers were a stranger, and in the dark-blue eyes that he lifted for a moment as she spoke there were depths one would have sought in vain in her cold eyes, and which one could never fathom. His very tone of voice, as he replied to hers, was, like hers, clear and softly modulated, and with the same well-bred accent, but there was a difference which the keen ear could readily detect and solve in looking from the merely beautiful face of the mother to the noble countenance of the son.

"I understand," he said quietly. "So my uncle is to waste his fair patrimony, and I am to sell honor to keep it—to say nothing of happiness?"

"My dear Eric, how can you talk so? I should have thought your long Continental sojourn would have driven such romantic notions out of your head. They would sound well enough in a lad fresh from Eton. I remember well your argument with young Biddulph; but how many men and women in the *beau monde* ever put your ideas in practice?"

"The question is not worth arguing, mother," said Sir Eric Egerton, in the same quiet manner. "I have to face a prospect black enough without contemplating so terrible a sacrifice as my honor—I repeat it, my honor—to solve the problem presented to me. Fortunately, I was not brought up in idleness, waiting for dead men's shoes. There was every likelihood that my uncle would live many years; he might have married and had a son to inherit his estates. He dies suddenly, and you write to me to come over and enter into possession of my ancestral lands. I find them a noble heritage, truly, and learn that they are mortgaged up to the hilt, and that the mortgagee forecloses in a few months. And I, an *attaché* of Her Majesty's Viennese Embassy, am to redeem this mortgage with my salary or the alternative you have just suggested."

"Eric, curb your ironical humor, and don't kick over the traces in that way. There, don't look at me! I have managed your uncle's house so long that I have fallen into some of his racing expressions. You think, perhaps, no heiress would have you? You must know that many an heiress would be glad to accept Eric Egerton and take up the mortgage. Irrespective of those broad, fair lands of Egerton Royal, are you not nobly born, highly connected? And your handsome person and winning manner would secure you a wealthy bride, if you had no other attractions. I have heard how you were courted in Vienna."

"Mem.—Curly black hair, two blue eyes, a straight nose, a love of a mustache, a clear complexion, a tall, straight figure—yes," said Sir Eric, glancing carelessly at the mirror above the mantelpiece, "I ought to be very much charmed with the valuable piece of personal property entitled Eric Egerton. It may be worth something to me some day."

"Eric," returned his mother, angrily—and, rising, she swept out her satin robe stormily—"if you think it proper to jest and sneer, and to your mother, too, I am sorry that I cannot agree with you. Perhaps, if you will not listen to reason, you will speak it, and tell me what you really intend to do!"

The young man inclined his head.

"Mother, pardon me. Hear me without interruption, and I will tell you what I intend to do." He shook off the assumed carelessness of manner which had veiled far deeper feelings than she had ever known in her selfish life, and, standing before her with folded arms, said resolutely: "I am speaking without one ray of preconceived affection to bias my judgment. I am speaking with heaven knows—for words can never utter it—what bitter pain at my heart to yield up to strangers the patrimony of my fathers, with bitter regret that I am compelled to ask you, my mother, who have passed your life—and especially the last few years—in luxuries, to live on the comparatively small income which my father left you, with such addition as I can make to it. But what is the alternative? Dishonor. I repeat it again, at the risk of wearying your ear—dishonor! I might marry an heiress, no doubt. You reminded me that I was courted in Vienna. True enough; and, if there is any one thing for which I would sell myself, it would be to save the lands and the graves of thirteen generations of Egertons from strangers. But it is not in my power. A man's honor belongs to heaven. Therefore I remain in England only long enough to attend to necessary business, and then I return to the Continent, never, I hope, to set foot on these shores again, unless—which I dare not hope—it be to buy back these lost lands."

While he spoke Mrs. Egerton gazed on her son like one in a dream. His noble words awoke no answering echo within her. She saw only the ultra-romance of boyhood prolonging its life into the years of manhood; and, despite the steadfast firmness with which Sir Eric spoke, she could not believe that his decision was really unalterable.

"Eric," she said, after a long pause, "do you really know what all you say involves? You, in whom pride of birth and name is a creed, to yield up your inheritance for a chimera! Why need honor and happiness be sacrificed? If you must have romance, cannot you learn to love without love being the first motive? You shake your head. Hear me in my turn. There is Miss Courtenay of Oakeley Park; report speaks of her as handsome. She is coming to England shortly, and is the greatest heiress in the county—some say in England."

"Her father's heiress? Is the property entailed?" asked Egerton, resuming his careless attitude, and with it the tone and manner that seemed suited to it. "For, if not, he may cut her off with a shilling."

"Her father died when she was a child," said Mrs. Egerton, believing that she had made an impression, but too diplomatic to speak eagerly; "and at nineteen—when, by his will, she came of age—she inherited an enormous fortune. She is just turned nineteen, and I am told has created quite a sensation in Parisian society."

"No doubt, with so many golden reasons for making an impression. How was this fortune made? The name is a good one."

"My dear Eric, the Courtenays of Oakeley Park are a very old landed family; you ought to know that!"

"I regret my ignorance; but, having had few opportunities to visit my native country, I can scarcely be in a position to have an intimate knowledge of the Courtenays. So this heiress is still to be won, and I am to win her hand and money-bags?"

"Why not her heart, too, Eric?"

"Oh, you can throw the heart in for a make-weight," said Egerton, "if I mean to try the matrimonial Derby—but I don't. You say pride of name and birth is a creed with me. So it is; and I will not stain a pure escutcheon by fortune-hunting. I meant what I said just now, mother; and I tell you plainly that any attempt to introduce me to this heiress will fail. I will not meet her. If she is, as you say, handsome, and in other ways attractive, I might perchance be led to forget the difference between us till it was too late to save peace, if not too late to save honor. I pray you speak no more on a subject so bitterly painful. You know me of old, mother; and, when I have once said 'I will' or 'I will not,' I rarely change my mind."

Mrs. Egerton yielded for the time outwardly, but cherished the secret hope that, as the day for foreclosure approached, her son might change his mind, or that in London—whither he was going to see his solicitors and to call upon an old friend whom he had known as a lad—he might encounter some heiress who would gladly bestow wealth upon the title, ancient name, handsome person, and fascinating society of Eric Egerton.

The old friend, after whom Sir Eric had instantly inquired on arriving in England, had been physician to his father's family, and had then enjoyed an extensive and lucrative practice. A long illness had done him irreparable injury in his profession. Rivals had snapped up much of his practice and retained it; and, when Doctor Dormer—who indeed never quite regained his former health—was able to resume work, he found himself with a large family, and far less than of old to keep them on. He removed from Upper Grosvenor Street to Berkeley Street, and contrived, by receiving one or two boarders and living economically, to "make ends meet," his wife being an excellent manager and his two eldest sons fairly started in the world through the kindness of friends.

Eric Egerton was a man of the world, but not a worldly man; if he had been the latter, he would never have "looked up" a friend from whom he had nothing to expect. The lord of the mortgaged lands of Egerton Royal did not however value men for their money's worth; and so when, two days after the unsatisfactory interview with his mother, he turned from the door of the solicitor in Great George Street, Westminster, he betook himself to Upper Berkeley Street.

CHAPTER II.

IT was a glorious day in early June, and the young man struck across the parks, pausing a few moments in Rotten Row—for it was the hour of the morning ride—to look at the stream of fashionable riders, of whom he might have been one, to whose "caste" he belonged, but from whom he was dissevered by the fatal barrier of poverty. Several loungers glanced at the elegantly-dressed, aristocratic-looking man leaning on the rail near Apsley Gate; but Egerton had left England when little more than a youth, and he was not known. He was well pleased that it was so; he had no desire to be recognized, and soon moved away, fearing that he might meet some one who had known him so well as to claim acquaintance, or perhaps cut him—for Eric Egerton, *attaché* of the Viennese Embassy, and Sir Eric Egerton who ought to be lord of Egerton Royal, but only inherited ruin, were two very different persons.

With a grave brow and sternly-compressed lips, he turned away from the bright scene and walked slowly down the grassy slope to the Serpentine. He had often sailed his toy ships in the bright waters as the lads before him were doing now. He threw himself upon the grass, and, shading his eyes with his hand, for a few moments languidly watched the children running to and fro; then his eyes grew dreamy, the joyous voices came to his ears in a confused medley of sound, and he fell into a profound reverie.

Something between a sob and an exclamation of impatience roused him from his sorrowful weariness, and he turned in the direction from which the sound proceeded. A little fellow of about ten years old, in a knickerbocker suit, was seated on the grass a few yards off, having come up unobserved by the preoccupied *attaché*, and was busily engaged in attempting to mend his little ship, the gear of which had by some means sustained woeful injury. The task was, however, evidently beyond him; and his sturdy English spirit, ill brooking defeat, caused him to emit the sound that had attracted Sir Eric's attention.

To most noble-hearted men and women—especially if they have suffered—a child in distress, even over a toy, is a sight not to be endured without an endeavor to render some assistance. So Egerton raised himself on his elbow and accosted the child with: "What ails you, my boy? Let me lend a hand."

The child sprang to his feet and ran up to the kind knight-errant.

"Look!" said he, dolefully, holding up the toy, and trying hard to keep back the tears. "A chap did that with his oar! I only wish I'd been a man; I'd have given it him!" added he, wrathfully.

"Never mind," said Egerton, rising too; "I see the damage, and we'll soon rig up a jury-mast."

He walked up to a neighboring tree, the child running hopefully by his side, cut a strong twig with his penknife, and, kneeling on one knee on the sward, proceeded with the help of the knife which the lad brought forth from his pocket, to repair the damage done.

"Oh, how kind of you, sir!" said the boy, watching the operation with absorbed interest. "You're doing it beautifully. Cecil mended it for me once before, but it was not so badly broken then."

"Is Cecil a sailor-brother?" asked Egerton, "belaying" the mainstay.

"No, I have no sailor-brother. Cecil's a girl, an awfully jolly girl—there she is. Cecil," shouted the young gentleman, at the top of his voice, "come and see my ship being mended!"

The shout must have reached other ears than Cecil's, for the swift pattering of feet sounded on the greensward, and in a moment three pairs of dancing eyes were looking on at the operation, and peering, with children's frank curiosity, into the operator's handsome face. He smiled at the eager little countenances, and asked:

"Which of you is Cecil? My young friend here says she's an 'awfully jolly girl.'"

He was answered by a general shout and upward glance, which made him, too, look up quickly to see a tall slim girl of seventeen or eighteen standing close by the little group—a girl with a face like a picture, and rich curls clustering under her plumed Rubens hat.

"I beg your pardon," said Egerton, standing up and lifting his hat—though he colored slightly, he was too well-trained a courtier to lose his self-possession; "I had no idea that I was betraying confidence to a grown-up young lady."

"So much the better; I have gained the benefit of a good opinion that I might not otherwise have heard," returned the girl, laughing with such debonair frankness that she was evidently thoroughly amused and by no means embarrassed. "I am sure, sir," she added, "it is very kind of you to have taken so much trouble. You should have come to me, Walter, and not have troubled this gentleman."

"The service was volunteered," interposed Sir Eric; "and I assure you I shall only be too happy if I can crown my efforts with success. Another piece of twine, please, Walter."

"Here is a piece," said Cecil, stretching forth a white gloveless hand.

"Many thanks. Do you carry stores of twine about with you?" asked Egerton, resisting a glance up into the girl's witching face.

"One has to do so with boys about," responded she, gravely, not at all shy, nor yet bold, but with the perfect ease of one bred and accustomed to society. "They are always breaking something or other and wanting it mended."

"Dormer got a ship run down the other day," volunteered one of the ring gathered round Egerton.

"Dormer!" repeated he, glancing quickly round the little faces.

"Yes, Walter Dormer," said the lad.

"The name struck me," remarked Egerton, apologetically, to Cecil, rising once more as he spoke, his task completed; "for I knew it years ago as that of an old friend. He mended a ship for me once—Doctor Dormer," he said, earnestly scanning Walter's features; "he lives in Berkeley Street."

"My father!" said Walter, promptly. "And you know him?"

"Your father! I was on my way to his house. Has he ever spoken to you of Eric Egerton?"

"Yes, indeed!" cried Walter and two or three brothers and sisters in chorus.

"Are you Eric Egerton?" added a little lady of nine, timidly laying her hand on the delicate ringed hand of the *attaché*. "I am so glad. Oh, papa will be so glad to see you."

Eric stooped over the child, deeply touched. Doctor Dormer, then, had remembered the Eton lad he used to be so fond of, and had spoken well of him to the children Eric had never seen. In their joy at the discovery, which was as charming as anything in a pantomime, the children had well-nigh forgotten all about the ship, and Walter would have omitted to say "Thank you" if Cecil had not gently reminded him.

"It's like the pretty play you told us of, Cecil," cried nine-year-old, who had tightened her clasp on Eric's hand and was looking up in undisguised admiration at his handsome features.

"And what is your name, bonnibel?" said Egerton, smiling.

"Mine is Minnie, and that's Walter, and that's Jimmie, and this one"—touching another girl a year or two older—"is Eunice; and there's Tom in Australia, and Bernard in India, and Janie married; and that's all."

"I remember Tom and Bernard and Janie," said Egerton, "and this damsel Eunice as a baby in arms—but the others are since my time."

"And Cecil came to live with us three months ago," pursued Miss Minnie—"Cecil Carlisle."

Cecil laughed.

"It is fortunate," she observed, "that Minnie is not acquainted with my pedigree and family history, or she would give it you *verbatim*."

"Miss Carlisle," said Egerton, "this has been an unceremonious introduction; but ceremony and childhood are at daggers drawn."

"I think ceremony is often more honored in the breach than the observance," replied Cecil. "Walter, we must be moving homeward; it is past twelve."

"One more sail," pleaded Walter.

Cecil glanced at Egerton and hesitated; but Eric seconded the lad's request, and the refitted craft made a triumphant passage across the Serpentine; and, as this trip occupied nearly half an hour, Cecil declared that they must make great haste home; and the whole party started, Miss Carlisle walking by Sir Eric's side, and chatting away as gayly as if she had met him a dozen times before.

As soon as Dr. Dormer's house was reached Cecil sent the young ones up to their nurse, to take off their things, and asked the servants where Doctor and Mrs. Dormer were.

"They are both in the dining-room," was the reply.

"Ah, we are late," remarked Cecil, turning to Egerton. "You see one o'clock is our luncheon and the children's dinner. This way, Sir Eric, please."

She opened a door near and entered a large and comfortably but plainly furnished dining-room, the table of which was laid for dinner. A fine-looking gray-haired man and a genial matronly lady rose at once when they saw the stranger.

"Doctor Dormer," said Cecil, "we met this gentleman in the park——" but she got no further.

The doctor clasped Egerton's hands in his own.

"My boy—my old favorite—Eric!"

"We thought you would come," added Mrs. Dormer, beaming upon the welcome visitor.

"To whom else should I come, dear Mrs. Dormer?" said Eric, kissing her.

"My boy," remarked the doctor, "when you left England we were in Upper Grosvenor Street, and now we are in Berkeley Street."

"That has made no difference in you," said Egerton.

"Nor in you, Eric. Time and foreign residence have not changed you—only improved you. By Jove, you're a lady-killer, my boy! Sit down; my wife is dying to know all about you."

Cecil had run off to remove her walking attire, and Doctor Dormer presently informed Egerton that this young lady was at present boarding with them. She had some small means, and was, he believed, looking out for a situation. She was highly accomplished, very musical, and had traveled in Italy and Germany. He knew nothing about her; the solicitor to whom she had referred him wrote in the highest terms of her, and they had all grown so fond of her that they looked forward with dread to the possibility of losing her.

"She is gently born, and evidently accustomed to good society," said Egerton.

"Oh, yes! I imagine, from remarks she lets drop now and then, that she has been well off and lost her money. She seems very young to be alone in the world; but I gather that her parents lived abroad. In that way people often lose sight of their English friends, and, if they return with clouded fortunes to their native land, and are proud, why their friends are likely to know little enough of them."

There was no doubt about Cecil Carlisle's position in that simple household, where there was no splendor, but all-prevading refinement and good taste and affection. She came into the dining-room with a child clinging to each hand; and it was evident to Egerton's keen observation, from an under-current of amicable dispute between two of the young ones, that they took turns to sit next their favorite. It was Walter's turn to-day, but he was gentleman enough spontaneously to offer it to the guest, and himself retired to a more humble place at the board.

"And you'll let me sit next you at tea, Princess, won't you?" said Walter.

"Is that your pet name, Miss Carlisle?" asked Sir Eric as Cecil nodded her assent to the boy.

She answered "Yes," laughing and coloring a little.

Egerton did not need an explanation. Children are quick and keen observers, and the title was well bestowed. Cecil Carlisle was simply

Digitized by Google

attired: her dress, though fashionably made, was neither of rich materials nor expensively trimmed. Her beautiful tresses fell upon her shoulders in loose curls without ribbons or ornament. And yet she reminded Egerton of some Venetian picture, rich in velvet and glowing tints, or some portrait of Velasquez breathing the aroma of courts. If Cecil Carlisle had been robed in sackcloth, she would have looked like a princess.

(To be concluded in our next.)

GRAND SUMMER NIGHT'S FESTIVAL AT WEST BRIGHTON BEACH.

THE Summer-night's Festival of the Arion Society at West Brighton Beach, on the last day of July, was the most remarkable affair of the kind which has ever been attempted in this country. The scene at the West Brighton Hotel during the whole of the bright and mellow night was altogether unique in its effects. The hotel and its grounds were inclosed with a substantial fence, making a place for the merry-makers extending from the northwest corner of the hotel to within about fifty feet of the water, and eastward to a point half way between the hotel and the observatory. This made an inclosure about 2,000 feet square, embracing the hotel and the music-stand. All the out-door portions of the square were laid with boards, and nearly covered with chairs and tables. The main hall of the hotel, usually the restaurant, was cleared for dancing, presenting a fine, large, smooth surface for the dancers. The entire place was elaborately decorated. On top of the hotel roof were a number of fantastic life-size silhouettes, representing dancers, fat men, lean men, cats, and all the fancy forms the Arion mind could conjure up. Chinese lanterns hung everywhere. The piazza fronts were decorated with models of imaginary sea monsters, huge snails, lobsters, and various creatures of the deep. The inside of the hotel was decorated in a style that is never excelled, and very rarely equaled. American flags were festooned wherever a space could be found that was not already occupied by Chinese lanterns. Five very highly-decorated private boxes were arranged at each end, and the fronts of these boxes were decked with the brightest crimson cloth. On the beach, the three fiery steeds that were afterwards ridden by Neptune in the procession stood rampant; and Arion's dolphin sat on his fins, with a fiery expression in his eye and his red tongue lolling out as if he wanted a drink. A barge anchored about an eighth of a mile from the shore held the fireworks that afterwards lit up the beach and threw a glare over the scene. The entertainment began at four o'clock in the afternoon, when a concert was given by the Red Hussars Orchestra. Another concert began at five o'clock by Seibold't's military band, and at half-past six the full chorus of the Arion Society, assisted by an orchestra of eighty pieces and the military band, gave a third concert in the hall of the hotel. This concert was really the opening of the festival, but it was not till after dark that the amusements began. While blue and red lights were throwing their glare over the waves, sky-rockets flying through the air, and fountains of fire were playing far over the heads of the spectators, Arion appeared and mounted his dolphin, and put out to sea. The dolphin sat very snug and warm in a nice dry boat, and moved without the slightest motion of his tail. He and Arion were soon out far enough to meet Neptune and his three horses and other followers, who had gone out previously, and the entire party returned to the shore to join in the festivities. They brought with them an enormous sea serpent, which was cut open at the hotel and found to contain choice tid-bits, such as champagne bottles, tongue sandwiches, etc. There was a supposed arrival at this time of the steamship *Intolerance* carrying the "Exiles of Saratoga and Manhattan Beach." These exiles, in their masquerade dresses, promenaded about the platform and the beach.

Dancing, promenading and most becoming hilarity prevailed until long after midnight. Trains and steamers were running until after one o'clock in the morning, and some even continued to run until three o'clock. Probably 15,000 persons witnessed the festive scene.

FIRST RACING MEETING OF THE SARATOGA ASSOCIATION.

THE first meeting of the Saratoga Association for the season which closed on Saturday, August 2d, was remarkable for fine weather, large audiences, a superb track and excellent races. Up to Thursday night there had been 105 races on the regular and extra days, and as there were many noted horses there that had not appeared, it was expected that the second meeting, beginning August 5th, and closing on the 20th, would show even greater surprises than the first. On Thursday, July 31st, which was the sixth regular day, four exciting races were run—the first, being three-quarters of a mile; the second, one mile and three-quarters; the third, one mile and a furlong; and the fourth, a steeplechase of two miles and three quarters.

The first race was won by Framble in 1:17¼, with Anna Augusta second, and Oriole third. For the second, which was the sixteenth renewal of the Sequet Stakes for three-year-olds, there were seven starters. Bulwark took the lead, followed by Rochester, who soon gained first place, closely pursued by Bulwark, Grand Master, Peter Hynes, George McCullough, Willful and Lulu. Rounding the turn, Rochester ran away from his pursuers, placing a good length of daylight behind him in the first quarter mile. Passing the stand at the end of three-quarters of a mile, Rochester was six lengths in front of Peter Hynes; Lulu two lengths behind Peter, who was lapped by Grand Master; Willful fifth, and McCullough sixth. In running the next quarter Peter crept up and put out the daylight between him and Rochester, but he could not pass him. In the next quarter Rochester placed three lengths of sky behind him and Peter, Lulu coming third, while Bulwark, under whip and spur, had nailed through from the rear and was crowding Lulu. Rochester kept up his pace to the three-quarter pole on the last round, where Peter began to press him again. The lash was applied to Rochester on the turn, and he warmed up under it, extending himself for the final brush. Bulwark began to work up dangerously near in the last quarter, passing Peter Hynes, and nearly reaching Rochester's tail as Rochester dashed over the line, a winner in the fast time of 3:13¾. Bulwark was second, Lulu third, Peter Hynes fourth, McCullough fifth, Willful sixth, and Grand Master last. The stakes amounted to $1,400.

The third race was a selling race for a purse of $300, with the usual penalties and allowances; distance, one mile and a furlong. W. Astor's Vagrant, J. W. Bell's Maritana, and T. W. Dowsell's Sunlight started for the purse. Vagrant sprang to the lead while the flag was falling, with Sunlight at his hoods and lapping him before he reached the stand on the first furlong. These two kept yoked together, making a beautiful neck-and-neck struggle around the upper turn, down the back-stretch, around the lower turn, and into the home-stretch, with Maritana a fair third, some three lengths behind. Vagrant pulled away from Sunlight a little as they came flying up, and Maritana made a brush to better her condition by lapping Sunlight. It was of no use, however, for Sunlight put in an extra streak, again shutting out some of the daylight from Vagrant, who raced over the line a winner by a clear length in 2:01¼.

For the fourth contest, a free handicap steeplechase, but two horses went to the post—Reed's Trouble and Carson's Katie P. Immediately after the fall of the flag, Maney took such a pull on Trouble that McBride was forced to take the lead with Katie P., and almost instantly she led by six lengths, by which distance she took the first jump. Afterwards he increased her lead to from eight to ten lengths, by which he made the circuit of the course, both horses jumping in the cleanest possible manner. As they took the wall opposite the public stand, Maney brought Trouble up on even terms with Katie, and as they began the last three-quarters of a mile he took a decided lead, holding it by four to eight lengths to the end, winning by that distance in 5:44¼, amid considerable applause.

OUR POPULAR SUMMER RESORTS.

BRIGHTON BEACH AND ITS ATTRACTIONS.

BRIGHTON BEACH is the most delightful of delightful surprises. You do not expect it. It comes upon you unawares. In one half-second the tiresome, tawny sands are exchanged for velvet grass such as would delight the heart of a Newport cottager, while the eye is refreshed with glowing ribbon borders worthy of sumptuous Sydenham. The hotel rises out of the sea all quaint corners and gables, and hooded sun-shades and piazzas. It is a fairy-like piece of architecture, wondrous in its *bizarre* beauty, wondrous in its dimensions, wondrous in its resources. The piazza alone would repay a dozen visits, crowded as it is from morning until night with the *crème de la crème* of Gotham, and of places "ten thousand miles away." What a sight that is! Hundreds of gayly-dressed people seated at tables discussing the merits of a bill of fare such as the best Parisian restaurant might well be proud of; hundreds leaning over the carved balustrades gazing seawards, listening the while to the music of an orchestra that Arditi would covet to lead, or to the honeyed mellowness of Liberati cornet; hundreds chatting, laughing and inhaling the grateful ozone; hundreds arriving and departing, some by stage, some by boat, some by rail; hundreds disporting themselves in the flashing foam of breakers, that toss up the champagne of the deep! Brighton Beach is always *en fête*, always full of vivid color, always bright, gay, animated. The tide of human life ever flows upon its yellow sands. Pleasure would seem here to have found a halting-place, would seem to linger as if loath to depart. What more can one have than a gorgeous hotel, a superb *cuisine*, an unimpeachable cellar, a golden strand, a champagny ocean! Brighton Beach is delightful, whether beneath the glitter of a dazzling dayshine, or the liquid pearl of the moon, or the blue-white radiance of the electric light. Here is ever a breeze, ever a shade, and ever a something to appeal to the senses.

REUNION OF ODD FELLOWS AT LONG BRANCH.

A THREE days' reunion of members of the Independent Order of Odd Fellows at Long Branch was brought to a close on the afternoon of July 31st, with an exhibition drill under the tactics, recently adopted by the Grand Lodge of the United States, for the Uniformed Patriarchs, on the spacious lawn of the Ocean Hotel, which the Leland brothers kindly placed at the service of the visiting encampments. Three uniformed organizations: Rochester Encampment, of Rochester, N. Y., under Colonel Eddy; Washington Battalion, No. 1, New York City, Captain Frank Parsons; and Newark Encampment, No. 1, of Newark, N. J., Captain William A. Clark, headed by a band of music, marched into the grounds from the Ocean Drive shortly after two o'clock, and formed in a line extending from the Ocean Hotel to the Drive.

The exhibition drill was led off by the Newark Encampment, which executed a number of peculiar and interesting movements. They were followed by Washington Battalion, a well-drilled corps, with whose precise evolutions many of our citizens are acquainted. Hearty applause from thousands of spectators on the hotel balconies, the Drive and adjoining grounds, greeted the faultless formation of intricate figures. The great interest in the exhibition were the movements of the Rochester Encampment, whose commander is the author of the adopted tactics. For nearly an hour they marched and countermarched on the admirable lawn, to the music of the band stationed in the centre. The men were merged from single file into columns of fours and sections, with a rapidity, ease and precision which elicited a general clapping of hands. The march and countermarch in open order, the oblique movements, the right and left outward wheels, the formation of solid and hollow squares, the cross, the triangle, and the Patriarchal or double cross, were pronounced marvels of evolution. An exhibition of the sword exercise, which contains also many novel figures, closed the drill.

On returning to their seats the judge of the contest, General William Ward, Postmaster of Newark, awarded the silver prize—a cup supported by three crooks, with figures of Patriarchs in full uniform standing on the pedestal—to the Rochester Encampment. This prize must be won three times to secure ownership, and it is likely that the next contest, if held either later or earlier in the season, so as to avoid the intense heat, will attract a large number of encampments of Uniformed Patriarchs.

During the sojourn of the visitors at the Branch President Fitch of the Ocean Pier Company placed that interesting structure at their disposal, and, with the Lelands, did much to make the occasion a memorable one. Our illustration represents the formation of the Patriarchal Cross with fifty men.

The Prince of Wales's Debt.

THE Prince of Wales, who for some years past has been on the high tide of popularity, has recently given great umbrage to his Somersetshire and Cornish tenantry by rescinding a decision to reduce their rents on account of the present hard times—by 25 per cent. The poor Prince is placed in rather an awkward position: his mother's niggardliness and his own lavish disposition have combined to involve him tremendously in debt. It is stated on good authority that his Royal Highness is indebted to London tradesmen alone in the sum of £2,500,000. Of course, the heir apparent can obtain unlimited credit; all his creditors are sure of their money sooner or later, and even in the event of his death before his ascension to the throne, there is no doubt of their being paid in full. Still the claims upon his purse are most pressing and the question of "ways and means," which many a poorer man has lately had to take most seriously into consideration, has not been without significance to the future King of England. Most of the landed gentry and noblemen of England have lately thought it their duty, or policy, to forego a considerable portion of their income to those who till their lands. The Duke of Bedford has remitted fifty per cent. of his rents, which is a clear loss of £70,000 a year to him. Whatever the faults of the Prince of Wales may be, stinginess could never be justly ascribed to him, and very dire must have been the necessity which could have induced him to alter the determination he had come to, to follow the example of so many leading peers and gentry in sacrificing a portion of their income to the pressing needs of the distracted and disheartened English farmers.

Street Accidents in London.

A RETURN has been issued which shows that between January 1, 1878, and January 1, 1879, there were 3,253 street accidents within the Metropolitan Police district, 661 of which were caused by cabs, 219 by omnibuses and cars, 346 by broughams and carriages, 1,008 by light carts, 159 by wagons and drays, 543 by vans, 1 by fire engine, 174 by heavy carts, 3 by traction engines, 24 by covered vehicles, 13 by bicycles, and 98 by horsemen. The total number of persons injured was 3,342, of whom 1,708 were male and 580 female adults, and 759 were male and 225 female children. In 157 cases death resulted, while 2,693 recovered, and the result in 492 cases was unknown to the police. In the City of London Police District there were 619 street accidents, 212 being caused by cabs, 54 by omnibuses and cars, 32 by broughams and carriages, 123 by light carts, 12 by wagons and drays, 172 by vans, 7 by heavy carts, 7 by covered vehicles, 5 by bicycles, and 1 by horsemen. The number of persons injured was 619, of whom 286 were male and 87 female adults, and 135 male and 13 female children.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

The Insurrection in Algeria.

Algeria is again tranquil, and the insurrection has been fairly stamped out. The most unhappy incident of the attempted rebellion was the assassination of Si-Small-Ben-Bachtarzi. This deeply regretted Cadi was surprised and assassinated, together with the whole of his escort, while engaged in a fruitless search for the body of his father, Cadi Mustapha Bachtarzi, who was also treacherously murdered by the Beni-Ben-Sliman. The last intelligence from Algeria is to the effect that the Governor-General has issued a decree sequestrating the territory of the counties which were recently in revolt, and imposing an extraordinary contribution of 255,000 francs upon them.

The War in South America.

In illustration of the present war in South America, we have already given our readers views of the port of Iquique and of the engagement between the Peruvian and Chilian war vessels in its harbor. As we write, the only intelligence of the war is contained in a dispatch from the Peruvian Minister of Foreign Affairs, which announced that the *Huascar* had entered the blockaded port of Iquique, fought the Chilian squadron for two hours, leaving Aura *de combat* the *Cousino* and *Alton*, and had escaped unhurt. The fleet of the Chilians is acknowledged to be superior to that of the Peruvians. In our illustration, 1 is the *Almirante Cochrane*; 2, the *Blanco Encalada*; 3, the *Chacabuco*; 4, the *O'Higgins*; 5, the *Esmeralda*; 6, the *Abtao*—all iron-clad frigates—7, the gunboat *Magallanes*, and 8, the schooner *Covadonga*. The chief vessel of the Peruvians is the celebrated *Huascar* (1), which some months ago had a brush with H. M. S. *Shah*; figure 2 is the corvette *Union*, and 3, the gunboat *Pilcomayo*. Callao is a fortified town of Peru, and the principal seaport of the Republic. The harbor is defended by three forts with an armament of 200 guns, and is sheltered towards the south by the barren islands of San Lorenzo, whose highest point is 650 feet above the level of the sea. In 1746 the city was completely submerged with all its inhabitants, during a great earthquake; and in 1825 and 1868 suffered the same way by a volcanic upheaval of the ocean. Its harbor has been the scene of a number of naval engagements.

The Revolution in Egypt.

The enforced abdication of Ismail Pasha, Khédive of Egypt, by order of the Sultan at the urgent demand of several European Powers, is now an affair of the past; and he has been quietly superseded by his son, Tewfik Pasha, who was hailed as the new Khédive by the Government officials, the Mahommedan ecclesiastics, and representatives of foreign nations at Cairo, on Thursday, June 26th. His Highness Prince Tewfik Pasha proceeded to the Citadel about 5:30 P. M., where he was received by the Ministers of State, the Sheik ul Islam, and the Ulemas; the heads of the Coptic, Armenian, Greek, and other churches; the heads of all the public administrations, and a large assemblage of natives and Europeans. The diplomatic body had a separate reception. The customary Viceregal honors were paid to Prince Tewfik, and he read to the diplomatic and ecclesiastical bodies the telegraphic dispatch he had received from the Porte, in anticipation of the firman of the Sultan. Ismail, the ex-Khédive, left Cairo very theatrically. Under an open canopied compartment he embraced Tewfik and committed him to his people, and as the train moved off, the last seen of him was a bobbing, bowing figure forgiving its enemies and leaving them its blessing and its debts. He looked ten years older; his face was white and bloodless, his beard nearly white, and his eyes were sunken.

The New Ossuary at Custoza, Italy.

Custoza is a village situated near Verona in Italy, and the scene of two memorable battles. The first was fought on July 25th, 1848, between the Austrians under Radetzky, and the Sardinians under Charles Albert in person, and resulted in the defeat of the latter. Again on June 24th, 1866, the forces of Austria, commanded by the Archduke Albrecht, and of Italy under Lamarmora, met there, when the Italians were a second time defeated. A few years ago it was determined to erect an ossuary and gather within it the remains of the men who fell in these engagements. These patriotic labors were completed last Spring, and in June the memorial structure was formally dedicated in the presence of the King. Immediately after the services a tour of the building was made, the young King manifesting great emotion at the array of ghastly relics in the crypt.

AT HOME AND ABROAD.

—VIRGINIA has so far re-funded $1,300,000 of her debt.

—TEXAS pays annually $500,000 interest on her State debt.

—A JUDICIAL opinion has been given in Florida that young orange-trees are liable to taxation.

—MR. TENNYSON has been requested to write the inaugural ode for the Australian International Exhibition.

—THE National Polish Museum at the Château de Rapperswyl has secured the bedstead on which Kosciusko died at Soleure in 1817.

—A TELEGRAPH station just opened at the Rifelberg, above Zermatt, in Switzerland, is said to be the highest station of the kind in the world.

—THERE are no Roman Catholic judges in the Superior Courts in Great Britain, but five members of Her Majesty's Privy Council are Roman Catholics.

—IT is now regarded as certain that the Cathedral of Cologne will be completed in 1880. The finials of eight metres in height that are to crown the towers have been commenced.

—THE Land Office reports that 6,000,000 acres of land were disposed of to actual settlers, under the Homestead Law, during the last fiscal year. The increase is very great since 1877.

—IT is stated officially that 3,501 fires occurred in Russia during the month of June, causing damage to the amount of about $9,500,000. Of this number 548 fires were of incendiary origin.

—SOME excitement has been caused in Madrid by an old woman, supposed to be insane, flinging a heavy stone at the carriage containing the King, who was going to church on Saturday evening, July 26th.

—THE British Admiralty has ordered all the Indian troop-ships to be in readiness for six months' continuous service, with the view of bringing home the troops from the scene of war in South Africa.

—OVER 30,000 children gathered in the Crystal Palace on the 12th of July on the occasion of the fourth annual *fête* and distribution of prizes to the children of the schools belonging to the London Board.

—A STEAMER has arrived at Halifax, N. S., from Bordeaux, filled up with refrigerators for freezing salmon, codfish and lobsters, which she will collect along the Newfoundland coast and carry to France.

—THE English Court of Appeals has decided that the steamer *Princess Alice* was alone to blame in the matter of the collision with the *Bywell Castle* last September, which resulted so fatally for the former.

—THE English Church Missionary Society received the very large sum of $237,320 from the children alone during the last missionary year. It was gathered by the little collecting-books, cards and boxes that the society sends out.

—A MEMORIAL hall in honor of George Stephenson was recently opened by the Duke of Devonshire at Chesterfield. It is a handsome structure, costing $65,000, and is intended for scientific, literary and educational purposes.

—ADMIRAL BATSCH, of the German Navy, having been sentenced to six months' imprisonment by the *Grosser-Kurfurst* court-martial, has tendered his resignation, and Captain Klauss has given himself up to serve a month's imprisonment.

—IT is intimated that at the next session of the Spanish Cortes the Cabinet will introduce bills for the gradual extinction of slavery and the payment of compensation to the proprietors of slaves, freedmen to give some years of labor for their liberty.

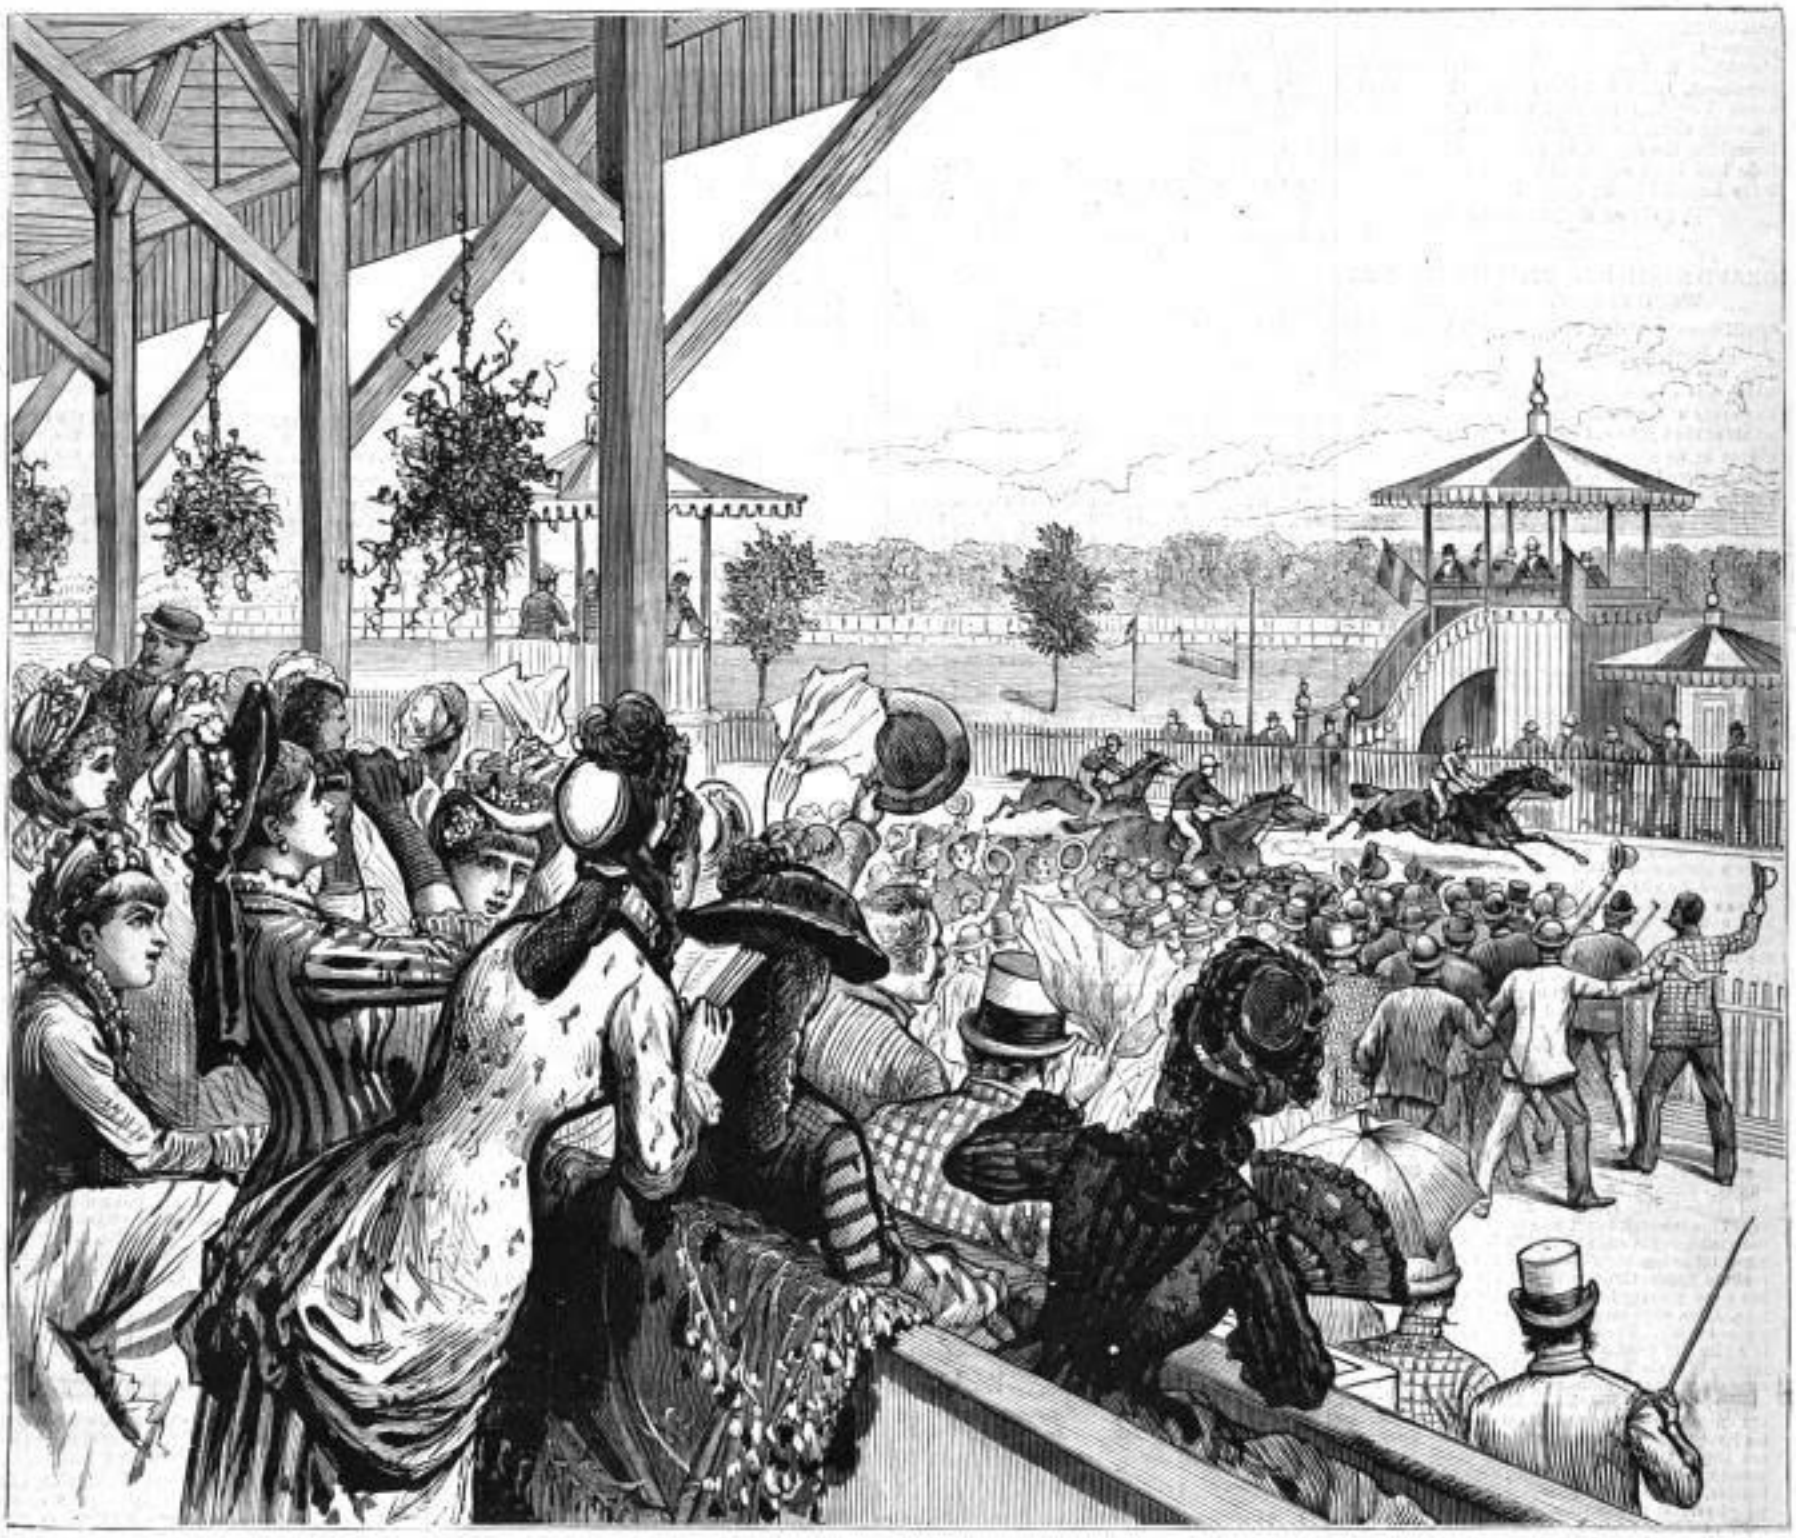
—THE English Ritualists are about to organize an "Order of Widows." Invitation is given by Rev. G. C. White, of Newland, Great Malvern, to "any widow who is free to give herself for Christ's sake to work for his poor and little ones, to join the Order."

—THE harvest in the southwest of France is nearly terminated, and in the southeast it is about half finished. The quality of the crops is reported as being better than it was last year, but the quantity falls short of expectation, and will barely come up to the average.

—THE United States Minister at Rio de Janeiro celebrated the Fourth of July by having the flag displayed and giving an official dinner. He says there was much animation and good feeling among the Americans, "whose hearts warmed towards our Government and country."

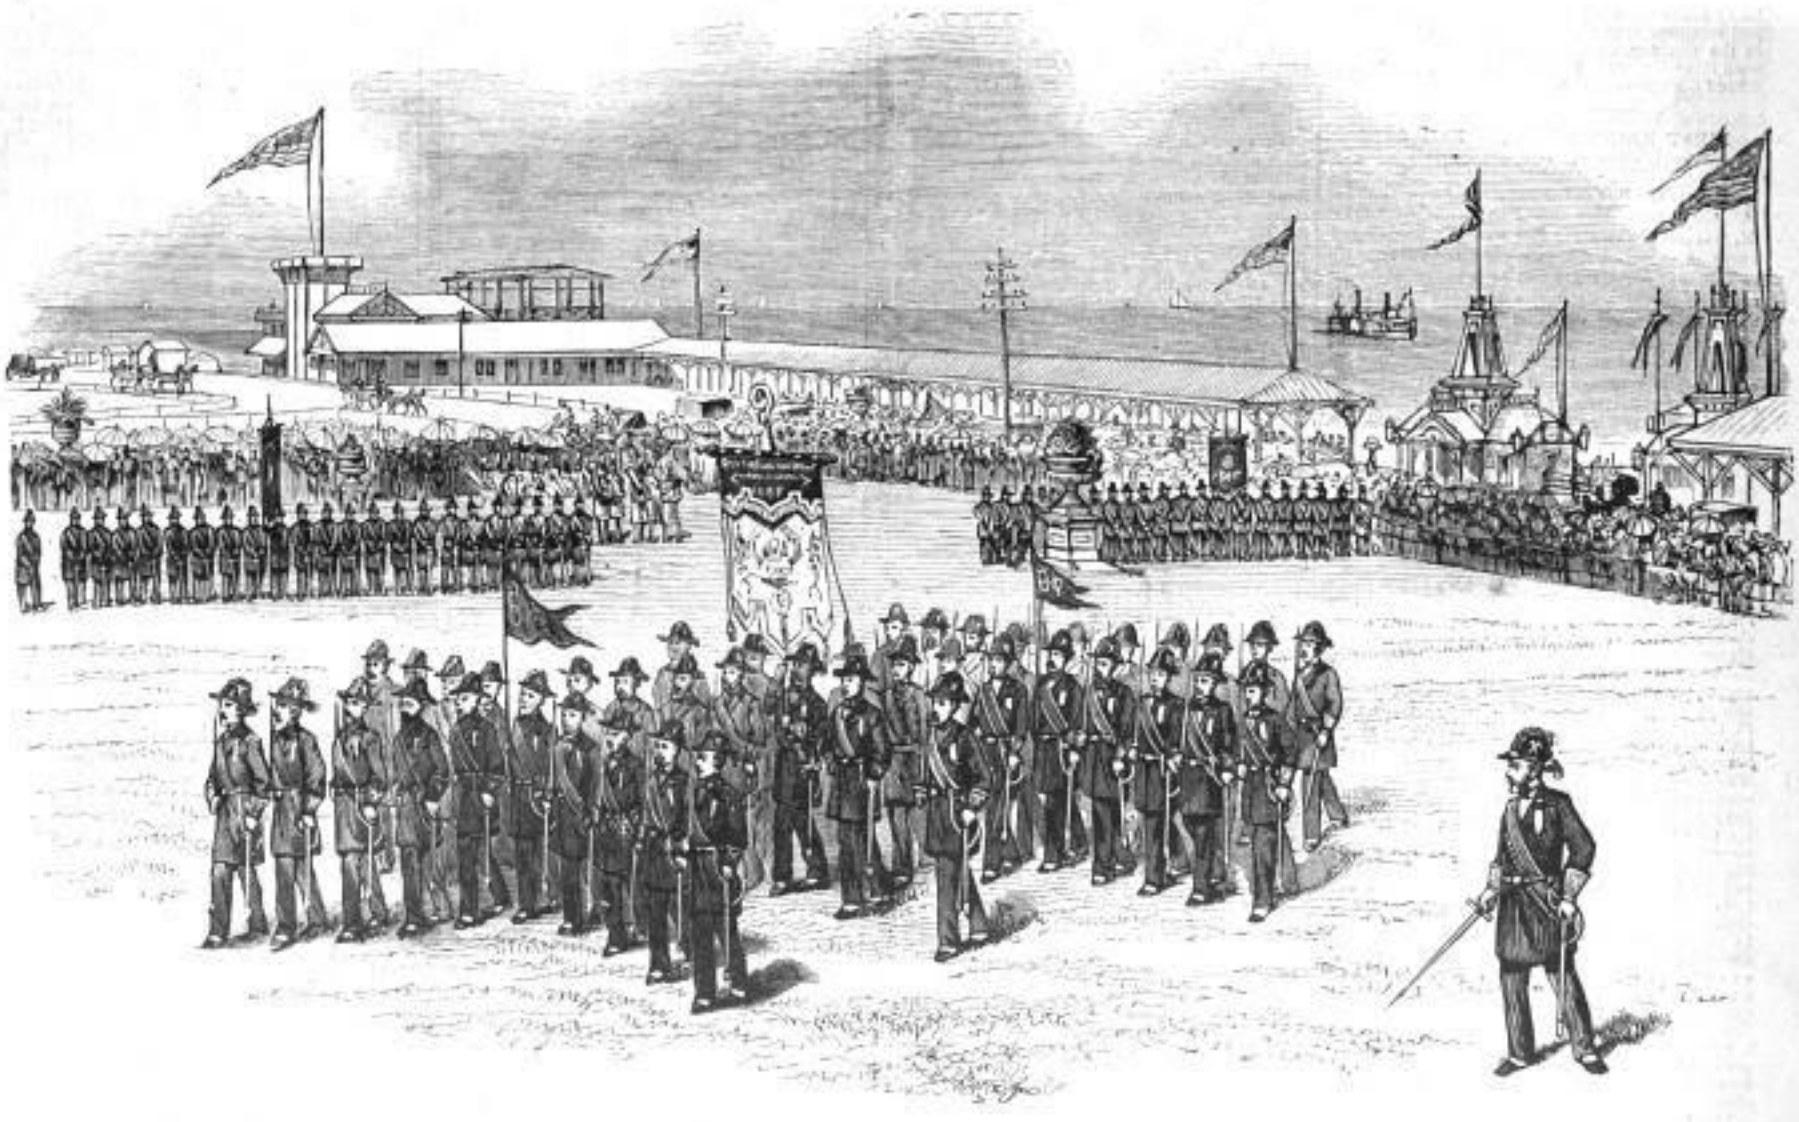
—PROTESTANT missionaries in Turkey say that young Turks who are sent to America to be educated, in order that they may return and labor for Christianity among their countrymen, aim to obtain a medical rather than a religious education, so as to practice medicine profitably when they get home.

—A DISEASE of an epidemic character, which the physicians do not appear to understand, has broken out in Linn County, Iowa, and which for want of a better name is styled an endemic malignant dysentery. In certain respects it resembles the Asiatic cholera. Over twenty deaths are reported in thirteen days.



—ON account of the heavy night-work there are no more girl-clerks appointed to the London post-office as telegraph operators, and it is understood that the female branch of the Government Telegraph Office has been closed. The ladies and their friends do not accept the excuse given, and are waging a mighty war to have the old order of things restored.

—INTELLIGENCE from Noumea, New Caledonia, confirms the report of the intention of the French authorities to take possession of the group of islands known as the New Hebrides. These islands are situate to the northeast of New Caledonia, between 15° and 20° south latitude and 167° and 170° east longitude, and comprise ten large islands and numerous islets.



—THE report of Mr. Forrest, British Consul at Tientsin, that the deaths from starvation in China during the late famine reached a total of nine and a half millions, is confirmed by Mr. Hillier, also of the consular service, who, within six months, has visited the desolated provinces. Whole districts, once densely populated, are now almost uninhabited. The efforts of the Government to send aid were frustrated by the bad roads and the fact that the people en route seized the pack horses and mules to devour them. No fiction can surpass in horror the scenes described by Mr. Forrest.

—IT is a fact not generally known that there is a Chinese marine insurance company. The Mongolian insurers are doing a pretty good business in taking risks on treasure shipments from San Francisco to Hong Kong. The institution goes by the name of the On Yan Insurance Company of Hong Kong. There is probably something in this name that is sweet and alluring to the ordinary Chinaman. At least the company's risks last year amounted to $1,370,000, and the premiums to $13,000. The losses for the year were $3,394. The agents give a bond in the sum of $2,000 to secure the payment of municipal taxes in the business.

AD LALAGEN.

SINCE hope is bought so dear,
Since death is drawing near,
Let joy dispel all fear
And sound of sigh.
Let pleasure hold sweet sway
And make the most of day;
The sunlight dies away
And night is nigh!

Ah, sweet one, shall time dare
To streak thy bright gold hair
With silver lines of care,
And mar thy face?
Must every dear delight
That knows not day from night
Fade quickly from our sight
And lose its grace?

Laid softly here at ease
Beneath the blossoming trees,
Red wine upon the lees
Makes cool your mouth.
Your gray eyes bent on mine
In languorous beauty shine—
A well of love divine
To ease love's drouth.

We who to Love belong
In worship do no wrong.
We praise him as a song,
We seek his rest.
And in the tonquet-house
Which he with light endows,
He crowns my sovereign spouse
His sovereign guest.

JOHN HORAN.

A CAST OF THE NET.

THE STORY OF A DETECTIVE OFFICER.

CHAPTER III.—(CONTINUED).

BARNEY WILKINS stopped here, to see what I would say; but though I was ten times more surprised than ever, I kept my countenance, and only said: "Well?" In point of fact I didn't know what *to* say.

"I've been used bad, Mr. Nickham," he went on. "I've had a lot of trouble and risk about that there paper. I got it from B——, and took the money for it to him, honest; and have been as near took with it in my possession as anythink. Twice the slops" (he meant the police; "slops" is what we call "back-slang," a rough sort of spelling the words backwards)—"twice they have come into my place when the stuff was there. Once I was sitting upon it done up like bundles of rabbit-skins. Now he gives me (the party wot I am down on)—he gives me five pounds, and I can't get no more out of him. And, you see, there ain't no reward out."

"No, not regularly, Barney," I said; "but there's no doubt at all that any man coming forward would be handsomely considered by the bank people."

"He might be, if he'd got anybody like you to speak for him," says Barney. "But you know, Mr. Nickham, that I am wanted for a lot of things by the bobbies; and I've been through the mill so often, that without I've got a friend I don't half like touching 'em again. But you're fair and square, and you licked the fellow last night; and I'm told you can box better than even Tom Sayers could; and if that's so, I'll trust you. And this here man won't give me more than five pounds; and he has settled with a regular fence, a sort of Dutch-Yankee skipper, what pretends to command one of them traders out there."

"Yes, yes," I said; "the man I fought last night. I know him."

"*Him!*" almost screeched the man (although, mind you, he never once forgot his hoarse whisper); "was it him you licked? Sergeant Nickham, I'd go through fire and water for you now, for I hate and despise that wretch; and if I had got a chance to do it safely, I'd have ——" He checked himself very sudden here, as if what he was going to say wasn't exactly the sort of a thing to say to a detective. "I see you are on the right lay," he begins again; "but I tell you he has settled with that skipper to have the stuff put on board, if it ain't already there; and then he'll go with it to whatever foreign port the craft comes from."

"And who is he," I asked, "who has arranged with the skipper?"

"Ah, Mr. Nickham," says Wilkins, with a very cunning look, "as if you didn't know! Haven't you been on the lurk round his house for two days past? Wasn't you there this morning?"

Egad! I saw it all now! You might have knocked me down with a feather. I could scarcely help saying something which would have showed my astonishment; but I choked it down, and, quite determined to keep the upper hand with him, I said as cool as I could: "Now, Wilkins, no beating about the bush, or making me help you out. If you've got anything to say, any name to mention, out with it like a man, and I'm your friend. You understand me."

"Fair and square you are, Mr. Nickham," says Barney; "and so you'll find me. That young Mr. Byrle has got the paper, and he means to go out with the trader. There is people over in Holland awaiting anxious for it; and at once they gets hold of it, it's all U. P. with our bank notes. Now, I don't know where the paper is; if I had known, bust me if I wouldn't have blowed the gaff long ago!"

He meant that he would have exposed the whole transaction, and I noticed that this declaration did not quite agree with his anxiety to have a friend on his side, a point on which he had dwelt so much before; but that didn't signify.

"Now, Mr. Nickham," he went on, "you must board the craft when the paper is shipped, if it ain't there yet."

"If it ain't there yet, my man," I said, remembering what had dropped from Edmund Byrle, that "she would come on board with the material."

"Then I think it will be to-night," he continued; "for a sailmaker as has been at work aboard her says she'll drop down the river to-morrow; and I think by what I can learn in other quarters, he is right."

I thought so too, and at once made up my mind that the meeting at the Railway Tavern was to settle about shipping the paper.

"I can give a pretty good guess at the man they will engage for the job," says Wilkins.

"I know him," I said; "a tall, sulky-looking, bony-headed old fellow, with a game eye."

"Why, Mr. Nickham," says Wilkins, "you're a wonder, a perfect wonder! You're a credit to the force, and Sir Richard ought to hear of it! Why, that's the man, the very man; and here have you only been down two days, and know all about it! Keep your eye on him after dark, and you're all right."

We had some more talk after this, and then he pretended to go to sleep in his corner again, and I went out.

I went straight into the city, and saw some of our chief people, who sent over to the bank. They would not chance my going there, for fear of somebody seeing me that had better know nothing about it. The gents from the bank could scarcely believe their ears, and the compliments they paid me, to be sure! It was decided that everything was to be left in my hands, and I was provided with letters to the right parties at the water-side. But I need not go into any further particulars of that kind.

I was not going to trouble myself any more just now about the pilfering at Byrle & Co's. factory; as far as I was interested in it, the thieves might take boilers, wheels, chimneys, and all. I took up my post in the old arbors, and there, though the rain came steadily down, I sat. I managed to get a pretty dry corner; and with a little of the Anchor's rum-and-water and my pipe, I made myself tolerably comfortable while I sat and watched the Dutch trader. I was well screened from the sight of any one below, or else my corner would not have suited; and although I could hear the steps and voices of the people going to the ferry, and could have touched them by leaning over, yet they could not see me.

The bony ferryman, in his tarpaulin coat and hat, was there this afternoon; and very sloppy and miserable all the boats looked; and as the tide fell lower and lower, the great broad bed of river-mud grew broader, and the path to the ferry-boat grew longer, and still I kept my watch, and meant to keep it. I must own, however, that I did not expect to see anything worth notice, for what could there be? But sometimes, you know, in our business, it is as necessary to watch to make sure there is nothing being done, as it is to make sure that some important movement is going on.

There was an oyster-smack not fifty yards from me as was left on the shingle or mud when the tide went down; and there was a man smoking his pipe on the deck of that oyster-smack, just as I was smoking mine in the arbor; and when night came and the river got dark, and you couldn't make anything out of it but a great black space, with a hollow sound of the wind moaning over it and of the water lapping on the shore as the tide rose again—then there was a lantern burning on the deck of that smack, and there was a similar lantern burning in my arbor; but the light was shown open on board of the smack, and mine was a dark-lantern (so was the other) with the light hid. But I was perfectly well aware that the man aboard that smack never took his eyes off me while it was light, and that after dark he watched to see if I showed my lantern. I didn't show it; but if I had, there would have been a Thames police galley and five armed constables alongside of that hard in a couple of minutes.

CHAPTER IV.

LONG after it had grown quite dark all remained quiet, and at last I resolved upon making a move. I had determined upon fetching Peter Tilley. I had plenty of assistance, but I thought I should like to have Peter with me. So I went down to the ferry; a gaslight which burned at the corner showed me before I left my post that the bony ferryman was not there, and choosing a pretty good boat, with a strong young fellow to pull, I got in. It was a most unpleasant night; as dark as pitch, which was bad enough, but every now and then it lightened, which was worse, as it dazzled my eyes, and made me think we were running smash on board some great vessel which I had not seen a moment before, and couldn't see a moment after. However, the boatman was used to all kinds of weather, I suppose, and knew the river thoroughly; so, through the darkness and the rain, which never left off for a moment, we reached the other side.

I left the boat to wait for me, and ran up to the Yarmouth Smack. I looked in, and saw Peter leaning against the bar and smoking a short pipe, as a laborer ought to do, and he was talking in a friendly way to some rough-looking fellows. I slipped in, and, using the name we had agreed upon, spoke to him. He knew my voice, of course; but seeing me so changed, for my make-up was really splendid (it was, although I say so that shouldn't), it gave him such a shock that he was obliged to put the pewter down he was going to drink from and look steadily at me before he answered. "I'm a coming," he said at last, and we got outside; when, as we walked down to the ferry, I gave him a sort of idea of what was going on, and how I expected to make a great catch that night. Peter, of course, was very glad to be in for such a big thing as this, for he had never been mixed up with anything so important.

Not to trust the boatman too much, I kept Peter back a few yards from the water while I finished my story, standing a little on one side, so as to be out of the way of the people who came and went to and from the ferry. While I was talking to him a wherry ran in; we heard her grate on the pebbles and the sculls rattle as the man laid 'em in; but that we had heard before. It's a part of my habit to notice little things, however, and I looked to see who had come in by this boat. There was only one passenger, a woman, and she passed us, walking quickly; but, quick as she walked, I saw her and she saw me. Blessed if it wasn't Miss Doyle! My being there was no odds to Miss Doyle, nor could it have signified to her if she had seen me fifty times; yet I felt I would rather not have met her just then; it looked unlucky, and she was such an uncommonly sharp one, too. Sharp or not, I couldn't see what she could make out of my standing under a wall on a wet night talking to another laborer.

Having finished my explanation, we both got into the wherry, and I asked the man if he would like a good long job, which might, perhaps, last all night.

"The longer the better, governor," he says, "if the pay is accordin'."

"The pay will be accordin'," I answered, "and so you are engaged."

The first thing I made him do was to row round that oyster-smack, for the tide had risen enough to take us round her. I showed no light, but we went inside her twice; and the fellow on the watch was very sharp, so he was leaning over the side when we came round the second time, and I could say quite quiet-like: "I am in this boat now—watch the river." That was quite enough; he knew he would not now have to look to the Anchor for signals.

After this began what I believe was the most disagreeable sort of patrol I ever had. There was a time when I used to envy the Thames police, but I can't say I ever did after that night. We were obliged to be in motion almost continually, because we did not know from which side of the river the paper might come, and we weren't quite sure that it would come at all, especially on that night; and I don't know, speaking from my own experience, that there is anything more trying to the spirits than the pulling backwards and forwards and loitering about on the river Thames in a raw October night, with a small, thick rain falling. Twice we landed, and went once to the Smack and once to the Anchor. I couldn't grudge the men a glass of hot grog; in fact, I was obliged to have some myself, even if I missed my capture through it.

It grew later and later; the flashes of lightning still came at long intervals; but the lights on the shore went out, and, excepting the gas-lamps, which burnt at street-corners, ferries, and wharfs, all was dark. The traffic on the river had long ceased, no shouts or rattle of wheels came from the shore; and, the rain still falling, it was, I give you my word, most horribly miserable, dull and sloppy beyond description. Twelve o'clock had struck, and one, and perhaps half an hour beyond it. I had cautioned my companions to speak very low; so the boatman only whispered when he said: "It's as quiet as it is likely to be, governor, if you've got anything to run. I have just seen the police-galley creep along on the other side; I see her under that lamp. Now's your time."

He thought we were smugglers! Perhaps he didn't care if we were thieves. I told him to be patient; when, at that very instant, just as we were creeping along under the lee of a coal-barge, a wherry shot very silently by, right in front of us, going across stream, and not six feet from our bows. In her sat the sulky ferryman; I knew him at a glance, dark as it was. "Pull after that wherry," I said.

"Peter Tilley, my lad," I continued, turning to Peter, "the time's a-coming, I think."

"I'm precious glad of it," says Peter: "for I'm catching a cold in my head every minute I sit in this confounded boat; and it's all soaking wet where I'm sitting."

Our man pulled on; he was a very strong fellow, as I have said, and we could have overtaken the other boat directly; but this, of course, I did not want. I knew where to look for the old scamp; and, sure enough, after a few strokes across stream, he bent to the left and ran under the bows of the Dutch trader.

All was dark and silent as the grave aboard the ship; but that didn't deceive the old boatman, nor did it deceive me. I stopped our man in the shade of the next vessel, if you can call anywhere a shade when it was all pitch-dark. We had not been there a minute before I heard a slight noise—it was impossible to see any one unless he stood between you and the sky—and then I could tell by the sound that a man had dropped into the wherry. There was no need to tell me what man it was. With an almost noiseless dip the ferryman dropped his sculls into the river again and rowed on, we still after him. I took it for granted he was going to the other side of the ferry; but he suddenly bore off to the right, and rowed on for some little time, then, striking in between two vessels, he went straight for the land.

"Where is he going to?" I whispered.

"To the landing at Byrle's wharf," says the boatman in the same tone.

So he was; and it appeared this landing-place was at the further side of the wharf, that is, lower down the river.

It was so dark we could scarcely see them—for we could just make out there were now two persons in the boat—but as they reached the shore a lamp that was burning on the wharf helped us a little. We could not clearly see what they were doing; but they certainly got out of the boat, and as certainly there were then more than two figures moving about, and seemingly engaged in placing parcels in the wherry. But it was very gloomy there; they were in the shade of the wharf, and the lamp glimmered weak and faint through the thick rain. It was the more difficult to see what was being done, because there were several boats tied up to the landing-place, making some confusion in the darkness. At last, however, we could see that they were pushing off from the shore, so it was time for us to move. We pulled back for a while (there was no doubt as to which way the others would come), and then, sheering off, lay between two colliers, until we saw the wherry we had watched go by, and then we once more pulled after them.

"I'm blest if I don't think there's another boat following us," says Peter Tilley, staring as hard as he could behind us. I looked, but couldn't see anything; and Peter owned that he might have been mistaken.

We could not make out how many there were in the foremost boat. There was only one man rowing, that was plain; and he pulled short round at the proper place, as I knew he would, and rowed towards the Dutch trader. As he did so, we lost him for a second, a big steamer lying between us; but the hull of this vessel did not obstruct the view up the river. I seized the moment, and waved my lantern twice. It was all right. As quick as thought the light on board the oyster-smack was moved twice also, and then we too were pulling across the stream. I wanted to capture my men on board the trader, as otherwise the paper might be got rid of, because I couldn't be positively certain that it was not already on board. In fact, Mr. Edmund Byrle was my chief aim, not the skipper.

The wherry pulled under the bows of the vessel; we followed just in time to see, by a very convenient flash of lightning, two packages handed up: then a figure, which we had recognized by the same flash as the bony ferryman, got into the ship. As he disappeared our wherry touched the vessel; and, at the same instant, to my great relief, a long, black Thames police-galley came alongside us, and its crew, five constables, with Barney Wilkins, who was there as guide, clambered up like cats. I and Peter imitated them, but not quite so quickly; and when I looked over the bulwark, I saw by the light of a couple of lanterns, screened from the outside, four or five men, the boatman and the skipper being two, lifting up a great lid which fitted in the deck—the hatches I heard it called—while by their side lay the packages of paper. I could not see Mr. Byrle; but there was no time to consider; we all jumped in at once, the men looking round in amazement at the noise. I fancied that just then I heard a shout from the boat.

"What do you all want here?" said the skipper, angrily.

"We hold a warrant——" I began.

"Oh, it is you, is it?" he screeched, like a hyena, or something of that sort. "I owe you a little for a past score, and you shall have it." As quick as lightning he pulled a long, straight knife from the side of his trowsers, where it must have been in some sort of sheath, and jumped at me with such suddenness that he would have stabbed me, only Barney Wilkins snatched a hand-spike from the deck, and, dashing between us, hit him down with such a blow that the skipper fell with a crash like a bullock when it is killed, the blood pouring from his head instantly.

It was all as quick as thought. The other men were all seized in a breath. So quick was it all done, that I had no idea that Barney was hurt, until he reeled, made a wild clutch as if he caught at something for support, and then pitched forward on his hands and knees.

"Hollo, Barney!" I said, stooping down to him. "What's the matter, old fellow?"

"It's all up, Mr. Nickham," he gasped; "he's done me. I only hope I've killed him. Where's the other?"

"Oh, never mind the other, Barney," I says. "Where are you hurt?"

But as I spoke, one of the men came with a lantern, and Barney had no occasion to answer me, for I could see a straight stream of blood running from his chest on to the deck; and his hands giving way from weakness, he fell over on his side.

"Pull in for the shore, you, sir!" said the sergeant of the Thames police to my waterman. "You know Marigold Street? Knock up Mr. Gartley, and tell him what has happened. Say we are afraid to move the man to his house, so he had better come aboard."

"Send one of your own men, will you?" answers the boatman. "I've got something to tell the governor" (that was me), "as I think he ought to know."

"Cut away then, Bill," says the sergeant to a constable; "these fellows are ironed, and we can manage all that are aboard this craft."

So the man went off in my wherry; and the Thames men tried to make poor Barney a little more comfortable, while I undid his waistcoat, hoping to stop the bleeding.

"It ain't no use," he said; but in that short time his voice was almost gone, and we could tell that he was dying. "I'm done for, Mr. Nickham. If there's a reward, you'll act fair and square, I know; you always was a gentleman—let my sister have ——" And with that he gave a gasp, and was dead.

I rose up, dreadfully vexed for the poor chap. The sergeant and one of his men were looking after the skipper, when I felt myself touched on the arm.

"I say, sir," said the boatman, "when I'm in for a thing, I go through with it honorable. Did you know as you was followed?"

"Followed? No!" I said.

"I thought we was!" said Peter Tilley.

"We was followed, sir, by a light wherry with two people in it," continues the boatman: "and when they see our boats, they held hard; and, as you all boarded the ship and the noise began, they rowed away as hard as they could go."

"Which way did they go?" I said.

"Down river," says the man. "But it's of no use thinking of looking after them now. They are ashore long afore this."

This was likely enough; and it was quite

Digitized by Google

certain that Mr. Edmund Byrle was one of the two in the boat, and I had lost him for the present. Well, it couldn't be helped; so we set to work to question the men and search the ship, till the doctor came. The men knew nothing more about the business than that they were going to have two passengers, a lady and a gentleman, this voyage. One of the Thames men understood Dutch, or we should not have heard even this scrap of information. The sulky boatman never uttered a word, except that once he said as I passed him, and he said it with a bitter curse, "I always had my doubts of you."

The doctor came off; but poor Barney was stone-dead, while the skipper's skull was badly fractured. However, the paper was all there; so I supposed, and so it proved; and I shouldn't have cared if the skipper's head had been broken fifty times over.

We got our prisoners to the shore, leaving the craft in charge of a Thames police-galley that came in answer to our signals; and, late as it was, I drove with Peter Tilley in a cab to the city. Our people there were immensely glad, I can tell you; and when I went over to the bank (for there was no need for secrecy or dodging now), I thought the gentlemen never would have left off paying me compliments. Poor Barney Wilkins that was dead deserved most credit; but it could not do him any good to say so now, so I let them go on. The paper was examined and found to be exactly the quantity required; enough, I believe, to have made about twenty thousand bank-notes. Ah! if they *had* got into circulation!

I hope you will understand, however, that I did act fair and square; and when the reward was paid (and the bank people did come down most liberal; I bought my house at Pentonville with my share), I told the gentlemen about poor Barney and his wishes; and I'm proud to say they found his sister out and took her away; and after a time she went abroad with kind people who looked after her, and took care of her money till she got married, and did well. Why, she sent me a snuff-box made out of pure Australian gold, with a letter signed by herself and her husband, who was a butcher in a great way of business out there; and they sent it as an acknowledgment of my having acted all fair and square. I promised so to do, and I did.

Edmund Byrle was never caught, and so far as we were concerned, was never heard of; and if it hadn't been for his father, I should never have understood a lot of things that puzzled me. I had given a pretty good guess as to how Miss Doyle came in the first place to inquire about Mr. Bryle and the detective; a very clever idea in itself, but like many other clever things, it lost her the game. But Mr. Byrle had talked with his friends about employing detectives; and Miss Doyle knowing about the bank paper, and being always on the watch, had got hold of just enough to mislead her. She went out with Edmund Byrle to Turkey, I think, and was married to him; and old Mr. Bryle sent out a friend to see them, and it was in this way I obtained the particulars. It appears she knew me again—only as the limping laborer, of course—when she saw me talking at the ferry to Tilley. But she knew *him* as the detective at the Yarmouth Smack, and she thought that although it might be all right, yet a detective was a dangerous customer, and his acquaintances might be dangerous also. Consequently she tried to persuade Edmund to put off his journey; but he wanted the money for the paper, and wouldn't listen to her. But he agreed at last to go aboard in another boat, which satisfied her, as she felt so certain that the skipper's boat would be attacked. As I have explained, her precaution saved him from fifteen years' "penal," which is the least he would have had. The skipper was sent for life, having killed a man in his arrest; but he didn't live six months in prison; he never got over the tremendous blow he received from Barney. All the reports spoke of his being a receiver of "stolen goods." The bank paper was never mentioned, for the authorities did not want to unsettle the public again, or let them see what a narrow escape they had had.

And now comes about the queerest part of my story. Call me names if I didn't stop the thieving at Byrle's factory as well as recover the bank paper, killing two birds with one stone.

It was all through my catching the bony ferryman. Finding that things were going hard with him, and hoping to make them easier, and being disappointed that those who were concerned with him did not come forward with money to provide for his defense, he "rounded" on them: he split on them all, and owned how he was the means of taking the metal over to a fence on his side of the water, the things being stolen by a mechanic and a watchman who were in league. (I see I have used the word "fence," this means a receiver of stolen goods; but though I have been warned by the editor of this paper, we can't do without some slang words.)

Peter Tilley got a tidy present, and was noted for promotion through this business. I was glad of it, for Peter was a capital chap—never wanted to play first fiddle—and I admire people of that disposition. I will tell you what I did; I got the newest five-pound note of all what the bank gave me, and they were all very clean and crisp, and I wrapped old Bob the gatekeeper's own sixpence in it, and I went to the factory and stood a pint of ale, and says: "Bob, here's your sixpence." He hadn't known exactly who I was till then, for I had made excuses as usual, and then I'm blessed if he didn't quite cry over his luck. Mr. Byrle, too, thought a lot of Bob's kindness, for I told the old gent about it; and I heard that on that very account he put six shillings a week on Bob's wages, and I was glad to hear it.

They couldn't keep me off the detective staff after this; and although I am free to confess—now I am on my pension and nothing matters to me—that I only stumbled upon these discoveries by accident, I was praised to the skies by those for whom I worked. But my story is done.

BELLE ISLE, DETROIT'S NEW PARK.

THE Board of Estimates of the City of Detroit, Michigan, has recently appropriated $200,000 for the purchase of Belle Isle, situated in the Detroit River, midway between the Michigan and Canada shores, with a view of converting it into a city park. The island comprises about 700 acres, and is over two miles in length, with an average width of half a mile. Its lower extremity is about two and a half miles distant from the City Hall, Detroit. For some time past the city has been considerably agitated over the question of the purchase of the island, some of the prominent capitalists opposing the Bill on the subject before the State Legislature, then resisting the scheme in the Common Council, and finally before the Board of Estimates; but their efforts were in vain, the project being favored by the people and unanimously supported by the press. The island is now reached from Detroit by ferry communication, but a bridge to connect it with the city will shortly be built.

THE LATE PRINCE IMPERIAL OF FRANCE.

EARLY on the morning of the day after the disaster in which the Prince lost his life, General Marshall and his staff, accompanied by Lieutenant Molyneux, Surgeon-Major Scott and Lieutenant Bartle Frere, left camp with a strong party of lancers, dragoons, mounted Basutos and men of the Native Contingent to search for the body of the Prince. After riding about two hours and a half the body was found in a deep "donga," or gully, close to the river Ityotyozi, and not far from a deserted kraal. It had been completely stripped by the Zulus, the only thing left being the *reliquaire* which he wore around his neck. Near by lay also the bodies of the two men of Betterton's Horse, covered with assegai wounds. The corpse of the Prince was wrapped in a blanket and placed in an ambulance wagon drawn by six white horses, and conveyed to the camp, where it was received with military honors, and the burial service read over it by the Roman Catholic chaplain to the forces.

The obsequies of the late Prince on Saturday, July 12th, were carried out with the solemn pomp of a national, if not an Imperial ceremony. H. M. S. *Orontes* cast anchor at Spithead at 4 A. M. on Thursday, and when day broke it could be seen that the hull, masts, and funnels of the vessel had been painted a dull slate-color, the official mourning for ships-of-war. The rough coffin in which the remains had been deposited was placed in a temporary *chapelle ardente* on it upon the deck, and during the voyage Mass had been celebrated daily by Father Rooney, Roman Catholic naval chaplain. Soon after 7 A. M. H. M. S. *Enchantress*, accompanied by Admiral Fanshawe's yacht, the *Fire Queen*, and preceded by two steam launches and a large pinnace for the reception of the body, steamed out of Portsmouth Harbor to where the *Orontes* lay at anchor, and the transfer of the remains to the last-named vessel was at once made. The rough clamped coffin, denuded of its pall, the floral wreaths, etc., which had lain upon it during the voyage, was carried by a party of seamen to the ship's side and lowered into the pinnace by means of a sling from the yard. The pall and ornaments were then reverently replaced upon it, and the pinnace was towed by steam launches to the *Enchantress*, and hoisted on board in a similar manner, and borne to the deck pavilion, which had been draped with black and converted into a temporary *chapelle ardente*, where it was again covered with a splendid pall and surrounded by lighted candles. The *Enchantress* steamed away from Spithead about 9 A. M., and at two o'clock reached Woolwich Arsenal. The debarkation took place under the direction of the clergy, among whom were Dr. Danell, the Roman Catholic Bishop of Southwark, Monsignor Goddard, the Abbé Frechein, and the Abbé Laine. These formed in procession, and led the way to the guard-room in the arsenal, which had been draped as a *chapelle ardente*, and the coffin, borne by six blue-jackets, was carried within. The next incident was the visit of the Prince of Wales, the Dukes of Edinburgh and Connaught, the Duke of Cambridge, and the Crown Prince of Sweden and Norway, to the mortuary chapel, immediately after which the French custom of identifying the remains of the deceased was proceeded with, in order that his nearest kin present and the old friends of his family might be able to sign the *procès-verbal* to be subsequently drawn up.

The remains were placed in a new shell, and then brought out and placed upon a gun-carriage, drawn by eight black horses. The military pall, formed by the combination of the Union Jack and the French tricolor, was then placed over it, and to this the Duc de Bassano affixed the insignia of the Legion of Honor, and other of the Prince's decorations; while on the muzzle of the gun wreaths of laurel were hung.

When the body reached Camden House it was reverently placed in the hall, which had been appropriately draped and illuminated with tall candles, and here the Empress passed nearly the whole of Friday night beside the coffin of her only child.

Soon after ten o'clock on Saturday morning, the Queen and Princess Beatrice arrived from Windsor, and were conducted to the *chapelle ardente*, where Her Majesty deposited a wreath of gold laurel, and the Princess a cross of violet porcelain flowers. The Prince of Wales, and other members of the Royal family, with many other personages of distinction, and military and political notabilities, both British and foreign, began to assemble, and presently the coffin was borne out and placed on the gun-carriage. The united flags of England and France again served as a pall, and above this were placed the Prince's sword, belt and sabretache, while on a cushion were laid the Grand Cross, the plaque, and ribbon of the Legion of Honor. The pall-bearers were the Duke of Connaught, the Duke of Cambridge, the Crown Prince of Sweden and Norway, with M. Rouher on the left; the Duke of Edinburgh, Prince Leopold, and the Prince of Wales, with the Duke of Bassano, on the right. The Mass and burial service at Saint Mary's Church were performed by Dr. Danell, Roman Catholic Archbishop of Southwark, and Monsignor Goddard, and the impressive nature of the ceremony was heightened by the booming of the minute-guns outside.

After the services the remains were placed temporarily in the mortuary chapel attached to the church. This chapel was erected by the Empress Eugénie, at her private cost, for the temporary resting-place of her husband, the late Emperor Napoleon III. She laid the foundation-stone on June 7th, 1873, five months after his death, the Prince Imperial taking part in the ceremony. The architect was Mr. H. Clutton, and Messrs. Brass were the builders. The chapel is a small building, only 24 feet long, 12 feet wide, and 18 feet high in the interior, but the exterior has an elevation of 40 feet, surmounted by two imperial eagles and a cross. It communicates with the southwest corner of the adjacent church, and it has a private entrance for the sole use of the Empress. The building is in the Gothic style of architecture. The exterior walls are of Bath stone, those inside of Caen stone, with a vaulted ceiling and polished marble columns. On the tessellated pavement are the Imperial crown and the letter "N" and "E" alternately. The sarcophagus, which was a gift of Queen Victoria, is placed in the centre, and the altar at the west end, to accord with the position of the holy table of St. Mary's Church, which is similarly placed. The chapel is lighted by three windows at the side, and one large rose-window.

SCIENTIFIC INTELLIGENCE.

The Japanese Government intend to connect the Loochoo Islands with Japan by a submarine telegraph cable to Kagoshima.

The Patents Committee of the German Chemical Association say that neither a novel substance nor a novel application of a substance obtained chemically can be patented in Germany.

It is Stated that, in consequence of the auriferous indications in the Cooktown district, the Queensland Government will offer a reward of £5,000 to stimulate the discovery of a gold-field rich enough to pay the cost of working.

M. Robin, the anatomist, who is the only member of the Academy of Sciences who is also in the French Senate, has proposed a Bill for instituting an inquiry into the means of increasing the fish production of the French rivers.

Professor C. H. F. Peters, of Clinton, N. Y., announces the discovery by himself, on the 17th of July, 1879, of a minor planet, in twenty-one hours thirty-one minutes right accension, seventeen degrees forty-seven minutes south declination, with a daily motion of three minutes south.

News has Arrived at Lisbon that the Portuguese explorers, Capello and Ivens, who started with Major Pinto, were on the margin of the river Lucala on April 5th, studying the regions crossed by the river Cubango. They had explored the Cubango from its source to the eighth parallel.

The Monument of the late eminent botanist, Professor Alexander Braun, was unveiled on June 17th, at the Botanical Gardens of Berlin. The granite pedestal is by Professor Adler, the bust of the deceased, which is said to be an excellent likeness, by the well-known sculptor, Professor Schaper.

It is Stated that the Council of India, despairing of obtaining the repeatedly asked for assistance of the Imperial Government towards defraying the costs of the Indian Museum, have decided to break it up and to distribute the collections between the British and South Kensington Museums and Kew.

M. de Brazza, the explorer of the Ogowé, and gold medalist of the French Geographical Society, has been summoned to Rome, where he received from the Italian Geographical Society another gold medal for his exploring work. M. de Brazza is an Italian by birth, having become French by naturalization.

A Catastrophe similar to the one which was happily averted at Teplitz is now feared at the well-known watering-place of Baden, near Vienna. An official investigation committee has been formed, comprising several members of the Geologische Reichsanstalt, and has already begun examining the springs threatened with exhaustion.

Fifteen Years Ago there were only 2,000 miles of submarine telegraphic cable in existence, and the cables were of a very imperfect description. Now there are 66,000 miles of cable in operation, representing about $100,000,000, or about two-thirds of all land lines. Soon the laying of contemplated cables will greatly augment these totals of length and invested capital.

Sanitary Authorities in Ireland are beginning to put the law into operation, with the view of preventing the spread of infection caused by the custom of holding wakes. A man has been prosecuted by the Dublin Public Health Committee for holding a wake on the body of a child who died of smallpox. It was said that a person who attended the wake has since died of the same disease.

The Practice of "Weighing" Silks has begun to excite serious attention. Some idea of the extent to which silk adulteration is carried may be formed from recent statements by Justus Wolff. He says the public is made to pay the full price for a material containing only one-third of silk and two-thirds of substances which are not only of very little value in themselves, but injurious to the small quantity of genuine silk.

An Official Publication lately issued in France shows that the phylloxera is causing about a third less land to be planted with vines than was under that crop a few years ago. The department of the Gard (on the Mediterranean) has suffered most by the scourge this year. It has lost 96,000 out of 99,000 acres. French brewers who have made progress of late will now be looking up. Paris, especially, has for some time been "beery."

The Digging of a Canal from Cronstadt to St. Petersburg is making such progress that Admiral Pestitch, who directs the work, assures the Russian Government that in a year's time vessels of small size will be able to pass from the sea to the Neva, and that in the Summer of 1881 the canal, the depth of which is fixed at twenty feet, will have been excavated to the extent of sixteen feet, enabling a goodly-sized craft to reach the capital.

The Thirty-sixth Annual Congress of the British Archæological Association is to be begun at Great Yarmouth on August 13th, and continue until the 20th, the last three days, commencing on Monday, August 18th, being passed at Norwich. Lord Waveney will deliver an inaugural address at the Town Hall, Great Yarmouth, as president of the meeting, on Monday, August 11th, and the following days up to Saturday the 16th will be dedicated to a variety of interesting excursions.

For Several Months no work has been done on the test shaft of the proposed tunnel between England and France. When it was sunk about 130 feet, or half the intended distance, the water poured in in such volume that the pumping apparatus was unable to discharge it. Now a new machine has been constructed capable of emptying 600 gallons of water per minute, and the work of excavation will be pushed on vigorously. The shaft is nine feet in diameter, and is boarded with oak planks backed by concrete.

One of the First Effects of the climate of the Indian plains, from which probably no European is exempt, is diminution of the intensity with which visual images are impressed on the brain. Natives of India are quite insensible of the charms of landscape, and even Europeans scarcely ever, except in the most cursory way, allude to it. When a European after some years' absence revisits Europe he is exceedingly struck by what appears to him the extraordinary brilliancy of the tints, such a contrast does it present.

PERSONAL GOSSIP.

THE Bishop of London has $50,000 a year and the use of two houses.

THE late Khédive of Egypt starts this week for Rhodes, where he will reside.

EX-CONGRESSMAN N. P. BANKS, of Massachusetts, is announced to speak at a Connecticut temperance gathering.

IN re-naming a number of streets which have borne names associated with the Napoleonic dynasty, the Paris Municipal Council has resolved to name one in memory of President Lincoln.

MANY members of the Institute of France are without the decoration of the Legion of Honor, among them Littré, Ollivier, Waddington, Jules Favre, and the Dukes de Noailles and d'Audiffret-Pasquier.

IN recognition of the labors of Professor Gneist, of the Law Faculty in Berlin, President Hayes has transmitted to the professor, through Mr. Everett, a collection of volumes on the history of jurisprudence.

COLONEL RICHARD PRICE MORGAN is the oldest American civil engineer living. He is eighty-nine years old. He was paid $85 in 1841 for making the preliminary survey of the Hudson River Railroad, of which he became the chief engineer.

DEAN STANLEY intends to grant a site in Westminster Abbey for a memorial to the Prince Imperial. This site is in a recess in Henry VII.'s Chapel, near the spot where Cromwell's remains once lay—and where they ought again to lie if greatness be a passport to that honor.

QUEEN VICTORIA has sent to ex-Empress Eugénie a frame made of violets in amethysts for the last photograph of the late Prince Imperial. The garland is surmounted by an eagle, which holds in its talons a three-colored streamer, on which is written in golden letters the motto, "Not lost, but gone before."

GAMBETTA'S *fête* on the 14th of July seems to have caused quite a sensation in Paris, and is universally pronounced a brilliant success. It is said to have cost about $30,000, but the expense was borne by an "anonymous friend of the Republic," who desired that it should be done handsomely, regardless of expense.

THE decapitation of Senate subordinate officials still goes on at Washington. The superintendent of the Senate folding-room, Mr. I. D. Merchant, was last week notified to vacate his place, in order that it might be filled by Lycurgus Dalton, late State Librarian of Indiana. When the Senate reassembles there will not be a Republican on its roll of employés.

MARTHA LEWIS, a widow of Phœnix, near Syracuse, N. Y., gave five sons, all she had, to the defense of the Union in the late war. They were all killed in battle, and she was left without support, and has ever since been maintained by the community as an object of charity. She has now secured back pensions due her dead boys to the amount of $1,300, and is also guaranteed an annuity of $96.

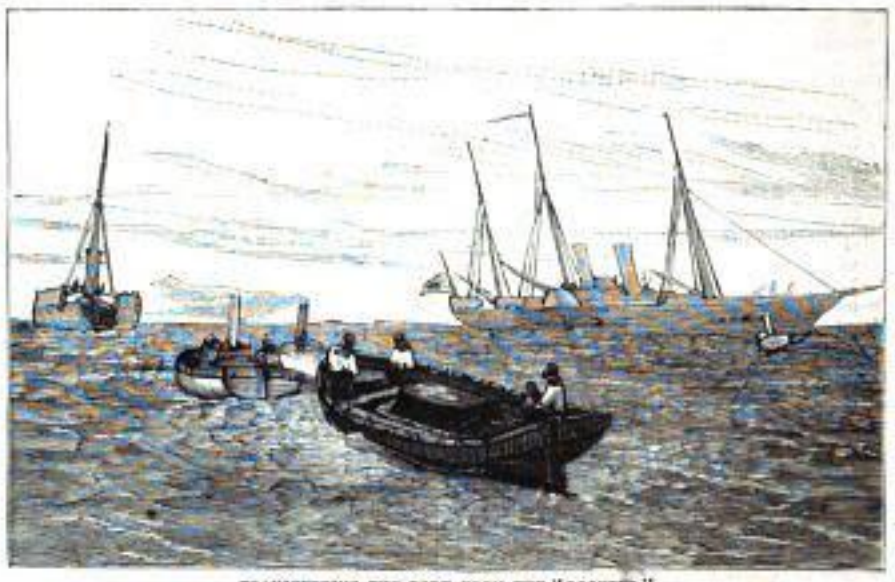
IN a recent interview, Ira D. Sankey, the singing evangelist, gave a glowing account of his work in Switzerland—where, he said, his songs had been translated and were sung in French and German—and his meetings at York, Darlington, Newcastle and other English towns. On the Sunday before his departure he sang in the evening at Mr. Spurgeon's Tabernacle, and the enthusiasm was unbounded.

A LETTER was recently received by Mr. Horatio J. Sprague, the United States Consul at Gibraltar, demanding that $3,000 be deposited in a certain spot, on pain of the death of himself and his family in the event of his refusal. The Spanish authorities investigated the matter and arrested fourteen persons on suspicion. Mr. Sprague has since received a letter containing still more audacious threats.

AMONG recent deaths are those of Baron von Gerolt, formerly Prussian Minister to the United States, at Bonn, July 28th, aged 80; the Duke Frederick William Nicholas, only brother of the Grand Duke of Mecklenburg-Schwerin, at Heidelberg, July 28th, aged 52; the Hon. Bland Ballard, United States District Judge for Kentucky, at Louisville, July 29th; Col. John V. D. Du Bois, United States Army, aged 46; Robert A. Sands, the oldest druggist in New York, aged 74; and Karl Gottlieb Peschel, distinguished German painter, at Dresden, July 29th, aged 81.

M. LAFFEZ, the French notary and agent of the Imperial family, has been instructed to dispose by sale or auction of the Empress Eugénie's château in Switzerland and her Spanish estate, and to turn every possession into cash. When her affairs are settled, she will retire for three months to a convent at Bourges. Thence she will pay a last visit to her mother, and, after a few months' stay at her home, she will return to the convent to remain there until her death. Although she has recovered calm, and even appetite, Baron Corvisart says her life has been immensely shortened by the death of her son, whom, he thinks, she will not long survive.

IT is related that during a call made on the Sultan by Mrs. Layard, wife of the British Minister, the Sultan invited her to ride with him. Assent was given, and in a few minutes a light basket carriage, drawn by two dashing bays, stopped in front of the palace. The Sultan gave Lady Layard his arm, opened her parasol himself, and assisted her down the steps, shading her the while. Not only this, but during the entire course of a half hour's ride through the palace grounds, notwithstanding her remonstrances and assertions that his Majesty would fatigue himself, he stoutly held the parasol over her head while she handled the ribbons—an act of courtesy to a woman, and a Christian at that, unprecedented in the annals of the Ottoman Empire.



THE Sheik El-Bakri is often put forward as the spiritual head of Egypt. The man is in reality the chief of the dancing, snake-eating and howling dervishes, and is a sort of a cross between a conjurer and a dissenting clergyman. He has no influence, and is particularly objectionable to Selim, or, as they are termed in Cairo, the students of the El Azhar. The real head of the Mohammedans in Egypt is the Sheik El Islam, whose name has never been mentioned in all the late European troubles. The present incumbent ran away rather than sign a manifesto in favor of Ismail. In taking this step he was, perhaps, wise, for his predecessor quarreled with Ismail one evening at nine o'clock, and, curiously enough, died the next morning at seven o'clock of a stomach-ache.

AT a recent meeting of the National Lincoln Monument Association, held at Springfield, Ill., July 31st, a letter was read from Larkin G. Meade, stating that he had the model of the third, or artillery group (for the monument) complete and ready for casting, and had commenced work on the fourth and last, or cavalry group, but awaited the order of the association before proceeding further. A resolution was adopted instructing him to proceed with the making of the last group, and have both cast as soon as possible. A communication was presented from Robert T. Lincoln, son of President Lincoln, proposing to convey to the association an interest in the old Lincoln homestead, provided it be restored to the condition left by Mr. Lincoln and preserved as a memorial.

FRANCE.—M. LOUIS AUGUSTE BLANQUI.

M. LOUIS BLANQUI.

THE election of M. Louis Auguste Blanqui as a member of the French Chamber of Deputies, on April 20th last, to represent Bordeaux, caused considerable excitement, and revived the discussion as to the legality of Blanqui's imprisonment for complicity in the insurrection of October 31st, 1870. It will be remembered that on that day Blanqui and his friends took General Trochu and other members of the Provisional Government prisoners, and founded a still more provisional government at the Hotel de Ville. Late in the afternoon M. Jules Ferry, who was at that time Mayor of Paris, arrived with a large force, rescued his colleagues, who at the moment of his arrival were arranging the terms of their release with Blanqui and his associates. The Blanquists were giving their liberty to the Trochuists just as M. Ferry arrived; and it was in his hearing, if not by himself, that the promise was made that no one should be molested on account of the events of the day.

Blanqui was born at Nice in 1805, and made his first appearance in public in 1827, when he was wounded in an affray in the Rue St. Denis. In 1830 he took up arms against Charles X., and since that date has been constantly conspiring against every succeeding government, and the consequence has been that he has spent thirty-five years of his life in the prisons of the Préfecture, the Conciergerie, la Force, Sainte-Pélagie, Mazas, Versailles, Fontevrault, Mont Saint-Michel, Tours, Blois, Doullens, Belle Isle, Lamalgue, Cahors, the Fort du Taureau and Clairvaux, at which latter place he was imprisoned at the time of his election.

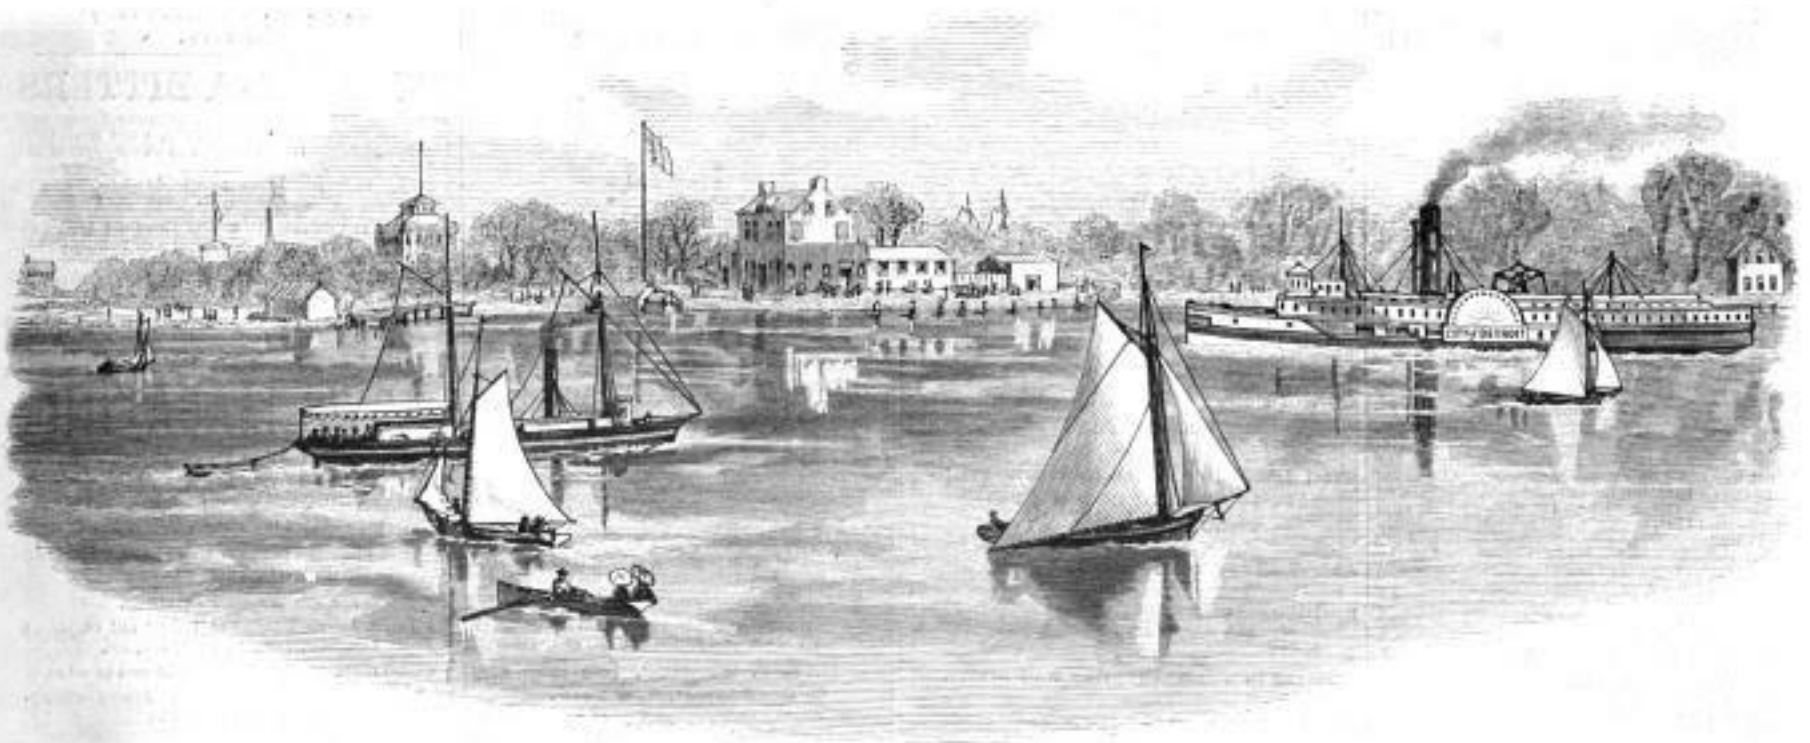
Soon after his election M. Blanqui received pardon with many other political offenders, and, proceeding at once to Bordeaux, he addressed to the electors a profession of his faith, which he concluded with those stirring and characteristically independent words: "The Government, with its monarchical instincts, has thrown over my head the black veil of civic degradation, of social disgrace, etc. I only accept these distinctions conditionally, until you pronounce the verdict at the next election. Your decisions alone are sovereign for me. I only reserve to myself, as an act of personal will, my profound gratitude for the liberating hand which has drawn me living from the tomb."

CALIFORNIA.—MRS. MARY J. YOUNG, OF SACRAMENTO.

CALIFORNIA'S FIRST FEMALE LAWYER.

WE give on this page the portrait of Mrs. Mary Josephine Young, the first and only female lawyer admitted to practice in the Supreme Court of California. Mrs. Young is the daughter of Rev. H. Hamilton, one of the earliest graduates of Michigan University, and was born in Santa Clara County, California, December 6th, 1853. She was educated at the State Normal School, San Francisco, and was engaged for a time in schoolteaching in San Joaquin County. Subsequently she entered Perry's Seminary at Sacramento, whence she graduated with honors. In February, 1875, she was married to John Nelles Young. Her love of study led her to take up Blackstone, which was followed by reading Kent; and the love of law—as well as of *one* lawyer—induced her to continue her reading with a view to becoming a professional lawyer. Her husband was in full sympathy with his studious and ambitious wife, and gave her every aid and encouragement possible. She was admitted to the Bar of the Supreme Court of California, May 12th, 1879. She passed a very rigid examination, standing one of the first out of a class of ten applicants, with a large margin to spare—so much so that Chief Justice Wallace complimented her by filling in her entire certificate with his own hand—a thing he never did before. On June 15th last she entered into partnership with her husband, the firm name being Young & Young. A correspondent says of Mrs. Young: "She is a *petite* brunette, and one would never for a moment suspect that that eminently feminine brain contained such a stock of legal lore. The lady impresses one as being of a studious nature, and of that determined disposition which is not daunted by the herculean proportions of an undertaking. In fact, she is a born student. She would never trust to her 'woman wit' or to feminine intuition to help her out, but relies wholly upon her natural devotion to study for her complete mastery of law learning. Her home is a depository of beautiful works of art and ingenuity from her skillful and active hands. Oil paintings of no mean pretensions, the product of her artistic genius, adorn the walls, while little articles of fancy work meet the eye from shelf and bracket on every side. How or when the time was found for such work is a mystery to all but this industrious little human bee, who sips honey from every experience in life, if her pleasant, happy face is an index of her heart."

Mrs. Young's husband has been a resident of California since May, 1869. He graduated from the Law Department of Michigan University in March of that year, and, removing to the Golden State, entered at once upon the practice of his profession. He has been admitted to several State Supreme Courts, and also to the Supreme Court of the United States, October 13, 1876.



GEORGIA.—THE NEW SHORTER COLLEGE, AT ROME.—FROM A PHOTOGRAPH BY JUDD.

THE SHORTER COLLEGE, ROME, GA.

THE Shorter College at Rome, Ga., built by Colonel Shorter of that city, at a cost of nearly $100,000, and presented by him to the Baptist Church, is second to no other similar institution in the Southern States in the educational facilities it affords to students. Rome itself is, perhaps, one of the best locations in the South for an institution of learning. It is surrounded by rich farming lands; convenient to inexhaustible beds of minerals, and accessible from every direction by railroads and navigable rivers. Its healthfulness as well as its social and religious advantages are unsurpassed.

The college stands upon an eminence commanding a view of the city, the suburban villages, and three rivers; while in every direction, for many miles, are seen some of the most beautiful landscapes in the Union. The grounds are nicely terraced, and will soon be supplied with a fountain. The college edifice crowns the top of the hill. This structure contains the memorial chapel and thirteen rooms for college purposes. The art studios are furnished with busts and studies for drawing and painting. The recitation-rooms are furnished with

MICHIGAN.—BELLE ISLE, THE NEW PARK IN THE DETROIT RIVER, OPPOSITE DETROIT.—FROM A SKETCH BY JOHN DARE.—SEE PAGE 402.

Digitized by Google

new desks, seats, etc., of the latest and most approved styles, while around the walls are hung maps and charts to illustrate natural history, geology, physiology, mineralogy, etc. The chapel has been elaborately finished at large expense. The walls and ceiling are adorned with paintings in fresco, and the windows are of stained glass. The memorial window, a rare specimen of art, is in memory of Mrs. Martha B. Shorter; on it are eight paintings from Bible subjects, illustrating the life and reward of a good woman.

The boarding-house, 114x50 feet, four stories high, contains thirty-six rooms. The chambers, 18x18, are neatly furnished and thoroughly warmed and ventilated. On each floor is a hall the length of the building, also two cross passages and two flights of stairs. In front are two towers and a veranda, and in the rear a porch the length of the house. The building is supplied with water-closets, bath-rooms, water from the city works, a laundry, a range, and everything which comfort and convenience demand. A sewer, more than 1,000 feet long, conveys the refuse from the laundry, kitchen, etc., to the Etawah River.

These elegant brick and stone edifices are supplied with gas and steam pipes, which can be used for lighting and heating every apartment. The perfect system of drainage and ventilation removes the possibility of any local cause for sickness.

Upon the corner-stone are the following words, which tell the generosity of a noble soul: "A gift to our daughters, from Alfred Shorter, A. D. 1877." Rev. R. D. Mallary is the president of the college, and is aided by an able faculty. The influence of the institution upon the educational development of the South must be very considerable.

FUN.

STONES of the times—assigns.

EATING is a chair-at-table act.

ARE book-worms good for bait?

THE board of education—the blackboard.

A MAN cares little for his wrongs when getting his funeral rites.

NERO, Pompey and Cæsar are common names for dogs, but wouldn't Agrippa be more appropriate?

HALF WAY UP THE HILL. *Grandpapa.*—"By Georgie—I must stop and blow a bit, Tommy." *Tommy.*—"All right, grandpapa. I've got a stone to put under your heel."

A CLERGYMAN won the canoe race at Lake George the other day. The rest of the cloth will please observe that it was practice, not preaching, that enabled him to come off victor

JULIA and Pauline, figurantes at a theatre, have a little tiff. "I hate you so, you mean thing," says Julia, "that I wish you hadn't a brooch to your back!" "And I hate you so," retorts Pauline, "that if you were drowning before my eyes I wouldn't lift my little finger to give you a cup of cold water—there!"

IN the kitchen: "Rosalie, this going out incessantly I can not have; next Sunday you must stay at home all day." "But, madam, I have promised my aunt to spend the afternoon with her." Baby, interceding—"*De* let her go, mamma: her aunt has been made a sergeant, and has got a new coat with stripes on it, and a great long sword."

THERE'S bound to be trouble in this old country yet. They are Taunton Massachusetts and Macon Georgia mad.—*Burlington Hawkeye.* And South Carolina is Aiken for another whipping.—*Philadelphia Bulletin.* And Wisconsin is Madison old hen, and even little Rhode Island is beginning to Bristol up.—*Boston Post.* And Maine says she will Bangor hair anyway; and let Ohio Conover the subject, fearing no harm because Illinois talks Piatt as she sees North Carolina Raleigh round the flag.—*Auburn Advertiser.*

"WHY, Harold Edgar, where have you been?" said a fond mother to her five-year-old offspring, as he appeared late the other evening after having been gone since breakfast-time, having in the meantime acquired a scratch down his nose, a black eye, a thick coating of dust, and a dead hen tied to a string, at an expenditure of one shoe, three-quarters of his hat, and the majority of the seat of his trowserioons. "You'd better ask where haven't I been," said the prodigal, making a break for the fatted tea-table.

"NOT FOR JOSEPH."—*Wayfarer.*—"Can I get through this way to the Agricultural Show, my man?" *Farm-servant.*—"Oh'ees—nicely, sir; straight on till yer comes ter the medder where Stile's bull's kep what killed a man last week; go across there through the plantation, on'y take keer of the mantraps an' spring guns; then yer comes to a field where they are a burnin' rubber and sifton' cinders; t'other side yer'll find a rickyard, on'y mind the blood'ound wot's kep theer, 'cos un bites; then yer'll see yer way quite easy."

TWO gentlemen are talking of one of their friends, who is a most incredible miser, though quite rich. "I must tell you a little circumstance about X. He had recommended to me a poor family worthy of assistance. I sent the money to those honest and suffering people, and my wife made up a budget of old clothes and sent to them. Judge of my astonishment when I met X., the other day, and perceived that he had on one of my old coats." "Had he bought it of the poor people?" "No; he had given me the address of his own family!"

QUININE IS FREE.

THERE'S a sound on the breeze—
A pæan of glee,
From the distant Maine trees
To the swamps of Maumee.

And the cheer gathers force
From the plains of Jersee,
And the Hoosiers, all hoarse,
Echo, "Quinine is free!"

"Avast fever and chill,
Off ague with thee;
We've shaken our fill,"
They're yelling in glee.

In Egypt, Illinoise,
And by the Maumee,
They're whooping like boys,
"Huzza! quinine is free!"

A VERY prepossessing young lady, canvassing for a popular book, stepped into the office of a broker, and, finding him apparently at leisure, asked him to look at her book. The gentleman informed her that it would be only a waste of time, as he could not purchase it. "Oh, never mind that," ejaculated the vivacious young woman; "it won't cost anything to look at it, even if you don't buy! I should like to have you read some portions of it, and see what it is." The accommodating broker took the volume, and, glancing at the title-page, commenced a perusal of the Introduction. This finished, he began at the first chapter, and read carefully and leisurely along. It was about nine o'clock when he commenced, and an hour passed silently away, when the book-agent began to show signs of nervousness, which were apparently unnoticed by the broker, for he never took his eyes from the volume, but read on steadily. Eleven o'clock came, and the lady began to walk smartly around the room, glancing occasionally out of the windows. At noon the broker was still reading, and the agent wore a decidedly troubled countenance. A few moments before one o'clock the broker laid the book down, leisurely donned his overcoat and hat, and remarked, "That is a very good book. I am sorry I cannot read more of it; but I am obliged to go to luncheon. If you call this afternoon, I will continue reading it."

AN IMPORTANT GEOLOGICAL FACT.

GEOLOGY has shown us that Nature accomplishes her greatest revolutions in the earth's surface conformation *slowly*. Every year the river makes its channel deeper, the glacier wears a deeper gorge in the Alpine rock, and the ocean tide deposits the sand it has crumbled from the rocks upon which it breaks. We note the earthquake and the devastating hurricane; but these changes are so gradual that man seldom observes them until the channel has become overhanging cliffs, or a mountain has disappeared before the icy stream, or the ocean has given us a Florida. Thus it is in disease. Our attention is attracted by acute diseases, as fevers, cholera, etc., while chronic diseases (often the most dangerous in result), being slow in their development, are seldom noticed until they have made an almost ineffaceable impression upon the system. Persons believing themselves comparatively healthful are oftimes the victims of these diseases, and only become aware of their presence when relief is almost impossible. Diseases of the liver and stomach are the commonest of these chronic affections. Dr. Pierce's Golden Medical Discovery and Pleasant Purgative Pellets are never-failing remedies for these diseases. They produce a healthful secretion of the bile, prevent indigestion by regulating the bowels, and impart a vigorous tone to the whole system.

NEW YORK AND THE ST. NICHOLAS.

ONE of the many reasons why the Summer resorts and watering-places surrounding New York enjoy such a universal popularity throughout the Union may be easily found in their proximity to the great metropolis, and in the possibility of exchanging, at shortest notice, the pleasures, excitements and varieties of country life, with the real comforts which the hotels of New York alone can offer. Foremost amongst these hotels stands, as it has for years past, the ST. NICHOLAS. Including all the advantages and improvements of other hotels, it has long been acknowledged as the model for all that appertains to the requirements of travelers. Many hotels of modern construction have copied its prominent features, none have excelled. Mr. Samuel Hawk, now abroad, prior to his loss of health the senior proprietor of the ST. NICHOLAS, gained his popularity and well-deserved success there; and it was through him and his experience thus acquired that the Windsor came into prominent notice. Those who, returning from the country, wish to find airy rooms, the best of beds, excellent *cuisine*, careful attention to all their wants, and last, but not least, easy access to all parts of the city, will be more than satisfied with the ST. NICHOLAS.—*Summer Season, July 12.*

REMEMBER that a little Hop Bitters saves big doctor-bills, and cures when all else fails.

IT is generally admitted that there cannot be anything more exquisitely delicate for perfuming the handkerchief than MURRAY & LANMAN'S FLORIDA WATER, but its great and distinctive property is its adaptability to the use of the bath. It is the only perfume that we know of *especially and particularly* suited to use in this way; the power it has of imparting to the waters of the bath great soothing, refreshing and invigorating effects, is peculiar to itself.

BURNETT'S COCOAINE received the highest award at the Centennial Exhibition. It is filled in elegant bottles, and is for sale by all first-class grocers and druggists.

CHICAGO, June 13th, 1877.

Messrs. JOSEPH BURNETT & Co., Boston:

Gentlemen—Our sales in your Cologne are steadily increasing. Its superior quality has won for it many admirers who, with us, pronounce it, for real freshness and delicacy, equal if not superior to any foreign Cologne. ROCKWOOD BROS.,
102 North Clark Street.

DYSPEPSIA, Biliousness, Nervousness and Miserableness, all cured with Hop Bitters.

HALFORD'S LEICESTERSHIRE TABLE SAUCE is capital for dyspeptics; gives tone to the stomach. Physicians recommend it.

TARRANT'S SELTZER APERIENT

There are probably a majority of the human race suffering from kidney complaints. They show themselves in almost protean shapes, but always to the injury of the patient. They cause indescribable agony. The experience of thirty years shows that the best remedy for this class of diseases is

Tarrant's Seltzer Aperient.

Its properties are diuretic, which are specially adapted for such cures.

VAGUE AND THEORETICAL POLITICS.

A MODERN writer on the philosophy of jurisprudence has remarked on the large terms and vague principles which are apt to be bandied to and fro as missiles in social or political contention, and which, he says, are all the more effective for a season because they seem to put criticism at defiance. Such phrases as the "Divine Right of Kings," the "Consent of the People," the "Social Contract," the "Rights of Man," are cited as specimens of the sonorous watchwords which have played an important part in the political history of the last two or three hundred years; and a similar collection of such partisan slogans may be gathered from the political dialect of the present day, rife as it is with hoarse clamors for "Constitutional Rights," for the "Rights of Nationalities," for the "Rights of Property," for the "Rights of Labor," etc., etc.

Whatever may be the moral or political significance of these high-sounding declarations, whether they proceed from aspirations for some unattainable good, from a helpless clinging to the past or a prophetic foresight of the future, it is plain that they have no place in the domain of practical politics. So fully was Mr. Webster convinced of this, that he always declined to take any share in the discussion of theoretical doctrines concerning the abstract relations of the States and of the General Government in our complex political system. "I can make no diagram," he said, "of the partition of national character between the State and the General Government. I cannot map it out and say, so far is national and so far is municipal; and here is the exact line where the one begins and the other ends." Instead of drawing such imaginary lines in the air, he always wanted a practical question as the starting-point of his logical processes in reasoning on the relations of the States to the Union; but when such a practical question was presented, whether by the assumptions of South Carolina in 1832 or by the political perils of 1850, he could reason with a cogency and power which carried demonstration to the popular mind and the national heart.

In casting a glance over the political field in the United States at the present time, the critical observer cannot fail to be struck with the vagueness and indefiniteness of the political cries with which it is sought to rally the adherents of party around some common standard. The Republican fugleman would fain persuade the people that the rightful supremacy of the National Government over the lately insurgent States is again put in perilous issue by the "rebellious" spirit of the "Confederate Brigadiers" in Congress. The Democratic tribune meets the cry of "Revolution" with the counter-cry of "Centralization," and ascribes to the Republican leaders a deliberate purpose to trample on the legitimate rights of the States, and to maintain their hold on the Executive Government of the country by military coercion and by interference with the freedom of elections. Unable to point to any overt act of the National Democracy which would justify them in formulating a charge of "Revolution" against the dominant party in Congress, the Republican leaders are fluent in the prediction of dark and covert designs hidden for the present in the bosoms of the conspirators, but designs which, we are told, would come at once to surprise and destroy the nation if the Democrats should be trusted with complete control of the Government. For instance, Governor Dennison of Ohio has just been curdling the blood of his hearers in that State with a prophesy to the effect that the Democrats, if allowed to carry the next Presidential election and to retain their present ascendency in Congress, will "wipe out" all the "war amendments" to the Constitution, by swamping the Supreme Court with new Judges pledged to declare those amendments illegally incorporated in our national charter. Democratic agitators, on the other hand, for the want of sufficient arguments with which to evince their capacity in practical statesmanship, are vehement in denouncing the past transgressions and future enormities of the Republican leaders.

Each party seeks to establish its claim on the popular confidence by blackening the character of its rival. Neither seems competent to state any clearly-defined set of principles on the strength of which to ask a popular verdict in its favor. Floundering in a sea of contradictions on the currency question, the Democrats are willing to conceal their embarrassment by raising vague and factitious issues in the field of disputatious politics. Pausing half way in the currency battle precipitated on the country by Greenbackers and Labor Reformers and Silver fanatics, the Republican leaders are not prepared, as yet, to take the high vantage-ground on which alone they can defend the *future* permanency of that gold resumption on which their party prides itself. The Democrats are scarcely agreed upon any subject except that they want a "change" in the Executive Administration of the Government while retaining their supremacy in Congress. The Republicans are more clear in their doctrine that the "Solid South" is a standing menace to the public liberty than in their views on any practical question of civil or economical politics. The main reason why the Greenbackers are able to make such a strong impression on the minds of their followers is the fact that they seem to offer something positive to their votaries. They have a definite plan which they publish as a panacea for all our financial infirmities, and this plan, absurd as it is, finds a readier access to the popular ear because the people see plainly enough that the Republican and Democratic magicians are seeking to frighten them with shadows. And the people obstinately refuse to start and stare at the spectres.

If anybody wishes to know the meaning of a political campaign carried on by a thunderous cannonade of partisan rhetoric, without clearly defined and substantial issues of practical politics, we commend him to the pages of Professor Von Holst's recent volume on the political history of the United States. Commenting on the Log Cabin and Hard Cider campaign of 1840, he cites the fact that the success of the Whigs in that "struggle for supremacy for supremacy's sake" was the beginning of their end as a political organization. The absence of great political principles and of definite political ideas is always the mark of dissolution or death in party confederation; for the party which is "wanting in questions deserving of a warm, tense and devoted contention" is a party which has lost the reason of its being, even if it has not wholly forfeited its traditional hold on the popular mind.

AGRICULTURAL DISTRESS IN ENGLAND.

SINCE the repeal of the Corn Laws in 1846 no such cry of distress has been heard in England as that which is now raised by the farming classes. It was argued by the Protectionists of that day that the abolition of the duties on grain would ruin the farmers and the entire landed interest. The prediction was not fulfilled. On the contrary, since 1846 down to within the last three or four years, the farmers of England enjoyed a prosperity unexampled in their previous history. Distress, however, has at last come to the farmer, and his condition has forced itself on the attention of the country. It is now no longer doubtful that at the next general election, which cannot be much longer deferred, Lord Beaconsfield and the Tory party will find in the existing agricultural distress a large amount of convenient political capital. The farmers have already formed an alliance among themselves; and Her Majesty has been induced to appoint a Royal Commission to inquire into the causes of the depression, whether they are of a temporary or of a permanent character, and how far they are the result of or removable by legislation.

The commission will, no doubt, enter thoroughly into the work assigned them; and with their report before us, it will be more easy than now to speak definitely as to the causes to which the depression is attributable. In the meantime there is no mystery about the disease itself. It is simple, visible fact. Farming has ceased to be profitable in the British Isles. Rents are high, and for the last three or four years the yield has been small and the prices have been low. Farming, in truth, has not only ceased to be profitable, it has become a ruinous business. It appears from an examination of trustworthy statistics that during the last three years the agricultural produce of the country, even on the best managed farms where no money is spared on cultivation, has declined not less than twenty-five per cent. This is really an alarming state of things. It is now morally certain that the present year will present more alarming results than any of its predecessors. The high rents are still demanded; the prices are still low, and the crops have been ruined by exceptionally bad weather. It is not wonderful that, in such circumstances, the farmers should be turning their eyes to the Government for relief. It is as little wonderful that large numbers of them should be leaving the country and seeking new homes in far Australia, in the United States and in Canada.

The situation would be less alarming for our British cousins if there was any good reason for believing that the evil complained of was only temporary. The causes, it is true, are not all of a permanent character. The unfavorable weather has been a serious drawback; but the farmer has reason to hope that the weather will not always be against him. The general trade of the three kingdoms is dull; and, as a natural consequence, the middle classes are economizing, while the working classes are without money. The general trade, it is not unreasonable to hope, will revive; and, with a more liberal circulation of money, the farmer may count on better prices for his produce. It is undeniable, however, that some of the causes of the depression are of an enduring kind. The low prices are directly traceable to two causes—the presence of American produce in the market, and the dullness which prevails among the manufacturing classes. We are supplying the British consumer with meat, with butter and cheese, with wheat and flour, at a lower figure than the British farmer can supply them. We no longer buy our manufactured goods from England; we manufacture for ourselves, and, what is more, we compete successfully with the British manufacturer in foreign markets. Other nations besides ourselves have become manufacturers, and have thus become less dependent upon Great Britain. It is this which accounts for the dullness of British trade. These two causes, it will be found, will not be easily removed. Great Britain is likely to become less and less the workshop of the world. Relief may be sought in legislation and in an attempt to restore protection. It is doubtful, however, whether protection or reciprocity would afford the needed relief. It is even more doubtful whether it is possible for the British people to go back on the principles of free trade. More effective relief will be found for the farmer in the modification of the land laws. Leases must take the place of the tenant-at-will system; compensation must be given the farmer for improvements made, and the rents must be so reduced as to enable the home grower to compete with his foreign rival. Sooner or later, by peaceful legislation or by violence, the land laws of England must be radically changed.

THE INTER-OCEANIC CANAL.

THE statement that Secretary Evarts is in correspondence with the Nicaraguan Government on the subject of the proposed inter-oceanic canal appears to be without foundation in fact. There appears to be no doubt, however, that both the President and the Secretary favor the construction of the canal by the Nicaraguan Government under certain reciprocal arrangements with the United States as to neutrality. It is stated also that Secretary Thompson has directed that close surveillance of affairs along the coast of the Central American States shall be maintained by the Gulf Squadron, and it is believed that any serious attempt to interfere with American interests will be promptly met. A Washington dispatch says:

"The Secretary states that there would be no objection to foreign capital aiding in the building of the canal, but the United States is the only power which could adequately, either by moral or physical force, preserve its neutrality; that were the French in possession, which this Government, however, would never assent to, the first conflict with another European power would find its possession and control a question of power to be disposed of through the arbitration of fleets and armies; that the United States, taking no part in the struggles of European governments, would be in a position to treat the commerce of all governments with fairness and equality.

"The initiative taken by the Nicaraguan Government in the recent reopening of this question is regarded as a most favorable circumstance. During the administration of President Grant a treaty was drawn up and ready for signature, but owing to subsequent differences in matters of detail was never consummated. Then the Nicaraguan Government acted on the supposition that the United States Government was aiming to take advantage of the facilities offered; now the two countries seem to be in perfect accord as to the mutual advantages which the building of the canal would be to themselves and the commercial world at large."

In connection with this subject, it may be stated that the Nicaraguan Government is engaged in completing improvements on the San Juan and the San Juan del Norte rivers on the direct route from the Caribbean Sea to Lake Nicaragua, with a view of opening direct navigation with the latter, which must prove of the highest importance both in a national and international aspect. The work is to be prosecuted under direction of Chief Engineer A. G. Menocal, of the United States Navy, and its completion, besides greatly facilitating the project of an inter oceanic canal via Nicaragua, will rapidly extend and enlarge an already increasing commerce between that country and New York, and open up an undeveloped region of country that promises to add enormously to the products and wealth of the countries having access to it. The *Herald* says of the project:

"The improvement of the Machuca Rapids is now nearly completed, and the Nicaraguan Government now proposes to build a canal with the necessary lockage around the Castillo Rapids, which will open up an uninterrupted line of communication from the sea to Lake Nicaragua. There will then remain but a short distance to be cut, said to be less than thirteen miles between the western boundary of Lake Nicaragua and the Pacific Ocean. This portion of the route has been already carefully surveyed for the inter-oceanic canal. The advanced stage of the work along the San Juan River and the energy which the Nicaraguan Government has determined to put forth in completing the route between the lake and the sea is an assurance to our Government that if an inter-oceanic canal is to be constructed it will be by this route, in which the United States is as largely interested as the Government of Nicaragua."

SUMMERING AT SARATOGA.

SARATOGA is a sanitarium for invalids, a metropolis of midsummer fashion, a rendezvous for sportsmen, a paradise for loungers, a vanity fair for money-spenders, a central market for match-making mammas, a trysting-place for politicians, a perpetual banqueting-hall for *bon vivants*, a nightly *fête* for the coquetry of the dance, and a kingdom where money and fashion are, with gentle and tolerant away, king and queen. Why is it that health and pleasure resort to those spots, where, of all others, the sick hie them for hygienic purposes? Why should the watering-place, with its health-giving springs, even though it be devoid of any special external or natural beauty, become Fashion's favorite Summer retreat? It would be hard to say; but it has always been so. Bath and Baden-Baden, Schwalbach and Aix-la-Chapelle, Tunbridge and Vichy, have, time out of mind, offered at once healing beverages to the afflicted and a myraid delights to the robust, world-loving, excitement-craving pleasure-seeker.

And among all the watering-places in the world, Saratoga is unique in the variety and the brilliancy of its attractions. The Old World cannot boast a single Summer resort the first impression of which is so striking, and where the first impression lasts and is heightened by familiarity. The street of palaces in Genoa is tame and musty compared with the street of monster hotels at Saratoga. The Paris Boulevard is fairly rivaled by that liveliest of thoroughfares; when at night the lamps are lit, and the gayly-dressed crowds of holiday-makers is abroad, only the *cafés* are needed to make the resemblance almost perfect. In costume, in elegance, in beauty, the balls of St. James's and the Winter Palace, of Potsdam and the Elysée, can scarcely claim precedence over the hops of Congress Hall and the Grand Union. The homage to the thoroughbred at Saratoga almost confirms the wisdom of that Roman Emperor who made his favorite steed a consul; the races are little daily Derbys, with their infinite variety of vehicles, their plentiful sprinkling of elegantly dressed ladies, the momentary excitement of the "run," the hasty settling of accounts, and the rattling return to town.

A great charm of Saratoga is its democracy. The *dame de société* can be as fashionable as she pleases, flaunt her huge diamonds, exhibit her most elaborate *coiffures*, and shine in her four costumes a day; she need not fear a lack of admirers, and if she is really *bon ton*, she may hold the same empire at the Summer watering-place as she held in the Winter drawing-room. But she does not and cannot monopolize Saratoga. It is tacitly understood that there is absolute social liberty, and that the quiet denizen of the boarding-house is to be accorded the same respect, the same privileges, as those given to the belle of the big hotel. It is *en règle* for ladies to walk about day and night bareheaded, and for men to go to the hops and look on, if they choose, in tweed suits. A great city magnate does not surprise any one when he is seen riding to the Geyser in a ten cent 'bus; the heiress, the servant-maid, the railroad king, the Chinaman, the Senator, the Jew, the beggar, and the bootblack stand side by side at the pavilion of the spring, and drink, one after the other, out of the same glasses, the bubbling beverage as it wells up from the common mother of all, the earth.

Saratoga is supreme among Summer resorts in the art of entertainment. The sojourner is not forced, as at most seaside or mountain places, to choose between extravagance and shabbiness. He is not confined to making his choice between a room in the fifth story of a big hotel at five dollars a day, and a hot attic, barely furnished, in a spasmodically-built cottage, at six dollars a week. He can choose just what he wants in the matter of accommodation—just where and just at what figure he wants it. The endless hotel piazzas are open to him wherever he may lay his head and line his stomach; if he prefers the day and night-long bustle, let him live in the caravanserai; if he prefers quiet at least ten hours out of the twenty-four, there are scores of elm-shaded streets with cozy verandaed boarding-houses of a homelike air, where he can select at least his dormitory and take his *siesta* and his night's rest

Digitized by Google

in peace. Wherever he may be, he is lulled to slumber by the mingled music of half a dozen bands, and awakes and performs his ablutions to the familiar strains of Strauss and Lecocq. Saratoga insists on making its guests forget their urban cares. It is an irresistible temptress to idlers. The naturally lazy man sinks easily into the lassitude that the place provokes: the nervous man catches the gentle power of indolence and wonders where his nerves are.

The politicians are wisely fond of consorting and hobnobbing at Saratoga. There are certain surroundings conducive to calm discussion and good-natured controversy. You can scarcely fancy a very bitter political squabble amid shades so grateful and influences so cheery as those of Saratoga. A good dinner, an after-dinner lounge on a cool piazza, are admirable preparations to graceful concessions, timely compromises, and votes by acclamation. The Republican State Committee did a shrewd thing when they designated Saratoga as the spot where the personal preferences of the party should be harmonized; the benign influences of the place may suffice to bring about a condition of party concord which a meeting in a hot and dusty city might put in peril.

EVENTS ABROAD.

LORD BEACONSFIELD made a speech at the Lord Mayor's banquet in London, August 6th, which might have been prepared by the floor-sweeper of St. Stephen's. He felicitated himself upon the result of the war in Afghanistan, and as to that in Zululand, he "awaited events," coolly ignoring all the deplorable past. His allusion to the Treaty of Berlin, however craftily worded, could not disprove that Turkey, despite the menace of England, has done and is doing exactly what she pleases, and that her internal reforms, if such exist, are owing to local and not imperial influences. It was truly Disraelian to say, and it was delivered in a manner worthy of Tancred: "This treaty has taken its place among the archives of the capitals of Europe." How "Dizzy" must have chuckled over this empty sentence with his faithful Monty Corry. The terrible depression in trade and commerce is attributed to imprudent speculation, and the good harvests in the rest of the world are to enrich the British agriculturists. Clever Disraeli!

Home Rule now means obstruction, and obstruction means Parnell. Mr. Parnell will make up the Irish party in the next session of Parliament. The "base, bloody and brutal Whigs" know this, and already the alarm has been sounded through Mr. E. Dwyer Gray, M. P. for Tipperary, and proprietor of the Dublin *Freeman's Journal*, who, at the bidding of the bishops and priests, alarmed and mortified at the defeat of their candidate at the recent election for Ennis, has been compelled to denounce the victorious Obstructionist through the columns of the leading Catholic journal. The Ennis election is just a foretaste of what is to happen consequent upon the dissolution of the present moribund Parliament, and if the bishops and priests are wise in their generation they will leave Mr. Parnell alone. The Home Rule League is now about to discuss the converting of the League into a regularly elected convention of the Irish nation. This looks as if business were intended. The Irish University Bill may possibly pass into law before the close of the session.

The troubles in the Transvaal are not yet over, and the South African thorn is still likely to stick in the side of John Bull. The Boers are disgusted by the approach of Sir Garnet Wolseley, who is known to them of old, while it is rumored that Cetewayo is intriguing with them. If the reply to the memorial to Queen Victoria is not satisfactory, the Boers will rise to a man, and then will come the tug of war. The story that Cetewayo is a fugitive is evidently unfounded, but there seems to be no doubt that a considerable number of his chiefs have given in their adhesion to the British. The latest official telegram says that the natives generally cannot understand the retirement of the British forces from Ulundi, and that Sir Garnet has therefore resolved to reoccupy the place. The special correspondents agree in condemning the idea that the war is over, and they deprecate Sir Garnet Wolseley's hasty action in sending the troops home.

Pallida mors has cast ghastly shadows over the King of Spain. His bride of a few months tragically snatched from him, her sister following to the unknown bourne, and now *his* sister, the Infanta Maria del Pilar, at the age of eighteen. This princess was the third child of ex-Queen Isabella and the Infanta Francisco. King Alfonso has himself sustained the dislocation of an arm by being thrown from his carriage.

Efforts are making to induce Dean Stanley to recall his permission for the erection of a statue to the Prince Imperial in Westminster Abbey; but it is not believed that he will give way. He has addressed a circular to the newspapers, defending his action; and, on the other hand, very strong protests against the memorial have been published. The Government, appealed to in the House of Commons, has declared itself neutral. It is not improbable that the most eager advocates of the memorial will yet see that they have made a mistake, and will allow the matter to drop when the agitation has spent its force.

Minister Welsh appears to have acted with great discretion with respect to the Bonapartist funeral at Chiselhurst. A London letter says:

"Like all the other foreign representatives at the Court of St. James, he received an official invitation from the Lord Chamberlain to attend the Bonapartist ceremony. He declined, expressing his sympathy with the Empress, but alleging with perfect politeness that a bereavement in his own family prevented him from appearing in public. If that reason had not existed, he would certainly have found some other. He is not, and never was, one of those republicans who keep their republicanism for home use. He had no desire that it should be said in France that the Envoy of the American Republic was paying public honors to the memory of the most dangerous enemy of the French Republic. He was sorry for the boy, but not sorry for the Prince and the Pretender, at whose tomb he was invited to do homage."

It is denied that the religious questions at issue between Germany and the Vatican have been adjusted. It is added that Bismarck will not surrender any essential point in the Falk laws under any circumstances whatever; and if this is really his decision, it is not at all likely that a truce can be established between himself and the Pope. Meanwhile, the Government has determined not to appoint priests to vacant livings on its own account, and will cause summonses issued to Catholic divines by the secular courts to be withheld for a time.

M. Léon Chotteau has just made a report to Minister Waddington on the progress of his work for the establishment of a Franco-American Treaty of Commerce, and it is announced that the French Government will shortly announce its decision as to how far it will co-operate in the movement.—The Turkish Government is unable to dispatch any additional troops to the Greek frontier, owing to the disaffection among the military generally because of the protracted non-payment of their services.—Mr. Keith Johnstone, the leader of the English expedition to explore the head of Lake Nyassa, in Africa, died of dysentery on the 28th of June, at Berobero. The expedition will go forward under other direction.

THE Republican candidate for Governor of Ohio is making one of the liveliest campaigns on record. He recently traveled over two hundred miles—forty-nine being by wagon over mountainous roads—and made nine speeches, some of them over an hour in length, in thirty-two hours, and he is said to be only "just settling down to his work." If success waits upon the candidate who makes the most of his opportunities, Mr. Foster may be fairly regarded as on the road to victory. His speeches deal mainly with the financial question, and are eminently practical and business-like.

THERE seems to be no doubt that Secretary Evarts has determined to reopen the Fishery Question with the British Government. He has recently dispatched a gentleman who is familiar with the whole subject, with instructions to cruise on the inshore fishing-grounds of the Dominion, and gather such statistics as to American interests therein as will enable the Secretary to present our case intelligently and forcibly, and it is believed at Washington that, as the result of the renewal of the agitation, the principle of settlement upon which this question rests will have to be changed radically or the immediate abrogation of the treaty will be brought about.

THE Kentucky election last week resulted in the success of the Democratic State ticket by a greatly reduced majority. The Republicans made slight gains in the Legislature. But the most significant fact of the election was the partial disappearance of the Workingmen's and Greenback parties. In Louisville, where the workingmen last year elected five representatives, the Democrats last week carried every district. Local elections in New Hampshire show the same decay of the Greenback party, and in the country at large it will be found, we imagine, that the success of the resumption policy has very materially weakened the hold of the Greenback delusion.

ONE hundred and thirty-five cutlers from Sheffield, England, have been brought to this country by a cutlery establishment at Bridgeport, Connecticut, where they will be employed in improving the quality of fine cutlery manufactured in the United States. In the manufacture of table-cutlery the American trade claims it can compete with the foreign manufacturers. In fine pocket-cutlery, however, the American manufacturers desire to improve, and, should the present experiment result satisfactorily, no doubt other companies will follow the example of the Bridgeport concern. And this is not by any means the only branch of industry in which, in the present condition of foreign trade, we are likely to attract to our workshops the skilled labor of Europe.

THEY have curious notions down in Mississippi on the subject of a free ballot. Recently, in Yazoo County, a well-known citizen who had been for some months an independent candidate for sheriff of the county, supported by a portion of the whites and a large majority of the negroes, in opposition to the regular Democratic nominee, was compelled by an armed mob to withdraw from the canvass in order to save his life; and an extra from the office of the local newspaper strongly approved the outrage; on the other hand, the Vicksburg *Herald* publishes a letter from a prominent citizen of Yazoo strongly denouncing the intolerant proceedings of the mob; and the *Herald*, commenting upon the occurrence, warns its party friends that their course is not only indefensible, but is certain to lead to political disaster.

GENERAL MILES'S offensive campaign seems to have effectually checked the invasion of the hostile Sioux. According to the latest reports, all the unfriendly tribes, numbering from 5,000 to 6,000 people, have decided to remain in Canada, and have given assurances that they will make no hostile movements to this side; that they will stop all raiding parties, return all stolen property brought into their camps, and not hunt the buffalo or destroy or disturb the game on the reservation, unless permitted to do so under the supervision of our officers. It is to be hoped that these promises may be kept, and that we may no longer be disturbed by actual or threatened invasions from these tribes. But if they shall at any time cross the line with hostile intent, they must be dealt with pitilessly, and made to respect and fear the authority of the Government they have so long defied.

THAT unique and peculiarly American enterprise, the Chautauqua Sunday-school Assembly, is now holding its sixth annual session, with an attendance of several thousand persons, mostly teachers, officers, and workers in the Sunday-schools of the country. A special event of the session last week was the dedication of the "Hall of Philosophy," a structure copied after the old Grecian temple which stood on the Acropolis, with the roof supported on all sides by pillars, the sides being open. It has a capacity for holding about 1,000 persons, and will be occupied by classes engaged in literary and other studies, under the direction of eminent divines and laymen. A scientific and literary circle, numbering some thousands of Sunday-school teachers and pupils scattered through the country, is maintained the year round, under the charge of competent instructors in connection with this Chautauqua Assembly, and a wonderful stimulus has in this way been given to Bible study, upon a coherent, uniform basis, among the youth of our American churches, which, in future years, will thereby be benefited.

SECRETARY EVARTS has recently interfered very effectually for the protection of certain German-American citizens from military requisition in Germany. Two sons of Carl Boisselier, a naturalized German citizen, both born in St. Louis, spent part of their minority in Germany, returning here, however, before they became of age. The German authorities demanded that the young men should report themselves for enrollment in the German army, and upon their refusal so to do, a process was served upon the father, stating that unless the sons should appear in court on a stated day in July last, they would be prosecuted under the penal laws of Germany, and certain property of the father would be confiscated to the State. The matter being brought to the attention of Secretary Evarts, he at once entered a decided protest against any attempt to punish the elder Boisselier, by the confiscation of his property, for the refusal of his sons to submit to the demand for military service; and it is now announced that the German Government has recognized the justice of his position, and will desist from further efforts to enforce a claim which should never have been pressed. If the principle of this decision shall be adhered to, German-American citizens will hereafter be exempted from an annoyance which has hitherto disturbed very many of them who occupied substantially the position of the Boisseliers.

THE reports from United States Consuls on the condition of labor in the several countries of Europe, and published by order of the State Department, will prove of the highest value in assisting our workingmen to understand their greatly superior position and the groundlessness of the clamor of demagogues over their miseries and wrongs. These reports show that wages in the United States are double those of Belgium, Denmark, France and England; three times those of Germany, Italy and Spain, and four times those of the Netherlands; that, on the other hand the prices of the necessaries of life are lower here than in Europe, and that the laborer in the United States, were he satisfied with the scanty and miserable fare upon which the European laborer must live, can purchase like food for less money than it can be purchased for in any of the countries named. It is shown also that "more misery results from strikes, drinking, socialism, and communism in England and Germany than from all other causes combined, hard times included." Facts like these have a higher significance for the working classes than the finest theories of the political charlatans and demagogues who seek to persuade them that they are of all men the most miserable, the victims of arrogant oppression and misrule; and the American workingman who cannot see and rejoice in the happy eminence he enjoys deserves to suffer all the consequences of his stolid stupidity and wrongheadedness.

NEWS OF THE WEEK.

Domestic.

MAJOR WILLIAM W. LELAND died at Saratoga August 9th, aged fifty-nine years.

THE fleet of the New York Yacht Club rendezvoused at Shelter Island, August 9th.

THE American Dental Association held its nineteenth annual session at Niagara Falls last week.

THE Act reducing the State debt in Tennessee was rejected August 5th by about 15,000 majority on a light vote.

JOHN TAYLOR, a trustee of the Mormon Church, has brought suit against the estate of Brigham Young for $1,000,000.

THE Abbott Democratic State Committee in Massachusetts has refused to unite with the Butler Democrats in calling a State Convention.

SUBSCRIPTION-BOOKS were opened in this city August 6th for the $50,000,000 loan for building the Inter-oceanic Canal and 500 shares were taken.

A NATIONAL Convention will be held at Baltimore, October 15th, to form a grand union of Catholic Knighthood of the United States and Canada.

SECRETARY SHERMAN will make several speeches in Ohio after August 25th. Secretary Schurz will make one speech in Cincinnati, *en route* to the Indian country.

THE total number of yellow-fever cases in Memphis up to August 10th was 359, with about 100 deaths. At that date the fever was rapidly spreading in the suburbs.

THE Rev. W. H. H. Murray, of Boston, is in San Francisco, and he denies that he seeks to evade his creditors. Many of the reports about him are probably sensational.

WILLIAM H. VANDERBILT has given $100,000 for the erection of a gymnasium and of a civil engineering and scientific hall on the grounds of Vanderbilt University at Nashville, Tenn.

THE American Bankers' Association met in convention at Saratoga last week. Alexander Mitchell, of Milwaukee, was re-elected President, and Jacob D. Vermilye, of New York, First Vice-President.

THE receipts of the New York customs for the fiscal year just closed were $96,545,899, against $91,992,931 for the year preceding. The expenses for 1879 were $2,134,115 against $2,320,552 in 1878.

THE Collector of Customs at Niagara Falls reports to the Treasury Department that he has seized a number of seines set at the mouth of the Niagara River, and adds that the intrusion of Canadian fishermen into our waters is becoming quite frequent.

REV. THEOPHILUS VAN DER MOONTEL, a priest and a member of the Society of Jesus, who has been attached to the Church of the Holy Family in Chicago, and also as a Professor in St. Ignatius College, has united himself with the Protestant Episcopal Church.

THE various Republican State Associations in Washington, composed of department clerks, which were disbanded shortly after the President's Civil Service order was issued, are now taking steps to reorganize. Is civil service "reform" to be abandoned?

THE Democrats of Maryland have nominated ex-United States Senator W. T. Hamilton for Governor. United States Senator Z. Chandler is addressing Republican meetings in Maine. The Committee on Rules of the House of Representatives, of which Speaker Randall is chairman, met at Long Branch, August 12th, for a two weeks' session.

MAYOR COOPER has removed General Smith, President of the Police Board in New York, and James E. Morrison, the Mayor's private secretary, has been appointed as his successor. Judge Westbrook has granted a writ of certiorari to renew the proceedings against Commissioner Nichols, and Judge Van Brunt decided to hear the writ of prohibition sued out by Commissioner Wheeler against Mayor Cooper on August 11th.

FIVE counterfeiters, who were concerned in an extensive counterfeiting operation on the notes of the Empire of Brazil, were arrested in this city last week. All the work had been finished. The genuine notes had been closely imitated, then traced on stone, and reproduced on paper, giving an exact representation of the original, and one of the principals was in the act of packing his trunk with rolls of counterfeits, preparatory to sailing for Rio Janeiro, when he was arrested.

Foreign.

THE Chilian blockade of Iquique, Peru, has been raised.

IT is announced that Germany will participate in the next international silver conference.

THE report of the safe passage of Behring Straits by the Nordenskjold Polar Expedition is confirmed.

A DECREE of divorce has been obtained by the Rev. Newman Hall, the well-known London clergyman, from his wife.

THE Exchange and the Ville Marie Banks of Montreal have suspended, causing great distress among depositors and a run upon other banks.

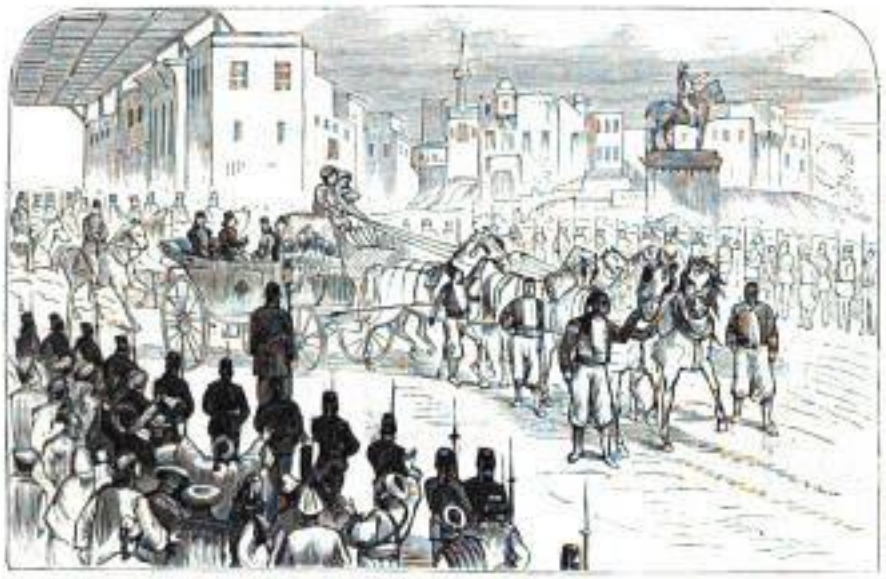
A GREAT fire broke out in the Latin quarter of Serajevo, Bosnia, August 8th, destroying 1,000 buildings and rendering 20,000 persons homeless.

IN the Quebec Legislative Assembly, August 6th, on a motion of confidence, the Government was sustained by a majority of 4, the vote standing 31 to 27.

A STORM in England has caused immense damage to the growing crops and the loss of many cattle by drowning. Twenty-seven lives have been lost by storms on the coast of France.

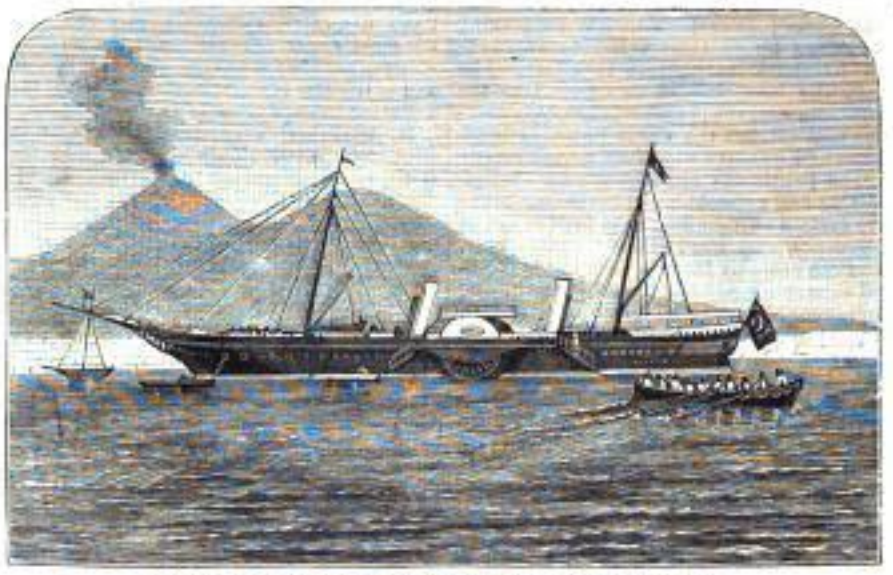
ONE hundred buildings were blown down, several persons killed and a number injured, by a hurricane which swept over Woodstock and vicinity, in New Brunswick, August 6th.

AMBROSE FONTESCUE and William Vaughan, the supposed accomplices of a gang of American forgers, who were recently arrested for attempting to pass an altered check on the Bank of England, have been committed for trial.



IT is intimated that Lord Dufferin, the present British Ambassador to St. Petersburg, will shortly be transferred to Constantinople, with instructions to insist upon the speedy execution of the required administrative reforms in Turkey.

THE *Russian News* says that Russia will surrender Kuldja in return for certain concessions from China favorable to Russian commerce, but there are signs that the Chinese troops will not be able to maintain their ground there for any length of time.



ON the Fourth of July President Barrios of Guatemala sent his own band of eighty-eight pieces to the residence of the United States Minister to assist in the celebration of the day. He has also given a banquet to our Minister, and displayed other unusual marks of cordiality towards the United States.

THE ARREST AT MATANZAS.

COLONEL M. G. BARNETT.—FROM A PHOTOGRAPH BY CRAWFORD.

IN THE CELL WITH DRUNKEN NEGROES AND CHINAMEN.

THE LATEST SPANISH OUTRAGE.

ARREST AND IMPRISONMENT OF AN AMERICAN CITIZEN IN CUBA.

THE arrest of Colonel M. G. Barnett, a former resident of New York, by the Spanish authorities at Matanzas, in Cuba, is very justly provoking indignant comment in this country, and, unless the facts shall appear to be otherwise than as now reported, our Government can scarcely fail to call upon the Spanish Government at Madrid for redress. The circumstances attending the perpetration of the outrage, as learned from Colonel Barnett, are as follows: Early last month Colonel Barnett left one of the interior towns of Cuba with the intention of starting an agricultural colony at Cienfuegos. On July 15th, he arrived at Matanzas. It was early evening when he arrived, and he proceeded directly to his brother's house in that city. About an hour later, just as he was leaving his brother's house, a man in citizen's dress stepped up to him and abruptly asked if his name was Barnett. He had no sooner declared that it was than he was told that he was a prisoner. Two members of the Civil Guards then came forward, and, placing handcuffs upon him, led him to the police-station. No attention was paid to his protest that he was an American citizen and had just arrived in the town. He was placed in a close, dirty cell, with a number of drunken negroes and Chinamen. Here he was kept several hours. Then he was placed alone in a foul, slimy closet, where he was compelled to remain until morning. Early the next day six members of the Civil Guards conducted him out of this horrible den, first joining his hands together with handcuffs behind his back. No information was given to him of his destination, and when he demanded to be taken before the American Consul he was told that it was impossible. In this condition he was marched to the railroad station. Here his captors were joined by others, and the party then proceeded to Cienfuegos, which was not reached until six o'clock in the afternoon.

At this place the Colonel was put in jail. All this time not a particle of food had been offered to the prisoner. At two o'clock that night he was taken from the jail by an officer and two men, for the purpose of being shot. Colonel Barnett has no doubt that this was the intention of his captors. As they approached the open ground beyond the city, and when there appeared to be no hope of escape, a cavalryman dashed up to them and ordered the officer to conduct his prisoner back to the town. At six o'clock that morning he was sent to Havana, still handcuffed, and not yet having been furnished with anything to eat, via the way friends gave him food, which was the first he had tasted since his arrest. Handcuffed and with clothing still covered with the filth of the places in which he had been confined, he was led through the streets of Havana to the Consul-General's office. Here he was received by Señor Joaquin Carbonnel, General Blanco's secretary. This gentleman immediately ordered that the handcuffs be taken off and that the prisoner be made free. The captors having no reason to give why they had arrested the prisoner, Señor Carbonnel made profuse apologies for the "inconvenience" that had been occasioned, but at the same time mildly advised Colonel Barnett to leave the island as a sure remedy of avoiding a repetition of such troubles in the future. Colonel Barnett took this advice, and, taking passage by the steamer *Niagara*, arrived in New York on the 4th instant.

Colonel Barnett is an intelligent-looking man, thirty-five years of age. He has black hair and eyes, and is somewhat short of stature. He was born in Cuba, but came to New York in 1868, and resided in this city five years. He became a naturalized citizen while living here. From New York he returned to Cuba. Colonel Barnett has been an officer in the Cuban army, where he has done such active work that his name has frequently been mentioned in the Spanish journals.

THE LAST SHALL BE FIRST.

"YOU make a very pretty picture, Isabel."

Colonel Egerton smiled to his wife. She was sitting in a low chair, leaning against the open window-sill, one diamond-flashing hand supporting her head, and a kitten on her lap.

She rose as he spoke, and smiled back, "You are home early to-day, are you not, Cecil?"

"About the usual time. I met an old friend of yours by chance, and I asked him to dinner; but, for the life of me, I can't remember if he said Yes or No."

"That is so like you. An old friend of *mine!* Tell me his name?" in faint curiosity.

"Sydney Carew. He challenged me going down Holborn, or I should not have recognized him. Don't believe I ever did know much about him. By Jove, Isabel, are you hurt?"

"Not at all," she said, promptly, kneeling down among the scattered ferns and smashed china pots that had fallen in one mighty crash around her. To a careless eye it seemed exactly as if Mrs. Egerton had extended her hand and pulled over the whole plant-stand; and her husband told her so.

"You did it yourself, my dear, deliberately. Will you have the gardener or a servant to put the mess right?"

"Call the gardener, please. He can save some of my ferns, perhaps;" and, as the colonel strolled away, calling Jones, his wife rose, and leaned from the window in an unconscious, gasping search for air.

Framed in the roses that clustered everywhere around, Mrs. Egerton was more than a pretty picture. She was sweet and fair as the buds that touched her cheek; and her eyes were lovely—large, almond-shaped, liquid, gray ones, shadowed by a perfect weight of black lashes—and with a wistful, yearning depth in them that fascinated while it saddened a meeting glance.

As she quitted the window and passed slowly up-stairs her movements were gliding and graceful, her voice as she spoke to her maid sweet and low, and pleasant as a lady's ever is to an inferior.

Colonel Egerton had good reason to be proud, as he was, of his wife. Mrs. Egerton was nearly dressed (in soft gray silk, with cunningly-mixed flecks of crimson) when, with a light tap at her door, entered a girl, very fair and very pretty, and laughing.

"What have you been doing among your flowers, Isabel? I met poor Jones in such virtuous despair just now. All his flowers and all his ferns, all his pots and everything else of value that he possesses, smashed in the drawing-room. I hope it isn't quite so irreparably bad. My dear"—her light tone changing rapidly—"how white you look! Have you been ill? Is anything the matter, Isabel, darling?"

"I'm not very well"—fingering nervously the trifles on the toilet-table. Then, as the maid left the room, Isabel turned desperately to her friend: "Tell Cecil anything you like, Millicent, as an excuse for my not appearing at dinner. He has asked Sydney Carew, and I can't meet him. I thought I could. I'm not so strong as I fancied. It would kill me, or worse!"

"Sydney Carew! Then he has come back to England—that bad, heartless man! Isabel, never tell me you shrink from meeting a wretch who has treated you so utterly badly. Could he have treated any girl worse than he did you?—pretending love and winning yours, till he grew tired of the amusement, and left you, when poverty came to you, Isabel, without one word of explanation or farewell. Compare his conduct with that of the generous man who only dared to offer his heart when others forsook you—the kind, noble husband, whom you told me only yesterday you were really beginning to love; and never tell me you cannot sit at table with those two men, and thank the mercy that has delivered you from the one's deceit, and given you the other's tender, unfailing affection."

Millicent spoke warmly, carried away by her mingled scorn and admiration; but her friend only shook her head, with the gray eyes tear-filled.

"I hate and scorn my weakness as much as you can do, but that does not conquer it. I told you yesterday I was beginning to love Cecil. I hoped and prayed so! That was when I thought Sydney far away—never to enter into my life again. Now I know he is near—now there is the chance of my seeing him, hearing him—I know that I dare not trust myself. Why has Cecil asked him here? What evil genius throws temptation in my way when I would flee from it if I could?" As she clasped her hands wildly, the dinner-gong sounded, and she looked up and said, "Run away, Millicent, and tell Cecil anything but the truth. I will be in the drawing-room when you come out if I can."

She was not there, however, though her just-touched work was, when Millicent, followed by the anxious colonel, entered from dinner.

"She has strolled into the garden, perhaps," he suggested. "Let us see if we can find her." And, lighting his cigar, he sauntered in one direction; Millicent Holt, in a presentiment she shrank from, bent her steps in another.

The moon was rising, and throwing silver paths over the lawn, as Millicent trailed her white dress vainly across to the summer-house.

No Mrs. Egerton there. Round the rose-garden she searched, and through the shrubbery, until she neared the little fir-plantation. Then she caught the sound of voices, and paused and trembled.

A man's voice was speaking—a deep, mellow, soft voice, that Miss Holt knew to be Sydney Carew's, and it was saying, "I purposely came too late. Do you think I could sit at another man's table, and see you at its head? You judge my memory by your own, I suppose; but I tell you I cannot forget as easily as you have done what once was. A year ago to-day, for instance, Isabel—think back—we were walking on the cliffs by moonlight, you and I. The band was playing 'Faust,' and ——"

"Don't!" she breathed, painfully. "What good is all that now I am another man's wife? Oh, Sydney, help me to remember *that!*"

"I wish there was a chance of our forgetting it. Isabel, why could you not trust me in absence? Had you no faith, no constancy, that you must needs have another lover the moment my back was turned? Was it old Egerton's money tempted you, child? I know you *did* love me—did not love him!"

Listening, Millicent grew a shade paler, and crept nearer to the stile that ended the path. Neither of the speakers heard her.

"I thought you cared nothing for me; you left me without one word!" poor Isabel wailed. "My stepmother taunted me till I was nearly mad; and when Colonel Egerton came forward, kind and generous, it seemed—it seemed——" Her voice choked in sobs.

"You ruined our lives for want of trust!" Carew cried, in well-feigned passion. "No matter for you, perhaps; but what is my life to be to me henceforth, do you think? A thing to throw to the dogs, the quicker the better, and thank you for its happy ending; while you live yours virtuously and pleasantly, no doubt, with the husband of your choice and your well-trained memory!"

Writhing under his upbraidings, she looked wildly up, lovelier than Millicent had ever seen her, with the moonlight falling on her sweet, pallid face, her eyes dark and deep in their pain, and her hands, so tiny and soft, unconsciously outstretched.

Carew's face brightened; and, with a step forward, he took those hands in his.

"Isabel, save me yet; it is not too late. Not too late, my darling, for perfect happiness for us both—for the one mistake of our lives to be set right. What matters the world to you and me, who are the world to each other? My darling, come to me, and let me teach you the love you doubted. Isabel, love, dearest, do not send me away."

The soft, insidious whisper fell on the stillness, and Isabel stood trembling there, with her eyes downcast. It was the tempter's hour—almost his triumph; *almost*—for, like a victim under a spell, Mrs. Egerton moved not as Carew bent lower, and whispered again.

Then Millicent laid her hand on the stile, and stepped forward.

"Isabel, what are you doing here? Your husband is looking for you. Mr. Carew, won't you finish your visit indoors?"

With a start like an awakening from an evil dream, Isabel turned, and glided away without a word. Millicent stood alone there, facing Sydney Carew in her burning indignation.

"You bad, wicked man! How dare you try to bring worse suffering upon Isabel than you have already done? Your pretenses of love may deceive her, but not me! You never loved her, or you could not have treated her as you did!"

"Perhaps you are right," he turned, in the most unruffled calm; "perhaps my heart was given to some one else; perhaps I only pretend affection now to Mrs. Egerton as a means of obtaining notice of some sort, indignant or otherwise (anything better than nothing) from that some one else."

And his dark eyes looked full and meaningly at Millicent, who was only two degrees less pretty than Isabel herself. The amazing effrontery of the man fairly staggered Miss Holt; and, as she stood bereft of speech for a moment, Carew's vanity filled up the pause.

"It is a cursed mess I'm nearly into; but, if I'm right in supposing a little jealousy at the bottom of this young lady's interference (remember, I fancied her a little spooney in the days gone by), I can find a way out of it. No bad way either, for, by George! she is very pretty!"

He leaped the stile, and came impressively nearer, never imagining that the girl had heard more than a word or two of his late conversation, and, as he approached, an idea shot into Millicent's head.

"Forgive my saying more than I should have dared, Miss Holt," in tones just as seductive as he had employed to Isabel. "Your sudden presence and voice broke down my control; but, nevertheless, they were truth."

"You mean to say you really care for me?" in faltering inability to realize such bliss.

"Care, Millicent?" Then he checked himself with an apparent effort. "I mean to say nothing until I have some hope that my words will be listened to and answered. I have no ground for such hopes at present. I have incurred your displeasure, and justly so."

But he sighed here in a manner that protested pathetically against injustice.

"Do you tell me," eagerly and breathlessly, "that you don't care for—for Isabel? That I was mistaken just now in fancying——"

"You were more than mistaken, if you fancied Mrs. Egerton possesses one iota of the heart that is all another's."

And here, as the two actors reached the house, Colonel Egerton's stalwart form appeared on the broadly-lighted steps.

"A moonlight stroll, you two? Ho, ho!" he laughed. "Well, come in the drawing-room now; better late than never, Carew! My wife will give us some tea."

Till he took his departure, Carew remained a fixture by Millicent's side. Isabel, close at her husband's chair, neither spoke nor stirred.

Miss Holt did all she knew to captivate, and the visitor congratulated himself, in his walk to the station, on having two birds in a very nice process of killing. He left with a pressing invitation from the hospitable colonel to come again; and Millicent laid her head on her pillow with a resolution that was almost a vow.

"I will save her, come what may! She has been more than a sister to me! Her brother's skill"—here, even in the dark, the fair face flushed—"saved my father's life! Her husband has been our life-long benefactor. I think I can save Isabel, and I will!"

* * * * * *

Colonel Egerton came down to breakfast on his young wife's birthday more radiant than his wont, and greeted Millicent, fair and blooming—Isabel, white and weary—with almost equal enthusiasm.

"I shall get rid of a secret that has been an incubus on my spirits for the last week or so, to-day, my dear," he said, blithely, with his large hand on his wife's shoulder. "Not a bad secret, either, only I object to the class of thing on principle. It is just this, Isabel." And the worthy officer began to turn color, as if soliciting a favor. "It is your birthday, to-day, you know, of course; and the thought struck me that you had plenty of gewgaws, bracelets, and such trash, and didn't want any more from me. Well, there has that clever brother of yours been looking out for a practice some time, and Dr. Henner offered his for sale in the most opportune manner; and so—and so, you see, my dear, I did a little bit of business without consulting you, and Jim will be here to-day to look things over."

"You have bought Jim that splendid practice?" cried Isabel, while Millicent stood at the window, and said never a word.

"Splendid?—pooh, my dear! There's just this—the house was for sale, too, and I thought you would like your mother near you, and so I have had it furnished up a little. We will walk there after breakfast, and see if you think the old lady will like it. Why, Isabel, what is the matter?"

"I cannot bear it!" she sobbed. "I do not deserve your kindness, and you must not give it me! Cecil, scold me—be cross—ill-treat me—I could stand it better. No, don't touch me—don't look at me like that! You do not know—you cannot guess—how unworthy I am!"

Tears rose in his honest blue eyes at sight of those raining, pleading ones. He dashed them aside as he took her hands in his (Millicent had slipped through the window), and his voice was husky, though he cleared his throat.

"My little wife, have you never read my heart yet? I am not good in clothing it in language, but I think when one feels most, simple words are best, and very simple are these—I love you! If I love you, Isabel, can any pleasure for me be like the pleasure of pleasing you? Can any money be better spent than by bringing a smile to your face? Time, thoughts, energy—all I have of any value to give—are yours! You don't understand, child, for you have not learned to love me yet—perhaps never will. No, darling; don't turn away!" as she writhed in the anguish of her shame and penitence. "You told me how matters stood when I married you, and I thanked you then for giving me yourself, and I thank you again to-day. I have love enough for both; and as it is its nature to find outlet in words, it owes you a debt when you give it a chance of proving itself in deeds. Do you see, darling? Now, kiss your old husband, and come to breakfast. Where has Millicent flown?"

As Millicent dressed that evening, Mrs. Egerton entered with a face that startled her friends so white and haggard was it in despair.

"Sydney is coming again to-night, Millicent," she began, abruptly, as she stood there, "and I must go with him. If I must break Cecil's honor and heart, I need not deceive him. The one thing I can do now is to be truthful; and better he should scorn and curse me, and free himself from me, than look lovingly and tenderly on the wife who is false to him in heart as I am now."

"You are not!" returned Miss Holt, decisively. "You are only mad! It is just a wicked glamour that evil man has cast over you!" She waited a moment; then, "You fancy you love Carew!"

"Millicent, you know—you know!" covering her agitated face with her hands; and the light caught the massive gold of the plain ring, and flashed in the diamonds of its keeper.

"And you are actually weak enough to fancy that he loves you?"

"If I could doubt that, half my misery would be at an end."

"Do you think Mr. Carew capable of loving two ladies with equal intensity? Do you believe in the depths and fidelity of a love that is given to *two* objects? In a word, judge by yourself—could you love Cecil and Sydney equally and at the same time?"

"Millicent, what are you torturing me for like this?"

"For the restoration of your reason, dear. You believe Mr. Carew to be a man of truth. You would not doubt a word you heard his own lips utter?"

"Millicent, I *know* he is true!"

"Well, then, sit in the conservatory at nine o'clock this evening—alone, mind—and listen, and draw your own conclusions. Now we will go down to dinner."

The dinner passed off—Colonel Egerton hearty, Mr. Carew fascinating, the ladies silent and beautiful.

On the colonel's being called away for a few moments after dinner, Carew strolled into the drawing-room, and saw no one there. Looking a little further, he discerned a white dress among the flower-beds and joined it.

Not Mrs. Egerton, as he had hoped, but Miss Holt, who stammered, and was flatteringly nervous at his sudden presence.

"Isn't it lovely?—the evening, I mean," she said, in her confusion.

"Very lovely. I do not mean the evening," he returned, with his bold gaze fixed on the face that crimsoned hotly at his pointed words. A few steps took them round to the conservatory, which was unlighted, with windows and door open, and Millicent sank on the garden seat outside it. When Carew's arm stole round her waist, she drew away slightly; and when he bent to whisper sweeter things than the flowers, she looked up, piteously, as she said:

"If I could only believe you! If I thought you meant one of the things you tell me!"

"When I tell you you are the sweetest and fairest and dearest in all the world to me, I mean each syllable I breathe! Words are too faint, Millicent, dearest dear. How shall I prove what you are cruel to doubt?"

"Am I dearest?" she asked, clearly. "I—I thought there was some one else you cared for."

"Never, I swear—never! How could I care for any girl after I had seen you?"

"But you saw her first; I mean Isabel—Mrs. Egerton."

He laughed aloud.

"If I had cared one straw for her, do you think I should have let her marry old Egerton? I could have had her for the asking, Millicent. No; she never touched my heart, though we had a certain amount of flirtation, *pour passer le temps*, once, I believe, and she may have been a trifle spooney on me—I can't say anything about that," stroking his mustache fondly, and in ineffable conceit. "But no idea could be so wild as my being in love with Isabel Lister. I tell you, if I had been, I should have asked her to marry me. There was nothing to prevent my doing so."

"No; and you tell me on your honor you don't like her one bit now—don't love her, Sydney?"

"On my honor, I don't. What a persistent little jealous mortal you are! I'll take any oath you like about it that will satisfy you. Spooney on Isabel Egerton? Not likely, if I did not admire Isabel Lister, for she has gone off frightfully; never saw a woman looking worse. Dark beauties are not my taste; golden hair is my ideal."

And he laid a soft touch on Millicent's uncovered head, but the girl started up in confusion.

"Some one is coming—I hear rustling!" she gasped, as adroitly she escaped his detaining hand; and into the midst of the deserted lover's fuming came his host's cheery call, "Carew, where are you, old fellow? Here is Jim Lister put in an appearance at last."

* * * * * *

The colonel was as nearly out of temper as history had ever recorded his being. He was striding up and down his study, alternately staring from the window, and facing the well-built, gentlemanly young fellow who was seated in the chair by the table, and annoying him sadly.

"If I call you a downright fool, Jim, I should be very near the truth, to throw up a good home and a practice you've just settled into, for a sudden freak of going abroad. Abroad, indeed! Take my advice, who have seen a few countries, and stop where you are well off. If I called you madman, I should not overshoot the mark!"

"I am deeply grieved to requite your generosity thus," began the other, sadly, though firmly; and the colonel interrupted him with speed.

"Generosity be hanged! You know I don't mean that. You know I'm not such a mean devil as to throw a paltry thing in a man's teeth; and generosity there was none. I wanted my wife's relations near her, and I thought I was able to arrange it; but it seems she isn't to have them, poor girl!"

Jim's word "generosity" had rather checkmated the colonel's eloquence.

"If my mother would stay on in the house——"

"But you know she won't if you go. You know she will follow her darling boy to the North Pole. Poor Isabel! it is hard on her. She has only one mother and one brother, and neither of them will stay in the same country with her."

Lister could not resist a smile at the tone more than the words; then he made an effort, a great one, for reserve was as natural to him as candor to his brother-in-law.

"I owe it to you, Egerton, to tell you the motive for my incomprehensible freak, and I

Digitized by Google

can trust your silence, I know. Well, it is only the old thing."

"A woman to blame," said the colonel, in quickest sympathy grasping his hand. "Who the deuce is it, my friend? Never mind her."

"She isn't just what I fancy, that's all" (wincing under his own words). "It is Miss Holt; and I chanced to hear her spooning with that puppy, Carew; and I hadn't quite imagined her that sort, that's all. Nothing new. It is months ago; but I'm such a fool I can't get over it as long as she is near, so I'm bound to try a little change of air, you see."

"You are hard hit, and I'm deuced sorry for you" (with a wring of the hand he held). "Millicent Holt, I never fancied her that style, though I remember it did strike me she was a little soft on Carew—moonlight stroll once—but it has come to nothing. Perhaps you've made a mistake, Lister?"

Jim shook his head.

"A man can't mistake his own eyes and ears. Well, you'll keep it quiet, colonel, and you understand now why I leave you?"

"More than understand—more than understand. I know what it is to be in love myself, you know. Well, good-by, old man. Not a soul shall hear a syllable but my wife. I've no secrets from Isabel."

* * * * * *

Mrs. Egerton rose from her piano, and nervously faced her husband and Millicent as Jim Lister entered the room.

"Stop where you are, please, all of you, a moment. I have something to say I want you all to hear."

Millicent looked up in startled alarm, and the colonel cried, quickly, "Are you ill?"

She was steadying herself by the chair in her hand, and her sweet face was blanched one moment and hectic the next; yet her eyes were raised straight and true, and her voice was clear as a bell.

"I am quite well, Cecil. I am only too cowardly to make the confession I have done harm by not making before. Be quiet, Millicent," as Miss Holt stole to her side and imploringly whispered. "I know what is right at last. I have wronged you terribly, Cecil, from the very first, for though I told you I—I did not love you, I hid back that I loved some one else, and that some one Sydney Carew."

She turned away as she gave him the shock, and her words came fast and desperately.

"He treated me so badly, I thought I could learn to hate him, until you asked him here, Cecil. Of course you did not know. Then he told me he had loved me always, and did still—that I had been mistaken and deceived. Anything he told me; and I was so wicked, so base, I listened; and when he asked me to go away with him, I was so mad, I should have done it but for Millicent, who saved me. She told me he was false in every word; and because, in my blind infatuation, I would not believe it for her saying, she led him on to make love to her, that I might hear from his own lips the kind of man that he really was. Do you all quite understand this?" looking round imploringly at the faces that not one was turned towards her. "For my sake alone, Millicent did what was the very hardest thing for her true nature to do—pretended to like what inwardly she revolted from, and let Mr. Carew say words to her that I, standing in the conservatory, might overhear and have my madness cured by. They did cure me, of course; and then Millicent told him just a word or two that have made his visits cease. She has saved my life from worse than death"—for the first time her voice broke in emotion—"and it is very little return for her unselfishness to tell you the truth you ought to know—what a weak, wicked, despicable wife and sister you have been treating as if she were worthy of your affection."

As she ceased speaking she stood waiting; but no sound came from any of her hearers.

Then, slowly, Millicent, and then Lister, stole from the room, and Isabel made her greatest effort and went up to her husband, standing fixedly gazing from the window where her ferns still stood.

She did not touch him; she clasped her hands tight to suppress the pain, and her sweet voice was only a faltering whisper as she said: "Cecil, now you have heard it all—what you ought to have known before—what do you wish me to do? Of course, my—my falseness has killed all your love, as Sydney's did mine. Whatever you think best I will do. If you want me to go away——"

Then her voice choked and she must needs stop.

He turned, with his honest, manly love shining through the pain in his face.

"My wife!" he said, simply; and her heart bounded at the touch of his strong hand on her shoulder; "you can never have known real love if you fancy that a brave confession of a weakness repented of can shake it. My love is part of my life, and can only end with it. I think, had you even left me, I could only have suffered and loved you still."

He paused a moment, then went slowly on: "I wronged you more than I thought, child, in pressing you to marry a man you did not care for. I hoped you knew that the strength of my love would have forced for itself some return—in time. Well, well, I was wrong; but now, Isabel, we can only make the best of our lives as they are. Always tell me everything, child; have no fear of me; and don't imagine me expecting anything more than you feel inclined to give. As I told you before, I have love enough for both, and we will be content with that."

He passed his arm round her trembling, sobbing figure, as a tender father might do; then she laid her head on his breast and a light in the gray, upturned eyes startled him.

"My husband—my generous, noble, loved husband!" she whispered; "do you think the contrast between the villainy of the man I fancied I loved and the noble truth of the man who loves me has taught me nothing? Do you think I could ever have gained courage to tell you my folly—do you think there would have been the agony there was in lowering myself in your eyes if I had not learned in these past months to love you—love you, Cecil?"

YELLOW FEVER IN MEMPHIS.

ALTHOUGH day after day new cases of yellow fever and additional deaths are reported in Memphis, there is quite a general feeling that even if the affliction should last until frost sets in its range will be very much restricted and its ravages few in comparison with those of last season. The authorities are fighting the fever bravely. Cities and towns on the lines of communication with Memphis very promptly established a strict quarantine at the first outbreak. Many of the cases this year have proved very slight, readily yielding to the prescribed treatment. The streets and alleys were never so clean or in so good sanitary condition as at present, and Bayou Gayoso was never so free from foul matter or odors. Because the city is almost depopulated no filth or garbage is produced, and the late rains have washed out the streets, alleys, and bayou. The erroneous statements in Northern journals as to the present filthy condition of the city are incorrect in almost every respect.

From these facts a strong probability may be deduced that the fever will be localized in the main, the cases appearing in other places being of successful refugees or persons engaged in steamship traffic.

The Howard Association is at work, but have not yet been obliged to solicit outside aid. The Safety Patrol, an organization effected for the purpose of scouring the suburbs and preventing the flight of panic-stricken citizens, is doing a vast service in confining the fever to the city.

On Wednesday, August 6th, the weather was intensely hot, just the state for the breeding of the fever, and twenty-two new cases and four deaths were reported. On the 6th the Secretary of War ordered 500 army-tents to be sent to Memphis for the use of fever refugees in camp, with the understanding that they are to be paid for by the National Board of Health, if upon investigation it shall appear that the latter has funds available for that purpose. The Board of Health at New Orleans, on August 7th, then adopted a resolution declaring that there was not a single case of yellow fever in the city or environs; that in its opinion there is no danger of an epidemic arising this Summer from past or future cases, should such occur, and that the Board will use the strictest and most unremitting vigilance against the introduction of foreign cases. The resolution suggested that quarantines against New Orleans be removed.

On the 8th John Johnson, Superintendent of Quarantine, and D. A. Porter, Chief Executive of Memphis, issued an order to inspecting and police officers that until further orders they shall not permit any person to be landed at that port or to enter the town by any road who has not had yellow fever and in addition cannot give satisfactory assurances that he will be able to provide for himself.

Dr. Jerome Cochrane, of Mobile, arrived at Memphis on the 8th, having been ordered there by the National Board of Health to take charge of affairs as the representative of the National Board, during the temporary absence of Dr. R. W. Mitchell, who has gone to Washington. The fever was officially declared epidemic on the 9th. This action was rendered necessary by the spread of the plague in the latter part of the week, twenty-two cases being reported on the 8th. A large majority of the cases this year have been among the colored people.

Nearly all the cases in New York and Philadelphia have been traced to infection in Havana. The strictest precautions have been taken by the health authorities of each city, and the sickness has been confined to those who reached the ports under its preliminary influence.

THE LATE HENRY D. PALMER.

FUNERAL services over the remains of the late Henry D. Palmer, the well-known theatrical manager, who died in London on July 19th, were held in the Church of the Annunciation, in West Fourteenth Street, New York, on Wednesday morning, August 6th. As early as 9:30 A.M. groups of ladies and gentlemen began to arrive at the church, so that half an hour later, the time fixed upon for the funeral, the pews were all occupied, excepting those set apart for the mourners and the pall-bearers. In the main aisle were seated Edwin Booth, E. A. Sothern, Joseph Jefferson, William J. Florence, William Davidge, Daniel Harkins, John Vincent, John Duff, A. M. Palmer, Signor Operti, Edward Gilmore, Samuel Colville, John T. Raymond, Maurice Grau, Harry French, Noah Brooks, William Winter, Clark Bell, Samuel Carpenter, ex-Warden Johnson of the Tombs, E. L. Tilton, Imre Kiraly, Jerome Buck, T. B. Pugh, R. Cornell White, A. Oakey Hall, Lawrence Jerome, L. J. Vinqent, Herrmann, the magician, John Lydecker, James Collier, Dr. Hall, Captain Fuller, George Roberts, Mme. Ponisi, Mrs. Seymour, Mlle. Bonfanti, Helen Tracy, and Kate Girard. The special ushers were Charles Irving Jones, chief usher of Booth's Theatre; Samuel Lynch, of the Madison Square Garden; Edward D. Cutler, of the Fifth Avenue Theatre; A. M. Kingsland, of the Standard Theatre, and W. M. Addler, of the Brooklyn Theatre.

The only floral display was an offering of Mrs. Barney Williams, which consisted of a design of camellias and tube-roses, in the form of an open book, on one page being the initials, "H. D. P.," and on the other the significant word "Finis." This was placed on the altar, immediately in front of a brazen cross. The coffin with the remains had lain, since their arrival on this side of the ocean, in a room of the church. It was a heavy lead coffin, inclosed in a handsome live-oak case, the solidity and plainness of which bespoke its English origin. The coffin-plate, which was very large and massive, bore the inscription: "Henry D. Palmer, born September 28th, 1837; died July 19th, 1879."

The congregation seated, Organist A. A. Wild played a low and solemn voluntary, which gradually merged into the processional, "In the hour of trial," which was taken up by the choir of boys and men, who slowly filed out from the chancel-room and down the east aisle. At the church entrance they turned and walked towards the altar, followed by the Rev. Dr. William J. Seabury, the rector, who read the burial service. Behind him were ten men bearing the casket. Following the coffin were the pall-bearers: A. Wright Sanford, Douglas Taylor, Charles J. Wahlers, John McCullough, Henry Wilder Allen, John H. Draper, Benjamin Gurney and George Fawcett Rowe.

The Rev. Dr. Seabury read the lesson, beginning at the twentieth verse of the fifteenth chapter of Paul's First Epistle to the Corinthians. Following this Mr. William Raymond, the tenor of the San Francisco Minstrels, sang the aria, "Be Thou Faithful unto Death," from Mendelssohn's oratorio, "St. Paul," followed by the full chorus from the same work, "Wake, Sleepers, Wake!" This was followed by the singing of the hymn, "Rock of Ages," Mr. E. De Kay Townsend singing the last two verses as a baritone solo. Then the prayer was read, and the congregation was dismissed, the choir singing as a recessional, "Oh, mother dear, Jerusalem."

The remains were interred in Greenwood Cemetery.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

The Khedival Change in Egypt.

On the afternoon of July 26th, His Highness Prince Tewfik, after having been notified of his appointment as Khédive of Egypt in place of his father, deposed, was escorted with great ceremony to the citadel at Cairo, where he held two receptions, the first for the Ministers of State and the heads of the various churches, and the second for the diplomatic body. To each class of dignitaries he read the telegram from the Sultan announcing his elevation to the vice regal throne, and was warmly congratulated. His father, the ex-Khédive, embarked with the harem on board his immense steam-yacht, and made the voyage to Naples, where he engaged spacious apartments pending his decision regarding a permanent place of residence. It has been rumored that in his flight he carried with him a vast quantity of national money and property, but official denials have been made. His departure from Egypt was quite theatrical in character, but produced no unusual excitement, the event being apparently anticipated by the knowing ones. On August 3d the new Khédive received a telegram from the Sultan of Turkey, demanding that permission be given the ex-Khédive, Ismail Pasha, to return to Egypt and reside at Alexandria or Damietta. The British and French Consuls General advised the Khedive to defer his reply until they had consulted their Governments on the subject.

First Sea Voyage of the Prince of Wales's Sons.

Prince George of Wales and Prince Albert Victor, the sons of the Prince of Wales, who are undergoing a thorough naval education, having completed their two years' course of instruction on H. M. S. *Britannia*, have been ordered to the regular sea cruise prescribed for all young officers. After enjoying a well-deserved vacation, the royal sailors will embark, in September, on H. M. S. *Bacchante*, which has been fitted out for this particular service, continuing their studies under the same circumstances as other cadets. A second captain is to be appointed to the *Bacchante*, besides her commanding officer, Captain Lord Charles Scott, in order to assist in their instruction, while the voyage of the corvette will be of such a nature as to embrace most of the principal seaports of the world. She proceeds in the first place to the West Indies and Canada, and will thence, in all probability, steer south and double Cape Horn. The *Bacchante* is a fine iron corvette cased with wood, and registers 4,130 tons. The lads are uncommonly bright; they attend strictly to the routine of their naval studies and duties, and have been favorites with their instructors and classmates since their first appearance on the school-ship.

The Launch of the Floating Dike Gate at Ferrol.

Spanish engineers, under the direction of Don Andres Avelino Concerina, have for some time past been engaged in extensive works for the improvement of the harbor of Ferrol. Among these constructions is the Dique de la Campana, which was to be closed by a floating gate, a vessel of very peculiar form and action, as our illustration shows. The launch of this vessel, which was alone needed to complete the great work, was hailed with great enthusiasm in all that part of Spain. The immense marine arsenal of Ferrol, covering nearly twenty-four acres with a basin and docks, and these latest improvements, is now one of the finest in Europe, the fishing village of the last century having, by the study and skill of Spanish engineers, been rendered a formidable fortified bulwark of the kingdom on the north.

The Chilian Army at Calama.

Señor J. A. de Lavalle, Peruvian Minister to Brazil, now in the United States, speaking of the present struggle between the Chilians on the one hand and the Peruvians and Bolivians on the other, admits that the Chilians have the advantage for naval operations in the number and strength of their men-of-war. Their army numbers some 15,000 men, while that of the allies contains 45,000. The Presidents of Peru and Bolivia, according to the terms of the alliance, have exclusive control over the armies when operating in their respective countries, and should the exigencies of war compel a mustering of the armies in one country the Presidents are to co-operate in directing the movements. Thus far all the conflicts have been on the water, where the Peruvian ironclad *Huascar* has had matters pretty much its own way. Our first opportunity for seeing a belligerent land-force is afforded by the sketch of the arrival of a division of the Chilian Army at Calama.

Proving Claims to Land in New Zealand.

The great bulk of the land in the North Island is still held by the Maoris. As some very valuable blocks are lying quite useless, it becomes from time to time the object of the Government to purchase them. Before this can be done the rightful owner, of course, has to be ascertained, and this is often a most intricate and difficult matter. Government officers are sent to the district to hear all claims, and their inquiry furnishes the subject of our illustration. The Government officials are seated at a table in the centre, taking an abstract of the evidence submitted. An energetic and demonstrative Maori, tomahawk in hand, is narrating the history of his claim from the time of the arrival of his ancestors from Hawaiki to the present day. The other natives sitting or standing around are also claimants or in some way interested in the land.

Gambetta's Fete of July 14th.

The entertainment given by President Gambetta at the famous Palais Bourbon, his official residence, on July 14th, was a most memorable affair. The cost, estimated at $30,000, was defrayed by two ardent Republican ladies. The palace was lighted by electricity, adorned by statuary bronzes from the national galleries, and the walls in many places covered with rich tapestries, borrowed from the Louvre and the various city palaces. Long lines of soldiery held the way clear for the guests. Inside the hallways lackeys lined the corridors, in gold and green liveries. The guests, on entering, delivered their cards to an official in waiting. These cards were of different colors, and a marked discrimination was made in the bestowal of the persons presenting them. The company was divided into three classes. The first went into the reserved salon, the second distributed themselves almost at random, while the third were not admitted to the general saloons until all the second and first were safely bestowed for the concert and ballet. From nine o'clock until ten Gambetta remained at the principal entrance, shaking hands and telling the first-class guests how glad he was to see them. At ten President Grevy arrived. Gambetta conducted him into the concert-hall, where the favored persons had been surreptitiously borne some time previously. After the concert there was a dramatic representation by Coquelin, the first comic actor of the Comédie Française, just returned from London. It was half-past one when this part of the entertainment closed, and an interval of an hour was given for refreshment. A ballet began at half past two and lasted until four.

AT HOME AND ABROAD.

—There are sixty life prisoners confined in the Kentucky State Penitentiary.

—The wheat crop in Kentucky, this year, is from eight to ten per cent. above that of last year.

—It is believed that the wheat crop of Minnesota this year will amount to 40,000,000 bushels.

—The Tennessee University at Knoxville is about to have endowed a chair of athletics and gymnastics.

—Consul-General Bradford, at Shanghai, has resigned his position, and his resignation has been accepted.

—The Texas five-per-cent. bonds issued to make up the deficiency in her revenue are selling at and slightly above par.

—In North Staffordshire 3,400 colliers have already struck against a proposed reduction of wages, which affects 17,000 persons.

—There are to be field manœuvres on a large scale in Russia this Summer. No less than 260,000 men, with 880 guns, are to take part.

—The total valuation of real and personal property in Boston for the year 1879 is $612,253,640, a decrease of $18,192,200 from last year.

—An emigration association has been formed at Sheffield for the purpose of aiding workingmen to obtain a livelihood in the Western States of America.

—The Spanish bishops, at the request of the Government, have agreed to temporarily relinquish a quarter of their stipends to relieve the public finances.

—A recently-enacted law in Galveston provides that any employer who shall force an employé to labor on Sunday shall be liable to a fine of fifty dollars.

—The Mississippi Valley Emigration Company have sent an agent to New York to look into the matter of securing good white labor for the Southern plantations.

—Russia is about to inform the Powers that she has fulfilled her part of the Treaty of Berlin, and that steps ought to be taken to make Turkey comply with her obligations under it.

—The Southern Historical Society will convene at Greenbrier White Sulphur Springs, August 15th, and General Chalmers will deliver an address before it on "Forrest and his Campaigns."

—The Supreme Court of North Carolina has decided that dogs are not property in that State. According to the report of the Commissioner of Agriculture dogs cost the State $6,000,000 annually.

—Virginia creepers are being planted by the Pennsylvania Railroad Company on the hillsides along their tracks. It is done to prevent land-slides, and will add greatly to the beauty of the scenery.

—King Menelik, who rules over the southern portion of Abyssinia, has sent a letter to the British Anti-slavery Society, announcing that he has abolished the slave-trade throughout his dominions.

—According to the new German law court regulations, which are to come into operation on the 1st of October next, German will be the only language which can be used before the tribunals of the Empire.

—Invitations have been sent by the various branches of the Amalgamated Engineers' Society to the strikers in Bradford, England, and nearly 300 engineers are coming to the United States and Canada to remain.

—The Landrath of the Canton of Uri, Switzerland, has voted in favor of the restoration of capital punishment for murder and for arson when involving a loss of life. As this is a provisional law, it will require to be ratified by a plebiscite.

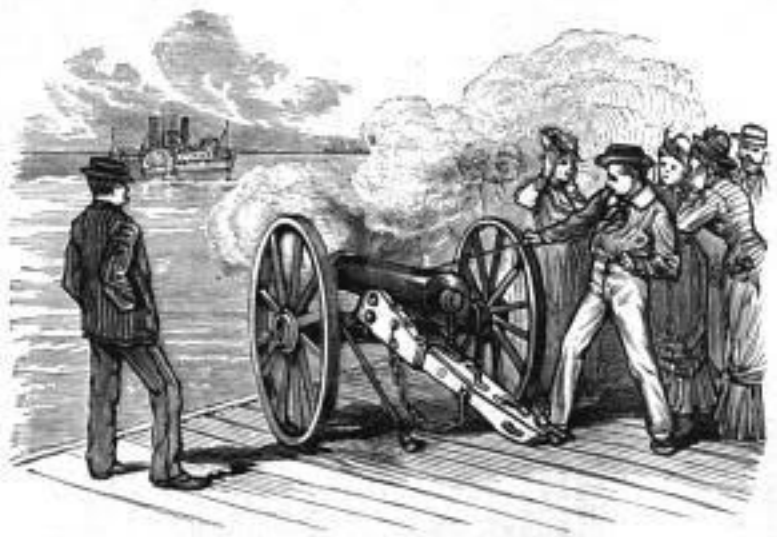
—The losses by fire in the United States during the first six months of this year amounted to $47,026,800, which is $15,500,000 more than at the same period last year. It is also from $7,500,000 to $15,000,000 over the losses in 1875, 1876 and 1877.

—The French Chamber has been lately called upon to consider the question of the abolition of an old law passed more than sixty years ago, and now entirely unobserved, obliging all work to be suspended and all shops shut on Sunday. To the mass the existence of such a law was unknown.

—Custer's battlefield on the Little Big Horn River, Montana, is to be incorporated into a national cemetery. Orders from the War Department, just issued, direct that a survey of the site be made at once, and that the Commanding General, Department of Dakota, announce the miles and bounds in orders.

—There is a movement afoot to celebrate the surrender of Cornwallis, at Yorktown, Va., with unusual pomp in October, in order to begin preparations for a grand centennial celebration in 1881, which shall be a crowning demonstration of the series of centennials which began at Concord and Lexington in 1875.

—Bristol is perhaps the only city in the world with two mayors, two city governments, police, etc., and that is taxed to two States. The line between Tennessee and Virginia is in the centre of Main Street, and it gives rise to many funny scenes, as, for example, a runaway couple need no coach and four, but arm in arm step across Main Street and are wedded. The fugitive commits a crime in Virginia, goes to the pavement on the other side of the street and talks defiantly to the officer, on the opposite side, who has a warrant for his arrest. A stumble or a too bold disposition will sometimes, however, bring him to grief.



—M. Venard de St. Anne, the originator of the project for bridging the English Channel, promises to commence operations without delay. He estimates that it will require seven months for experiment, and that 1,000,000 francs will suffice to pay the preliminary expenses. To raise funds he has laid the project before the French and Belgian Chambers of Commerce. Eighty-four of these have already expressed themselves in favor of the project. He will visit England shortly to lay the matter before the English Government. To span deep water he has recourse to the tubular system similar to that employed in the case of the bridge between New York and Brooklyn.

—Where a Chinese has, by his services, merited a title of nobility, his son neither has nor ever will have the right to use any title except that immediately inferior to it; and thus the nobility goes on diminishing in the family from generation to generation, until it becomes completely extinct, unless one of its members renders to his country a signal service, and thus reinstates himself in the title originally granted to his ancestor. This ingenious combination gives to the nobility an ever-growing emulation, a desire to render service to their country great in proportion as the family title is diminishing, because it is more dishonorable to see this heritage declining in their hands than never to have possessed it.

CHANCE.

A WORD unspoken, a hand unpressed,
A look unseen or a thought unguessed,
And souls that were kindred may live apart,
Never to meet or know the truth,
Never to know how heart beat with heart
In the dim past days of a wasted youth.

She shall not know how his pulses leapt
When over his temples her tresses swept;
As she leaned to give him the jasmine wreath
She felt his breath, and her face flushed red
With the passionate love that choked her breath,
And saddens her life now her youth is dead.

A faded woman who waits for death,
And murmurs a name beneath her breath;
A cynical man who scoffs and jeers
At women and love in the open day,
And at night-time kisses, with bitter tears,
A faded fragment of jasmine spray.

CECIL CARLISLE.

CHAPTER II.—(CONTINUED).

THE luncheon was a merry one. Sir Eric Egerton threw off the gloom that had oppressed him, and, though he made no effort to shine, shone brilliantly. The children were too well trained to make themselves prominent, and, if a little tongue was inclined to outrun discretion, a look from one of the elders enforced instant silence.

After luncheon the children went out for a walk, and Cecil, who often went with them, remained in the drawing-room with the doctor and his wife and the guest. She withdrew presently, however, in order to leave those who were old friends together for a time; and then Egerton informed Doctor Dormer and his wife of the true state of the case with regard to Egerton Royal. The doctor was deeply concerned, but scarcely surprised.

"It was the turf," he said, "that brought your uncle to ruin. I am sure, while your mother was at the head of his establishment, she did what she could to restrain him; but, when once the gambling fever, in whatever form, seizes upon a man, one may give him up. You must marry an heiress, Eric," he added, more lightly.

"That counsel does not come seriously from you, Doctor Dormer," returned Egerton, gravely. "No; Themistocles ennobled road-sweeping, but he could not have ennobled fortune-hunting."

"The same Eric as of old, unchanged," said the doctor, laying his hand on that of his younger friend.

"Can nothing be done?" asked Mrs. Dormer.

"Nothing, dear Mrs. Dormer," said Eric Egerton, sadly but sternly. "I must give up father's inheritance to strangers, and return to Vienna."

"It's very hard, very bitter," remarked Mrs. Dormer. "I wish——"

"What, my dear?" asked the doctor.

"Eric might not like me to express my thought," said she, demurely.

"Dear Mrs. Dormer, no thought of yours concerning me could ever be anything but kind," declared Egerton.

"Well, I was thinking of Miss Courtenay," said Mrs. Dormer. "She is a great heiress—perhaps you have heard of her? My cousin who lives near Oakeley told me that she was coming to England soon, and that she is said to be very handsome."

"She turned people's heads in Paris," remarked Egerton, indifferently, not choosing to repeat the mercenary counsel of his mother. "But pray do not build castles for me; I shall be in Vienna when Miss Courtenay is at Oakeley, Mrs. Dormer, even supposing she would stoop to a poor *attaché*."

As she spoke the door opened, and Cecil Carlisle entered in time to catch the last few words. She was about to withdraw instantly; but the doctor called to her, and Sir Eric, rising and approaching her, begged her on no account to so wrong him as to suppose that he wished her absent.

"You are kind to say so," she said, smiling; "but, you know, Sir Eric, politeness is not always truth. You would not like to say that to me, but I can take advantage of my sex and say it to you."

"It is true in this case, Miss Carlisle, believe me," answered Egerton, gravely; and it was.

The most cynical of men could not have found an atom of coquetry in Cecil as she uttered words which might have seemed in the abstract chargeable with that often cruel folly.

"We were only talking about a great heiress, dear," said Doctor Dormer, drawing the girl to his side.

"Miss Courtenay?" she interrogated. "I was so fortunate, or so unfortunate, as to catch the name; but I am as wise as I was before. My fate has not cast my lot among heiresses. I wish it had."

"You might not be any happier for it, Cecil."

"Maybe not; but I should not mind trying it—by way of a change."

"That's just what we have been recommending Eric to do," said the doctor, laughing.

"To marry an heiress?" questioned Cecil, laughing too. "I see; and Miss Courtenay is the fortunate young lady?"

"More likely a Viennese princess," said Egerton, "unless Miss Courtenay turns up at Vienna within the next few months."

"Are you going back to Vienna at once?" asked Cecil. "You are a model landlord!"

She was leaning over the back of the doctor's chair, and looked up quizzically into Egerton's face as she spoke.

"There is no need for my talents in that capacity, Miss Carlisle," he said, gently; "the land is mortgaged up to the hilt, and the mortgagee will foreclose in a month." Cecil's face flushed crimson.

"Sir Eric," she said, hurriedly, "I beg your pardon; I did not——"

"Miss Carlisle, the exculpation is not necessary."

"I am so sorry," she said, in the same low tone. "I know what it must be to lose lands that have been in one family for generations."

She moved away. Too strong an expression of sympathy seemed unsuited to so short an acquaintance, and might only pain where it was meant to soothe. If Cecil Carlisle had been more conscious of her power, she would have known that the sympathy of a beautiful woman can never be misplaced.

That was a pleasant evening, and so were many others that followed it. Eric Egerton could not—even in Cecil's presence—forget that the lands of his fathers were to pass into the hands of strangers; but he sought her society the more eagerly because it was the one thing that beguiled him; all other pleasure seemed "flat, stale and unprofitable."

The business with the family lawyer kept him in town for more than a fortnight, and most of his spare time was spent in Upper Berkeley Street, where he was a great favorite with the children, and sure always of the warmest welcome, from Doctor Dormer to the servant who opened the door. He shrank from other society, and shunned the places where he was likely to meet those who might recognize him. Cecil was passionately fond of music, and, though she frankly said she could not afford to go much into society, she must go to concerts. Egerton was often one of the party; and, fond as he was himself of music, it could scarcely be doubted that the charms of Cecil's company on these occasions outweighed even those of a concerto of Mendelssohn's or a symphony of Beethoven's. To his mother he only wrote that the business was progressing favorably, and that he was a great deal with the Dormers. He said nothing of Cecil Carlisle.

CHAPTER III.

WHEN Sir Eric Egerton returned for a few days to the country, his mother once more attacked him on the score of the wealthy marriage, but found him inexorable.

"I believe," she said, at length, "that you have fallen in love with some penniless woman, and that that is making you obdurate, though I cannot see how you can marry on your income."

"I have no thought of doing so, mother," was the gentle answer. "I owe my first duty to you. You shall never lack that my happiness may be secured. For the rest I must beg you to ask no questions. Whether I loved or did not, it would make no difference in my original decision."

She tried reproaches—she tried tears; but both were in vain. Egerton merely answered:

"Mother, you only pain me, and heap sorrow upon sorrow. I am willing to sacrifice my own peace for you; is not that enough? Not to save your life would I sacrifice my honor."

"Then," she said, "I am right—right in supposing that now your heart fights against me."

"It ever did, mother, but honor more—and it is the same now. Only then I could not have married without love, and now I dare not. You wish to know more? I cannot tell you. I have been foolish, not sinning. I suffer alone. Let the dead past bury its dead."

"Can it? Will it? You were always self-depreciative, Eric. You are not a man that women regard with indifference—ay, wince, I speak truth; and, if this girl is portionless—low-born she cannot be—you would never disgrace your birth—she would doubtless not love you the less because you are a baronet."

"Mother," said Egerton, sternly, "you reach the limits of my forbearance when you breathe a word against the woman I love. Nay, I have heard enough. Pray let this subject drop. For the present, good-morning;" and he left the room.

The next day at breakfast he announced that he was going up to London to bid farewell to the Dormers. He should return the same night, if possible, as in a few days the foreclosure would formally take place and the heir of the Egertons look his last on his fathers' home. Mrs. Egerton longed to ask some questions about the forbidden subject; but the manner in which her son had spoken sealed her lips.

"Very well," she said; "you lose your patrimony with a light heart, Eric."

He did not reproach her, but gently kissed her forehead and went out.

He did not reach London till the middle of the day, and repaired to Upper Berkeley Street about five o'clock.

"All out, sir," said the servant—"Miss Cecil and all. She's not with the children, sir; but, for certain, some one'll be home before long."

Egerton entered the dining-room, so full of memories of Cecil's presence, the room where he had waited for her less than a fortnight before to go to the Philharmonic Concert. Had he betrayed the truth to her that night? Oh, the misery of that thought! She would believe that he had trifled with her, and he could not explain—could not clear his name.

He walked up and down the long room, schooling himself to meet her—and part from her—perhaps for ever. He tried to face the worst. He dreaded to meet her alone.

If the mental vision of her, as he seemed to see her, with her earnest face and clear eyes and rippling tresses, made his heart beat and his lip tremble, what would his feelings be in her presence, when he must say the last words—the terrible eternal good-by?

He passed through what seemed hours of torture, and yet it was barely half an hour before there was a knock at the door. He heard the servant say that Sir Eric Egerton was in the dining-room. It was Cecil's sweet voice that answered, and the next moment she came into the room, throwing down her hat upon the table, and holding out her hand.

"Why did you not write?" she said. "The Doctor and Mrs. Dormer will not be in till ten o'clock to-night. I am so sorry. Have you been waiting long?"

"Only half an hour, Miss Carlisle"—he had taken her hand for a moment, dropping it almost immediately. "Ten o'clock? I ought to leave London by that time."

"Going back to night?" interrogated Cecil, passing, and leaning over the back of the doctor's armchair, a favorite position with her.

"Yes; the mortgagee forecloses in another week," said Egerton, quietly. "I must be down there then. I leave for the Continent three days later. I am come to-day to say good-by."

His words in that room so short a time before, standing, as he stood now, by the mantelpiece, the very attitude of graceful ease the same, rushed back upon the girl's heart with overpowering force—"I never wish to see England again." For a moment self-command failed her. Her secret must have been read in her face if she had not bent it down over her hand, while she played with the rings on her fingers.

"You know how grieved I am for the reason that takes you away, Sir Eric," she said, after a pause, still not looking up—"how sorry we all are; but—but—cannot you remain to see the Doctor and Mrs. Dormer? They will be so deeply grieved to miss you."

"I am afraid not. I must see the agent the first thing to-morrow morning."

"But there is a train as late as eleven," urged Cecil; "could you not wait till ten?"

"I have other business to attend to this evening, Miss Carlisle."

"Then you could call again," she said, a little puzzled now.

Egerton was silent. He could not tell her that, once parted from her, he dared not incur the risk of meeting her again. Cecil spoke first.

"They will be so sorry," she said again; "and the children too—they were so fond of you. But they will be in shortly. Can you not wait for them?"

"I am afraid not. I wish I could have had more time. This is a very hurried, very unceremonious farewell; but I can only throw myself on your mercy. Will you tell the dear old doctor and his wife"—pausing, and then going on quickly—"how it grieved me that I could not fix a day beforehand to say good-by, nor wait to see them? I will write to them from Egerton Royal. And will you make my peace with the little ones?"

"Yes," she said, still keeping one hand on the back of the chair, and scarcely looking at him. "I will give all your messages."

"Thank you. And now good-by!"

She gave him both her hands, and, with one quick fleeting glance into his face, she said softly, and very quietly:

"Good-by!" Then gathering all her strength for one effort—one effort to wear the mask to the end—she added earnestly, "And Heaven prosper you, Eric Egerton!"

If he had spoken then, he must have revealed too much. He kissed her hands, dropped them, and turned to the door. With her soft profile half averted, she stood still by the old-fashioned chair, her hands clasped—ah, how tightly now, though he could not see the tension of the sinews!—over the back; and Eric Egerton paused and looked once more—for the last time—at the woman he loved, his hand on the door-handle.

He who had withstood his mother's tears, the pleadings of pride, all that had tempted him to sell his honor—hesitated now, paused, and then came back again to her very side.

"Cecil, one word—not of hope—not—not—oh, pardon—forgive! Cecil, how can I part from you?"

The blood rushed to the girl's brow; she gave one swift look into his face, wistful, questioning, and then stretched out her hands to him; and he clasped her to his breast, forgetting everything in those moments save that Cecil loved him. Alas, how soon the clouds followed the sunshine! Even as he lifted the sweet face to his and pressed the first kiss on her lips, he saw the grim shadow gliding between them.

"Cecil," he whispered, "my darling, I have wronged you. I dreaded the conflict in which I have been vanquished; and yet—yet—for I did not dream you loved me, Cecil—I thought I suffered alone. It is better that you should know the truth; you will not misjudge me now; and the parting may be for a time—not for ever."

"Part?" she said, clinging to him. "Why need that be?"

"Dear one, I am poor, and my mother has not been trained to bear poverty; she has been brought up in luxury. That is why I would not try to win you, why I should have left England without betraying my love for you. I dared not ask you to wait—perhaps for years—before I could claim you as my wife."

"I should be willing to wait," said Cecil, softly; "but your mother—will she ever welcome me, when she has hoped to see Miss Courtenay your wife?"

"Cecil, I could not wreck my life and yours because my mother has set her heart upon what never would have been. I would not meet Miss Courtenay. If—before I saw you—I had known I should meet her anywhere, I would have avoided that place lest perchance my heart should betray my honor."

"And now?" said Cecil, archly. "Now I should have no fear. They say she is very handsome. I shall know soon."

"How, Cecil?"

"I am going to her—to be her companion. A friend has obtained me the situation. She says Miss Courtenay is very kind, and I shall be very happy. She often travels, and then I might see you sometimes, Eric."

"When do you go to her, *chérie*?"

"The day after to-morrow. Eric, you will come and see me again at Oakeley Park before you leave England—you will be so near?"

"Cecil, you forget Miss Courtenay might not approve."

"She could not mind—she is young herself, not middle aged and prim. I must see you once more," said the girl, earnestly; "promise to come."

"You know that you tempt me, Cecil. I promise."

"And you will wait now to see the doctor and his wife?"

"Yes—ah, Cecil, do not make me plead *pecuci!*"

The girl smiled, and, drawing him to a chair, sat down at his feet, and the hours flew on wings. The separation would not be for long, she said; he was so clever, he would soon rise higher in his career. And so her young hopeful spirit wove bright fancies; and he had not the heart to cast a black thread across the glowing woof.

It was a sorrowful parting with Doctor Dormer and his wife; and then there was the last clasp of Cecil's hand, and her steadfast, earnest look and whisper, "Remember"; and he was gone.

CHAPTER IV., AND LAST.

THREE days before the foreclosure Sir Eric Egerton rode over to Oakeley Park. The very horse he bestrode would soon pass under the hammer, and he sighed as he caressed the arching neck of the noble animal. The lodge-keeper at Oakeley bowed low to the handsome fashionable gentleman. He wondered, with a bitter smile, if her courtesy would have been as profound if she had known that he was the ruined lord of Egerton Royal, that the spirited gray he managed so skillfully was not as much his own as a hired hack?

He rode on in the Summer twilight through a chestnut avenue, a mile in length, and drew rein before the mansion—a splendid old pile, with stately terraces and turrets and gables. His mother had wearied him with enlarging on the beauties of Oakeley; but he who might have owned all this splendor looked on it without envy. He thought more of the one jewel within that casket, though, like himself, alien to it, than of all that wealth and beauty could bestow.

Cecil had not, it seemed, counted in vain upon Miss Courtenay's kindness, as the servants had evidently had their orders. Eric's horse was immediately led to the stables, and he was conducted across a splendid hall, up a broad flight of marble stairs, and into a noble drawing-room, where the footman left him to carry his card to Miss Carlisle.

Egerton was left alone with tall mirrors, amber draperies, statues, pictures and flowers. Something more than a merely "pretty" taste had presided over the arrangement of this room—a fitting frame-work to Cecil's picture-like beauty, which had enriched even the dingy London interiors where he had hitherto seen her.

Through the partly-opened door he presently heard the rustle of silken garments; the door was pushed wider and Cecil came quickly in—Cecil, but transformed. Her richest dress had been black velveteen. Now she was attired in a robe of rich blue satin, with costly lace on her neck and sleeves. She looked more than ever a "princess" as she stood before him—a meet figure for such a frame.

But satin and laces had not changed her, for she sprang forward to his arms as she would have done if the meeting-place had been Doctor Dormer's shabby dining-room, and she had not been a great lady's favorite—for that Miss Courtenay had taken a dangerously sudden fancy to her beautiful companion was manifest in the richness of her attire.

"Dear Cecil," he said, tenderly, as he put back the clustering curls and looked into the shining eyes, "do you think you will be happy here? Miss Courtenay cannot be jealous, for, verily, in the serge dress that you wore when I first saw you, you would outshine her, I am sure; and now——"

He held her off to look at her again.

"I see you admire me," she said, smiling. "Oh, I am sure I shall be happy! Miss Courtenay seems so fond of me; she denies me nothing. Don't look cynical, Eric, and don't look so sorrowful."

"Have I not enough to make me sorrowful, Cecil? But forgive me. In truth, if there could be a Lethe for my regrets it would be in your presence, Cecil."

He was a little surprised—nay, though he would not have owned it even to himself, a trifle pained—that she seemed so light-hearted. Did she divine it, that she glanced up so keenly into his face? If she did, it did not seem to produce any profound impression on her, for she drew herself from his embrace, retired a few steps, and said archly:

"What made you send up your card to Miss Carlisle?"

"Cecil, are you not here under your own name?"

"Certainly!" she laughed. "You think it a sorry time for jesting, when in three days your mortgagee will foreclose? Well, Miss Carlisle would not have seen you if she had had your card, which was given to me instead, I thought you must have made a mistake, because Miss Carlisle is fifty, and you don't know her. So I imagined—you know what Shakespeare says of a name—that Miss Courtenay would do rather better."

"Cecil, what am I to understand? You cannot mean——"

"That, if you knew where Miss Courtenay was, you would avoid that place—and yet you come here on purpose to see her, and meet her very warmly. Will you love me less, Eric, because I am Miss Courtenay, and not Miss Courtenay's companion?"

"Cecil, Cecil, how could you suffer me to win your heart under so terrible a mistake?"

He sank down upon the sofa from which he had risen, covering his face. Cecil knelt before him, and drew away his hands, holding them in her own.

Digitized by Google

"A mistake," she said, in her clear, soft voice, looking unflinchingly into his face while she spoke, "that gained me a love unblemished by one thought of worldly advantage—a mistake that enabled me to redeem your father's lands. Nay, Eric, hear me out; you shall not rob me of this great privilege—am I not serving myself also? Do you fear the world? But you will not break your heart and mine for what scandal may say, when conscience acquits you. I called on your solicitor, Eric, on the day before I came down here. I told him the exact truth, and that in less than a week the mortgage would be redeemed, but that he was to say nothing to you. Only from my lips should you learn that Cecil Carlisle was Nina Cecil Courtenay."

He could only clasp her to his heart once more and bow his head on hers in uncontrollable agitation; and Cecil, smiling through tears and weeping through smiles, clung to him and whispered softly:

"Ah, you wondered why I was so light-hearted when we were parting for so many years! You thought I was weaving girlish fancies when I foresaw so bright a future for you, Eric; but you know all now; and I—I know now the value of wealth, for all that I have is thine."

"Cecil, hush! Your love was all I sought—nay, I did not dare to seek even that—I cannot suffer——"

"Me to do as I will with my own!" interrupted Cecil, archly. "But it is too late. Presently"—and she colored a little—and her head drooped—"you may take the high tone—not now."

"Never, Cecil; but of that another time. Tell me what induced you to assume a disguise and live as you were living when I met you?"

"Eric, will you think me very eccentric? Well, it was this. I was my father's pet and only child, heiress to great wealth, and of gentle birth. Every one petted me and spoiled me. You think that last could not be. So at least your smile says; but you are prejudiced. So was every one about me, though from different motives. I grew weary of praise and flattery, weary of being always in the right, of being imitated and courted, and made much of; if in one moment I had become poor, what a difference there would have been! Do you know, at one time I tried to outrage people's notions—did odd things—I even went so far as to be rude in cold blood! But they wouldn't be horrified—wouldn't take offense. My oddity was originality, my rudeness independence of mind. I went abroad and traveled about, and in Paris and elsewhere went into society; but, of course, it was the same there. Suitors! I might have had one for every day in the year! I grew sick of it all. I began to get cynical. How could I test the worth of any affection? The servants would all fawn on the heiress. Every one loves rich people! Suddenly the idea came to me which brought me to Doctor Dormer's; he did not know who I was. I told my design only to Miss Carlisle—my companion—borrowed her name, and came to London. I saw Doctor Dormer's advertisement and answered it. I determined to live for a time like a poor woman, to see if there was any truth in what I had been told, that I could be loved for my own sake. You think that I had grown morbid and cynical? Was it strange? But I was cured among those good people; I grew to love them very much even in the short time I was there, and they—you saw how they treated me—like their own daughter. And then—then you came, Eric—you, who had given up all you held dearest rather than be false to honor; and you loved me, too, for my own sake. Have I lost by the lesson I taught myself? Have I not gained more than all that wealth could give?"

"Cecil, you did well," answered Eric; and in the long close embrace, the one tender, almost solemn kiss pressed on her brow, she understood all else that he left unsaid.

* * * * * * *

Lady Egerton, of Egerton Royal and Oakeley Park, is the *belle* of the London season. The romantic story of her marriage had got about—as such stories always do—and added zest to the homage paid to the beautiful and noble-hearted wife of Eric Egerton; but the great world had no power over the pure heart. Despite her Velasquez-like stateliness, those who were intimate with her were inclined to drop the formal "Lady Egerton" for the familiar "Nina." To her husband and the Dormers she was always Cecil, and the children still gave her the old title of "Princess."

What pantomimes there were now for the children—what children's parties—what happy days at Egerton Royal! What splendid dolls there were for the girls and ships for the boys! Lady Egerton never felt greater pleasure in anything her brilliant life afforded her than when "playing daughter," as she called it, to the Doctor and Mrs. Dormer, or amusing the children.

Cecil Egerton's friendship did not stop short at these loving attentions. By her generosity the good doctor was placed beyond the need of practicing; but he loved his profession so much that, though he thenceforth gave up the more arduous portion of the work, he still practiced as a consulting physician; and it was a common thing now to see a long line of carriages waiting outside the residence of the fashionable physician, Lady Egerton's friend. For all the ladies were now ready to declare that they had never known so clever a man as Doctor Dormer.

* * * * * * *

One sunny morning in June, at an hour when many beauties were lounging over a late breakfast, down by the Serpentine a group of children were gathered round a tall, handsome man and a young and lovely girl. The man held in his hand a tiny model clipper, which presently he launched upon the stream with a push that sent her several feet into the dancing water, while a series of delighted shouts and clappings of hands followed her; and the girl, happy in the children's happiness, clapped her hands too, and watched with real interest the little vessel in her trip across the Serpentine. The previous night's ball had faded from her memory; she had almost forgotten the garden-party for the afternoon, and opera for the evening, when every one would be looking to see if Lady Egerton's picturesque beauty shone in the well-known box. She was Cecil Carlisle, swimming the children's boats, and the happier in that innocent pleasure that it was now always associated in her mind with the day she had first met her husband, as he knelt on the grassy bank mending Walter's ship, and, while she stood by, asked of the children clustered round him, "And which of you is Cecil?"

OUR POPULAR SUMMER RESORTS.

Attractions of Long Branch and its Iron Pier.

"AM I on the deck of an ocean steamer?" I asked myself, as I recently paced the new iron pier at Long Branch. Above me a canvas awning, beneath my feet deftly laid boards, holystoned to a Dutch dazzle; around me groups of gayly dressed people engaged in reading, in chatting, in flirting, in fishing, and, better than all, in doing nothing. I glanced seawards, and the ocean, dark-heaving, boundless, endless, kissed the sky. I gazed over the bulwarks and the blue-green waters flashed golden in the sunlight. In the distance a white sail on the sky—or a dim, filmy smoke-cloud. The illusion was perfect, even to the masts dressed with the gaudiest of bunting. A *figo* for the Bessemer swinging saloon! A *figo* for the Douvres-Calais catamaran! This was the ship for me—steady as a billiard-table, and—— I turned, to be confronted by the stern reality of land—a tawny beach fringed with leaping snow-foam, a tawny bluff crowned by the palatial Ocean House, whose extending piazzas resemble widespread and welcoming arms open to those "who travel by sea." The view of Long Branch from this pier is panoramic. Away to the right and left hotels and villas and cottages, of every design "since Babel was builded," stretch in infinite variety, ending as dots against the sky-line, the specialty being houses such as were seen by the captains of the Spanish Armada from their high poops when Philip rashly attempted the invasion of Merrie England. Beneath the bluff nestle hundreds of bathing-houses, while bathers, arrayed in *bizarre* costumes of as many colors as the raiment of Joseph, swarm on the yellow sands, till a garden of animated flowers presents itself to the attracted gaze. What a heaven-sent corner is this pier to the semi-convalescent! What deep, deep draughts of life-giving ozone are to be inhaled from every wave that comes sweeping in from the broad Atlantic!

I strolled down to the entrance, a very Mosaic in woodwork, and listened to the band, while I gazed at Long Branch *en toilette*. Immense omnibuses and dumpy stages trundle cheek-by-jowl with flashing equipages that would hold their own in the Row or the Bois; pony-phaetons and basket-cozys tooled by bewitching maidens, pass in saucy and pretty trottiness; family carriages of ponderous build, containing portly dowagers and the small fry, and Norman-capped *bonnes*, creep lazily along; mail-phaetons, "worked" by knowing ones, tear onwards! Everything is gay and animated. The crowd is always in motion. Groups of graceful young girls pass across the well-kept road from the Ocean House to the pier, or towards the bathing pavilions, where they stand "all in a row" while waiting for bathing suits. Young fellows, red as to the back of the neck from exposure to the sun, and dressed in the shortest of jackets and flowingest of continuations, and invariably attached to formidable-looking canes, stride jauntily about, a dip in the briny being their all of occupation in life. To behold them demanding their jewelry when they emerge from the billows is "a bit" of Long Branch. *Pater familias*, in a wide-brimmed straw hat and armed with the dailies, is strong at this charming *sanitarium*. He affects the pier, and has his favorite seat. The novel-reading young lady is also to be found here, who calmly passes at the end of each chapter to listen to what the wild waves may be saying; children, "symphonies" in pink and "arrangements" in blue, group with the grace of kittens. The pier is a great resort for those who desire to behold their friends and acquaintances leaping, plunging, tossing, squirming, screaming, laughing, swimming and diving in the glad, mad, merry surf. Seated directly over these toilers of the deep every movement may be watched at ease, while a big wave can be seen approaching from afar off, so soon to burst over the devoted heads of the all-unconscious bathers. Many bathe beneath the pier, thereby securing respite from the rays of an almost tropical sun.

A noticeable feature of this portion of the Branch is the Life-guard service. These men, attired in distinctive dress, and with a life-belt around their waists, stand upon the sands or wade chest-deep in the surf, ever on the look-out. The moment an alarm is raised, or that their experienced glance indicates danger to a bather, they swim to the rescue, the life-belts being in readiness for the person in jeopardy. But the great feature, not only of the pier but in the life at the Branch, is the morning and evening arrival of the *Plymouth Rock*, the leviathan making two trips daily from New York. Her appearance having been duly signaled, a white flag is run up at one side of the extremity of the pier to denote the landing side. Then Judge Fitch, the ubiquitous and earnest president of the Pier Company, takes up his position, and Mr. R. F. Hamilton, the business manager, takes up his. The monster of the deep passes a long way out at sea, but presently slows round and comes drifting towards the pier, her three decks black with swarming humanity. The paddles give a few turns and she is alongside, but still fifty feet from the wooden uprights. Her captain seems to be standing on an inch of something or other on the bulwarks, while at six different points keen-eyed, strong-armed sailors are ready to fling ropes to pier officials, who run along wobbling beams with the agility of monkeys. Guy-ropes are thrown from the ship and deftly caught, while at the same moment—boom! and the piece of ordnance presented to the Ocean House by Mr. Frank Leslie, his name in brazen letters on the gun, now stationed on the pier, is fired, announcing to the Branch the safe arrival of the *Rock*. The hawsers adjusted, gangways are run out at different points, and thousands of excursionists are vomited forth—thousands! for, as I stood there watching them file before me like an invading army for twenty-five minutes, three thousand five hundred people passed *en route* to the shore. The young mother with the baby; the husband enfolded in wraps; the lovers, *she* hanging fondly upon *he*; the swells who do not come ashore till the very last; the youths who are determined to have a good time; the prudent ones, with basket and bottle; the bathers, carrying their own suits; children who will approach too near the edge of the pier—all these and other types too numerous to mention pass onwards in slow if not solemn procession, for they have got to deliver up their pier tickets at the iron wicket, and business must be attended to. To behold these excursionists, as later on they swarm upon the sands, is indeed a sight "rich in wondrous variety." Such groupings, such attitudes, such thorough *abandon!* They take possession of every available resting-place, and while many ramble along the beach for miles, the large majority remain within rifle-range of the *Plymouth Rock*, which gathers them together by vigorous blowing of whistle at the appointed time. Sun-kissed and ozone-laden, they return to the city, resolving to visit the Branch at the very next convenient opportunity.

SCIENTIFIC INTELLIGENCE.

Professor Newberry, of the Columbia College School of Mines, is spending his Summer vacation in Utah, studying the geology of the Territory and examining its mines.

The French Minister of Fine Arts has placed at the disposition of the War Office fourteen cups of Sèvres china to be offered in competition to the societies of carrier-pigeon breeders.

The French Association for the Advancement of Science will hold its eighth session at Montpellier, commencing on August 28th; the President being M. Bardoux, late Minister of Public Instruction.

By Improving the Navigation from Manchester to the sea, so as to accommodate steamers of the largest class, it is estimated that an annual saving to the city of £1,200,000 would accrue. Competent engineers pronounce the plan to be entirely feasible.

In Central Africa a large number of Jewish negroes has been discovered. Nearly every family possesses the law of Moses on parchment. They trace their origin to the first captivity, when some of the Hebrews fled to the desert and intermarried with the natives.

The Last Sheets of the map of Switzerland, recently published at Berne, will prove particularly valuable to tourists. They include St. Maria and the Stelvio, Martigny, and the Great St. Bernard. When the whole work is completed, Switzerland will be able to boast of a map of a far higher and more useful order than is possessed by any other country in the world.

The Opponents of Dr. Schliemann affirm that it is impossible to identify Hissarlik with the Homeric Troy, on the ground that at the time of the great epic war the site must have been covered by the sea. The Berlin geologists come to the rescue, and say that all the building stones brought from Hissarlik are of fresh-water formation, and thus confirm Schliemann's conclusions.

In Addition to his Astronomical Paper, Admiral Mouchez is preparing the organization, at the Observatory, of a High School of Astronomy composed of pupils from the Polytechnic and Normal Schools, and licentiés en sciences, mathematiques, et physiques. The salary of successful pupils will be 1,800 francs a year, and positions will be secured for them in the French national observatories. The school will also admit a number of free students, who will have the advantage of the use of the instruments of the Observatory.

Professor Beneke, of Marburg, Germany, after measuring 970 human hearts, says that the growth of that organ is greatest in the first and second years of life. At the end of the second year it is doubled in size, and during the next five years is again doubled. Then its growth is much slower, though from the fifteenth to the twentieth year its size increases by two-thirds. A very slight growth is then observed up to fifty, when it gradually diminishes. Except in childhood, men's hearts are decidedly larger than those of women.

Mr. W. Whitman Bailey, of Brown University, describes the operations of a party of ants. The theatre of their work was a cherry-tree, partly decayed in the centre. From this portion of the tree the busy creatures were bringing forth small grains of sawdust, the particles of which were passed on from one ant to another, as water-buckets were at old-time fires. Nor was this all, for on the ground below another party removed the accumulated material. The principle of division of labor thus appears to be recognized among ants.

The Twenty-eighth Annual Meeting of the American Association for the Advancement of Science will be held at Saratoga, New York, beginning on Wednesday, the 27th of August. The President this year is Professor George F. Barker, of the University of Pennsylvania. The managers of the United States Hotel have agreed to furnish first-class accommodations to members of the Association and their families at $2.50 a day, or one-half the regular rates, and a number of railroad companies will sell tickets at half-rates. A very full attendance is expected.

The Rev. C. T. Wilson, missionary in Africa, has recently made a voyage across the Victoria Nyanza from Uganda to Kagei. He visited a group of 150 islands at the northwestern corner of the lake, where Stanley places only one large island. The south shore of the lake is found to consist of high downs, ending in abrupt precipices 300 or 400 feet high, which sometimes descended sheer down to the water; at others there was a low strip of alluvial land at the base, dotted with villages. The geological features of the south were also distinct from those of the north.

PERSONAL GOSSIP.

The German Emperor has conferred the Order of the Crown of the First Class on Freiherr von Varnbüler, the author of the protectionist tariff.

The Board of Trade of Philadelphia is making arrangements to extend a fitting welcome to Minister John Welsh upon his return from England.

A special dispatch from Fort Buford says that Sitting Bull was present and directed the fight with General Miles on July 17th, and that one of his brothers was killed.

The Cardinal Secretary of State, Cardinal Nina, has received from the Emperor of Austria the Grand Cross of St. Stephen, the highest Austrian decoration given to persons not of royal blood.

Charles Feuhter, the distinguished actor, died on his farm, near Quakertown, Pa., on August 8th, after suffering from a complication of diseases of the liver, kidneys and digestive organs for several weeks.

Cardinal Hohenlohe, Liszt's great friend, was recently made Cardinal-Bishop of the Suburbicarian See of Albano, and the Pope has named Liszt an honorary canon of the Cathedral of Albano, that the friends may be together.

King Humbert of Italy has set himself to the very considerable task of reading the Italian Parliament reports for the last thirty years. His reason for doing so is to familiarize himself with the history of the most important public discussions.

The German Crown Prince's eldest son, Prince William, who is now finishing his studies at the University of Bonn, will start at the beginning of the vacation, about the middle of August, for the East. His Imperial Highness will be absent for several months.

The Pope has intrusted Cardinal Hergenröther with the reorganization of the Papal archives at the Vatican, so as to make them more accessible for historical research. The cardinal has also been authorized to prepare interesting documents for publication.

A French physician, Dr. Companys, who had charge of the sanitary arrangements of the Suez Canal works, has been sent to Panama to study the subject of health regulations for laborers on the proposed canal. De Lesseps will get the men from South America.

Dr. Kirk, the British Consul-General at Zanzibar, writes to his Government that Mr. Keith Johnstone, the leader of the English expedition to explore the head of Lake Nyassa, died of dysentery on the 28th of June, at Berebero, 120 miles inland from Dar-es-Salaam.

The Infanta Marie Del Pilar, second sister of the King of Spain, who was born June 4th, 1861, is dead. King Alfonso and the Princess of Asturias did not reach the place until after the death of the Infanta. It is stated that the body of the Infanta will be interred in the Pantheon of the Escurial.

Princess Albert Victor and George Frederick of Wales, on July 24th, bade farewell to the *Britannia*, at Dartmouth, where they have been educated during the past two years. They have both passed first-class in seamanship and conduct, thereby gaining six months' time, which will enable them shortly to become midshipmen.

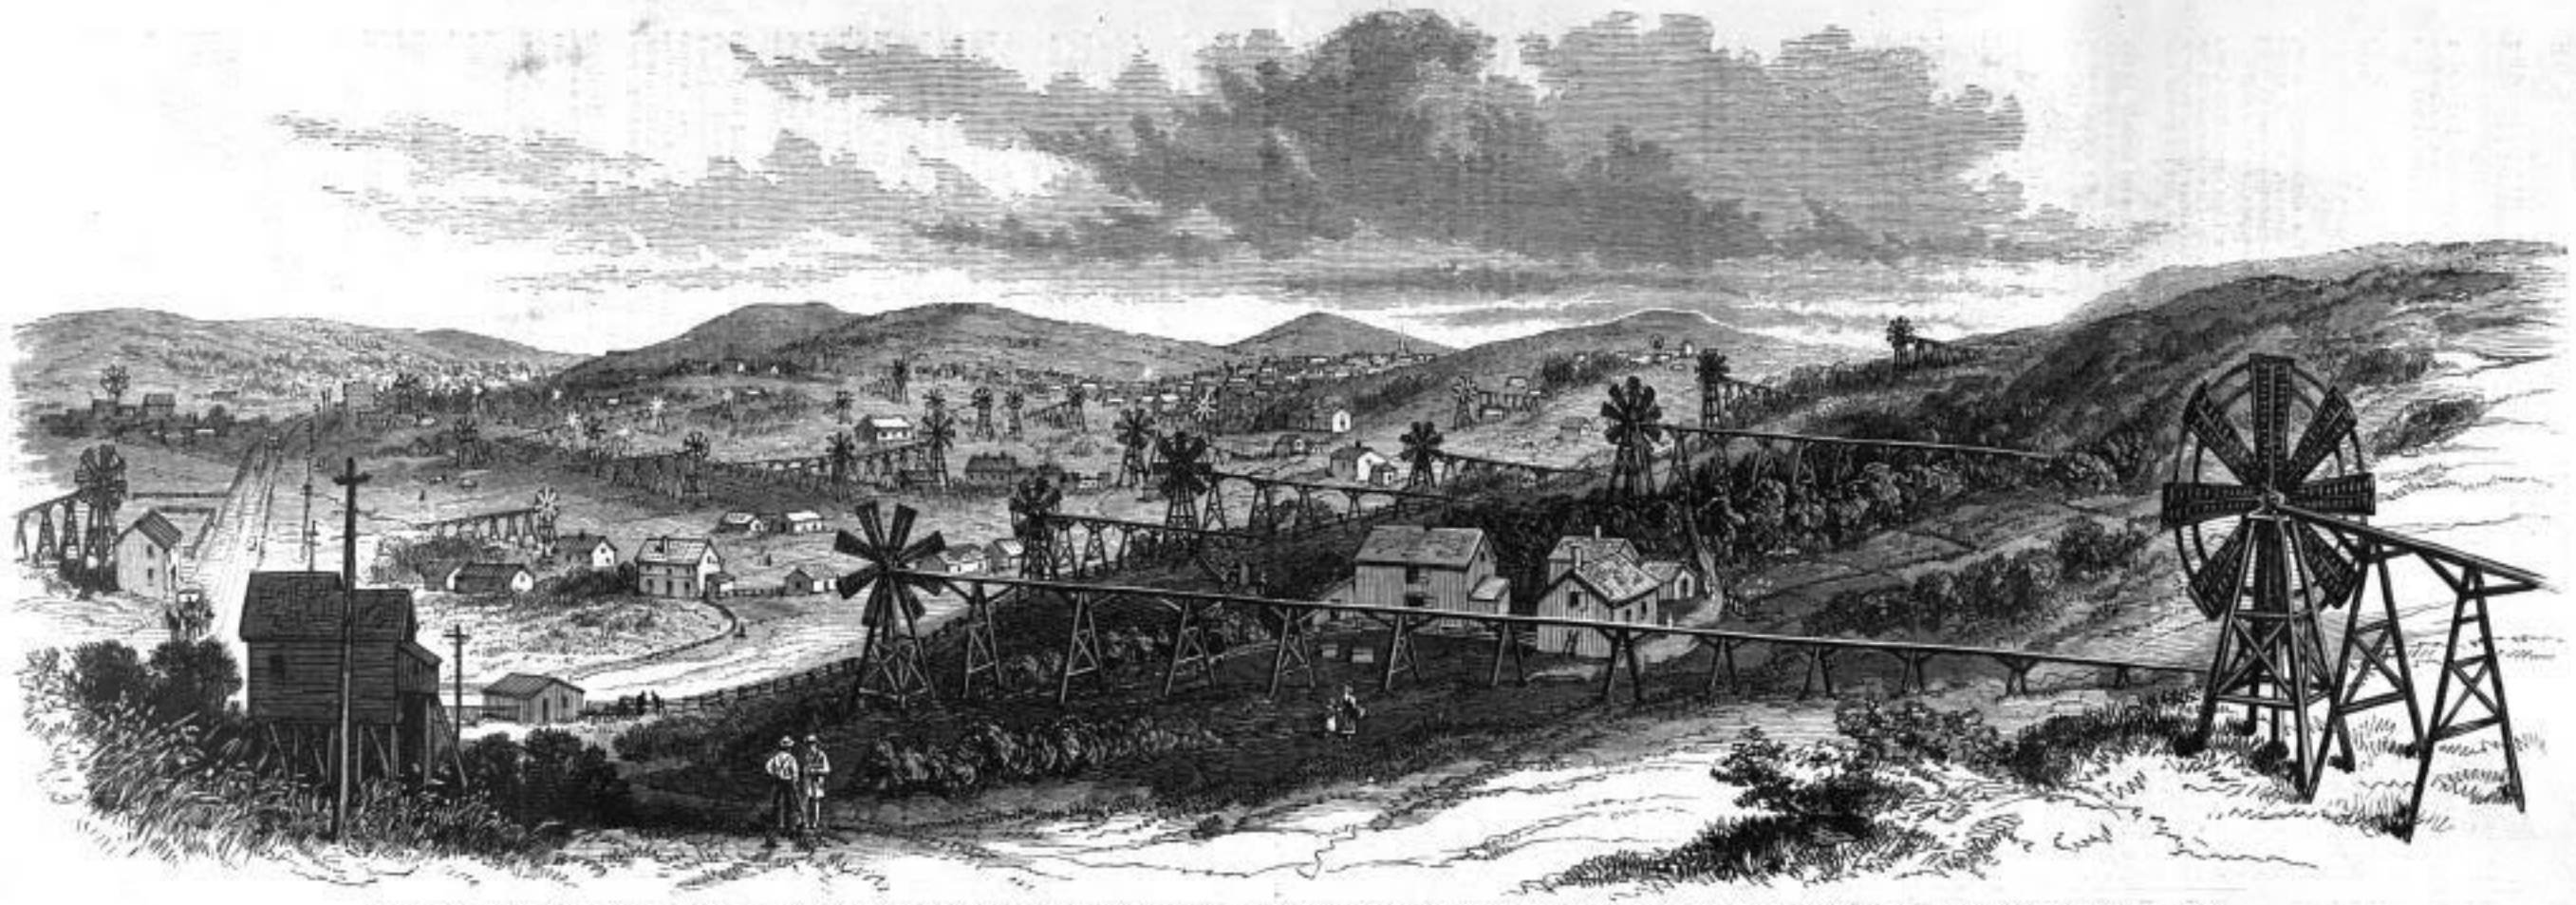
The oldest ex-Member of Congress now living is the Hon. Peleg Sprague, who represented the Kennebec District, Maine, fifty four years ago—1825 to 1829. He was also a Senator from Maine from 1829 to 1835, and is the oldest ex-member of the Senate now living. Judge Sprague is now residing in Boston, at the greatly advanced age of eighty-seven years.

Official publication is made of the nomination of General von Manteuffel to be Governor-General of Alsace-Lorraine, Dr. Herzog to be Secretary of State, Herr von Pommelesche to be Under-Secretary of the Interior, Worship and Instruction, Herr von Puttkammer-Calmar to be Under-Secretary of Justice, and Dr. Mayr to be Councilor of Finances and Domains.

Lord Beaconsfield, Sir Stafford Northcote, the Marquis of Salisbury, the Duke of Northumberland, Right Hon. Richard Assheton Cross, Lord Cranbrook, Right Hon. William Henry Smith, Lord John James Manners, Lord Sandon and Sir Michael Hicks-Beach, were present at the Lord Mayor's banquet, which took place, August 6th, at the Mansion House.

Mrs. Mary Alice Seymour, formerly connected with the female seminary of Knox College at Galesburg, Ill., has received an appointment in the Imperial household of Austria as Mistress of English to the young Archduchess of Austria and the Princess of Tuscany, and will be known henceforth in the Imperial Royal household as Lady Alice Seymour.

Dr. Pond, the President of the Theological Seminary at Bangor, Me., is now eighty-eight years old, and is still strong in body and mind. He has occupied his position in the seminary for almost half a century. He has written fifty or sixty books, in addition to countless casual articles in magazines and newspapers, and he has withal made a very busy, energetic and successful president.



The statue of Thiers was unveiled on August 3d at Nancy in presence of a large assemblage, which included members of the Ministry, Senators and Deputies, and many other distinguished persons. A statue of Rabelais is to be set up at Chinon. A statue of General Foy, the Liberal orator of Louis XVIII.'s reign, was recently unveiled at Ham, and statues are proposed for Théophile Gautier and Béranger.

The two new French cardinals—Monsignor Desprez and Monsignor Pie—are entitled to a supplementary stipend of 10,000 francs a year in addition to an archiepiscopal allowance of 20,000 francs. The Archbishops of Paris and Algiers receive 50,000 francs and 30,000 francs respectively, but the other sixteen archbishops 20,000 francs, and the sixty-nine bishops 15,000 francs each. Each prelate is also allowed from 1,000 to 3,000 francs, according to the size of his diocese, for visitation.

Rev. Lawrence S. McMahon, Vicar-General of the Diocese of Providence, who was consecrated Bishop of the Diocese of Hartford on August 10th, was educated at Montreal and Baltimore Catholic Colleges, besides making a European trip, and studying for some time at Rome. He speaks fluently a number of languages, and ranks as a deep thinker and skilled theologian. He is about forty-five years of age, and has spent the past fourteen years as pastor of a church at New Bedford. While there he was advanced to the Vicar-Generalship.

The Spanish and Portuguese congregation of Jews in London, the oldest in Great Britain, have elected Rev. Abraham Pereira Mendes to the position of preacher in both their synagogues, vacant by the death of Rabbi Aaron in January last. Dr. Mendes was educated for the ministry in London, and officiated in Jamaica, W. I., his birthplace, and in Birmingham, England, where he succeeded Rev. Dr. Raphall on his departure for New York in 1851. In the last fifteen years he has been Principal of the Northwick College in London, and has published several valuable educational works for Jewish schools. Dr. Mendes is the father of Rev. Dr. de Sola Mendes and H. P. Mendes, of New York.

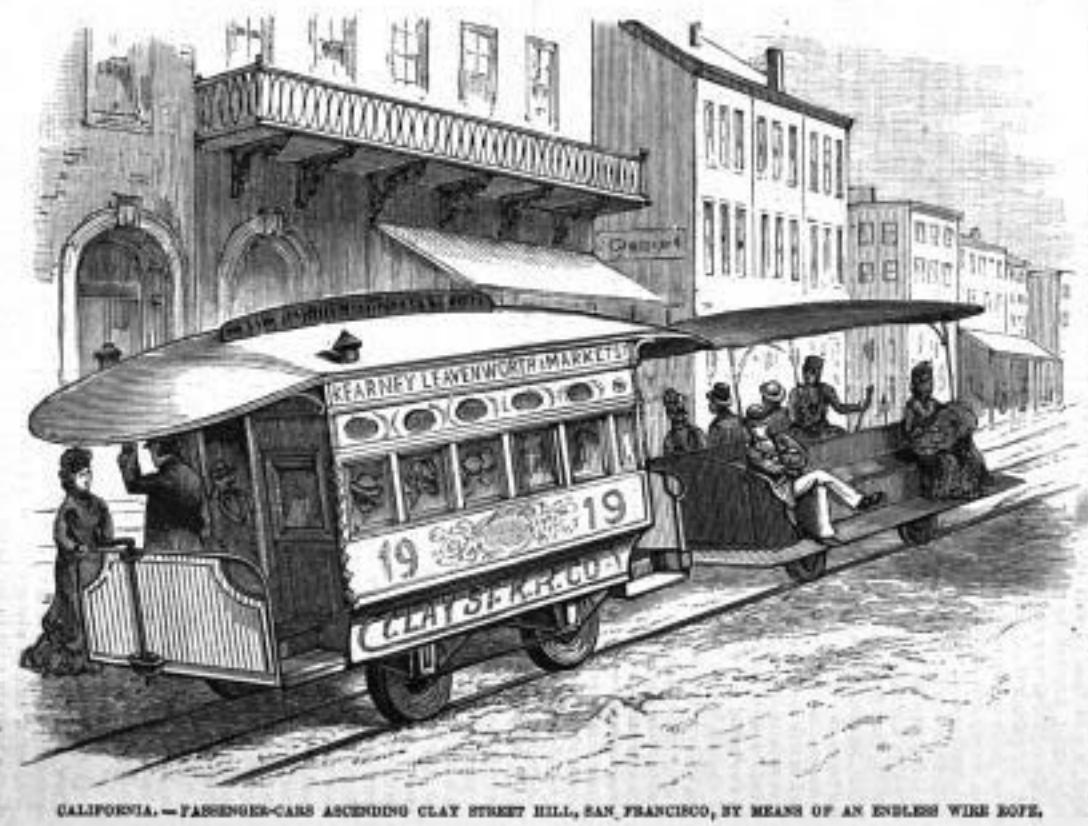
CALIFORNIA.—AGRICULTURAL RESOURCES OF THE PACIFIC SLOPE—THE WINDMILL SYSTEM OF IRRIGATION—VIEW OF THE VALLEY AT SAN MIGUEL STATION, MISSION ROAD, NEAR SAN FRANCISCO.—FROM A SKETCH BY WALTER TEAGER.

IRRIGATION IN CALIFORNIA.

THE VALLEY OF THE WINDMILLS.



IT has been asserted that nearly one-half the world requires irrigation for growing crops. It has been practiced in New Mexico for more than 200 years, and it is well established in Colorado, Montana, Idaho, Utah, Arizona and Nevada, as well as in much of California.

Irrigation is always a necessity where the general elevation is several thousand feet above the sea-level, or where mountain-ranges run across the sky so as to arrest the fall of moisture, and in each case the water used for irrigation first falls upon mountains. Except in Africa, irrigation is almost always practiced in sight of mountains perpetually covered with snow. The general elevation of the plains of New Mexico is 6,000 feet; of Colorado, 5,000; of Montana and Idaho, 3,500; of Utah, 5,000; of Nevada, 4,500; of the plateaus around Jerusalem, in Palestine, 3,000. The average amount of rainfall in the countries of the higher elevation is about twelve inches per annum; in those of the lower, sixteen to eighteen inches; and in those last wheat and other small grains can be grown without irrigation, providing there are Winter or "latter rains," as in California and Palestine, but gardens or vegetable crops must be irrigated; also, vines and fruit trees in the earlier stages of their growth. The annual rainfall of the Atlantic States is about fifty inches, of England fifty-five inches. An acre of wheat requires for its maturity a depth of ten to twelve inches of water, in the aggregate, all over the surface. This is equal to the supply on the great interior plains, but there it comes at such irregular intervals that no dependence is placed upon it except for germinating the seed of small grain, which almost always is sown early in Spring, so as to receive the benefit of the last snows. Should snow or rain fail, the grain must be started by irrigation, which is always dreaded, because a bare surface bakes and becomes hard, though something depends on the nature of the soil, whether sandy or adobe.

In preparing for irrigation two things are about equally necessary—one, a sure water-supply, the other, land so situated that water can be brought upon it, without too great an outlay. A preliminary line is to be run, and a surveyor is employed, who, selecting a suitable locality on a stream where a dam can be built, and where the banks are low, will, by help of an assistant, mark out a line, indicated by stakes driven two or three rods apart. A proper stream should have a fall of about ten feet to the mile, and the fall of an irrigating canal should be from three to five feet to the mile. The real work commences by plowing a furrow from stake to stake; what is called a farm ditch to supply two or three farms can be mostly finished with the plow. Two furrows will make a ditch large enough to carry water for fifteen or twenty acres. A larger one, called a canal, is made with plows, scrapers and shovels. The contract price of excavation is about eighteen cents a cubic yard, so that the cost will be from $300 to $1,500 a mile.

A grain-field is irrigated three times; the first time after the ground is fairly covered with the growing crop; the last time just before ripening, and each time the ground is submerged, every inch being reached by the water. Except in porous soils, water will not soak more than twelve inches. The farmer who invented the dividing flume has so arranged the furrows running through his fields that he has turned on the water at sundown, and returned at an easy hour in the morning, finding fifty acres completely covered.

In the Sacramento Valley, as well as in the agricultural suburbs of San Francisco, a great many wind-mills, each costing but a small sum, are used for raising water from a depth of twelve feet to irrigate market-gardens. One mill will water about half an acre by means of small flumes arranged as in our engraving. The vicinity of San Miguel Station, on the Mission Road, near San Francisco, is so dotted with these flumes and wheels that the section has been not inaptly called by visitors the "Valley of the Windmills."

CALIFORNIA.—PASSENGER-CARS ASCENDING CLAY STREET HILL, SAN FRANCISCO, BY MEANS OF AN ENDLESS WIRE ROPE.

NOVEL STREET RAILWAY IN SAN FRANCISCO.

THE City of San Francisco is well supplied with street railroads, all of which are well and efficiently managed. One of them, that on Clay Street, has peculiar attractions to the stranger on account of the novelty of its method of operation. The locality through which this road runs being elevated, was much sought after as a place of residence; but the hill was too steep to admit of the running of either steam or horse-cars up and down the grade, and it became necessary, therefore, to adopt some other means of propulsion. Accordingly, an endless wire rope, one inch in diameter, passing around the drive-wheel of a powerful engine located at the summit of the hill, and around a strong pulley at the bottom of the grade, serves as the cable by which the cars are drawn up and down the acclivity. This rope runs in an underground channel-way, and the "gripping-clamp" projecting from a "dummy" in front of the car seizes or releases the rope at the will of the conductor or driver. The car-brakes act directly on the rail, stopping the car instantly, as soon as released from the ropes. The principle thus employed is by no means new, but its application to street railroads was first made, we believe, in San Francisco, where it has proved entirely successful.

THE SOUTH AMERICAN WAR.

THE situation of the South American belligerents remains practically unchanged, the only operations of note reported since our last issue being the engagement of the famous Peruvian ironclad *Huascar* with the Chilian blockading squadron in Iquique Bay. A report, via Panama, under date of August 4th, represents that the *Huascar* and *Union* have visited Chilian ports, destroying launches and capturing the steamer *Rimac*, with the entire Zungay regiment of cavalry fully armed and supplied with horses, besides three vessels loaded with coal and copper.

The attack of the *Huascar* in Iquique Bay occurred July 10th, when she seriously damaged the Chilian armed transports *Matias Cousiño* and *Abtao*, and then had a fight with the blockading squadron lasting two hours, after which she quietly steamed back to Arica. The object, of course, was to sink the two Chilian vessels supposed to have been left in the harbor; but it so turned out that all the blockading squadron was together, and too closely grouped to permit the full accomplishment of such a plan. Nevertheless considerable injury was inflicted, and the *Huascar* is ready for another brush. Being the only seagoing ironclad the Peruvians possess at the moment, it is out of the question to risk her existence in a pitched battle with the bulk of the opposing fleet, more especially as the Chilian armored ships are considered to be individually stronger than the *Huascar*. These dashes and species of Stonewall Jackson warfare on the water will eventually tell, and Captain Grau seems determined to make the most of his opportunities. Now, with the *Union* and *Pilcomayo* to help him, he may attempt greater enterprises.

The voyage of the *Pilcomayo* to the southern coast has been referred to. An officer was sent on shore at Tocopilla and informed the Chilian commandant the *Pilcomayo* was about to detroy all the lighters and launches in the port, but that no fire would be opened on the town. The Chilian replied that he could only make resistance on land, and would permit no disembarkation of troops. The launches and a Chilian merchant ship, the *Mathilde*, were then sunk, and as the *Pilcomayo* was steaming

Digitized by Google

off she discovered the ironclad *Blanco Encalada* with a corvette, in the distance, rapidly approaching. The Chilians gave chase and pursued the *Pilcomayo* for twenty hours, when the superior speed of the gunboat was acknowledged and her opponents gave up the attempt.

Don Anibal Pinto, President of the Republic of Chili, was elected in September, 1876, his term ending in 1881. He is an energetic and patriotic administrator, having displayed singular powers of government in several critical periods. He is thus no unworthy successor of the many good Presidents who have done so much to

GENERAL MARIANO PRADO, PRESIDENT OF THE REPUBLIC OF PERU.

make Chili the best governed and most prosperous of all the South American Republics.

General Mariano Prado, President of Peru, succeeded one of almost similar name, General Pardo, since assassinated as he entered the legislative hall. In that turbulent State, Prado well knows how insecure is his tenure of power, and that revolution or assassination may at any moment close his administration.

General Hilarion Daza, President of Bolivia, has filled the Presidential chair of Bolivia since May, 1876, and has the reputation of being a man of advanced ideas, eager to push forward the material prosperity of the State. He had developed its resources, and, when the war was inevitable, was ready with a small but well-organized army.

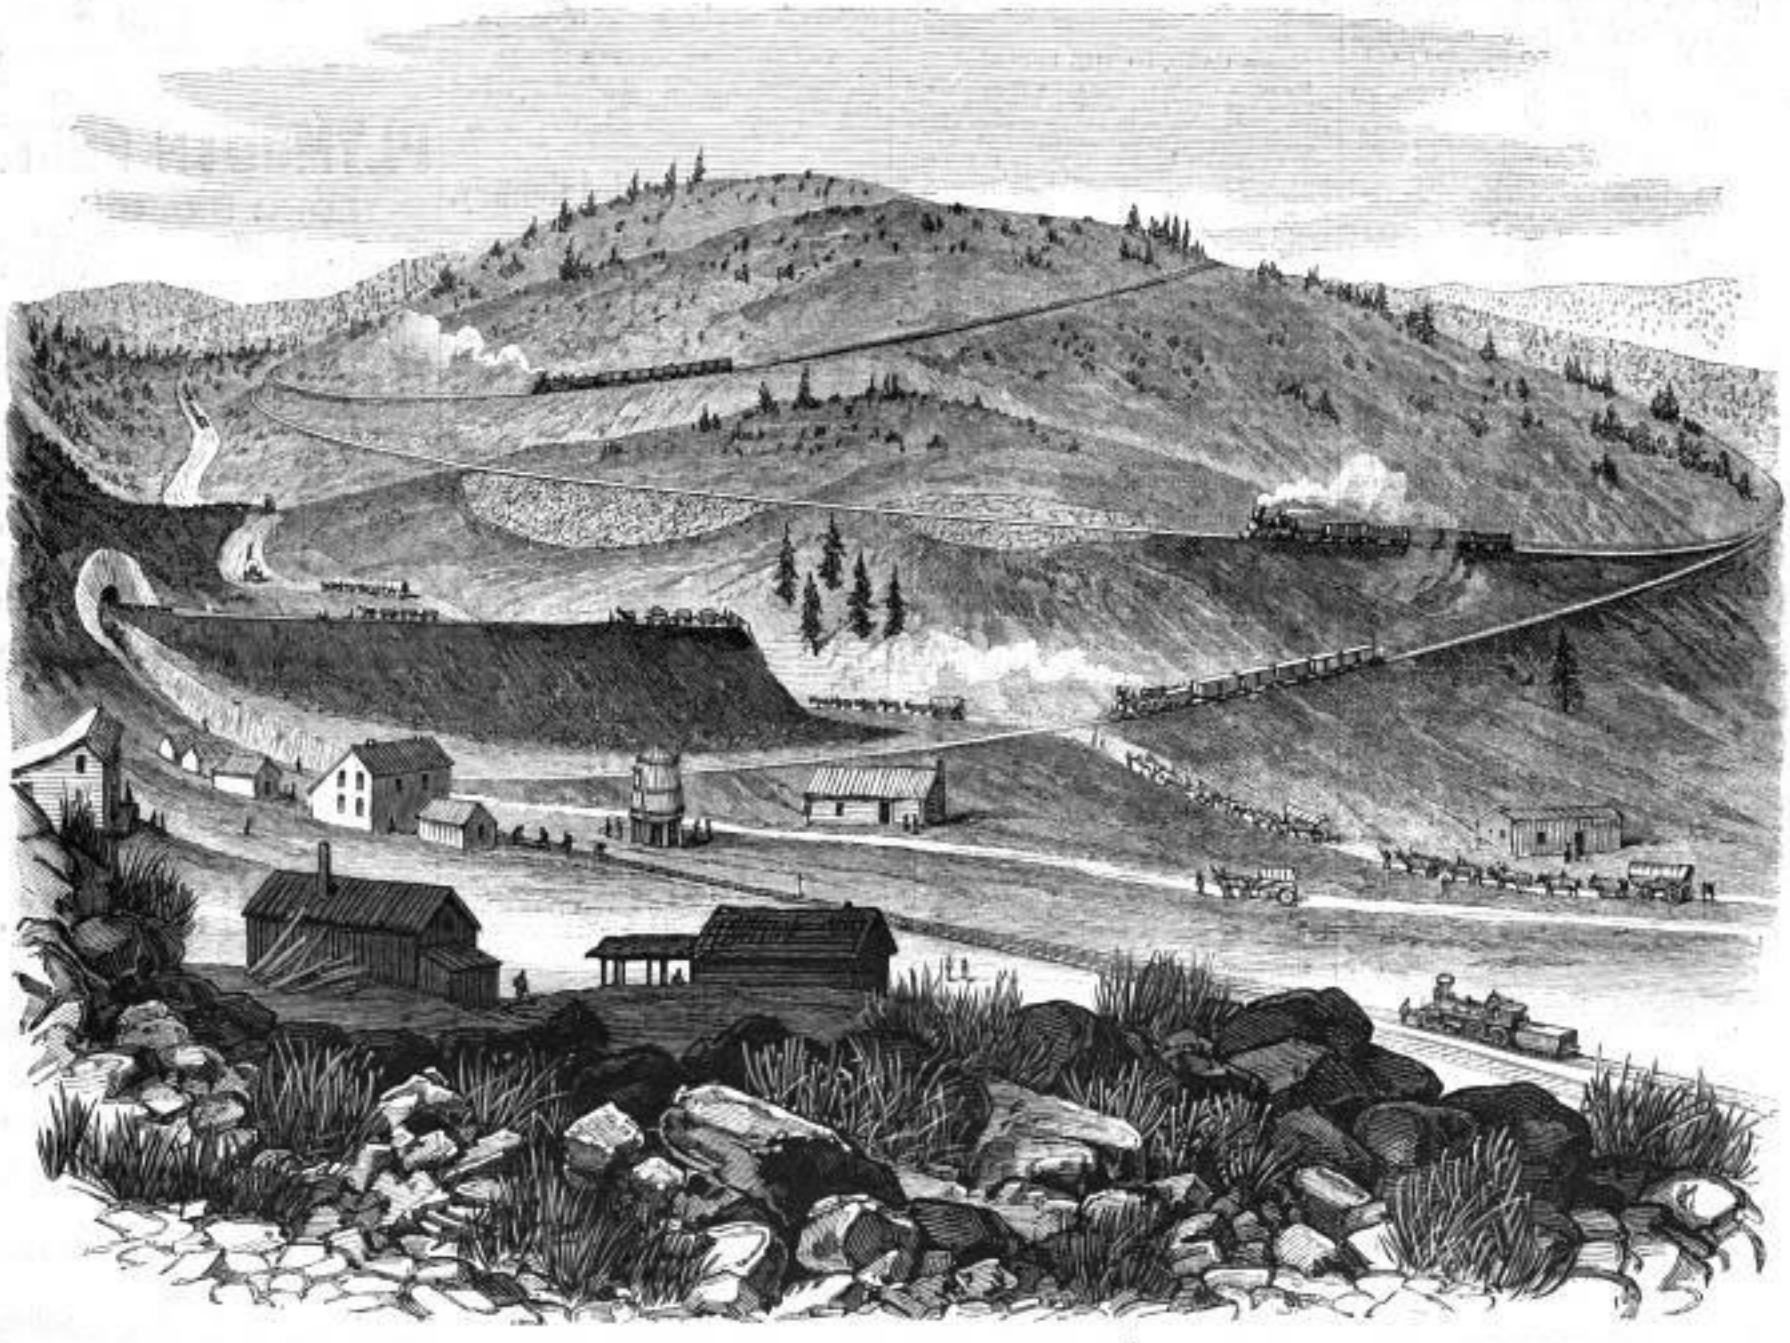
A private telegram from Valparaiso, dated August 4th, announces that the Chilian blockade of Iquique has been again raised. The *Admiral Cochrane* of Chili has spent several days on the site where the *Esmeralda* was sunk, seeking to recover some of the effects and

GENERAL HILARION DAZA, PRESIDENT OF THE REPUBLIC OF BOLIVIA.

guns of that ship, but no results are mentioned. Chili has received another check in the form of a refusal by the Argentine Senate to ratify the treaty of 1878 with it, relative to the cession of Patagonia.

CROSSING THE RATON MOUNTAINS.

The Famous Switchback near Trinidad, Colorado.



WE give on this page an illustration of the "switchback" near Trinidad, Colorado, by which the Raton Mountains are now crossed into New Mexico. Trinidad is the southernmost town of Colorado, and the *entrepôt* for the Territory named. The Raton Mountains reach out from the main range in a nearly easterly direction, forming a line almost coincident with the boundary between Colorado and New Mexico. The culminating point is Raton Peak, seven miles south of Trinidad, which attains an altitude of 9,465 feet. Directly west of this peak begins Raton Cañon, crooked, savage and picturesque, rising up to Raton Pass 7,863 feet above the sea. Directly opposite Raton Cañon is Willow Cañon, debouching at Willow Springs upon the vast pastoral plains of New Mexico. The hollow thus scooped out by the finger of nature has long been a great viaduct of travel, the portal to New Mexico, and the route of a vast traffic. This natural artery of trade the managers of the Atchison, Topeka and Santa Fé Company resolved to follow, and after a short **and sharp but decisive struggle with the Denver and Rio Grande Company, they remained masters of the situation, and proceeded at** once to construct their road, the only enemy left them to contend with being the natural obstacles they found in their path.

The distance from Trinidad to the summit is a trifle over fifteen miles, giving an average rise of upwards of 121 feet to the mile. This would not be excessive if it were equally distributed, but it is not. In places a gradient of 185 feet to the mile has to be overcome, and when within half a mile of the summit the road runs suddenly against a steep ascent 287 feet high. To reach the foot of that hill enormous engineering obstacles have been surmounted. The hillsides have been dug into, the rocks have been blasted away, streams have been diverted from their channels, riprap has been built to protect embankments, three iron bridges have been thrown across

D. ANIBAL PINTO, PRESIDENT OF THE REPUBLIC OF CHILI.

the cañon as the line changes from side to side, seeking the least difficult path, and at last the locomotive is brought face to face with a steep ascent no human machinery can climb. To surmount the ascent two schemes are devised, the one temporary and in present use, the other to be permanent and to supersede the first. The means now employed is called a "switchback." By it the cars leaving the main line are carried along a steep incline diagonally up the hill; thence, reversing their direction, shoot up another; then, reversing again, they climb to the summit, zigzagging up the steep they cannot directly scale. Even in this gradual ascent the grade is no less than 316 feet to the mile. Circling around the highest point, the road descends on the New Mexico side by a similar contrivance, and reaches the main line once more after having **achieved 2,000 feet of actual distance by going** *three* **miles around. This temporary work has cost the company $30,000. The permanent** line, instead of overcoming the summit, will pass through 160 feet below, by a tunnel 2,000 feet in length. This tunnel is 14 feet wide

COLORADO.—NORTH END OF THE RATON SWITCHBACK AND TUNNEL NEAR TRINIDAD, ALSO SHOWING THE OLD SANTA FÉ TRAIL OVER RATON PASS.—FROM A SKETCH BY H. WORRALL.

Digitized by Google

by 19 feet high, and will cost, when completed, $125,000. The company expect to have the tunnel open for business by the first of September.

The ride over the mountain is exhilarating and romantic, and all the more for the spice of danger there is in it: for the misplacement of a rail by half an inch, or the slipping of a brake, would hurl train and passengers hundreds of feet below.

Thirty miles south of Trinidad is the mushroom town of Otero, named in honor of Don Miguel A. Otero, one of the wealthiest merchants of New Mexico, and at one time its honored delegate in Congress. It is the intention of the railroad company to operate the line between Trinidad and Otero as a mountain division, with the largest engine in the world as a motive power.

The Planets in August.

VENUS is evening star, and eminently deserves the place of honor among the mysterious twinklers throughout the month, for she dons her most beautiful garments, and far outshines her sparkling peers in size and radiant light. On the 19th she reaches her point of greatest brilliancy, and sharp-eyed observers who know where to look may then obtain a glimpse of her before the sun sets, or watch the shadow she casts at night in the absence of the moon. Viewed through the telescope, she now presents the phase of a waning crescent, but, owing to her nearness to the earth, her apparent diameter is nearly six times as great as when she is furthest off. Venus sets about nine o'clock. Her rapid approach to the sun night after night will be evident to the most casual observer, as will be her rapid increase in brilliancy until the 19th, after which she will be so near the sun as to be quickly hidden by his bright rays. At the end of the month she will set about seven, only half an hour after the sun, and then for nearly a year the queen of stars will be missed from the western sky.

Jupiter deserves to be ranked with the evening stars, although the calendar does not give him a place there until the last day of the month. He comes into opposition with the sun on the 31st, and is then at his most brilliant point to terrestrial view, being more than one hundred and eighty millions of miles nearer to us than when furthest off. The earth is between the sun and Jupiter, and, as the planet's position in the heavens is then opposite the sun, he is said to be in opposition. Thus the two largest and brightest planets of the system will reach their culminating points during the month, and observers will not fail to enjoy as well as contrast the softened radiance of Venus in the west with the brighter glow of Jupiter in the east. It must also be remembered that our mighty brother-planet is approaching his much-dreaded perihelion, reaching it next year in September, and that in the intervening period and the two or more years succeeding, all manner of atmospherical disturbances are to be expected. The vast mass of Jupiter, when approaching fifty millions of miles nearer to the great central luminary, must inevitably create a commotion among his incandescent elements, and every disturbance in the sun is reflected to the remotest bound of the solar system. The men of science are therefore watching the dawn of the eleven-year period, and the inauspicious combination of the perihelion passages of the four great planets, with an intensity of interest proportioned to its importance, while Jupiter, the superb star challenging our admiration throughout the month, is the chief sinner among the shining quartet. He rises now at a quarter before nine o'clock; on the last day of the month, just as the sun sets, about half-past six.

Saturn is morning star. He has departed from his close companionship with Mars, and may be easily recognized in the southeast by his peculiar dull yellow tint, and the absence of any other bright stars from his vicinity. He rises now about ten o'clock, nearly an hour and a half after Jupiter; at the end of the month he rises not long after eight.

Mars is morning star, and noticeable for his increasing size and more ruddy light as he approaches opposition. He rises now about eleven; at the end of the month about half-past nine.

Mercury is evening star until the 23d, when he comes into interior conjunction with the sun, and commences his short rôle as morning star.

Uranus is evening star until the 18th, when he comes into conjunction with the sun, after which he shines among the morning stars. He sets now about eight, but is too far away to be seen by the naked eye. After his conjunction he rises before the sun.

The month of August is honored by the advent of two full moons, one on the 2d and one on the 31st. The waning moon was near Jupiter on the 4th, Saturn on the 7th, and Mars on the 9th. The new moon of the 17th is in conjunction with Mercury and Uranus when one day old, but they are all too near the sun to be visible to observers on this planet. The moon is near Venus on the 20th. The moon and Jupiter are in conjunction on the 30th, one day before the full.

Thus the skies of the softer Summer nights will be full of interest for human observation. Two full moons will shed their rounded radiance over the sleeping earth, and flood the landscape and seascape with silvery light. Jupiter will reign supreme in the early eastern sky, and Venus in the height of her renown will hang in pensile beauty amid the glowing west. Later in the night Mars and Saturn will divide the starry honors with Jupiter, the celestial trio gaining in size and brightness as they approach their opposition. The Earth will plow her way through the August meteor zone, and myriad meteors dissolving in fiery tears will give evidence of the annual passage. Besides all this, there will be conjunctions and oppositions, visible and invisible, of the great celestial forces, as well as a rarely beautiful phenomenon in the occultation of the red star Antares, the leading brilliant in Scorpio, by the Moon on the evening of the 24th, not far from half-past ten. Observers will have busy work in tracing out the movements here indicated on the glowing map which, every star-lit night, lies open above our heads.

Singular Instincts of Scorpions.

THERE is a species of stinging scorpion found in the river bottoms of Western Texas. Immediately after the birth of her young the female places them in a basket-shaped receptacle on her back, where they at once attach themselves and begin sucking her blood. Of course, the mother soon succumbs to this unfilial treatment and begins to droop. The young ones are by this time sufficiently nourished to demand more substantial food, and they kill their mother and devour her. Should one of the young ones become detached from the living nest, it is at once killed and feasted upon by its mother. Thus it seems that while the female willingly sacrifices her life to her offspring, yet she does not hesitate to kill them should they be so devoid of instinct as to refuse to remain where she places them after birth. While this is going on the male parent stands around.

FUN.

DARKNESS that may be felt—a black hat.

ARE the Scottish lochs fitted with quays?

NIAGARA FALLS, but the mercury doesn't.

NEW YORK policemen make all their arrests at club rates.

BEWARE of the man of one book—especially if he is the agent for it.

A GOOD many Western people are feeding New Jersey musquitoes at Long Branch.

PERSONS who eat cucumbers do not have their labor for their pains, but the reverse.

THE Bible tells us that our hairs are numbered, and we know that they are also sometimes red.

THE bootblack blithe shines while he works;
But the lazy man whines while he shirks.

A YOUNG man described a taxidermist to a bevy of young girls as one who sort o' upholsters animals!

MRS. SQUILLS don't believe there ever has been "a white race in Africa," because, from what she has heard of the climate, it's altogether too warm there for such sports.

A CLEVER boy was offered five shillings to dig up his aunt's garden, and he hid a sixpence in it, and then told all the boys in the neighborhood. The next morning the ground was pulverized two feet deep.

"WHAT part," asked a Sunday-school teacher, "of the 'Burial of Sir John Moore' do you like best?" He was thoughtful for a moment, and then replied. "Few and short were the prayers we said."

HE was a disgusted boy. He had exercised great caution and had finally succeeded in crawling, unobserved, under the canvas into the tent. And he found it was not a circus, but a revival meeting in progress.

DE CANDOLLE calls attention to the fact that a branch of a coffee-tree, preserved in a solution made by boiling water, with about seventeen per cent. of common salt, retained its green color for fifty-three years.

A CLEVELAND mother, noticing her little daughter wipe her mouth with her dress sleeve, asked her what her handkerchief was for. Said the little one: "It's to shake at the ladies in the street. That's what papa does with his."

THEY begged him to play a little. He seemed to feel bashful at first, but, after a while, began to play vigorously. "What power!" said a listener to the owner of the piano. "Yes," exclaimed the latter, in alarm, "he seems to have considerable music; but he ought to know that this isn't a gymnasium."

A PARTY of Baptist clergymen were bluefishing off Martha's Vineyard the other day. A question arose as to whether a certain specimen was really a bluefish. "We call 'em Baptists," said a native fisherman. The Baptist clergymen rather eagerly asked why. "'Cause they spile so soon arter they're taken out o' the water."

A LAWYER once asked a Texan judge to charge the jury that "it is better that ninety-and-nine guilty men should escape than that one innocent man should be punished." "Yes," said the judge. "I will give that charge, but in the opinion of the court the ninety-and-nine guilty men have already escaped in this country."

THIS, dear children, is the shoe of a Chinese lady. See how little it is; what a very narrow sole it has." "I'll bet it ain't as narrow as Deacon ——'s. Father says his soul will fall through a crack in the floor some day and get lost!" was the shrill comment of a boy given to sharp listening. The superintendent put the Chinese shoe in his pocket, and requested the school to sing "Pull for the Shore."

A CARD TO THE PUBLIC.

WE ask a careful reading and a thoughtful consideration of what follows. It is now over twelve years since a new cure for chronic diseases was discovered, known as "COMPOUND OXYGEN." The results which have followed its use up to this time have been so remarkable that it is beginning to attract the widest attention. Many intelligent physicians in various parts of the country have, after a careful investigation of its scientific and pathological claims, used it in cases where all other known remedies had failed, and with a success alike surprising to themselves and their patients. In Consumption, Catarrh, Asthma, Bronchitis, Headache, Dyspepsia, and the wide range of Neuralgic disorders from which so many suffer life-long tortures, it has rarely failed to give relief, and in many cases it made permanent cures. It is not a drug, but a new combination of the two elements which make up our common air, giving oxygen in excess. It is taken by inhalation, and cures by natural and orderly processes—first, *by eliminating the excess of carbon which has accumulated in the system*; and secondly, *by a revitalization of all the great nervous centres*. In order to give the public an opportunity to learn all about this new treatment, we have prepared a carefully written Treatise, in which is presented a history of the discovery of Compound Oxygen, a statement of its Scientific Basis and Mode of Action, and large details of the results which have followed its administration. This is sent free by mail to any one who may desire to receive it. Address, DRS. STARKEY & PALEN, 1112 Girard Street, Philadelphia, Pa.

Life in the Kah-chen Hills.

IN a brief account of the work of the China Inland Mission in Burmah we find some notes of interest respecting a visit to the Kah-chen hills near the Chinese frontier. The village visited is situated among the mountains at an elevation of 4,000 feet above the Burmese town of Tsee-kaw. The Kah-chen houses, are described as being built of bamboo, and more substantially than those of the Burmese. The roof of each is about 100 or 150 feet in length; at the entrance, for some 15 feet, the sides are open or merely formed of open bamboo work. The poles which support the roof of this part of the building are ornamented with the heads and horns of buffaloes sacrificed to the *nats* or spirits. On either side of a long passage are small rooms, the first of which is the guest chamber; the kitchen and general sitting-room is at the end of the passage, whence a door, always open, leads into a small raised veranda and which is entirely appropriated to the use of the nats, of whom the people are in great dread. The dress of the women is superior to that of their Burmese sisters, than whom they are said to be more modest. All who can afford it wear a large silver hoop round the neck, and as many strings of red, green, blue, and white beads as they can muster. Their ear ornaments are peculiar; large flaps of ornamented cotton hang from the back of the ear, and tassels or silver tubes are passed through the lobes. All wear large coils of rattan round their bodies, and the younger ones wear bells and cowrie shells. There is, however, one objection to both men and women, viz., their great want of cleanliness.

A WISE LEGISLATOR.

HE is successful because he has the manly courage to rise above all personal motives or interests, cast his vote and influence on the side of measures which will contribute to the well-being of his fellowmen. The good of the many, even though it proves injurious to the interests of the few, is the maxim of the wise legislator. But certain men will never admit the wisdom of this doctrine, any more than some selfish private practitioners will admit the superlative value of Dr. Pierce's Golden Medical Discovery and Pleasant Purgative Pellets, because these remedies have injured their practice. Of course no man in his right senses will pay a physician $5 for a consultation, a bottle of bitters, a few powders, and a prescription, when one bottle of Dr. Pierce's Golden Medical Discovery and a bottle of his Pleasant Purgative Pellets, both costing but $1.25, will accomplish the same result, viz: cleanse the liver and blood, regulate and tone the stomach, and impart a healthful action to the bowels and kidneys.

$500 will be paid for any case that Hop Bitters will not cure or help. Doubt not.

BURNETT'S FLAVORING EXTRACTS.—There is no subject which should more engross attention than the purity of the preparations which are used in flavoring the various compounds prepared for the human stomach. BURNETT'S EXTRACTS are prepared from fruits of the best quality, and are highly concentrated. The "Fifth Avenue," "Continental," "Grand Pacific," and other leading hotels, use and indorse BURNETT'S EXTRACTS.

THE perfume of freshly-culled flowers is agreeable to every one, and so it is with the delightful fragrance of MURRAY & LANMAN'S FLORIDA WATER. None reject it, none dislike it. From the tropics to the frigid zone, it is the universal favorite on the handkerchief, at the toilet, and in the bath.

No one can be sick if the stomach, blood, liver and kidneys are well. Hop Bitters keeps them well.

HALFORD'S LEICESTERSHIRE TABLE SAUCE is capital for dyspeptics; gives tone to the stomach. Physicians recommend it.

THE Genuine Asbestos Liquid Paints are used on the finest and most important structures in this country, and are particularly adapted for first-class dwellings. H. W. Johns' Manufacturing Company, 87 Maiden Lane, New York, sole manufacturers.—*Adv.*

Special Notice.—In presenting the eleventh of their series of Popular Drawings, the Commonwealth Distribution Company respectfully assure the public that the utmost vigilance will be used for the protection of ticket-holders, and to this end a committee of honorable citizens will be selected, and as many ticket-holders as possible are requested to be present, who, in conjunction with the committee, can personally supervise the drawing, and see that the interests of all ticket-holders throughout the Union are represented as fairly as if they were present in person.

$10 to $1,000 Invested in Wall St. Stocks makes fortunes every month. Book sent free explaining everything. Address, BAXTER & CO., Bankers, 17 Wall St., N. Y.

THE VENERABLE PETER COOPER.

I cheerfully testify that I have been to the COLTON DENTAL ASSOCIATION, 19 Cooper Institute, and had two teeth extracted while under the influence of Laughing Gas. I felt no pain whatever, and the gas produced no injurious or even unpleasant effects. PETER COOPER.

"THREE WOMEN AT ODDS" is a short serial, unaffected in style, of great power in portraying character, and highly dramatic in plot. The dialogue is natural, with bright flashes of wit, and always exciting in a healthy and legitimate way.

No story can claim attention more deservedly during the idle hours of Summer than

POLITICAL ANOMALIES.

OUR Republican contemporaries have been teeming for the last two or three weeks with expressions of much just indignation at a case of political terrorism which has recently been witnessed in Yazoo City, Miss., where a number of reputable Democrats, having announced themselves as independent candidates for some local offices, were waited upon by a mob of regular Democrats who set before them the alternative of either straightway "leaving the county" or "taking the consequences." As "taking the consequences" in the parlance of Mississippi politics is understood to mean "death," it is natural to inquire wherein consisted the enormity of the offense committed by these political aspirants, that they should be left only to choose between death and exile as an expiation entitled to appease the wrath of their fellow-citizens. It is proper, therefore, to explain that these "Independent" Democrats were guilty of what passes for incivism in the politics of Mississippi, because in putting themselves up as *independent* candidates, "subject only to the choice of the people at the ballot-box," they were bold to recognize the colored voters as a part of the "people" on whose suffrages they did not disdain to count. It was this recognition which provoked the anger of the Yazoo "Regular Democracy."

Confronted by this "white terror" of their fellow-citizens, the "Independent Democrats," instead of standing on their rights and justifying their claim to independence, were weak and compliant enough to make a compromise with the mob—that is, they withdrew from their candidature as the price of being allowed to live in Yazoo City, and now "order" again "reigns" in the modern Warsaw of the "Regular Democracy."

The fatuity of this proceeding is only exceeded by its iniquity. The old saying of Fouchet that a political crime is also a political blunder, and that some political blunders are worse than political crimes, is almost verified by the arrant stupidity of these political rioters, who, just at a time when charges of "intimidation" at the South can serve a good turn to the Northern Republicans, have come to furnish the latter with a most available text for their commentaries. It is true that the Democrats of the entire South cannot be justly held responsible for the "Yazoo incident," but in a time of public suspicion such "incidents" are easily adjudged to be typical of a whole community, unless their exceptional character is at once demonstrated by the indignation they excite and the denunciation they receive in the bosom of the wider community whose good fame is tarnished by their occurrence. In the present case there is only one way in which the Mississippi authorities could have vindicated the political freedom which has been trodden down at Yazoo City, and that way has not been chosen by them, any more than by the candidates who have retreated before the mob.

As an offset to the Yazoo complication, the Democratic press has found a similar topic for its denunciations in some revelations just brought to light by an investigating committee of the United States Senate which has been sitting at Providence, R. I., in inquest on some anomalies of suffrage peculiar to that State. It seems that the Constitution of Rhode Island makes a distinction between the political rights of naturalized and native citizens. All natural-born male citizens who are duly qualified by age and by the payment of a poll-tax are admitted to the right of suffrage without any property qualification; but in the case of naturalized citizens it is required that, in addition to the other prescribed qualifications, they shall be owners of real estate to an amount of not less than $134. The effect of this constitutional provision works the disfranchisement of a large part of the naturalized citizens of Rhode Island, and tends to discourage foreigners from seeking the privilege of United States citizenship under the laws of Congress. Under the operation of the obstacle thus placed on suffrage and citizenship the voting population of Rhode Island is constantly growing proportionately less while its aggregate population is constantly increasing. Though the State, in virtue of its aggregate population, is entitled to two Members of Congress, and receives them, its voting population is not larger than that of Delaware, which is entitled to but one Representative in the popular branch of Congress. That is, the voter in Rhode Island has twice as much political weight as the voter in Delaware and in other States. If the Pennsylvania proportion of voters to the total population, as evidenced by the last Presidential election, should prevail in Rhode Island, the number of her voters ought to have been 62,500 instead of 26,000, which is the highest number of votes ever cast in the latter State. In the presence of such statements the reader can appreciate the justice of the remark made by Professor Ernst, a Republican journalist, but a disfranchised naturalized citizen of Rhode Island, when, in giving in his reluctant testimony to the Committee of the Senate, he said that he regarded that State, "in its political organization, as a close corporation, rather than as a Democratic or Republican State."

We have not referred to these "incidents" in Mississippi and Rhode Island for the purpose of librating them one against another in a game of political see-saw. Violence in the one case is no excuse for political inequality in the other, nor is a sufficient answer made in palliation of wrong-doing at the South by pointing to organized incivism at the North. The tumultuary proceeding at Yazoo is of evil omen outside of its narrow territorial limits, for already that evil example has spread to the adjoining county of Rankin, in Mississippi, and therefore tends to work mischief which may well excite the animadversion of the whole country. The constitutional disabilities visited on naturalized citizens in Rhode Island, though effected under the forms of law, are none the less open to public criticism, if they are found to produce evil results in our complex and confederated system of government. The slave-holders under our Federal polity, before the abolition of slavery, enjoyed a right of representation on their slaves, and thus had an advantage over the non-slave-holding population of the North; but the fact that this advantage was secured by the Constitution of the United States did not exempt it from criticism. The fact that the Constitution of Rhode Island discriminates against one class of citizens on the ground of their nativity, and thus invests her voting population with a greater power than is secured to the voters of other States, affords at least a legitimate topic of discussion, for it was precisely such discussion which led to the adoption of the Fourteenth and Fifteenth Amendments of the Constitution.

THE GREEK FRONTIERS.

THROUGH the obstinacy of the Turks the Greek boundary question is again thrown back upon Europe for consideration. Greece has been shamefully cozened. The Berlin Conference has proved a mockery, a delusion and a snare. The Greeks are now aware that they made a mistake in listening to the sphinx-like whisperings of Beaconsfield and to the direct assurances of Lord Derby that when the time came for settling the questions arising out of the war "Her Majesty's Government would use their best influence to secure for the Greek population in the Turkish provinces any administrative reforms or advantages which may be conferred upon the Christian population of any other race." Greece demands an extension of territory. She feels that she is too small, and that the limits which nature laid out for her are not filled in by her kingdom. She yearns for a line drawn from Cattaro, on the Adriatic, to Salonica, on the Ægean, and for all the islands of the Archipelago. Janina is now the battle-cry of the Greeks. She demands this Albanian city, which fell into the hands of the Turks towards the middle of the fifteenth century, and which, under Turkish rule, is fast going to decay. "No understanding between Greece and Turkey is possible," says the leading Greek organ, "that does not give Janina to Greece. We are unanimous, as in all critical periods of our national existence. All the Greeks—the Government and the Opposition—agree to adopt nothing from Europe if Janina remains outside the kingdom."

Greece is thoroughly aroused, and means to make one supreme struggle for the adjustment of her frontier. And is she not justified by the stern logic of facts? But 67,941 of her people out of 1,500,000 speak any other language than Greek, and but 16,084 profess any other belief than the Orthodox one. The laws are excellent; she tries by jury for criminal offenses, and the most complete civil and religious freedom exists everywhere, while it is worthy of note that it was only when the Greeks obtained possession of the Ionian Islands that the Jews became emancipated. The population since 1832 has doubled. Greece has sixty-five good trading ports, and 5,440 vessels whose aggregate tonnage reaches 262,032. Her commerce touches $42,000,000, while sixty-five steam factories, all of recent construction, attest her strides on the road of progress. Her educational system is perfect; she outdoes every other nation, not even excepting the United States, and she proudly boasts 129 newspapers. True, agriculture is behind, and that she groans under a grinding land-tax. But Greece is awakening from her sleep of centuries. She begins to feel her own strength, and her cry for Janina is one that will not be uttered in vain.

The latest accounts indicate that slight encounters have already taken place near the Greek frontier. It is said that there are now in Thessaly, Epirus and Macedonia 90,000 Turkish troops, exclusive of artillery and cavalry. These, together with the forces at Adrianople and Constantinople and in Albania, make an army of 160,000 men in European Turkey. In the presence of these warlike preparations, the folly of the Powers in accepting the promise of the Turks as to the settlement of the frontier question becomes so obvious as to admit of no excuse whatever.

BUTLER IN THE FIELD.

ONCE more General Butler, with a pluck and insensibility to defeat all his own, enters the field for the Governorship of Massachusetts. It is a prize which he has eagerly craved and sought for more than twenty years; through every party in turn he has striven, by hook or crook, to win it. The Democrats, years ago, used to run him as regularly as harvest time came round; he fought a formidable fight for the nomination in the Republican convention at least twice, in which he had all the leaders, like Sumner, Wilson, Dawes, the Hoars, the Rices, and their lieutenants, against him; and last year, breaking loose from the two larger organizations, made a Butler party of his own, carried utter confusion into the Democratic ranks, and bore in his own person the brunt of a campaign almost unparalleled for vigor and bitterness in the annals of Massachusetts politics. His discomfiture then, it appears, has not dismayed him. He came out of the contest with 109,435 votes, while Governor Talbot received 134,725. General Butler, therefore, has this year to overcome an adverse majority of about 25,000 votes. What are his chances as compared with 1878?

Last year he received the support of large numbers of the discontented classes, artisans and laborers out of work, victims of the greenback delusion seceded from both parties, a rather small section of the Republicans, and the great mass of the Democrats. A minority of Democratic votes, perhaps 30,000, voted for the Republican candidate, perceiving that Abbott, the orthodox Democrat, stood not the least chance, and resolved at all hazards to beat Butler. It was really these Democratic votes for Talbot that routed him. Had he been able to secure the entire Democratic vote, he would be at this moment occupying the office he has so long and so eagerly coveted. The situation is now, however, somewhat changed. In certain respects it is more favorable to the "perpetual candidate." He suffered, last year, from bad leadership, and to a great extent his campaign was a campaign of rowdyism. His lieutenants were not even shrewd. The part taken in the struggle by the California demagogue, Kearney, drove votes from Butler in herds. He now has shrewd, persevering, adroit politicians, like ex-Marshal Usher and ex-Collector Simmons, as his managers. Kearney is at a safe distance, and Butler no doubt hopes that he is forgotten. On the other hand, the widespread discontent which prevailed last year among the working classes does not exist to anything like the same extent to-day. There is trouble in Fall River and many hands are idle; but the situation has greatly improved within the year. The fire of the Greenbackers, too, has been largely drawn by the success of Secretary Sherman's resumption and financial policy, and Greenbackism has perceptibly dwindled in Massachusetts. The Republicans, moreover, are much more united than they were in 1878. Then there were serious divisions between the Hayes men and the "stalwarts." Events have since drawn these sections together, and they are now a compact body.

Butler shrewdly made State Reform his main issue in 1878. He charged the State administration with extravagance, favoritism and incompetence. He gave long statements of figures to show the reckless expenditure under Republican rule; and he promised that if he was chosen a system of rigid economy should replace it. Much has been done during the year to deprive him of the benefit of this unquestionably strong argument. The legislature has pruned expenditure in every direction. It not only cut down its own salaries, but reduced the salary of nearly every State official. Other reforms have been resolutely carried, so that it may be fairly said that a great practical work in this direction has been done. Moreover, the Butler men in the Legislature have strenuously opposed many of these reductions and reforms, and this cannot but greatly weaken their champion in the coming fight. It is a problem whether Butler will capture the Democrats this year. He is to be nominated by an "independent convention," which will meet to register a foregone conclusion. Will the Democrats confirm this choice in their succeeding conclave? It is highly probable; and it is even more certain that, if it does, there will be a bolt, and once more an orthodox Democratic candidate. It therefore seems as if he would receive about the same Democratic support, and also the same Democratic hostility, as last year. He will lose on the discontented and the Greenback vote, and he will not get as strong a Republican support as before. We therefore conclude that his vote of last year will be reduced, and the question of his election or defeat hangs upon the success of the Republicans in bringing out their full vote.

The country will watch this contest with deep interest. It is well known that the Gubernatorial chair of Massachusetts is by no means the goal of General Butler's ambition. He is making a bold and desperate aim for the Presidency. His election in Massachusetts would give him a strong position as a third candidate in the Presidential race; and few can doubt that 1880 will see at least three Presidential candidates in the field. It is plainly for the interest not of Massachusetts alone, but for that of the country at large, that he should be defeated now, and defeated decisively.

CONVICT LABOR.

IT is a sad commentary on legislation that imprisonment for crime should be used as a means to strike down private capital, to wreck old-established industries, and, in too many instances, to establish suffering and beggary by creating enforced idleness in various branches of production. It cannot be questioned that such results have been the natural outgrowth of the employment of convict labor in the penal institutions of the country. What are some of the facts as they have transpired? It is not long since that an eminent Cincinnati founder testified before a committee of the Ohio Legislature that, in consequence of the ruinous competition of prison labor, he was obliged to close his works and discharge his whole body of employés. Another gentleman, connected with a large manufacturing establishment in the same city, testified that the company of which he was a member gave employment to about one thousand men, but that, owing to the prison system of competition, they were conducting business at a loss, and could not well prolong the struggle. Others gave like testimony, and it was shown to the satisfaction of the committee that many Ohio firms had been driven from business through the vicious system of employing convict labor in the industrial branches of trade.

Ohio is not the only State in which this pernicious system operates to the disadvantage of both capital and labor. Only a few years ago the manufacture of fur hats in Connecticut, New Jersey and other States, gave employment to some 12,000 hands at remunerative wages. A Hatters' Convention, held at Orange, N. J., in 1878, appointed a committee to examine the condition of the trade, and according to their report, made in the month of May of the present year, free labor has now only 5,000 persons engaged in making and finishing fur hats, while 800 convicts are engaged in the same branch of industry. The report affirms that the work outside is never carried on more than eight months in the year, while the imprisoned convicts work six days in the week the whole year round, thus making the amount of work of 800 convicts equivalent to that of 1,400 free laborers. The work of such convicts costs the contractors from twenty-five to forty cents per day, and against this both employers and employed are obliged to compete. At this very time a large force in Dannemora Prison, in this State, are engaged in hat-making. The labor is contracted to a firm in this city at twenty-five cents per day for each man, and the contract calls for ten hours labor each working day of the year. Each convict is forced to turn out four dozen hats for women or two dozen men's hats as a day's work. The price paid by the trade for this class of work has been one dollar per dozen for ladies' hats and two dollars per dozen for men's hats. By this bargain the State of New York gets twenty-five cents from the contractors for four dollars' worth of work, and provides shelter, food and clothes for the convict workmen. Another feature in this contract is that the convicts are inhumanly overworked. Experienced workmen assert that two dozen ladies' hats or one dozen men's hats per day is a fair daily task for any one man working throughout the whole year.

Under such circumstances, is it any wonder that many hatting establishments have ceased operations, that the force of

Digitized by Google

workmen has been reduced more than fifty per centum, and that, as stated in the resolutions passed by the Hatters' Convention in 1878, convict labor is taking from each journeyman hatter an average of $90 per annum in wages?

Among the several branches of business carried on in the Ohio Penitentiary is that of cigar-making. Some sixty men are steadily engaged in this branch of business at a contract price of forty cents per day for each workman, or $2.40 per week. For the kind and quantity of work there turned out an ordinary cigarmaker would receive from $10 to $12 per week. The contractor saves from $7.60 to $9.60 per week on the cost of manufacture, thus making it an utter impossibility for an outside manufacturer to compete with him. What remains to be done under such circumstances? Either the employer of free labor must reduce wages below starvation rates, or else discharge his workmen and go out of business. Nowhere can the manufacturers of the country, engaged in the production of boots, shoes, furniture, carpets, hats, chairs, hollow-ware, buckets, stone-cutting, cigars, and other mechanical productions, stand up against men who employ convict labor in the same branches. The former must either seek a market not invaded by prison products, or reduce the wages of workmen, or, as a last resort, retire from the field.

While this system may have a tendency to cheapen goods in the market, it is cutting away the ground from under the feet of the employers of free labor and pauperizing American workingmen. Who can say how much this employment of prison labor has had to do with the troubles now everywhere prevailing in industrial circles? If convicts can be employed at prices ranging from 25 to 40 cents per day, and be forced to execute two days' work in one, how can honest workingmen in the same lines hope for much more?

EVENTS ABROAD.

IT is indiscreet in officials who value their salaries to speak of wiping out Sedan and Metz, and of squaring accounts with Germany, at public dinners in France. The Secretary-General of the Department of Ardennes, at a recent rifle-match banquet, full, possibly, of *vin ordinaire*, and equally full of patriotism, referred to the possibility of a *guerre de revanche*, or war of revenge. That this speaker hit the mark, it is true, but the following day found him a gentleman at large, with his successor duly installed.

The British Parliament was prorogued, August 15th. The speech from the throne delivered by royal commission presents a rose-colored view, which the facts do not justify, of the results of British policy in the East, in Afghanistan and in South Africa. It is admitted that the reforms promised by Turkey have not yet been consummated, but the Queen declares her purpose to insist upon their adoption. When it is remembered that the promised reforms have really been postponed because of the failure of the British Government to demand the fulfillment by the Porte of treaty obligations, this announcement of Her Majesty is not likely to be regarded as anything more than a shallow pretext.

Pope Leo, wise in his generation, is inclined to bury the Papal hatchet and smoke the calumet of peace with William of Germany. Bismarck is still out in the cold, and likely to remain minus the Papal blessing, albeit he is now endeavoring to bridge over the gulf that he himself caused to yawn between Germany and the Vatican. It is not unlikely that a Nuncio will be appointed who will keep his eye upon the blood-and-iron Prince, and report the slightest indications of backsliding. The most recent dispatches state that the ecclesiastical policy of the German Government is of so pronounced a Catholic nature as to cause the editor of the Ultramontane *Germania*, and Herr Windhörst, the Catholic leader in the Reichsrath, to wag their heads uttering, "*Timeo Danaos et dona ferentes.*"

The Irish University Bill has passed the Commons, *mirabile dictu*, without a division, and the House of Lords has adopted the amendments made by the Commons. If the Catholics are satisfied with such a settlement of the endowments question, the country must be congratulated upon so unexpected a solution of a most troublesome problem. But can this be assured? For want of a better, the Bill may be accepted for the time, but to say that it will settle the University question is absurd. It will do nothing of the kind. What the Irish Members want is not only "justice" but "reparation," and reparation can only mean the undoing of the "wrong" which was done to the Catholic Church in Ireland at the Reformation. To satisfy claims of such magnitude by such concessions as the Government is now making is simply an impossibility.

The resignation of Count Andrassy, the Austro-Hungarian Premier, has been accepted by the Emperor Francis Joseph, but it is understood that he will remain in office pending the nomination of his successor. A new Cabinet has been formed by Count Taafe, but in view of the troublous questions with which it will have to deal, its success is only problematical. The defeat of the Liberals at the elections in July disclosed the existence of apparently ineradicable popular antagonisms as to questions which no mere jugglery can put out of sight; and unless the Government shall broaden its policy and put itself abreast of the spirit of the age, the future of the Empire cannot be otherwise than a stormy one.

The latest intelligence from South Africa is more favorable to the hopes of peace. Cetewayo is said to be ready to submit upon condition that he shall be guaranteed safety and good treatment, and this guarantee is reported to have been given him. Another report declares that he is still belligerently inclined. He must, of course, surrender in the end, but he has it still in his power, no doubt, to give the British invaders a great deal of trouble.

A Roman Catholic procession in Belfast has led to the cracking of both Orange and Green skulls. Hating each other for the love of God, the followers of the rival faiths seem to regard a procession as the signal for battle, its appearance producing the same effect upon them as the *matador* of a *matador* upon an enlarged bull. Half a hundred devotees were brought to their knees through the influence of the shillelah, or the still harder penance of stones, while one or two are in a fair way of joining a procession to that bourne from whence no traveler ever returns.

The International Law Conference in session in London was opened by Sir Robert Joseph Phillmore, the distinguished writer on international law. Among the subjects discussed last week was that of intrusting to mixed tribunals criminal jurisdiction to adjudicate on collisions at sea between merchantmen of different nationalities. Mr. E. C. Benedict, of the United States, said that an international criminal law was impossible, and the matter was referred to a committee.—A number of leading social Democrats, concerned in an attempt to reorganize the Socialists, have been arrested in Dresden.—A naturalized citizen of the United States, one Mirzan, shot and killed the confidential agent of the ex-Khédive of Egypt, at Alexandria, a few days since, in consequence of a private grudge. The State Department has instructed our Acting Consul-General at Alexandria to proceed in the case according to the demands of justice.—M. de Lesseps's Panama Canal scheme appears to hang fire. Of 800,000 shares of the scheme put on the market only about 20,000 shares have been applied for, and these chiefly through a syndicate supporting the scheme. Despite this undoubted failure, M. de Lesseps asserts that he still has hopes of American aid.

SOME of the members of the English commission on the depression of the agricultural interests in Great Britain will visit this country and Canada for the purpose of inquiring into the question of food supplies. Such a commission could not come to the United States for such a purpose at a more opportune moment than the present.

PROCEEDINGS have been commenced in earnest against the persons who are charged with corrupt solicitation of members of the Pennsylvania Legislature in connection with the attempted passage of the Pittsburg Riot Claims Bill. Among the accused are two or three prominent bank officials and well-known politicians, and their trial by the courts will awaken widespread interest in financial and political circles. If their guilt should be established they should be punished to the fullest extent of the law.

THE report of Commissioner Raum on the condition of the Internal Revenue accounts during the past year shows very conclusively the integrity of that branch of the public service. The total collections of internal revenue during the fiscal year amounted to $113,448,830, and of this sum every dollar was accounted for and paid into the Treasury. During the past three fiscal years the total collections of internal revenue have been $343,098,178, and the total amount in default is only $2,786, which is recoverable by suits. We venture to say that no private business in the country can show such a record as this.

SECRETARY SHERMAN is fortunate in his critics. Wendell Phillips has just published an open letter savagely criticising the Secretary's financial policy, and insisting that the nation, instead of being on the road to prosperity, is really bankrupt. He denounces the Republican Party as false to its most sacred promises, and, outlining the policy of the Greenbackers, says that they must attack resolutely the whole banking system. The letter is marked by all the wild exaggerations which usually characterize Mr. Phillips's public efforts; but it has, at the same time, some touches of description which will be keenly enjoyed by the public.

THE National Board of Health has failed entirely to justify the expectations of those who urged its formation. Its only beneficiaries are the physicians who are running at large in the South at ten dollars a day and expenses, and who, so far, have not been of the slightest service in connection with the yellow fever visitation. It is idle to suppose that this disease can be dealt with by manipulation from Washington, or by the scampering of inspectors to and fro out of the reach of the contagion. The Secretary of the Treasury, as we think, would be justified in refusing to pay out any further sums of the $500,000 appropriation made by Congress until the Board shall at least show some practical results for the outlay already made.

THE defeat of the debt-compromise proposition in Tennessee, at the recent election, leaves the question still an open one; but unless a special session of the Legislature shall be convened, nothing definite can be done until January, 1881, when the next regular session will be held. There are those who believe that the debt will be finally paid at the rate of sixty cents on the dollar at six per cent. interest; but this result scarcely seems to be possible in the present state of public feeling on the subject. The entire debt of Tennessee, it may be well to remember, is $20,800,000 principal, and about $4,000,000 arrears of interest. At six per cent. the annual interest is about $1,200,000. The compromise just rejected proposed the payment of fifty cents on the dollar by bonds bearing four per cent. interest. This would have reduced the principal to about $12,000,000, and the interest to a little less than $500,000, requiring a tax of less than 3½ mills, in addition to amounts received from other sources, to pay this and the ordinary State expenses.

SARATOGA is not only the centre of fashion and the field of skillful stock manipulations, as elsewhere shown in FRANK LESLIE'S ILLUSTRATED NEWSPAPER; it is also, just now, the scene of frequent political conferences and deliberations. Recently, a conference of prominent Democratic managers of this State was held there to mature a plan of operations for the Fall campaign, and it is alleged that, as a result of the decision arrived at, an effort will be made to nominate Lieutenant-Governor Dorsheimer for Governor, and that, failing in this, Chief-Justice Church will be asked to carry the party standard. This movement is understood to be in opposition to that for the renomination of Governor Robinson. On the Republican side, the candidates prominently named are A. B. Cornell, Theodore M. Pomeroy, John H. Starin and Senator Sloan, and all of these have active partisans who scheme and plan on the cool Saratoga piazzas. The coming contest is one of great importance in its bearings upon the next national election, and both parties, we fancy, will feel constrained to put the best and strongest possible tickets in nomination.

IT is now announced that General Grant will reach San Francisco about the middle of September. The scheme for a grand transcontinental excursion to welcome him at the Golden Gate and escort him to the East appears to have been abandoned, and wisely so. Whether the committees appointed by the Legislatures of Pennsylvania and one or two other States to tender him a more orderly welcome in their name will carry out their instructions, is yet to be seen; but we suspect that the ex-President, should he be consulted, would prefer that all these unnatural, exaggerated demonstrations should be altogether abandoned. As to the use of his name in connection with the Presidency, he is reported in the *Herald* correspondence to have used the following language, in conversation with the Viceroy of Tientsin, China, who congratulated him on his possible nomination:

"Your Excellency is very kind, but there could be no wish more distasteful to me than what you express. I have held the office of President as long as it has been held by any man. There are others who have risen to great distinction at home and who have earned the honor, who are worthy, and to them it belongs, not to me. I have no claims to the office. It is a place distasteful to me, a place of hardship and responsibilities. When I was a younger man these hardships were severe and never agreeable. They would be worse now."

APPARENTLY the Government is about to adopt a more vigorous policy in reference to the polygamous practices of the Mormons. The Act of Congress prohibiting polygamy having been contested by the Mormon influence and decided constitutional by the Supreme Court of the United States, the Administration has no other course left but to insist upon its enforcement, and has therefore instructed the District Attorney of Utah to carry it into effect against all persons guilty of bigamy. The Government will also insist that the importation of the deluded women who are brought here by Mormon agents from Germany, England, and other countries, for purposes in violation of the national statutes, shall be prohibited, being held to come within the meaning of the treaties which prohibit the importation of criminals. This announcement appears to have provoked great consternation in Utah, and the church organ denounces with great violence what it calls the efforts of "modern autocrats to thwart the divine purpose in gathering the Latter Day Israel." On Sunday week last, several of the Mormon Apostles in Salt Lake, in addressing the faithful, counseled them to procure firearms and prepare for active resistance to the Federal authority, and on the day following the gunshops did a thriving trade in selling and repairing weapons of one description and another. The Mormon leaders probably imagine that the Government officials will be terrorized by this vehement and angry bluster, but unless all the reports as to the purposes of the Government are unfounded, the blatant and insolent anarchists are likely to discover very soon that they have reached the end of their rope, and will no longer be permitted to defy with brazen audacity the laws of God and man.

NEWS OF THE WEEK.

Domestic.

TREMONT TEMPLE, in Boston, was destroyed by fire August 14th; loss, $120,000.

THE Lake Shore Railroad Company has acquired control of the Canada Southern Road.

THE cashier of the Citizen's National Bank, of Washington, D. C., is a defaulter in the sum of $60,000.

BISHOP ODENHEIMER, of the Episcopal Diocese of New Jersey, died August 14th, aged sixty-two years.

FIVE persons were killed by a collision on the Philadelphia and Atlantic City Narrow Gauge Railroad, August 14th.

WALTER PAINE, Third Treasurer of the American Linen Company, Fall River, Mass., is a defaulter in over $100,000.

THE Locust Grove Hotel and Pavilion, on Gravesend Bay, Long Island, a well-known Summer resort, was destroyed by fire August 15th.

JOSEPH K. FAYE, a well-known Boston merchant, was murdered in his own house on the night of August 14th, by some person unknown.

THE New York Democratic State Convention will be held at Syracuse, September 10th. The call indorses Governor Robinson's administration.

A WRIT of certiorari in the case of ex-Police Commissioner Nichols has been served upon Mayor Cooper. It is probable that an appeal will be taken.

THE Montreal banking scare has disappeared and confidence has returned. The feeling on the Stock Exchange has vastly improved and stocks have advanced all round.

REV. THOMAS B. SARGENT, a well-known and highly esteemed minister of the Methodist Episcopal Church South, died at Baltimore, August 15th. He was seventy-four years of age.

At the convention of the National Cotton Exchange, held in this city last week, Mr. John B. Lafitte was elected President, William P. Campbell, Vice-President, and Henry G. Hester, Secretary.

MR. GEORGE WALKER has been sent to Europe by the Secretary of State to ascertain the views of foreign Governments upon the plan to call a Congress to fix the relative value of gold and silver in coinage.

SENATORS KIRKWOOD, Plumb and Dawes started August 14th for the Cheyenne Indian Agency to investigate the recent raids. They travel in private conveyances, and twelve days will be consumed in making the trip.

THE Alaska Commercial Company's steamer *St. Paul*, from Onalaska, reports that the Arctic exploring yacht *Jeannette* arrived there on August 2d, and was to sail for St. Michael's on August 6th. All on board were well.

THE statement that the stolen body of the late A. T. Stewart had been recovered is authoritatively denied. The robbers, however, are still negotiating, through a lawyer of this city, for its restoration, demanding the sum of $200,000.

A CHARCOAL-BURNERS' association at Eureka, Nev., numbering 2,000 members, last week struck for higher wages, refused to allow teams from the mills to load, and defied the sheriff and his posse. The Governor called out three companies of militia.

THE Wallace Investigating Committee last week inquired into election methods in Massachusetts, and especially as to the intimidation of operatives by employers. A number of mill workmen testified that they voted in accordance with the instructions of their overseers.

THE yellow fever is still spreading at Memphis. The highest number reported in any one day last week was forty. The new cases are spread far outside the old infected districts, showing that infection has reached points heretofore recognized as safe. Business is entirely destroyed.

Foreign.

MR. TEN BROECK'S American-bred filly Saratoga won the Runnymede Plate at Egham, England, August 12th.

MR. WELSH, American Minister to England, has gone to Osborne, probably to present to the Queen his letters of recall.

HENRY M. STANLEY, the African explorer, arrived at Sierra Leone, Africa, on the 24th of July, and started for the river Congo.

DR. MOSELY, a promising young physician in Boston, fell recently while ascending the Matterhorn, in Switzerland, and was killed.

JAMES MCHENRY, the well-known English financier, has failed, with liabilities estimated at about $5,000,000, and assets reported to be small.

A DISPATCH from Pesth reports that a severe famine prevails in the district of Nertschinsk, Siberia. The Government is distributing corn to the poor.

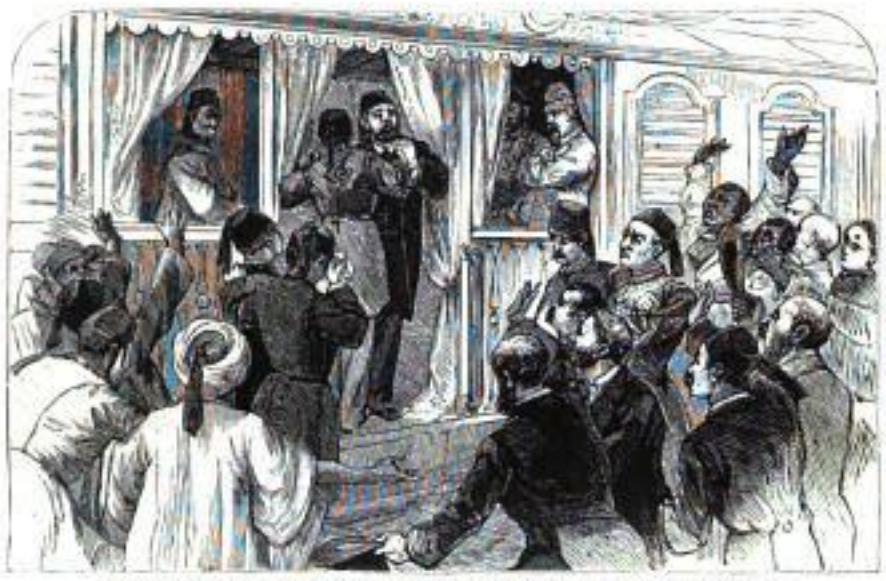
THE latest accounts state that 1,476 houses have been burned at Serajevo. The losses will reach 50,000,000 florins. Forty-six soldiers were killed and wounded.

ROWELL and Brown, the English pedestrians, have sailed for New York, to take part in the great international walking-match at Gilmore's Garden, in September.

SUNDRY fires, some of them of incendiary origin, are reported in the Spanish provinces. In one case thirty houses were destroyed and thirty-four persons perished in the flames.

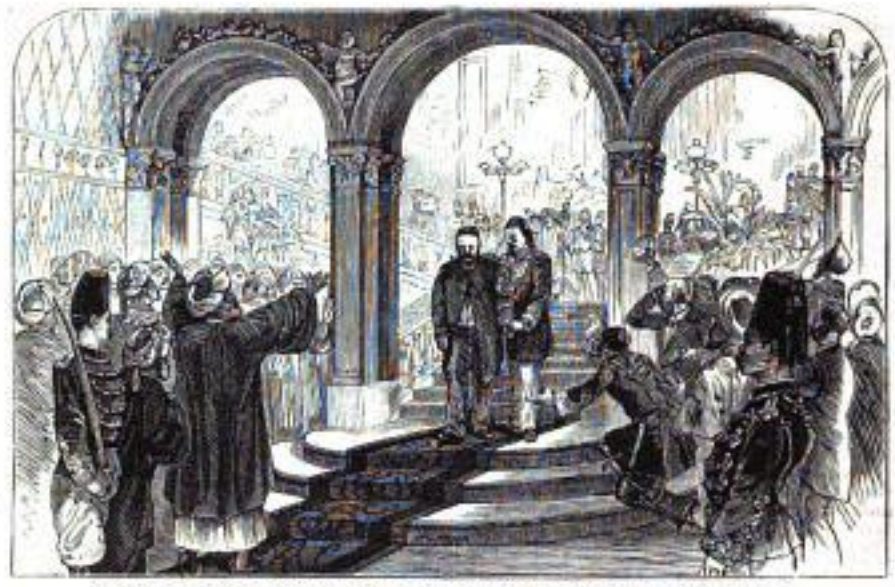
COLONEL GORDON, Governor-General of Southern Egypt, has been forced to return to Darfur by the serious aspect of the war with the slavers, whom he thought he had suppressed.

IN order to colonize the Central Asian provinces, Russia has promised all her subjects residing therein unlimited land grants and exemption from military service and the payment of taxes.



THE war in South America continues. The Chilian Admiral bombarded Iquique August 16th, doing considerable damage. The Peruvian vessels have been ordered to retaliate on the Chilian ports.

THE English House of Commons has finally passed the Bill enabling banks of unlimited liability to become banks of limited liability and authorizing such banks to increase the nominal value of their shares.



A BLOODY riot took place in Quebec, August 15th, between the French-Canadian and Irish ship laborers. Over 2,000 persons participated in the fighting, and for a time the authorities were powerless before the mob. Several houses were sacked, two persons were killed, and a dozen others badly injured.

SWIMMING FROM SANDY HOOK TO MANHATTAN BEACH.

CAPTAIN MATTHEW WEBB, the English swimmer who distinguished himself by swimming across the English Channel without any life-saving apparatus, accomplished with much ease the task of swimming from Sandy Hook to Manhattan Beach, a direct distance of ten miles, but lengthened to fifteen by the necessities of the course, in five hours and a half, on Wednesday, August 13th. Arriving at the Hook, the party, after a short wait, embarked on the *Priscilla* and steamed around to the Government Dock, Webb undressing the meanwhile. When stripped he weighed 195¼ pounds, and stood five feet eight inches in height. He wore nothing except a small cloth about his waist. His body was carefully greased from head to foot, and, putting on a small blue cap, he stood at the bow of the boat ready for the plunge. At twenty-five minutes of nine o'clock A. M. he dived from the boat into the water and swam rapidly to the shore. There he poised himself for a moment or so, and at exactly twenty-two minutes of nine he sprang into the water and began his great swim. The tide was a strong ebb, and the wind very light indeed, and from the south. He swam an even stroke, making very slow progress for the first one-eighth of a mile. When about an eighth of a mile out he passed through a school of mossbunkers without appearing to notice them in the least.

The tide began to run harder as the channel was reached, and for twenty minutes the stroke was about twenty-nine to the minute, a faster stroke by seven than he used in his swim across the English Channel.

At a quarter-past nine the wind died away, and a few minutes later he passed the black-and-white striped channel buoy. A flock of birds now circled around the swimmer's head for a few moments, and they were followed by another school of mossbunkers, who jumped all over and around the swimmer as he pursued the even tenor of his way.

At eleven the first jellyfish were met, and Webb looked anxiously at them to see if they were of the stinging kind, of which he seems more afraid than of sharks. After finding to his satisfaction that they were not stingers, he hailed the boat and said that he was "not at all tired." Nor did he appear to be, as his stroke was now twenty-six a minute. A few moments later the yacht *Rosetta* came close up and some one on board hailed Webb. He turned suddenly completely around and looked at the yacht, and then immediately went on again. He turned and swam a little on his right side at a quarter past eleven, but only for a few strokes. This was the first change he had made from the time he entered the water.

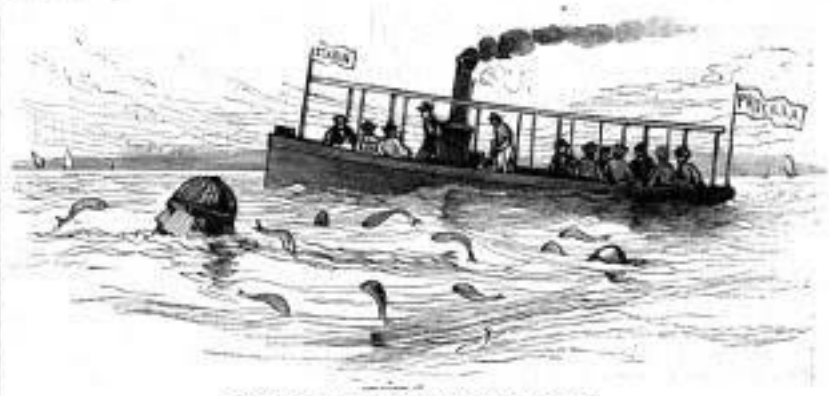
At one o'clock Webb was swimming twenty-seven strokes to the minute. Five minutes past the hour the red spar-buoy on the middle ground was passed, the wind blowing harder with each moment. At twenty-five minutes past one Webb changed his position for a few strokes, but resumed the old, regular motion again in less than a minute. At exactly half-past one Webb stopped for the first time since the start, and treading water near the launch asked for something to drink.

Captain Hartley filled a pewter mug with beer and handed it to Webb, who, treading water the while, drank the contents and threw the cup back into the boat. Webb then swam up beside the boat again and asked for meat, when Captain Hartley took some roast beef, which, breaking into small pieces, he placed in the swimmer's mouth. Webb chewed a small piece about the size of one's finger, and then swam on. He reached the vicinity of the Beach at two o'clock, and then remained in the water three hours longer in order to keep his engagement to land shortly after five o'clock, the consideration being $1,000. The water was exceedingly rough, and during this time he was tossed here and there like a cork. Now away up on a white-crested wave, now down in a hollow that seemed to have the sand for a bottom, his little blue cap told the watchers that he was all right.

The passengers on the launch had an exciting time during these three hours, and it was with much difficulty the crew could be kept at work until the passengers were transferred to the yacht *Nelly*. Captain Webb landed at 5:05 P. M., fresh and hearty, and there was great enthusiasm over him as he passed through the bathing-house amphitheatre, the men shouting and the ladies waving their handkerchiefs and throwing him bouquets, while the British flag floated from the staff above him.

PENNSYLVANIA.—DANIEL O. BARR, DEMOCRATIC CANDIDATE FOR STATE TREASURER. FROM A PHOTOGRAPH BY OTTENHUNST.

DANIEL O. BARR,



Democratic Candidate for State Treasurer of Pennsylvania.

THE Democratic candidate for State Treasurer of Pennsylvania, Mr. Daniel O. Barr, whose portrait is given on this page, is in the prime of his years, having been born at Blairsville, Indiana County, in 1840. He was educated at the public school in that town, and was subsequently employed in one of the local stores and by a firm of contractors engaged in the construction of a branch of the Pennsylvania Railroad. At a later period he studied telegraphy, and filled a number of important positions under the eye of Colonel Thomas A. Scott, who was then superintendent of the Western Division of the Pennsylvania Road. He next, in July, 1858, accepted an appointment in the old Pittsburgh Trust Company, now the First National Bank of Pittsburgh, one of the largest and most admirably managed banking institutions in the State, and there he has remained ever since, discharging all the duties of his position with marked ability and spotless integrity.

In 1869 Mr. Barr was nominated by the Democrats in the Legislature as the candidate for State Treasurer, as a compliment to him for the active part he had taken in that and previous campaigns. Again in 1870 he was the regular caucus nominee for State Treasurer, but the party being in the minority on both occasions the Republican Treasurers were elected. Two years ago his name was presented to the Democratic State Convention for the

nomination for State Treasurer, and at the convention recently held he was again put in nomination, and will be warmly supported.

Mr. Barr's career has been marked by great activity and genuine usefulness. He has never been a drone in the hive. He has shown himself in all the relations of life a man of broad sympathies, earnest convictions and thorough conscientiousness. One who knows him intimately writes: "Sympathetic with others in their troubles and considerate of their wants, his hand has often reached out quietly to succor those who needed aid, and today he has more personal friends in the community in which he lives than almost any man who could be named. He has ever been a faithful worker for his party, has attended many of the State and National Conventions, and was one of the committee of thirty-three at Reading appointed to select the Democratic delegates-at-large to the Constitutional Convention. Always moderate and restrained in his actions and expressions, he has attracted to himself that kind of friendship and support which it is very hard to take from any one who has it. His nomination illustrates this. Wherever he made a friend in any part of the State, that friend seemed to have brought others, and to stand up with enthusiasm for him."

RUBIE'S MISTAKE.

"RUBIE, child, do not grieve so! Be brave for my sake!" And Roy Wentworth drew the slight, girlish form more closely to his side.

Rubie raised her dark, tearful eyes to his face.

"Roy, I will try. But you do not know how lonely I shall be—how——" Poor little Rubie was trying hard to calm herself, but in spite of her efforts the red lips quivered piteously.

"Yes, I do know, for I shall sadly miss my little wild rose. But on this, our last night, let us sit under this shady old tree and have one cheerful little chat, and see if I cannot bring the smiles back to that woeful face." And Roy, half-laughingly, half-earnestly, drew her gently down to the mossy bank at his side.

But Rubie was strangely silent. It was a bitter trial for her, this separation from her handsome, manly lover; for her life, short as it had been, was a lonely one. While she was yet a babe her young mother died, leaving her alone, with no companion save her father, her kind, indulgent father, who worshiped her for the resemblance she bore to his fair young bride—who gratified her slightest wish, and lavished upon her all that wealth could buy. Rubie, in return, loved him deeply and tenderly; yet this love could not fill all her soul, and often in her beautiful home a feeling of loneliness stole over her, and the motherless child would have given all her great wealth for a companion to cheer the dreary house and break the dull monotony of her life.

Was it any wonder, then, when Roy Wentworth, who was spending the Summer months at Earnstead, became a frequent visitor at Clifton Hall, that Rubie, poor lonely child as she was, should learn to love with all the fervor of her warm, impulsive nature—with a love that was almost idolatry? But she dared not hope that she was cared for in return, and one night, when Roy took both her trembling little hands into his own, and whispered, "Rubie, little one, do you know that I love you? Will you be my wife?" she silently raised her face all doubtingly to his.

But there was truth in his voice, truth in those earnest blue eyes, and so Rubie trusted him, believing that in all the wide, wide world there was none so happy as she.

Mr. Clifton consented to this union, saying, "You may have her, Roy, but not yet." And his voice grew husky as he added, "When you take her you take the sunshine from my home. I cannot give up my child now; Rubie must stay with her old father at least two years more."

The village gossips held up their hands in horror when the engagement between the judge's beautiful daughter and an apparent stranger was whispered abroad. But Rubie only tossed her pretty head, and would not listen to a word against her lover.

Happy days followed, such as Rubie's short life had never known—bright, joyous days, shadowed only by the thought that Roy must soon go away; and Rubie, although she knew that his visit had already been prolonged many weeks, placed his departure far away in the dim future. But Roy had suddenly announced his intention to return, saying that he had received a letter the day before calling him home.

The news, though not entirely unexpected, proved a blow to Rubie; but Roy spoke cheerfully, and at last succeeded in diverting her attention, while Rubie gained from him a promise that before many months he would again visit Earnstead, and bring with him a certain merry maiden, Roy's only sister, to whom he was deeply attached, and that she should be her constant companion during her visit; for Rubie had already learnt to love this unknown Mabel, as she fancied she would love anything that was dear to Roy.

Besides, they were to write very, very often, and Rubie felt that those long, loving letters from Roy would, in a measure, compensate for his absence, and she was therefore disposed to look more hopefully into the future; and, if not quite her own bright self, she carried a lighter heart than only a few hours before she had thought it possible to do under the circumstances.

They had just returned from a walk over the hill. Rubie was standing in the hall, with the little white hat swinging in her hand, and when passing through the door a light coat fell from the rack; it was Roy's, and she stooped to pick it up. As she did so some letters fell from the pocket; she caught them in her hands and was about to replace them, when she thought she recognized in a dainty pink envelope one of her own letters. Scarcely knowing why she did it—perhaps to recall the occasion on which it had been written, and thinking of no harm—she thoughtlessly drew out the letter. To her astonishment a picture presented itself to her view, that of a girl, young and beautiful—a sweet, girlish face, with rosy, laughing lips and sunny blue eyes.

How came this picture there? Surely she had never seen it before. She glanced at the writing—it was not her own. Had Rubie paused but a moment, not for worlds would she have done what she did; but her brain seemed on fire, and she was prompted by a mad desire to know the worst. The letter was lying open in her hand—only one hasty glance, but it revealed all; a few words written in a graceful, childish hand—only a few, but they were as a death-blow to Rubie's happiness.

"DEAREST ROY: Do you remember how you used to tell me that you loved me more than anything else in the world? Will you ever come back? I send my photograph as you requested, and hope it will remind you sometimes of me. You will come back soon, won't you, Roy? I miss you so much! Your loving

"MAY LEE."

Very slowly Rubie folded the letter about the picture and returned it to the envelope. In her hand were two more letters, both directed in that bold, free writing which she knew only too well; one to Charles L. Mason & Co., the other to Miss Mabel Lee.

Rubie pressed her hand upon her forehead in a dazed sort of way, and wondered if her heart had turned to stone. Then, with a face cold and white with grief, she placed both letters in the pocket.

Through the open door called a well-known voice:

"Rubie! Rubie!"

But she turned silently away; not one moment too soon.

Half-way across the hall, a faint, dizzy feeling came over her; and Roy, weary at her long delay, found her cold and senseless, stretched upon the marble floor.

Then, with a face almost as white as the one lying so still upon his bosom, he laid his burden upon a sofa and called for assistance.

Mr. Clifton and Rubie's maid were soon by the side of the unconscious girl; and when at last she opened her eyes, it was Roy's face, pale and anxious, that was bending over her, Roy's hand that was holding hers in warm embrace.

"Oh, what has happened?" she exclaimed starting up and looking wildly about her. "Oh, take me, papa, take me!" and she fell helpless into his arms.

"Rubie, dear child," he asked anxiously, "what is the matter? Are you ill?"

Roy came and stood at her side; but she turned from him with a shudder, as she whispered, "No, papa; I wish to go to my room."

Having closed and locked her door, she sank upon her knees before an open window. She was hot and feverish, and her temples throbbed with pain. Too utterly miserable for sleep, she gave herself up to her painful thoughts.

It seemed years since she had entered that dear, familiar room, a happy, care-free girl. Now the sunshine was crushed out of her life, and Roy, whom she had so madly worshiped, belonged to another; and again she brought the lovely features vividly to her mind. In her own heart she could feel no anger towards the beautiful girl who had taken from her life's dearest object, for something in the pure, innocent face seemed to say that she was as good as beautiful, and she prayed that Roy Wentworth would not break that young heart as he had broken hers.

A knock at the door interrupted her; she opened it, and Janet placed a note in her hand. With nervous haste she tore it open and read its contents.

"MY POOR LITTLE RUBIE: Are you well enough to come down and say good-night? If not, I will call early in the morning.

"Your own ROY."

"'Your own Roy'!" she repeated bitterly, and the crimson blood rolled in dark waves over her pale face as she crushed the note tightly in her hand. Then, drawing a small rosewood writing-desk before her, she hastily wrote:

"MR. WENTWORTH—You will please consider our engagement at an end. Do you ask for an explanation? Then your own heart will tell you if you have been true to me. Do not attempt to see me; it would be useless.

"RUBIE CLIFTON."

Then she drew the sparkling diamond from her finger, and, folding the small white note about it, placed both in the envelope. Then she removed from a slender gold chain a costly locket; she pressed the spring, and Roy's handsome, boyish face was before her. Roy's laughing blue eyes were looking full into her own.

One moment she stood irresolute. Could she part with that which seemed a part of her life? With a stifled sob all pride and anger vanished, and, almost heart-broken, she pressed her quivering lips to the loved face, while the bitter tears fell thick and fast, and Rubie wept as in all her life she had never wept before.

Still wondering at the long silence which had followed his message, Roy was startled by a voice at his side.

"Please, sir, Miss Clifton sends you this."

He turned to receive a packet from Janet's hand. She retired, and with eager haste he broke the seal and read its contents. It would be impossible to describe the dismay which spread over the handsome face.

"'Your own heart will tell you if you have been true to me,'" burst involuntarily from his white lips. "What can she mean? Oh, Rubie, are you insane? She is ill now, but she will, she must, see me in the morning."

Then he seized his hat, and hurried from the house.

But when the next day came Rubie was firm, and would not see her lover. In vain he lingered, hoping she would relent. Her purpose was unalterable.

It is needless to tell of the dreary days that followed, of the long, sleepless nights, and mornings when Rubie found her pillow still wet with tears; for, young as she was, she had not loved with a child's love that could be thrown lightly aside, but with that woman's love that would come to her but once in a lifetime.

Two years passed away. Ruby was much changed—the youthful face was shaded with pain, but beautiful still.

It was at this time that Mrs. Featherstone, Mr. Clifton's only sister, came to spend a few months at Earnstead. Of this aunt Rubie knew but little, as her home was far away, and her visits few and far between. It was almost six years since her last visit.

Mrs. Featherstone was a widow, and had no children; and something in Rubie's sad, sweet face, and the dark, wistful eyes, touched her warm heart, and she longed to fold the girl to her bosom, and to love her as she would have loved her own child, had one been given her; and thus, between the childless woman and motherless girl sprang a strong friendship, which soon ripened into love. At length she made up her mind to take Rubie home with her. Her brother consented; so one month later Rubie found herself at her aunt's beautiful residence in Richmond.

Mrs. Featherstone deeply loved her niece, and would fain have made her happy; and it sadly pained her kind heart to see that shadow which rested upon the sweet young face. She knew that something was grieving her; but fancied, could her attention be called away and her thoughts diverted, her trouble would wear itself out. So Rubie was kept in a constant whirlwind of gayety.

"Rubie," said her aunt, one evening, "you must not forget Mrs. Arnold's reception. It is time to dress."

"I did not know it was so late. What shall I wear, Aunt Marian?"

"Anything you choose, dear; but I wish you to look even prettier than ever to-night, for I expect to meet a large number of friends, and you know I am very proud of my little niece. Run away now; your maid has been waiting this half-hour. You will find flowers in your room."

"Oh, thank you, Aunt Marian!"

Rubie went to her room and began to search her wardrobe, intent upon gratifying her aunt by wearing one of her prettiest dresses.

An hour later, her toilet completed, Rubie turned for a last look into her mirror. Surely she could find no fault with what she saw reflected—a graceful, girlish form, clad in a rich, glimmering satin of pale pink, with an overdress of soft, fleecy white lace carelessly draped with rosebuds of pure white and delicate pink, while the same beautiful flowers nestled among the long, dark curls which fell in profusion over the white, dimpled shoulders.

The fair, sweet face was still pale, save for the faint blush upon the soft cheeks, and an eager light glowed from the depths of the large, beautiful eyes.

With a little smile of satisfaction, Rubie ran lightly down-stairs.

Mrs. Featherstone, tall and stately, in a costly evening dress of dark blue silk, met her at the door, and Rubie noticed with pleasure the look of pride and wonder that flitted over the handsome face, and felt amply repaid for the slight sacrifice which she had made by the tender kiss which she received.

The guests had already thronged Mrs. Arnold's brilliantly-lighted rooms. Many lovely faces, many beautiful forms had gathered there. Mrs. Featherstone moved about with that stately, winning grace which seemed a part of herself; and her kind greeting and ready smile made her a favorite with old and young. With a quiet pleasure she noticed the many whispered words of praise, the many admiring glances, bestowed upon the beautiful girl at her side.

Dance followed dance in rapid succession, but at last, flushed and weary, Rubie stood for a few moments alone. Eagerly she watched for an opportunity to pass out unobserved, and saw that the bay-window near which she was standing opened from the floor out upon a small balcony. Once out in the open air and alone, she found a rustic seat, and, clasping both hands upon its arm, bowed her head upon them, while the cool breeze fanned her cheek. Poor, weary-hearted child! She had tried, oh, so hard, to be happy, and how miserably she had failed! Could she never forget?

So absorbed was she that she did not at first hear voices near the open window.

"Do you know, Cousin Ernest, I think you are extremely selfish in keeping Ettie all to yourself, when I have been looking in every nook and corner for her. Ettie, you can't guess who is here!"

"Then it would be useless to try," replied the young lady addressed.

"Now don't be so provokingly cool, when I know you are just wild to know! But I will be reasonable for once. It is May—May Lee and her brother."

"Why, Nell, I thought they were abroad."

"So did I, until I saw them a few moments ago. They returned on Tuesday, and have kept themselves perfectly quiet on purpose to surprise us all to-night. Mrs. Arnold and Frank were the only ones who knew of it. May is lovely to-night; I do believe the child grows prettier every day."

"And how about the brother?" asked Ernest.

"Oh, he is just as handsome and as good as ever, and a splendid catch; but we girls do not take as much interest in him as one might suppose."

"And why not?"

"Well, you see, he fell in love with a beautiful girl. They were engaged, but must have had a quarrel, for he came home and was dangerously ill for a long time, and——"

"Hush!" said Ettie in a low voice, as the speaker paused for breath. "Some one will hear you. Nellie, how do you know this?"

"Mrs. Blain was his nurse, and she told me how he raved and called her name, and vowed never to marry another; and he has kept his promise well, for I see he is as tenderly devoted to May as ever. He could not love her more if she were his own sister. But they are coming this way. Come, Ettie, and you, too, Ernest, if you wish to speak to them."

The little group vanished, and Rubie rose, intent upon catching a glimpse of the fair May and her brother.

They were standing beneath the chandelier, and as they turned, their features were plainly visible. An exclamation of horror and surprise burst involuntarily from her pale lips, and she clung to the settee for support. For it was Roy who stood there, although slightly changed, a trifle older, with a shade of pallor resting upon the handsome features. At his side, with the gaslight falling upon her golden head, stood a tiny, fairy-like form, clad in an evening dress of pale, fleecy blue. She had a sweet childish face. Rubie knew it well, for every feature was stamped upon her memory, although she had seen it but once; it was but little changed—the same as when she had drawn it from the unsealed letter in Roy's pocket three years ago.

This, then, was the little sister of whom he had so often spoken. Oh, how wickedly, how cruelly, she had wronged him! And in all these years he had been faithful to her—perhaps loved her even yet! But she must tell him all, even though he despised her for it.

She hastily left her hiding-place, and noiselessly entered the door of the conservatory. It was deserted by all except Mrs. Arnold's little daughter, who was gathering flowers.

"Jessie," she said, taking the child's hand in hers, "do you know the gentleman and pretty lady in blue who were talking to Mrs. Romaine a few moments ago? You see them now, do you not?"

"Oh, yes!" replied the little one, smiling; "that is Mr. Wentworth and his sister."

"Will you tell Mr. Wentworth that somebody is waiting in the conservatory who wishes to speak to him? Can you remember, Jessie?"

"Oh, yes." Then, raising her large brown eyes to Rubie's face, she said, "Are you ill, Miss Clifton? Shall I call mamma?"

"No, darling; run away now, and do not forget what I have told you."

Then Rubie crossed the room, and stood with her face turned from the door. She was nervous and excited, and was inwardly trying to calm herself. Only a few moments more, and then came the sound of footsteps, and a well-known voice exclaimed, "Excuse me; I was told that some one wished to speak to me."

Pale and trembling, Rubie turned and stood before the man she loved and had wronged. Roy started violently, and sprang towards her with open arms.

"Rubie! At last I have found you!"

He would have embraced her, but she stepped aside.

"Do not speak to me, do not touch me, until you have heard what I have to say."

"Then why did you send for me? Oh, Rubie! you might have spared me this."

"Roy, I have wronged you cruelly; I owe you an explanation."

Then, with quivering lips and downcast eyes, she told him all.

Roy had not interrupted her, and she could not, dared not, meet that cold, hard look which she felt was on his face; and without lifting her eyes from the floor she added, with faltering voice, "Forget and forgive me if you can. Good-by!"

But two strong arms were clasped about her.

"Poor little darling! You have suffered, too. Yes, I forgive you fully, freely, on one condition. No, Rubie, I have waited so long for this that I cannot let you go now. I must have your answer first."

"If I can," she murmured.

"You can. It is not very hard; only that you look up and tell me that you love me still, and will be my wife very soon."

Rubie flushed crimson.

The kind, loving tones, so different from the bitter reproach which she had expected, thrilled her, filled her with joy.

"Oh, Roy! do you want—do you care for me yet?"

The soft, dark eyes were moist as she raised them to her lover's face; and Roy was answered, for he stooped and kissed the sweet lips, saying, "You are mine, now, for ever! Poor little sister. She has been the innocent cause of all our trouble. Strange I did not mention that she was my half-sister; but I was but three years of age when my mother married Mr. Lee—four when Mabel was born. I have never known any father but hers, and she is as dear as a sister could be."

"Is her name May or Mabel?" asked Rubie.

"It is Mabel, but her schoolmates call her May, and we have all become quite familiar with the name. Wait here a few moments and I will bring her to you."

He was gone; but soon returned with the young lady leaning upon his arm.

"Rubie, this is my sister, Miss Clifton, May."

Mabel bowed her pretty head with girlish grace; but an anxious, doubtful look clouded the bright face as she threw a quick glance at her brother.

Roy saw and understood it, for he took the white hand which was resting upon his arm, and, placing it in Rubie's, said, "I wish you to love her dearly, May, for she has promised to be your sister very soon."

The bright, joyous look returned; and with childish glee she threw both soft, white arms about Rubie's neck, and kissed her cheek, exclaiming "Then it is all right! Oh, Roy, I am so glad!"

Digitized by Google

And there Aunt Marian found them; while Mabel laughingly declared that they were the three happiest people in the world.

Ruble's mistake had its compensation at last.

SUMMER LIFE AT SARATOGA.

How the Railway Magnates Manipulate the Stock Market.—The Electric Light and a Garden Party.

NEVER was Saratoga so crowded, so gay, and so brilliant. Never did fairer women or braver men throng its boulevards, its piazzas, its walks. Never did the genius of Monsieur Worth appear in "bigger blaze." Never were there so many fierce flirtations or genuine heart exchanges. Never were the souls of anxious mammas more intensely gratified. Never was *paterfamilias* so importuned for the all important parental assent. Never were millionaires so plentiful, or magnates thick as the autumnal leaves that strew the brooks of far-famed Valambrosa. There is but one Saratoga. It is unique. It is special. It reigns absolutely. It glitters, sparkles, flashes. Nothing can be more brilliant than its main street in the beginning of the month of August, wide as the Boulevards Malesherbes or Haussmen, and lined on either side by stately elms that shade its palatial hotels, while its stores, thronged by the *crème de la crème* of superbly gotten-up femininity, are about as *piquante* as they are persuasive.

The piazzas are crowded with the most animated and best-dressed people in the world. Five o'clock, and the roadway is impassable for equipages that would hold their own in Hotten llow or the Bois de Boulogne, drawn up in the shady side of the street, and all *en route* to the lake that lies like a mirror laid on a bed of thick, soft verdant moss. Overhead is an Italian sky, blue as a sapphire, while a golden tropical sunshine falls around, rendering the shadows all the deeper by its dazzling contrasts of light. Everything is bright, animated, coquettish. As *chic* as Paris in April, as luxurious as London in the height of the season. Everywhere one hears English and sees the Anglo-Saxon type of countenance; but how utterly un-English is the scene! All the heaviness, the stiffness, the lead taste of the mother-race has evaporated in the champagne-like atmosphere of what a Boston poet has well called "Our Daughterland." Everybody and everything somehow or other looks Parisian—only looks, however, for the close observer will soon note the Anglo-Saxon reserve.

In one corner of the piazza of the United States Hotel a knot of lynx-eyed gentlemen daily congregate. They seat themselves on rude wooden chairs, speak in that low tone dramatists relegate to conspirators; ever and anon consult telegraphic slips or pocket-memoranda, whiffing the while cigars that would have made the mouth of that arch scamp, the ex-Khédive, water from envy. This El Dorado is known as "Vanderbilt's Corner," and in the centre of the railroad magnates sits their monarch, Mr. William H. Vanderbilt, a word from whose lips makes or mars millions. Apropos of the value of Mr. Vanderbilt's golden words, a bit of sharp practice, such as would have delighted the hearts of Messrs. Dodson & Fogg, of Pickwickian memory, took place recently, the "cute one" being a well-known stock-operator. One morning during the past week the sovereigns of the railroad world met as usual to hold council and to discuss the propriety of relieving poor embarassed Europe through the medium of express-trains and grain-elevators. The stock-operator, apparently by accident, planted his chair close to that of Mr. Vanderbilt's but as he immediately buried himself in the folds of his newspaper, no further notice was taken of him. It so happened that the august ones were deciding the propriety of the Lake Shore's acquiring the control of the Canada Southern, and the moment that their chief, Mr. Vanderbilt, announced his decision in favor of the arrangement, the stock-operator, still buried in his paper, shuffled hastily away. Whither? To the telegraph-office, and a message instantly flashed to his partner in Wall Street securely "nobbled" several thousands of dollars. Those railroad magnates meet daily at Vanderbilt's Corner, and during "a long hour by Shrewsbury's clock" the great game is as quietly played as a rubber at whist, the stakes being only millions.

A suggestion contained in an article in this journal of last season that the electric light should be used for a Saratoga *fête* has been adopted with supreme success. The magnificent quadrangle of the Grand Union Hotel has been laid down with a floor worthy of the Mi-Careme ball at the Grand Opera. The trees are festooned with Chinese lanterns, and above all, like an opal star, shines the electric light shedding the "white radiance of eternity" on the hundreds of guests who nightly float to the dreamy strains of Strauss, or who "foot it" to the mad, merry music of "H. M. S. Pinafore." The *coup d'œil* is fairy-like. The soft, yet fierce, yet unknown light, the colors now gleaming white beneath its rays, now toning into those half tints such as artists rave madly over; the tender green of the gentle foliage and the snowy background of the hotel, with its windows containing living bouquets, is one of those all-satisfying sights such as is recognized only in dreamland. How coquettishly fair wives, widows and maids as yet untouched by wrinkle or crow's foot, seek the whitening touches of the electric light; how cautiously and carefully ladies of a certain age avoid its searching rays. *Ay de mi, Alhama!* Nor is this dancing floor exclusively confined to these Arabian Nights Entertainments. It has a double debt to pay, for during the earlier portion of the evening it is occupied by exquisitely dressed children—the little girls "symphonies" in lace, the little boys copies of Reynolds's and Gainsborough's pages, who dance and frisk, and romp, and make merry, their ringing silvern laughter pealing sweeter than the music. So attractive have the electric-light *fêtes* proved, that the Grand Union has been obliged to close its doors against all comers save its own guests, and their name is legion. Saratoga has been at its best this season, and so have Long Branch and Newport. With the revival of good spirits, and of the glories of the past, may we not hopefully look forward to a healthful resurrection of the business of the country which has now taken a slumber too long?

A Military Revival in China.

Old plans have in many cases been adhered to. There are still squadrons of junks, and troops armed with shields and spears, and bows and arrows. Not long ago the present writer saw, in the course of a few hours' trip from the Taku forts to the city of Tientsin, guards of soldiers armed with Remington breech-loaders, match-lock men, archers, river junks carrying smooth-bores, and iron steam-gunboats mounting Krupp breech-loaded cannon. But the old is fast being replaced by the new. In China the vastness of the scale of everything precludes the possibility of rapid and sweeping reform. Nothing, in all the world of wonders, probably strikes a visitor to the capital more than the immense mounds in which the salt—the sale of which is a government monopoly—is stored. Merely covered with mats, much that can be very ill spared is annually wasted in the wet season, and every vice that can be laid to the charge of a monopolist institution is aggravated in this one. The authorities are not blind to it. A year or two ago an eminent member of the Imperial Government said on this subject to an English officer, whose loss the diplomatic service and linguistic science have had to deplore: "We are most anxious to abolish it, but 100,000 employees and their families are directly dependent on the existence of this monopoly; how can we provide for them, under the actual circumstances of the country, if we disestablish them?" So, too, the old naval and military organizations are not things to be swept away in a moment; they at least continue to serve a good purpose in the maintenance of internal order.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

Khedival Changes in Egypt.

In consequence of the protest of England and France against the return of the ex-Khédive to Egypt, he has relinquished his intention of going back, and is engaged in negotiations for the purchase of the well-known and charming Villa Gallo at Capo di Monte. It was sold by the family of the Duke of Gallo to Queen Isabella, the mother of Ferdinand II.; and on her death she left it to her second husband, Count del Balzo. It is a large and beautiful house, commanding noble views. The harem which accompanied the ex-Khédive into exile consisted, besides the three princesses (the mother of Prince Tewfik remaining behind), of sixty women altogether, including twenty female slaves. It took sixty of the vice-regal carriages to convey the party from the palace of Abdine to the railway station, and ten men-of-war's boats to embark the fair travelers at Alexandria. The harem luggage formed a small pyramid, completely filling a lighter of 150 tons burden, and occupied over two hours in shipment. The above, however, was but a small portion of the female belongings of the late Khédive, over 400 of whom remain behind in Cairo, and are maintained by the present Viceroy at a cost for feeding alone of $15,000 a month. Our illustrations represent the ex-Viceroy in the act of taking leave of his family and advisers in the Abdine Palace, which ceremony we have already described, and his adieus on the railroad carriage at Cairo.

The Zulu War.

The remarkable valor, and also the semi European discipline, of the Zulu troops, have tended in some respects to shorten the war. If the Zulus had resembled most of the other South African tribes they would have warily kept in the bush, and rarely showed themselves in the open. In this way they would have avoided the terrible slaughter which has on several occasions been inflicted on them by the British superiority of armament when brought to close quarters. Instead of this, the valiant savages, with the most utter disregard of their personal safety, boldly charged solid squares of English troops armed with weapons of precision. Such foes, even when only armed with assegais, are assuredly not to be despised; and, as Mr. Archibald Forbes observes, "apprehension was unquestionably felt lest the sudden confront of the men with the fierce Zulu rush should shake their nerves; but the British soldier was true to his manly traditions when he found himself in the open and saw the enemy face to face in the daylight. Lads of new regiments, who had never seen a shot fired in anger, were as cool as the seasoned veterans." The sketch from the Lower Tugela shows John Dunn (the well-known "white Zulu," whose experience and advice since the war began have been of great service to the British troops) in the act of interrogating a prisoner. The prisoner is bound with a rope round his neck, each end being held by a volunteer. They ride with the prisoner between them, which is the recognized method, the Zulus being very slippery customers. At Estcourt, in Natal, on his way from Maritzburg to the frontier, the artist stopped at a farmhouse which was converted into an inn, and there he saw three or four native servants employed in making bread for the Seventeenth Lancers, who were expected next day. The farmer's wife and children, with an Indian coolie girl nursing the baby, were looking on at the work of kneading the dough in large tubs. An officer stood by, whip in hand, but not with any intention of compelling the natives to industry by an application of the lash.

The War in South America.

The Peruvians appear disposed to take the initiative in the struggle now going on, once having satisfied themselves of the greater speed of their few ships, insignificant in numbers and strength as compared with their enemies. The last raid of the *Huascar* incensed the Chilian Admiral, and, unable to catch his antagonist, he returned to Iquique. It is said that he bombarded that city for half an hour or so on the evening of July 16th. Less than fifty projectiles were thrown into the city, and the centres of the population, even the quarters of the Peruvian forces, were untouched. The moment that the news of the affair at Iquique reached the ears of Presidents Prado and Daza at Arica, orders were given to the *Huascar*, *Union* and *Pilcomayo* to go south and retaliate as far as possible on the undefended ports of Chili. This they did. They are said to have encountered no resistance whatever. Peruvian official telegrams further state that they captured the splendid Chilian transport *Rimac*. The loss to Chili will be over $1,000,000. After the engagement between the Chilian fleet and the Peruvian ram *Huascar*, on July 10th, the Chilian ironclad *Cochrane* went to Pisagua, designing to land her forces and destroy the property of the foreign merchants there. Unknown, however, to the commander, a strong battalion of infantry had taken possession of the fort, and the troops kept up such a vigorous fire on the small boats that the attempt to land was abandoned and the *Cochrane* withdrew.

Proposed New British Polar Expedition.

An influential Central Committee has been formed, to which forty-nine Provincial Committees are affiliated, for the purpose of organizing an expedition to the North Pole on the plan recommended by Commander Cheyne, R. N., who is strongly of opinion that balloons will form an important element in all future Arctic explorations. Our illustration depicts the three balloons as ready to start from the Winter quarters of the ship during the first week in June next, their destination being the North Pole. The balloons are named Enterprise, Resolute, and Discovery; each will be capable of lifting a ton in weight, the three carrying a sledge party intact, with stores and provisions for fifty-one days. The ascent will be made on the curve of a roughly ascertained wind circle, a continuation of which curve will carry them to the Pole, but should the said curve defect, then the required current of air can again be struck by rising to the requisite altitude, as proved by experiments that different currents of air exist according to altitude; this fact Commander Cheyne himself observed when, in charge of the Government balloons in his last expedition, he sent up four at the same moment to different altitudes, being differently weighted; they took four different directions to the four quarters of the compass, giving him his first practical idea of ballooning in the Arctic regions. Lord Derby has subscribed $500 to the fund, to enable Commodore Cheyne to carry out his scheme.

SIGNIFICANT STRAWS.

An estimate by counties of the wheat crop of Indiana gives the grand total of 55,000,000 bushels.

Cleveland reports ore and pig-iron in great demand and sold for months ahead, and that rolling mills are obliged to refuse orders.

The number of immigrants that arrived at New York during the year ending July 31st, 1879, was 163,245; the previous year, 74,132.

Persons who have recently visited some of the Ohio Valley States report that they are thronged with persons buying wheat on foreign orders.

From Nebraska come the good news: "The corn crop will be immense. The sight of our corn-fields would drive an Eastern farmer crazy with envy."

The Texas papers are filled with notices of large receipts of new cotton, and that planters are joyous at the promise of a full crop, not having as yet been troubled by worms, etc.

The paper trade in Western Massachusetts is much more active than last Summer. Fewer mills are shut down than for several years, and the prospect for the Fall trade is much better than it was last year.

A New York commercial authority says: "Our export of cotton goods so far in 1879, amounts to 99,622 packages, worth $5,454,434, which is the greatest quantity and value on record for the same period of any year."

The West Wisconsin wheat harvest is nearly completed. The yield of Spring wheat has been fully equal to the average, while the Winter wheat has far surpassed the most sanguine hopes, both as to quality and quantity.

The extensive rolling-mills at Spuyten Duyvil, N. Y., which have been idle for the past eight years, are to begin work at once with a single contract for 12,000 tons of railroad iron for a Boston party, the rails to be delivered at Kansas City at $40 per ton at the mills.

In the Northwest, in Minnesota particularly, farmers are put to great straits to obtain men to work in the harvest fields at from $2 to $3 a day. The crops are larger than were ever known, and men to harvest them are so scarce they can almost command their own prices for labor, and $2 is the minimum.

Ironton, Ohio, is at present the seat of financial healthfulness and industrial activity, and prosperity is again beginning to smile upon it. The furnaces, mills and foundries are worked to their utmost capacity, night and day, and are still unable to meet their orders. One after another the furnaces that have stood silent for years have "blown in."

Reports from all the portions of North New Jersey indicate a most pronounced revival in the iron trade. Mines, furnaces and forges, which have been idle since the panic of 1873, are being reopened and work pushed, the forces being kept on in many of them night and day. New mines are being opened and new furnaces built, notably at Chester and Port Oram.

A Chicago authority says: "Everything looks highly encouraging for a prosperous Fall trade in lumber, general merchandise, cattle, hogs, provisions, dry-goods, groceries, boots and shoes, and, in short, in all lines of commerce, not even excepting lake freights, which have been in a healthier condition this season than had been anticipated, owing in part to the revival of the iron trade calling for increased shipments of iron ore.

"There has been a heavier wheat export business this year from the port of Philadelphia than ever before," says Collector of Customs Tolton. "To be more explicit, and as a fair sample of the tonnage sent abroad," he continues, "there were exported from this port during the month of July, 1878, 205,790 bushels of wheat; for the same month, 1879, the amount had increased to 1,064,549 bushels, or more than four times as much as during the previous year."

The receipts of sugar at the principal ports in the United States denote thus far a considerable advance. In 1878 the receipts at the New York Custom House alone amounted to 550,000 tons, representing a value of about $47,827,547, and customs duty to the amount of $24,653,108.22. For the six months ending June, 1879, the receipts aggregated 611,762,653 pounds, valued at $25,007,796. For the corresponding period last year the receipts were 501,997,241 pounds, at a value of $22,246,618.

The managers of the Abbott Rail Mill at Baltimore are considering the advisability of starting the mill on full time, in anticipation of a demand for rails. The mills comprise in all six, there being three for the manufacture of plate-iron—that is, iron used in the construction of boilers, tanks, cars, stills and iron-clad ships; two puddle-mills, for the heating of iron and all necessary preliminary work, and one rail mill, for the construction, chiefly, of railroad rails. All are now in operation but the rail mill.

The great manufacturing establishments in the East are running full-handed and on full time. In Lowell the mills are all running, and the Hamilton Company, as that point, is adding new print works that will give employment to several hundred more persons; North Adams is reported as shipping prints to Cuba, Genoa and Naples. The Woolen Mills at Millbury, Mass., have been running over time for three months. In Maine the reports are that factories are crowded and running extra hours. At Manchester, N. H., all the mills are running full-handed and on full time, and a new mill, larger than any now there, is being erected the present season.

Hon Abram S. Hewitt says: "The revival of the iron trade is the legitimate result of the revival of business generally. Every iron works that kept at work during the period of depression is now overrun with orders, is working at its full capacity and unable to fill its orders. Others that had to stop operations are now going to work again. There is no doubt that we are beginning an era of healthful prosperity. Nothing can check it. We are the granary for the world. Our crop this year is enormous. Industries thrive. Last year we put down over 5,000 miles of railroad; this year it will be 4,000. Under the most improved plans iron can be made as low as $13 a ton. The profit of $4 a ton is not great, but it is remunerative, and so the outlook is encouraging."

The quarterly report of the Kansas State Board of Agriculture, just published, which embodies the official returns of the Township Assessors for the year ending March 31st last, states that the area in Winter wheat aggregates 1,297,500 acres, an increase of 223,000 acres over 1878, and an increase of over 100 per cent. for the last three years. The area in Spring wheat is over 412,000 acres. The area in corn is 2,925,000 acres, an increase of 500,000 acres over 1878, and an increase of 60 per cent. during the last three years. The area in oats is 574,000 acres. The total area in all farm products aggregates 7,157,000 acres, an increase during the past year of 1,250,000 acres. Winter wheat is unusually fine. Corn promises the largest yield ever known in the State.

The iron industry in Allentown and vicinity has a brighter outlook now than at any time since 1873. Seven out of the nine furnace-stacks in the city are now in operation, and the indications point to a long continuance of work. The Lehigh Iron Company has two stacks in operation, the Allentown Iron Company three, and the Allentown Rolling Mill Company two. The merchant and the rail mills of the latter company are running to their full capacity, and in the puddle mill eleven of the furnaces are working. The largest furnace of the Reading Iron Works, which went out of blast four years ago, was blown in August 12th. This company is now building a new tube-mill, which, when finished, will give employment to 200 additional hands. The large iron establishments at Catasauqua and Hokendauqua are in full operation.

AT HOME AND ABROAD.

—The French water-color exhibition is to be reopened in November.

—The sculptural decorations of the Hotel de Ville, in Paris, will cost 1,191,500 francs.

—The official census returns of Kansas are all in. They show that the population on the 1st of March last was 849,978.

—The Church of St. Peter-upon-Cornhill, London, celebrated its seventeenth centennial August 3d. It is believed to have been founded in the year 179.

—The total value of stamps, stamped envelopes and postal cards issued during the past fiscal year was $29,530,020, an increase of $671,866 over the year previous.

—Danish newspapers state that a terrific thunder-storm occurred in that kingdom on the 4th inst. Over 100 farmhouses were destroyed, and fifty persons were killed. The damage to the crops is incalculable.

—The American Institute will hold their usual annual exhibition this year, commencing September 17th. A large number of applications have been made for space. Intending exhibitors should address the General Superintendent, New York City.

—The sessions of the International Code Congress were opened at London on August 11th. The Lord Mayor cordially welcomed the delegates. Sir Robert Joseph Phillimore, the distinguished writer on international law, delivered the inaugural address.

—The Iowa State Board of Equalization reports that there are 34,570,636 acres of land in that State, of an average value of $7.11 per acre. The total equalized value of lands and lots is $203,735,046; of personalty, $102,048,535. Grand total, $405,763,581.

—A telegram from Para, Brazil, dated on the 21st of July, states that 14,000 distressed inhabitants of Para had revolted in consequence of the stoppage of supplies for their relief. There was much alarm in Para, as it was feared the town might be sacked. The militia had been called out.

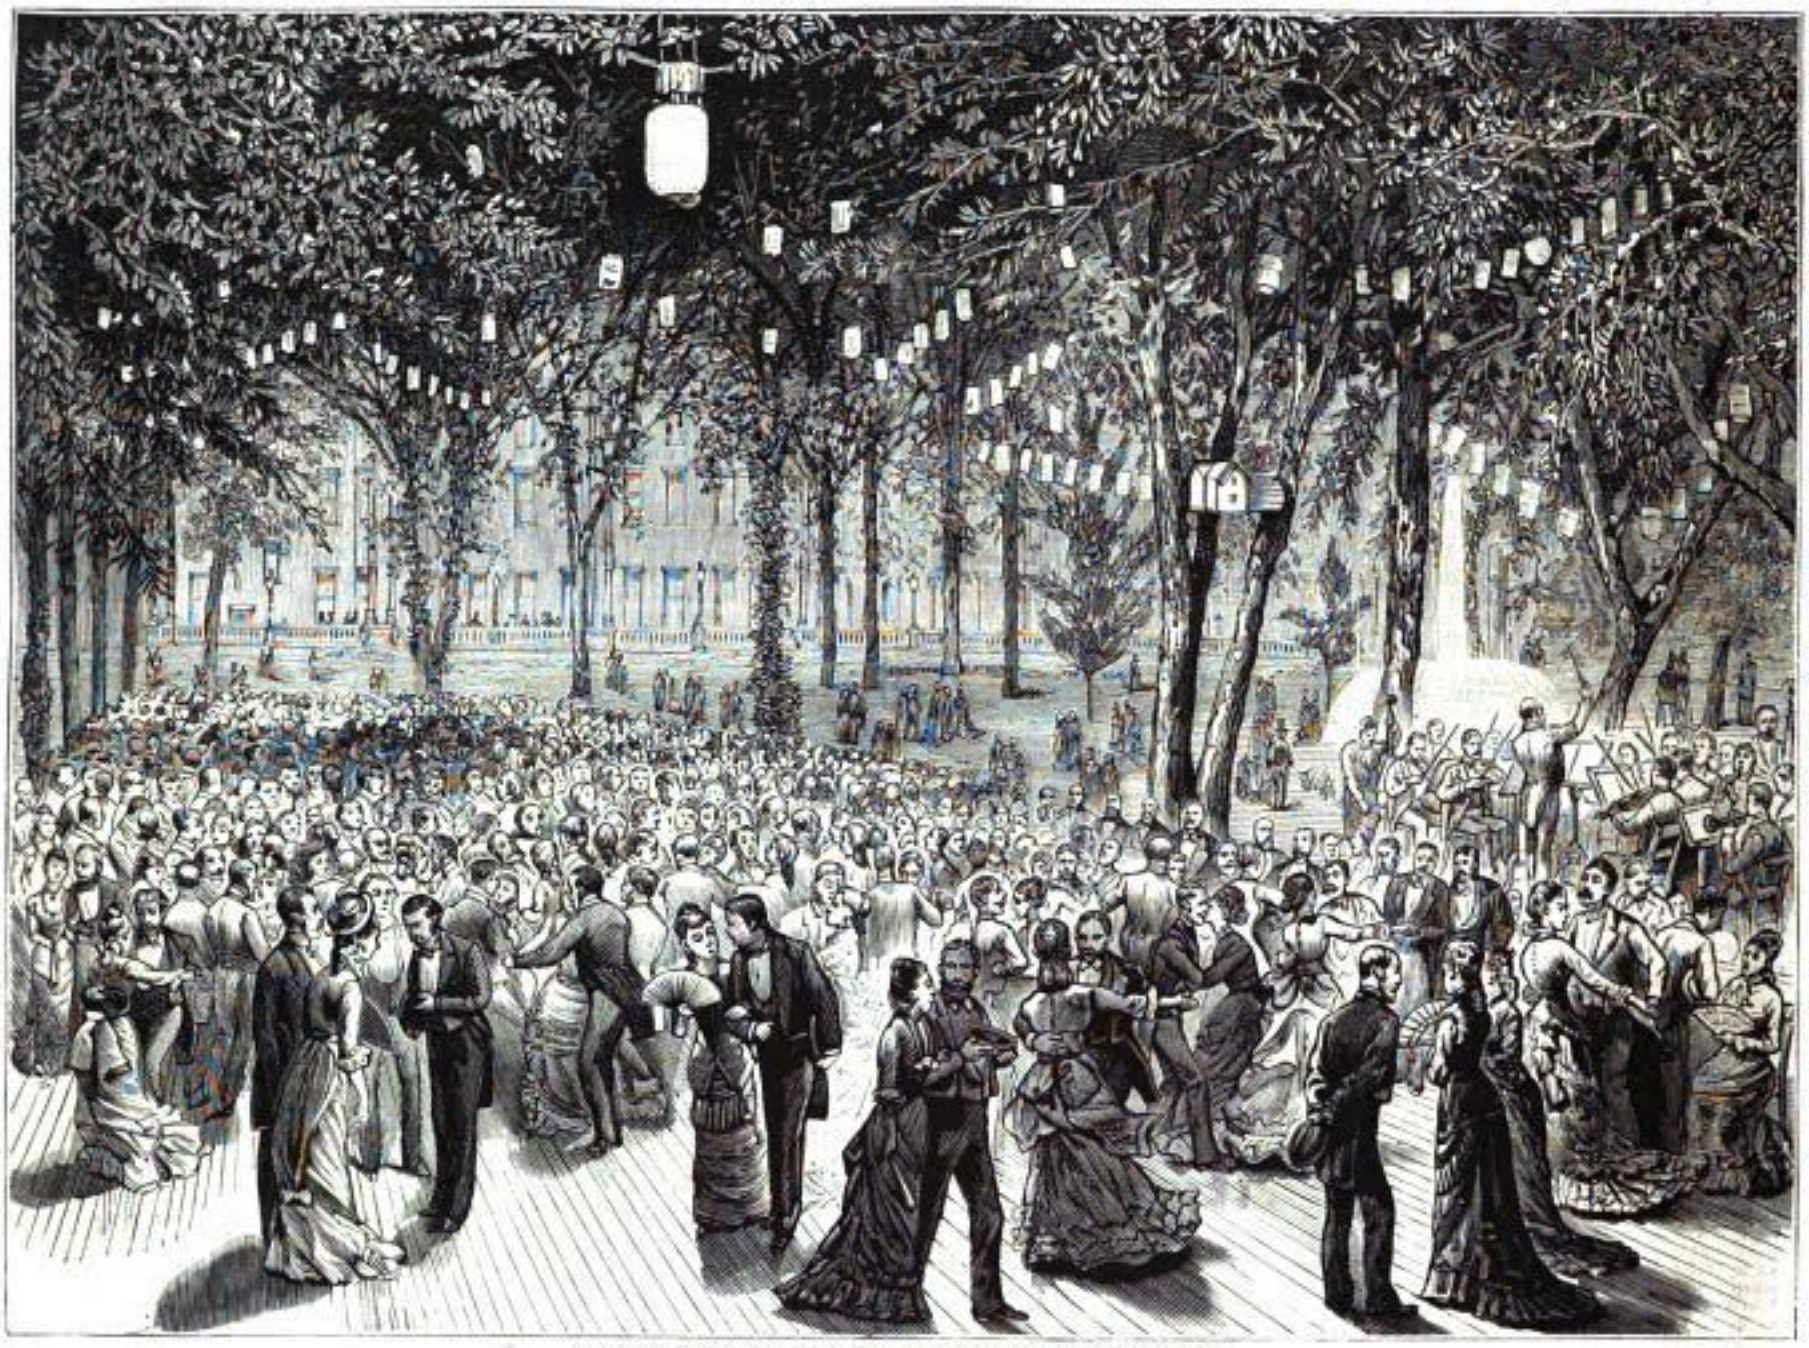
—The authorities of Odessa have decided that the new treasury buildings about to be erected there shall be supported upon pillars, so that the guards may be able to keep their eyes upon every part of them. This project was suggested by the late great robbery at Kherson, performed by undermining.

—A submarine cable in the Caspian Sea is the latest news over which Russia is jubilant, for it is the first submarine cable brought into the Czar's country. The cable was made in England, and is to be put in place by a Dane; it is 147 marine miles in length and 2,000,000 pounds in weight, and cost $310,000.

—One-third of all the emigrants from Italy go to France. The average emigration for the past three years has been 101,000, and the average number going to France has been 34,000. There are 14,000 Italian emigrants to South America, where there are 1,500 to this country. The total number of Italian emigrants is yearly diminishing.

—It is estimated that there are now over 5,000,000 sheep in Texas—more than there are in any other State in the Union, excepting California, which has about 8,000,000, Ohio ranging third in the list, with about 4,500,000. Last year over 11,000,000 pounds of wool were shipped out of the State, besides large quantities that were manufactured into yarns and cloth by the woolen mills in the State.

—A new regulation has been adopted at Monte Carlo to prevent people from gambling till they have not the wherewithal to pay their bills and get away. For the future, it is stated, none will be admitted to try their fortune in the gaming-rooms without having first deposited in the hands of the saloon authorities 500 francs, which sum they will under no circumstances be permitted to stake.



—The Municipal Council of Paris has just caused a commemorative plate to be placed on the house No. 151 in the Faubourg Saint-Antoine, bearing the following inscription: "In this place, on the 3d of December, 1851, the Representative Baudin was killed while defending the rights of the Nation." The site of the hall where successively sat the Constituent Assembly of the National Convention in 1779-93 has been marked by a column with an inscription.

—The records of the Pension Bureau show a curious fact in reference to pensions not easily explained. Kentucky furnished the Union army 79,025 white soldiers during the war. There are now on the pension rolls 2,106 invalids in Kentucky, or an average of one to every thirty-two soldiers sent to the field. Maine, New Hampshire and Vermont furnished 144,905 soldiers to the army, and now have 8,350 invalids on the pension rolls, or an average of one to every sixteen, just double the ratio in Kentucky.

—There are in Great Britain eight societies laboring for the conversion of the Jews, and on the continent of Europe a dozen more. These societies have incomes amounting altogether to about $500,000, and employ now, probably, about 250 agents, Christian and Christianized Jews. The oldest and most prominent British society is the London Society for the Propagation of Christianity among the Jews, which occupies thirty-four stations, embracing the principal Jewish centres in Europe and all around the Mediterranean Sea, and in Abyssinia employs thirty-six agents, and enjoys an income of about $200,000.

—According to the military contributor of the Cologne *Gazette*, the dry-docks at Kiel are now in full working order, and the floating docks have been removed from that town to Swinemünde, while a second floating dock is to be ready at Dantzic during the present year. This will complete the shipbuilding establishments whose construction was ordered by the German Admiralty. There are now at Wilhelmshaven three dry docks, and at Kiel four, any two of which can hold the largest ironclads in the navy. At Dantzic the necessary arrangements have been made for repairing ships of from 5,000 to 6,000 tons burden, and twelve ships of war can be repaired in the Government yard at the same time, while ten years ago there was not a single establishment in Germany, public or private, where large wooden ships or ironclads could be repaired.

IN ALL LABOR THERE IS PROFIT.

WE tread the grapes, but shall not drink the wine.
All through the lazy hours of Autumn heat
The red juice foams around our weary feet,
Our garments blush with many a purple stain;
But not for us, who trained the meagre vine
To fruitful strength, this vintage shall be sweet;
We shall not join the banqueters who meet
When these rich drops through glowing crystal shine.
Not for our lips the draught our hands prepare;
But when slow time has ripened it, and when
Its mellow warmth makes glad the hearts of men,
May we, the husbandmen, in spirit share
The feasters' joys, which we with painful care
Laid up for them in years before their ken.

FROM ALTAR TO HALTER.

CHAPTER I.

DO I believe in capital punishment—in death-dooming? No, my lad, no! Once I did, for soldiering had hardened me, and made me familiar with death in its awfulest and horriblest forms. Once I would have taken the law into my own hands and shot to the heart any man whom I believed guilty of certain crimes—of murder, for instance, or seduction—rather than the villain should escape, and I could have turned away with a lightened heart.

Why am I changed? Well, I am older than I was, and I have seen sufficient to force conviction, even on a rugged mind like mine, on this question. A man cannot see his own brother—his own flesh—one who could love a woman with more than woman's love, tried, convicted, sentenced to death, without deciding in his own mind whether the human judgment, aided by all law and all evidence obtainable or conceivable, is——! No, my lad, I can't get up words to express what I mean; but I don't believe in it—I don't believe in it!

Was Uncle Ben innocent? Of course he was—innocent as you are now.

Tell you the whole story? Very well, but I bespeak patience and forbearance, for I never can stick close to it; I am apt to get off the metals and run foul.

Ben was three years older than I, and whilst I was enjoying a bit of laziness, soldiering in peace, Ben was learning to mix physic and laying siege to Ada Carmeen's heart. He lived in the North of England. I was stationed in Knightsbridge at that time.

Silly lad! he'd better have followed the black sheep of our family (for that's what *I* was) and joined the Forty-third, than wasted powder and shot in the way he did.

What ailed the girl? Nothing. She was of the woman-kind, I suppose, that's all.

Well, if I were to say he bombarded, stormed, shelled, or the like of that, I should do Ben a seeming injustice, for he wasn't capable of tying thread to the tail of a mouse—but he laid siege, Ada put up the white rag, and he marched in.

I tell you she was a very nice girl, Ada was, but proud; and being naturally a bit jealous herself, she did not hesitate to tease Ben a little. She had material enough to work at, I assure you, for Ben wasn't the only lad who loved her. She was one of those misses who could keep two or three lovers—not at a distance merely, but (what required more generalship) at a certain nearness.

See what I mean? You may learn one of these dog days!

But Ben was not easily piqued. Ada had promised him her hand and her heart—both very wee things, but inestimably valuable to Ben—and that was enough for him. She must have played the deuce before a doubt or fear of her would have crossed *his* mind.

On the day before the wedding Ada was a bit pouty—whimpered a bit—and says she:

"You're a trifle jealous, ain't you, Ben?"

"Not a bit," answered Ben, probably with some accompaniment. "Not a bit," says he. "Why should I be, my—?" etcetera

"Oh, no, no! I don't see why you should. Indeed, I am sure you needn't. But I was afraid my recent conduct towards—that is, I thought—you *know*, I did not really care for Mr. Timms?"

"Sure, sure, my wife," says Ben, simply enough. "Don't think of it—don't name it; *I* ain't jealous."

Clearly he was a fool.

I am a rough old soldier, and can't frame elegant love-language, but I can understand that what the girl wanted that night was an opportunity to say a few things with which probably her heart was bursting. She wanted to tell Ben—no doubt with a spice of flattery, but none the less with truth—that she realized the full import of the step she was to take on the morrow, that she was not unmindful of what would be her duty, and that he never need be jealous of her—in other words, to assure him that Ada Bowden would be as womanly and wifely as Ada Carmeen had been coquettish.

But Ben had no head for *finesse;* Ada was equal to a dozen of him for that. In his very soul he thought that girl the best and loveliest on God's little footstool, and he pitied the poor fellow Timms, who, like himself, had loved Ada passionately, and had hoped to win her, till within a month or so—if, indeed, he had yet relinquished all hope, or would relinquish it, till she and Ben were really hitched together.

Talk of my brother Ben murdering that man—a man for whom he had some sympathy and regard!—talk of Ben offering him poison as a sweet morsel, and smiling the while—my brother do that? A man 'may smile and smile and be a villain,' I won't deny that, but not Ben. He was as harmless as this canary, all his life long.

They were married, Ben and Ada, and went down to Scarbro, on the Yorkshire coast, to enjoy their—sea air.

The honeymoon would be waning, I should think, but I don't know; I ought simply to say they had been married some weeks when, one morning, who should they meet on the sands but Harry Timms!

Well, I presume the little wife blushed and bowed and so on, as is the stereotyped custom in such embarrassing circumstances, according to the novels; I presume she did. Ben did just what you would expect of him. He refused to believe that Timms would be obliged to return home that day, and insisted on having his company at dinner.

Timms did remain. He tried to appear perfectly at ease, and to converse with Mrs. Bowden as if she had never been Miss Carmeen, and with Ben as if he had been Mrs. Bowden's husband for ages. Ben's part would cost no effort to perform, for envy and jealousy, as I have shown you, were perfectly foreign to his nature.

They passed a pleasant evening at the Castle Hotel, and when Ada retired for the night, she left Ben and Timms in the best of humor, with bottles, glasses and cigars.

CHAPTER II.

AT two in the morning Ada woke up, and found herself alone.

The mere fact of her being alone at such an hour, and in a strange house, was sufficient to unnerve her: but she had been dreaming—what she could not just now recall to memory—and an inexpressible feeling of dread stole over her.

She was a woman, remember, of delicate, finely-wrought nature, though by no means devoid of spirit.

What should she do? The dream troubled her, not that she even yet recalled it, but she could recollect that it was a distressing one, that made her shudder and woke her up. She shuddered yet, and her teeth chattered, and the rustling of her clothes as she drew them on, the ticking of her watch, the tramp of the policeman in the street below, and the thumping of her heart—all spurred her wild fancy till she could bear no more. She crept into bed again, and covered herself over, but only for a moment. Up again, looking fearfully about, with eyes almost clear of their sockets, with nimble, silent tread she opened the door and passed out. Along the landing, down the stairs—still with the same fearful tread—to the door of the sitting-room.

She knocked timidly at the door and waited. No answer. Again. Still no answer. She opened it.

Two candlesticks stood upon the table, and one of the candles was still burning, the other flickered and went out as she entered the room.

By the poor light of the remaining candle Ada could see her husband lying back in a large easy-chair, fast asleep. She stepped up quietly and awoke him. With a bewildered look he stretched himself, apologized, and inquired the time. Learning that it was early morning, he expressed astonishment, said (with a light laugh) they "had been too jolly," and inquired for Timms, whom, of course, Ada had not seen. Timms must have gone to bed, and left him dozing. But, no; there were the two candlesticks—the two—and Timms would surely not go up and leave his light there. Of course not.

Ben now rose to his feet, and he and his wife looked round.

The three windows were draped from ceiling to floor with curtains of a blood red—crimson, I suppose, it would be called—and the furniture, carpet, tablecloth, and even wall-paper, to match—all crimson. These were things to be noted and remembered from that time, though simple in themselves, and not noticed before.

One of the windows was slightly open, and its long damask curtains waved and rustled; the untrimmed candle gave a flickering, shadowy light; the long unshapely shadows of husband and wife flitted about with the motion of the candle, and everything wore a weird, unearthly look.

When Ben stepped towards the open window, Ada caught sight of his face in the great pier-glass, and it seemed to her awfully pale and haggard. That, of course, was the result of his sudden awaking, and the effect of the candlelight, together with Ada's shivering, fearful fancy. When she remarked it, Ben only laughed, drew her to him, and kissed her—the best possible way to convince her that he was no ghost, I suppose. Then he turned round and looked at the chairs and the couch, but saw no Timms.

Ugh! What was that?

Ada clutched her husband's arm, and sank down upon the couch with a terrified, half-stifled scream, and the words "My dream!"

Ben stooped to comfort her, wondering what new fancy possessed her. In an instant he turned to the table, took up a glass, rinsed it with water, which he then emptied through the open window; then he poured out some liquid from one of the decanters, and turned to offer it to his fainting wife. As he turned towards her he glanced instinctively at the pier glass, to see if some new apparition were there. Pshaw! there was only his own face, strange-looking, it was true, in the flickering candlelight—nothing more.

At that moment the night-porter opened the door to see what could be the matter. What he saw was afterwards detailed fully and with simple truth.

There, on the couch, lay Ada apparently lifeless. By her side stood her husband, holding to her lips a small glass of wine.

When the door opened Ben raised his eyes, but not being able to clearly discern the porter's face he turned to the table and lifted up the candle. Then he gave a sudden start, uttered some exclamation, and pointed into the corner. What the light had just revealed to him, what the porter now saw, and what Ada had seen before them, was the body of Harry Timms, lying in a strange posture behind the door, with chalk-white face and foam about the mouth.

Ben stooped down and felt the pulse, the forehead, the heart; looked intently at the pale face, shook his head, looked up at the porter, and said quietly:

"Poison!"

Timms was dead as nails, of course.

Ben took up the still insensible form of his wife and carried her up stairs. When she recovered consciousness and became somewhat tranquilized he would have gone back to the sitting-room, but she begged him not to leave her so soon.

"Poor Harry Timms is dead, dead—I know it," she said.

Ben had not told her the whole truth, but he might as well—he could see that—so he said:

"Yes, Ada, he is."

"Oh, my husband! You were not jealous—did not think unkindly——"

And so on. What possessed the woman then *I* can't imagine. I never can repeat her words. I always require to discharge a few round oaths when I get to that part of the story.

By this time the house was aroused, and when Ben did at length get down to the sitting-room he could hear his own name being whispered about among the people who were gathered on the landing, talking with scared looks, some already making use of the epithets "suicide" and "murderer."

He found a physician and a police-officer with the landlord and the porter in the room.

Ben had little to say. I can imagine him standing there with white face and distracted look.

The physician muttered the word "suicide"; the landlord nodded concurrence; the police-officer chewed his mustache, eyed Ben closely, and reserved his opinion. Ben, in turn, said something about suddenness and mystery—I believe he mentioned arsenic—and every word and look was noted.

Well, of course, a *post-mortem* examination was made, and an inquest followed.

That the deceased met his death by poison—by arsenic—was clear. How and by whom had it been administered?

The doctor, the porter and the landlord were examined. Ben and Ada followed, and after them a policeman and a chambermaid.

Ben was questioned and cross-questioned, always with the same result. He had met deceased on the beach, and they and Mrs. Bowden had dined together. After dinner Timms and he chatted and drank and smoked; then called for lights; then smoked, drank and chatted, till Ben seemed to have fallen asleep. (What time was that?) He could not tell at what moment he fell asleep. The last he could remember was that Timms and he were chatting and smoking. Yes, his wife came down (time?) between two and three in the morning and awoke him. They looked for Mr. Timms—Mrs. Bowden fainted—the porter came in. The porter's statement was substantially correct. He had not discovered the body of deceased before the porter came in. It was quite true that he had made the observations attributed to him. He was a medical man himself. He understood poisons, of course. He had not seen any, nor had such a thing been mentioned, on the night in question. He fully concurred in the opinion of Doctor Phillips as to the cause of death. Life had been extinct some time when he discovered the body. He did carry his wife up-stairs. After her recovery they did hold some conversation with reference to deceased.

Ada came next.

Did she know deceased? "Yes." Was well acquainted—better acquainted with him than her husband was? "She had known him longer." Deceased was not an ill-natured young man? "No, no!" But rather—a—lovable? Ada blushed, but said nothing. Just so; your husband and he were good friends? "Oh, yes; perfectly." Perfectly. And no—a—jealousy—nothing of that kind—existed, say, between you three in any way? "No, no!" But such a thing had been spoken of between Mr. Bowden and you, as between all married people? "Possibly, at some——" Possibly, yes; don't trouble to explain. Was deceased ever mentioned in that connection? "Yo—Oh, *let me go!*"

She fell back in her seat, sobbing hysterically. Her husband stepped up and spoke to her.

"Ah, Ben," she murmured, audibly, "they would have me swear *your life away!* Poor, poor Ben!"

All color had fled from both their cheeks. Ben took Ada in his arms, and carried her up to their room. It was no easy matter just then, for the awful truth had not entered his simple mind till Ada cast it there, like a flash of light, and now he was quite unnerved.

The inquest was adjourned shortly after Ben and Ada left the room, and when it was resumed on the next day, a lawyer attended to watch the case on Ben's behalf.

I cannot attempt to describe the state of the unhappy couple's minds, nor the tone of their conversation during that time. There seemed an age to have passed since their wedding-day—a long dark age. It was difficult to realize that what was passing now was not a dream but an awful reality.

The inquest was pushed on; new evidence was adduced. Ben's and Ada's clothing and that of the dead, the liquor, the glasses—all had been examined, and no further trace of poison had been found.

Ada did not enter the coroner's room again.

Ben sat by the side of his lawyer—a very poor prompter, I am afraid. He would seek only truth, and if that were given in evidence—no matter how liable to distortion or in what direction it drifted—he would see in it nothing but the unraveling of a terrible mystery.

A policeman, passing the hotel on his beat, had observed lights in the three-windowed room, and had noticed that one of the windows was open. At some particular moment between eleven at night and four in the morning—he couldn't put his foot on the exack moment, but it was certainly between the hours named—he seen a tall gentleman, with black whiskers, which he now recognized afore him, put his hand out of the winder, with a middlin' small glass, which had somethin' in it, which, o' course, ran out. He had 'urried up in less than no time and turned his bull's eye on the parypet, and seen a spill of liquid. Not much. Could not give it a name, sir. There was rain afore six o'clock. He seen shadders in the said room, and wonst a sort of groan, and a slight shrieking, but could not fix the moment.

The chambermaid was a damsel of several Summers, with a flatness of nose painfully suggestive of keyholes. Her evidence tended to show "that Mrs. Bowden thought uncommon well of the diseased. Sich, lestways, 'ad the remarks which Mrs. B. had observed to Mr. B. caused her to conclewd. *What* 'ad the lady said? Well, she could assewer the 'onorable croonier and the juniormen that she allus tried to mind her own patickler jewties, which was—— Very well, she would try to stick to the pint which she had once got to say was as Mrs. B. said to Mr. B.—as she supposed they did occupy that hinterestin' sitivation, though not long. 'Dear 'usban,' she says, 'my darlin' 'usban, Orry Timms is *dead!*' she says. 'Oh, why was you jealous,' she says. *What did Mr. B. say?* 'Yes,' he answers her back in a voice of lemoncolly. And then Mrs. B. told Mr. B. that it was her dream come trew. 'Which dream?' he erst her, an' she says, 'Do you disremember that I acclaimed in the sitten'-room, Oh, Lord, my dream?' and Mr. B., he says, 'Yes, darlin',' and she continuers on: (An' the looks of her as she sot there on the edges of the bed, with a white 'and on a white furread, with two rings on it, which one of 'em it 'ad valleyable dymons of all colors in it—for to see that lady sittin' there, it would have pitied onnybody!) Well, she goes on tellin' her dream to Mr. B. in a way which would have melted stones!"

(Here the maid rubbed her liquescent eyes till they were sore, and the result was sufficient for a widowhood. It is difficult to imagine what she shed so much water over.)

"Never had she seen two loviner couple than—— Beggin' parden, she was stickin' to the pint, if they would excuse inmotions which she could not controwl. She had seen many 'oneymoons in her short life, but never see a more better conducted or a more loviner—— *The pint? the dream?* Well, the dream was as how she had met an old luvver 'urryin' on afore her, wavin' 'is 'ands this way—an' she follered an' follered till they come along seaside, close to the waves. Then he stops all a suddin', an' she sees it's Mr. Timms, an' then, more suddener still, everythin' changes. They seems to be in a dark room, an' her sat on a couch done up in blood-colored poulsterins, same as the walls an' everythin'—an' her disgarded luvver he's kneelin' aside of her with a blewish-white face on same colored carpets, an' he litts up his hands an' he says 'I luvved you Aider with my hull 'art, but you'll remember me,' an' then he dies. That was Mrs. B.'s dream, an' she said she'd went down-stairs an' gone into the sittin'-room where the diseased man was poisoned, an' there he was, an' the gas was not lighted but there was two burnin' candles on the table, one in an' one out."

At this point the loquacious maiden was—snuffed.

But to get on with the story.

The whole of the evidence having been taken, the coroner summed up. After running over a lot of details he came to speak of Ben.

Ben was the only person who could possibly offer any solution of the mystery; he was the only person who had been with deceased during the night; his account was unsatisfactory; his version of the acknowledged fact that he had emptied a glass through the window was rendered questionable by the testimony of the policeman, whose attention had been drawn to the window at eleven o'clock; he had let fall certain expressions with reference to poison; there had been conversations, not to say quarrels, in which the term "jealousy" and the name of deceased had been connected; he was a doctor of medicine and could, of course, easily procure poisons. In short, the coroner pointed Ben out, and the jury nailed him. He was charged with willful murder, and committed on the coroner's warrant.

I believe there were at first no two opinions as to the justice of that step, except that Ben himself, and Ada and I, believed him innocent.

(To be concluded in our next.)

BLUE-FISHING AT NANTUCKET.

RESUMING our illustrations of Summer life at Nantucket, we give a sketch this week of a scene familiar to all tourists to this delightful resting-place, and at the same time one that will secure the attention of the professional and amateur Izaak Waltons. In the course of a Summer fishing cruise the cost of a single blue-fish to the amateur and average city sportsman will range from three to thirty dollars per pound in actual money for yacht-hire, stores, equipment and unmentionable necessities, to say nothing of the time spent, the clothes ruined, and the fingers torn. But to the true sportsman who knows his business, and to the men who fish for the profit that the market guarantees, blue-fishing is an excitement, a delight.

The blue-fish is a pelagic or wandering fish, passing its Winters in the South and its Summers in the North. In March and April they are found off the Carolina coast. About the 20th of May they make their appearance off the coast of New Jersey. Barnegat is a favorite ground for them, where set nets have taken as many as 6,000 in a single day. The May fish range from two to twelve pounds in weight, are poor in flesh, and ravenous as sharks. In June they are found equally abundant off and in Fire Island inlet, and in the few days thereafter are scattered off Montauk Point, the east end of Long Island, Shagwauna Reef, and other reefs adja-

Digitized by Google

cent. By or near the 20th of June, depending something on the forwardness of the season, they have spread themselves over the reefs of New London, and to the eastward, on to Block Island, and thence through Fisher's Island Sound. By the 20th of August they are in plentiful supply all through, inside and outside of Vineyard Sound, Nantucket, etc. They have gained flesh, and become quite palatable. The size here described is seldom found to the westward of the Connecticut River. On the main of Long Island Sound it is quite interesting to see them drive the menhaden, or mossbunkers, in shoals, causing a "sleek" on the water as they spill their oil when they chop them up with their great sharp teeth.

About the middle of July the small creeks and rivers, from Stamford eastward to the Connecticut River, abound in a size weighing about a quarter of a pound, which in a month grow to half a pound, and these feed on a size still smaller, recently spawned, and scarcely an inch and a half in length. About the 1st of September the small fry are sufficiently large to venture into the Sound, and then they swarm in the creeks and harbors, affording great sport to lads, who catch them with a float-line, with shrimp for bait. By the month of October both large and small fish are fattened.

The peculiarity of this fish is that by about the middle of October the large size, that weigh from nine to fourteen pounds, are generally found from Nantucket to Watch Hill, around Block Island and outside of Montauk Point; while from Stamford eastward to New London, on the outer reefs, they are of a uniform size and of about two and a half pounds weight, and those in the harbors and creeks are a mixture of small fish just spawned and a size that weighs from one-eighth to one and three-quarter pounds. Another singular feature is that by or about the 12th of October, or the first freezing weather, these fishes, of all sizes up to two and a half pounds, vacate the northern harbors and sounds, and so sudden has been their departure in many seasons that a change of tide has utterly emptied the waters of their teeming fish-life.

More singular still, the great mass of fish, except the newly spawned, take the coast within one or two miles of shore, part of them stopping, if the weather permits, at the inlets of Fire Island, Egg Harbor, Townsend's, Canarsie Bay, Cape May, and so on along shore, using up all the feed thereon, and by the month of December they are found in the creeks and rivers of North and South Carolina, where they remain through the Winter, to migrate next season to Northern waters.

The professional or business process of catching the fish is capitally shown in our illustration, the location being on Sysconset Beach at Nantucket. Long lines, attached to stakes driven into the sand, are thrown out beyond the surf, and at the first nibble are quickly jerked in, when the fish are removed from the hook, the bait reset, and the line again cast. The fish are gathered in wagons, and removed to the wholesale markets, where they are disposed of readily.

The favorite blue-fish ground of New York fishermen is known as the "Sea-bass Banks," a stretch lying in front of Seabright and Long Branch, from five to seven miles from shore. Another is the "Rocky Spot in the Channel," five miles south-southeast from the lightship, where man-eating sharks also abound; and a third is the "Rocky Ground," twelve miles southeast of the Highlands.

SUMMER IN THE WHITE MOUNTAINS.

THE ascent of the 6,285 feet that lead to the summit of Mt. Washington, the highest point of the White Mountains, in New Hampshire, either by rail or carriage, is now so readily made that this wind-swept, frost-enveloped locality grows more in popular favor every season. By the carriage-road, the distance from the base of the mountain in front of the Glen House to the summit is eight miles; by the wonderful Mt. Washington Railroad, three miles long, and ascending 3,625 feet on a maximum grade of a little over one foot in three, the transit is made in about an hour and a half. The popularity of the region is attested by the crowded condition of the hotels, and the improvements being constantly made in the bridle-paths, carriage-roads, and foot-lanes. It is recommended that all who wish to fully appreciate the spirit of our illustrations remain over at the summit at least one night. The huge stoves in the offices of the hotels will be found most comfortable objects to lounge about, while the tidy chambermaid who knocks at your door late in the evening, and inquires if you need more blankets, will rise in your estimation to the dignity of a veritable good fairy.

From any point at the base of the mountain the writer may start on delightful excursions, the landscape never tiring to the eye, nor the weather becoming particularly disagreeable, if the precaution is taken to provide oneself with warm clothing and rubber coats, capes and boots. The weather is so uncertain among the mountains, and heavy fogs are so prevalent, that it is absolutely necessary to be prepared to defy the elements.

There are five passes through the mountains, picturesquely named "notches," of which the Franconia, perhaps, the best known. The Pemigewasset River passes through it, and the walls rise to a height of 2,074 feet. The White Mountain Notch, through which the Saco passes, is 1,914 feet deep; the Pinkham, coursed by branches of the Saco and of the Androscoggin, is 2,018; and the Gratton and Dixville, watered by the Androscoggin and one of its tributaries, are of much less height. In the Franconia region "The Flume" and "The Old Man of the Mountain" are objects of particular interest. The mountains are also rich in waterfall scenery, which may be reached without danger or annoyance. At North Conway is the Artist's Fall; on the side of Mount Webster, the Silver Cascade; on a tributary of the Saco, Ripley's Falls, the lower one called the Sylvan Glade Cataract, to distinguish it from the upper; the Falls of the Ammonoosuck; on the Androscoggin, the Berlin Falls; and on one of its tributaries, the Crystal Cascade and the Glen Ellis Fall.

THE GROWTH OF ARCHERY.

GREAT INAUGURAL MEETING OF ARCHERS AT CHICAGO, AUGUST 12TH, 13TH AND 14TH.

AMONG all the sports and games which are now in vogue in this country, none has become more rapidly popular than that of archery. During the last two years archery clubs have been formed everywhere throughout the United States, until now there is scarcely a city or town without its representative organization of archers. Being one of the few outdoor pastimes that can be enjoyed by both gentlemen and ladies, it well deserves the reception and support it has received from the social classes, and as its real merits become known it will no doubt be adopted as the favorite lawn sport, until young ladies will consider it as much of an accomplishment to be a fine archer as a fine musician, and the young man pride himself as much on a good hit as a big run at billiards.

In England it has been the custom, with a view of promoting a general interest in archery, to hold annual tournaments, and so popular have these annual meetings become, that now a great many ladies and gentlemen consider it a high honor to compete at them, and immense audiences gather to witness the shooting.

With the hope of establishing a similar meeting in this country, and with a special desire to bring archery to the practical attention of the public, the leading archers of the country, organized in the National Archery Association, determined at their last meeting to hold a grand national archery meeting in August. Chicago was selected as the most appropriate place for such a meeting, and thus, at White Stocking Park, on the 12th, 13th, and 14th, the tournament was held. The first day was devoted to shooting by gentlemen at the double York round, and to shooting by ladies for the National Medal—forty-eight arrows at thirty yards.

On the second day, the competition for the National Medals was continued, the ladies shooting forty-eight arrows at forty yards, and the gentlemen seventy-two arrows at one hundred yards. In the afternoon the handicap shoots took place; the ladies' handicap forty eight arrows at forty yards, and gentlemen, thirty arrows at fifty yards. On the last day the competition for the National Medals was concluded, and in the evening the prizes were awarded. The ladies' championship medal was won by Mrs. Spaulding Brown, of Hastings, Mich., at the double Columbia round. Her grand total was 548. The prize was a National Medal set with a solitaire diamond. Mrs. Bee won the second prize, a Spanish yew bow worth $100, and Mrs. Klein the third prize. The gentlemen's championship medal was won by William H. Thompson, of Crawfordsville, Ind., at the double York round, by a grand total of 546. H. P. McMeehan won second prize, and Mr. Hull third. The team shoot was won by the Wabash Merry Bowmen, of Crawfordsville, by a total of 1,507 at the American round. The prize was $100. The Highland Park team took the second prize, $60, and the Depere (Wis.) team took the third prize, $40.

The scene on the grounds during the tournament was full of picturesque effects. The targets ranged across the entire field from east to west, ten in number; the neat green protection for the markers; the blackboards with their list of scores; the bow-and-arrow racks, with their finely wrought and costly freight, decked with bright ribbons, and, finally, the groups of ladies and gentlemen, the former prettily dressed and hung about with quivers, many of which were embroidered in beautiful designs, and the latter mostly habited in white flannel—all these formed a most brilliant spectacle. After the shooting began it was a constantly-changing picture, as one after another took position at the score and discharged three arrows. First a statuesque figure would appear, then a graceful one, then a willowy one, and so on, ever new. A correspondent says: "Looking upon the scene, it was easy to understand why archery should take such a strong hold upon the social element. It is not a sport in the sense in which that term is commonly used, but rather more nearly what is expressed by the word pastime—something which affords physical exercise and social interchange at the same time. This archery does, being pre-eminently the outdoor amusement of ladies and gentlemen, as distinguished from sporting and betting characters."

Early in the contest the targets at which the ladies were shooting became the centre of observation, primarily, of course, because they were ladies; secondarily, because the targets were nearer than those of the men, and the effect of the shots could be seen more easily; and for the further reason that the ladies were making more hits. As arrow after arrow punctured the gold or the red the fair archeresses were greeted with an enthusiastic hand-clapping from the grand stand. Before the first twenty-four arrows each were shot, a sharp rivalry was developed among those who were leading in their scores, and it became somewhat a question of nerve as well as skill. On the gentlemen's side, owing to the impossibility of keeping a close estimate among so many, the outside interest was not so great; but among themselves a keen rivalry was developed. The shooting was done at ten targets, eight of which were used by the gentlemen and two by the ladies, the latter having the middle ones, with the gentlemen on either side.

Our illustration gives a general view of the tournament grounds during the progress of the shooting.

Religious Toleration in Poland.

FOR many years past no bull or encyclical of the Pope has been permitted to be published in the Polish provinces of Russia, which are inhabited by Roman Catholics. The alleged ground of prohibition was that among the Polish revolutionists who took up arms against the Russian Government in 1863 were many Catholic priests, and that these priests were encouraged in the revolt by Pius IX. When the Polish insurrection was crushed, the Pope was forbidden direct communication with the Poles. But times and circumstances have now changed, and the Czar himself, with his Government, is endangered. Negotiations were opened some time ago between the Court of St. Petersburg and the Vatican, and the result has been a restoration of the friendly relations between the Czar and the Pope. Now the Catholics of Poland do not need to secure the aid of smugglers, as they had to do in past years.

The privileges of the Vatican were restored upon the condition that the clergy under its control should denounce the projects of the Nihilists, as opposed to the State and to religion. There has lately been published in the *Gazeta Polska*, and republished in the other Polish journals, an epistle of the Archbishop Solkevitch of Warsaw to the clergy of his diocese, transmitting to each of them a copy of the encyclical of the Holy Father, Leo XIII., dated December 28th, 1878. The Archbishop says that this most worthy and important document should be known not only to the clergy, but also to the faithful laity, who should be informed of its contents, and thus protected from the dangerous influence of pernicious doctrine. Further, the priests are advised to expound from the Holy Scriptures the rights of property, the family question, the proper relations of servants and masters, and the necessity of obedience to the authorities. The publication of the epistle of Archbishop Solkevitch was greeted by the Russian secular journals as the triumph of religious toleration, and the *Golos* said: "Religious toleration, always and everywhere, is the surest sign of moral development and of political and national growth; and for this reason we welcome the publication of the Papal Encyclical in Russia." But the Russian religious organs regret the new policy of the Czar, who is the head of the Orthodox Church, in granting privileges to the Church of Rome, which is the competitor of Russian orthodoxy. In consequence of their language on this subject, some of the religious journals have lately received official warning.

SCIENTIFIC INTELLIGENCE.

The "Naturforschende Gesellschaft" of Halle, celebrated the 100th anniversary of its foundation on July 20th.

An ounce of peach kernels contains a grain of prussic acid, which is a fatal quantity. Ammonia is the best antidote.

The Death, on July 5th, is announced of Dr. Reiff, of Tübingen, formerly Professor of Philosophy at the University of that city.

Mr. Morris, the well-known botanist in Ceylon, whose endeavors to find a remedy for the disastrous coffee-leaf disease are well known, has established the fact that very favorable results may be obtained from the application by hand of a mixture composed of three parts of lime and one of sulphur.

Great Damage to Agriculture has been done by swarms of grasshoppers in Hungary, in the Szathmar Comitat. An area of some 600 Hungarian "Joch" is entirely devastated. The local authorities have been compelled to apply to Buda-Pesth for military assistance, besides availing themselves of that of the inhabitants of numerous villages in the districts affected by the plague.

Herr Carl Bock, who has now finished his natural history exploration of the western highlands of Sumatra, is about to explore, on behalf of the Dutch Government, the northeastern part of Borneo—the district of Kretai. There is a powerful and friendly Sultan at Koetai, who has been requested by the Dutch Government to give all possible assistance to Herr Bock.

A New Natural History Museum, formerly the private collection of Dr. L. W. Schaufuss, has just been opened to the public at Blasewitz, near Dresden. Dr. Schaufuss has for many years been in close personal relations with the Archduke Ludwig Salvator of Austria, well known by his scientific writings and travels, and the new museum therefore bears the name of its founder's august friend and patron.

Aluminum Salts have long been used as disinfectants, but they are of less universal application than many other substances for the reason that their efficacy is chiefly limited to the fixation of ammonia. In stables and places where ammonia is evolved they are excellent, and the resulting ammonia salts will prove valuable to agriculture. The sulphate of aluminum can be recommended to disinfect decomposing organic matter.

The Second International Congress for Commercial Geography will take place at Brussels from September 27th to October 1st next. It will be divided into five sections; the first will consider commercial routes and exploring expeditions, the second natural and artificial products, the third and fourth questions relating to emigration, colonization and instruction, while the fifth section will be devoted to the discussion of general questions.

Imitation Meerschaum Pipes are now manufactured from potatoes in France. A peeled potato is placed in sulphuric acid and water, in the proportion of eight parts of the former to one hundred of the latter. It remains in this liquid thirty-six hours to blacken, is dried with blotting-paper and submitted to a certain pressure, when it becomes a material that can be readily carved. The counterfeit is said to be excellent. An imitation ivory, sufficiently hard for billiard balls, can be made by still greater pressure. A resemblance of coral is obtained by treating carrots in the same manner.

The Use of Phosphoric Acid in tanning has been tried with success. It has the property of holding the albumen in solution without affecting the gelatine, and thus enables the tannic acid to enter the pores of the skins more freely. Stronger tanning liquids can be used when phosphoric acid is added to the bath. The proportion of phosphoric acid to be used has not been determined, but the author, M. Ador, recommends manufacturers to experiment further in the same direction. He thinks that the saving of tannic acid may much more than cover the cost of the phosphoric acid.

The Remarkable Gem called the "Maxwell Stuart" topaz is undoubtedly the largest cut precious stone known. Its weight is 1,475.9 grains, or 368 carats 3.9 grains; specific gravity, 3.5685. It is perfectly white and very brilliant. It was brought from Ceylon many years ago, and has been for a considerable time, in an uncut state, in the possession of Mr. Maxwell-Stuart, a collector of gems, after whom it takes its name. An idea of its size may be formed by stating that the table is 2¼ inches in length. It was cut and polished in London, the operations occupying twenty-eight days.

Professor Chrystal, of St. Andrews (formerly of Peterhouse, Cambridge), has been appointed to the Chair of Mathematics in Edinburgh University. He was Second Wrangler and Second Smith's Prizeman in 1875, and is already known to science by his experimental researches on Ohm's Law (made in the Cavendish Laboratory), and by the very excellent article "Electricity" in the new edition of the *Encyclopedia Britannica*. Thus the Chair of Mathematics in St. Andrews is now vacant; and it has just been announced that Professor Blackburn has requested the University Court of Glasgow to sanction his retirement from the Chair of Mathematics there. As Professor Fuller, of Aberdeen, resigned last year only, the whole of the Mathematical Chairs in Scotland have been vacant within one year.

A New Project for the construction of a system of canals connecting the Caspian Sea with the Black Sea is now being considered by the Russian Government. The author of the new project is the engineer, M. A. Daniloff. He proposes to construct (1) a canal of some 300 versts in length, from the River Terek to the water-shed of the River Manytsch, which connects the Don with the Caspian Sea, but the bed of which is generally dry; (2) a canal of about 320 versts, from the mouth of the River Kalaus (a tributary to the Manytsch), eastward to the Wolga, near Astrachan; (3) a canal from the same spot, westward to the Don (about 350 versts); (4) a branch from the eastward canal to the Serebriakowskaya Station on the Caspian Sea; (5) a branch from the westerly canal to the Black Sea. Other Russian news states that the Government has commanded the Khan of Khiva to furnish 5,000 workmen for the works connected with directing the Oxus River into the Caspian Sea.

Major Serpa Pinto, who traveled across Africa from Benguella to Durban, relates the following, regarding a white race inhabiting that continent: "I one day noticed that one of the carriers was a white man. He belonged to a race entirely unknown up to the present day. A great white people exists in South Africa. Their name is Cassequer; they are whiter than the Caucasians, and, in place of hair, have their heads covered with small tufts of very short wool. Their cheek bones are prominent; their eyes like those of the Chinese. The men are extremely robust. When they discharge an arrow at an elephant the shaft is completely buried in the animal's body. They live on roots and the chase, and it is only when these supplies fail them that they hold any relations with the neighboring races, the Ambuellas, from whom they obtain food in exchange for ivory." He adds that the Cassequers are the only people in Africa who do not cook their food in pots; that they wander in groups of from four to six families between the Cuchi and Cubango, never sleeping two nights in the same encampment; and that the bushmen of the South are the result of a crossing of the Cassequers with negroes.

PERSONAL GOSSIP.

WILLIAM H. VANDERBILT has given the University at Nashville $100,000 more.

OF Dr. Luke Blackburn it is said that, for the first time in the history of the State, a non-professional politician has been elected Governor of Kentucky.

VINNIE REAM will have her bronze statue of Farragut cast at the foundries of the Bureau of Steam Engineering in the Washington Navy Yard, at her own expense.

MISS NINA KEARNEY, a daughter of General Philip Kearney, who was killed during the Civil War, was crowned Queen of Love and Beauty at a tournament at Orkney Springs, Va., a few days ago.

SINCE the three Astor families arrived at Newport it is estimated they have given $25,000 to religious and charitable institutions. The new Episcopal Church is to be built with Mrs. John Jacob Astor's money.

THE Rev. O. B. Frothingham's health is decidedly better than it was when he left America. He has been for several days at Bagatz, in Switzerland, and thence will go southward and pass the Winter in Italy.

MISS ELLA STURGIS, daughter of General Sturgis of the army, and sister of Lieutenant Sturgis, who was killed with General Custer, is about to make her début as an actress, and to assume the leading character in a new drama.

THE Emperor of Austria arrived at Gastein Saturday, August 9th. There was great enthusiasm when the Emperor of Germany approached, and the two sovereigns embraced cordially. The town and heights were illuminated at night.

THE late Robert Argyle, of Gold Hill, Nevada, one of the first settlers of the Comstock, has left $10,000 to the City of San Francisco to build a fountain. He has ordered the fountain to be made of refuse quartz from each of the Comstock mines.

IT is stated in Boston that Mrs. Monroe, the widow of the Dean of the School of Oratory of Boston University, will occupy her late husband's chair at the Autumn term. It is said, further, that she is perfectly capable of doing the work well.

PRESIDENT ANDERSON, of Rochester University, lately secured in three days subscriptions for that institution amounting to $100,000. Of this sum Mr. John H. Deane gave $50,000, Mr. John B. Trevor $25,000, and Mr. Jeremiah Milbank $25,000.

THE Japanese Government officially invited the French jurist Professor Boissonnade to be an official adviser of the Japanese lawmakers. The French professor has failed to please the Japanese, and now Professor Bobishich, of Russia, is invited in his stead.

THE oldest (in point of consecration) living bishop in the Church of Rome is Archbishop MacHale of Tuam, Ireland. He was consecrated in 1825, under the pontificate of Leo XII. The next oldest prelate, the Archbishop of Tyre, was preconized in 1826.

SEVENTY-FIVE sculptors sent in designs for the statue to be erected to Thiers in France. The successful young artist, whose work was unveiled on August 3d, is Ernest Charles Demosthenes Guilbert. At the first drawing school which he entered he carried off all the medals, and in 1872 he secured the grand prize. He exhibited "Cain Maudit" in this year's Salon, obtaining a third-class medal.

THE strong point of Mr. Gladstone's Government was finance. While in office he remitted taxes to the amount £13,000,000, reduced the nation's debt by over £28,000,000, and left his successor a surplus of several millions. Lord Beaconsfield, on the other hand, has imposed taxes to the amount of £5,233,000 over the amount remitted, and created a deficit (not including the Zulu account) of £4,250,000.

MR. GLADSTONE, speaking at the opening of the Art Exhibition at Chester, England, on August 12th, said that when America learned to trust entirely to her own splendid natural resources, the great genius of her people and their marvelous proficiency in the adaptation of labor-saving appliances, in which she was at the head of the world, she would be a formidable competitor with the English manufacturer.

THE ball given at Carlton House Terrace by Lady Olive Guinness, daughter of the Earl of Bantry, and wife of the head of the great porter brewing house in Dublin, Sir Arthur Guinness, to the Duke and Duchess of Connaught, was the most sumptuous revel of a London season. The house, in which Mr. Gladstone had resided for many years, was gorgeously decorated with the rarest exotics and flowers, and the cost was $40,000.

WHEN Sir Frederick Haines completes next Spring his five years' term as Commander-in-Chief in India he will be succeeded by Sir Garnet Wolseley. The appointment is by far the most extensive command in the British Army, and is better paid than any other military post in the world, the salary attached being £12,000 a year, besides perquisites in servants, etc. Sir Garnet will be the youngest officer ever named to that command.

IT is announced that Governor Croswell of Michigan will be married at Charlotte on September 12th. The bride expectant is Miss Lizzie Musgrave, the youngest daughter of the Hon. Joseph Musgrave, President of the First National Bank of Charlotte, and also head of the wealthy and influential firm of Musgrave & Lacy. She is a beautiful woman, still in the twenties. Governor Croswell is about fifty-five years of age and a widower, with two adult children.

It is proposed to hold a reunion at Lexington, Ky., of representatives of the Clay family, the time suggested being from October 14th to the 17th. It is said that all the Americans born bearing the name are descended from one family. Most of them reside in Kentucky and Alabama, but the family is represented in this State, New England, Texas, and the Carolinas, and in Minnesota, Kansas, Missouri, Illinois, Ohio, and perhaps other States in the North and Northwest.

THE King and Queen of the Sandwich Islands had a swimming race while on a recent excursion. James G. Fair, the Nevada millionaire, who was then visiting the royal family, says that the party could not land from their steamer for reason of the breakers. The King said that all ought to swim to the shore. The Queen assented, and the pair jumped overboard together. They buffeted the waves with skill, and soon reached land. They not only went where no boat could go, but braved another danger, for the place was alive with sharks.

GENERAL JESSE H. DRAKE, a prominent citizen of Nash County, N. C., died Friday morning, August 8th. In accordance with his declared request the will was opened, and it was found that he had left his whole fortune, estimated at from $12,000 to $20,000, to three of his former slaves, Calvin Drake, Aaron Drake and Judah Drake, for their lives, with reversal to their children. He leaves all his estate, real and personal, to them and says, "They have been my faithful slaves, and have remained with me since their freedom, nursing and caring for me in my old age, and I desire them to share my gratitude."

Yellow Fever in American History.

THE history of yellow fever in this country shows that it has scarcely been the exception when the fever appeared as an epidemic the year following an epidemic. In 1847 there were 2,250 deaths in New Orleans; in 1848, 850, and in 1849, 737. In 1853 there were 7,970 deaths in the same city, and there were 2,423 deaths in 1854, and 2,670 in 1855. In 1858 there were 3,889 deaths, but none the next year. In 1867 there were 3,093 deaths, and none the following year. In the same proportions the fever appeared in the smaller places in Louisiana and Mississippi in those years. In 1848, when it reappeared in New Orleans, it came in June, while the epidemic of 1847 began in August. The great epidemic of 1853 began in May, and the epidemic of the year following came in July, and in the next year in June. The epidemic in North Carolina in 1862 was followed in 1864, two years afterwards, by one of increased mortality, but not in the same cities and towns as a general thing. In 1797 Philadelphia's death list was 1,300, in 1798 3,500, and in 1799 there were 1,000 deaths. So it was in 1802 when Philadelphia next had the fever as an epidemic. In South Carolina it has been almost invariably the case that the second year brought an epidemic. Memphis, and all other points which were infected in 1873, escaped the second year. In that year the fever began at Shreveport first, and did not come until the latter part of August, reaching Memphis September 14th. August has been the favorite month for its inception. Last year it began near the first of that month in the South.

Acres of Perfume.

SOME idea of the magnitude of the business of raising sweet-scented flowers for their perfume alone may be gathered from the fact that Europe and British India alone consume about 150,000 gallons of handkerchief perfume yearly; that the English revenue from French eau de-cologne of itself is $40,000 annually, and the total revenue of England from other imported perfumes is estimated at $200,000 each year. There is one great perfume distillery at Cannes, in France, which uses yearly about 100,000 pounds of acacia-flowers, 140,000 pounds of rare flower-leaves, 22,000 pounds of jasmine-blossoms, and 20,000 pounds of tuberose-blossoms, together with an immense quantity of other material used for perfume. Victoria, in New South Wales, is a noted place for the production of perfume-yielding plants, because such plants as the mignonette, sweet verbena, jasmine, rose, lavender, acacia, heliotrope, rosemary, wall-flower laurel, orange and the sweet-scented geraniums are said to grow there in greater perfection than in any other part of the world. South Australia, it is believed, would also be a good place for the growing of these perfume-producing plants, though they are not yet cultivated there to much extent. The value of perfumes to countries adapted to their production may be gathered from the following estimate of their growth and value per acre, as given in the London (Eng.) *Journal of Horticulture*: An acre of jasmine plants, 80,000 in number, will produce 5,000 pounds of flowers, valued at $1,250; an acre of rose-trees, 10,000 in number, will yield 3,000 pounds of flowers, worth $375; 100 orange-trees growing on an acre will yield, at ten years of age, 2,000 pounds of flowers, valued at $250; an acre of violets, producing 1,600 pounds of flowers, is worth $800; an acre of cassia-trees of about 300, will at three years of age yield 900 pounds of flowers, worth $450; an acre of geranium plants will yield something over 2,000 ounces distilled otto, worth $4,000; an acre of lavender, giving over thirty-five hundred flowers for distillation, will yield a value of $1,500.

The Religious Capital of Japan.

KIOTO is the great religious capital of Japan. A girdle of temples surrounds it within a vast sweep of many miles. The mountains stand about it in the shape of a horseshoe, and all their lower spurs and all the dells and valleys that break them are laid out in temple grounds. The temples rise one above the other through dark belts of wood. Their gateways crowd the avenues of every suburb. Their lands are of vast extent, laid out in gardens and parks, with rustic bridges spanning waterfalls, with endless footpaths and cascades and holy fountains, and little platforms and harbors, from which there are lovely views innumerable. Every week, and almost every day, there is some new festival. The brilliant dress of the women and children who keep the least gleams along the dark, steep paths, and in the evening the lamps spring up as if in fairyland, and there is music and laughter. Worshipers can choose a service after their fancy. One temple has its gigantic bell, another its Dai Buts. Rengeoin, in one long building, displays 33,000 gilded idols; Hondganji, in the very centre of the city, offers the silence of cloistered courts, and within, grave and lofty halls softly matted for the feet, the roof supported on gilded pillars, the walls hung with pictures of the saints and paneled with birds-of-paradise. Over and over again we met the great temple roofs, with their magnificent but heavy curves, the quaint gateways, or *tori*, mostly of wood, but sometimes of stone, the courtyard surrounded by trees, the inner sanctuary with its mysterious *gobei* paper, and the burnished mirror; outside, the universal lamps, all of one pattern, and within, the Buddha sitting on the lotus-leaf, and the gilded warrior with his weapons in his hand. Everywhere the priest moves about with clean-shaven crown, and the nun, in long brown robes, slips noiselessly through the cloister; the pilgrims from the country stare and worship, the coins are flung before the altar, the deep and sweet-toned bells toll the hours of prayer, and the worshipers clap their hands and lie with their faces on the ground.

Ventilation of Children's Apartments.

THE proper ventilation of the apartment of children does not usually receive from parents and those having the care of the young that share of attention which its serious influence upon their health deserves. Provision is rarely made for a regular supply of fresh, or removal of vitiated, air beyond what is afforded by windows, doors, and open chimneys. The fact is that the public generally are not yet alive to the vast evils consequent upon breathing impure air. If, however, you want to be convinced and to see these evils in their most unmitigated form, it is only necessary to visit the dwellings of the poor in a crowded city. The atmosphere you will have to breathe, and the appearance of the inmates, will amply suffice to convince you, however skeptical. In cities, as contrasted with rural districts, the deaths from consumption are about 24 per cent.; those from typhus fever about 55 per cent.; those from childbirth 59 per cent.; and so of several other disorders. The diseases chiefly incidental to childhood are twice as fatal in the city as in the country. The mean duration of life in the two classes of districts differs nearly 17 years, being in the proportion of 55 years in the country to 38 in the towns and cities. These differences can only be explained by attributing them to the weakening influence of impure air and the want of sufficent exercise; and there is one circumstance which shows that impure air is the most noxious agent of the two, namely, the great comparative mortality in towns of children under two years of age, even although they get as much exercise as their time of life would allow of anywhere. Many authorities might be quoted in confirmation of this conclusion, did our space allow.

FUN.

THE proverb "fair exchange is no robbery" didn't refer to church fairs.

WE hear of men sowing wild oats, but who ever heard of a woman sowing anything but tares.

IT is evident that the earth is feminine from the persistence with which she refuses to tell her age.

"I HAVE nothing but my heart to give you," said a spinster to a lawyer who had concluded a suit for her. "Well," said the lawyer, grufily, "go to my clerk; he takes the fees."

ARTIST (to Chicago landlady): "Yes, I like the room very well, but it is absolutely necessary that I should have a north light." *Old Lady in Charge*: "Bless the man! then what's the use of coming out West if you want that?"

"MA," said a little girl, "do men want to get married as much as women do?" "Pshaw! what are you talking about?" "Why, ma, the ladies who come here are always talking about getting married; the men don't."

CLASS in the Agricultural College.—*Professor*.—"Is there any way to obtain good fruit without grafting or budding?" *Student*—"Yes, sir." *Professor*—"Please explain the process." *Student*—"Watch your chance, and when the farmer goes to dinner crawl over in the orchard and steal it."

A GENTLEMAN in a draper's shop had the misfortune to tread on a lady's skirt. She turned round, her face flushed with anger, but seeing the gentleman was a stranger, she smiled complacently, saying, "I beg pardon, sir; I was going to be in a dreadful passion. I thought it was my husband."

MR. GEORGE DINES, who has made extensive experiments and observations on the formation of dew, finds that the depth of deposit in England in an evening rarely exceeds a hundredth part of an inch, and that the average annual depth of the dew deposited upon the surface of the earth does not exceed an inch and a half.

A HINT TO WORKINGMEN.

THE honest workingmen of the country, many of whom have large and increasing families to support, have been the chief sufferers from the great financial pressure under which we have labored for the last few years. Diminished wages have not been attended by a corresponding diminution in price of everything which the workingman needs. Rents, fuel, food and clothing are cheaper, but these do not constitute all his necessities. It is sometimes necessary for him to employ a lawyer or a physician, yet the fee rates of physicians and lawyers are as high as they were in "flush" times. Yet cheap medicines are as necessary as cheap rents or fuel. Cheap medicines are not necessarily poor medicines. It must be obvious to every intelligent person that medicines, compounded and put up at wholesale, can be sold at much lower rates than when retailed from the doctor's pill-bags. Dr. Pierce's Golden Medical Discovery and Pleasant Purgative Pellets have completely restored persons who had spent hundreds of dollars in vainly seeking relief from private practitioners, and all at a very slight expenditure.

THE utility of amateur printing presses like those manufactured by W. A. KELSEY & Co., of Meriden, Conn., is fully established. They are rapidly making their way into offices and business houses in all parts of the world, as really effective economists of time and money. With them boys pass many a pleasant and useful hour, learning the "art preservative," and acquire, at the same time, practical knowledge and experience, which insures a comfortable and honorable livelihood. Within their wide range these presses do work excelled by none and always satisfactory.

PREMATURE loss of the hair, which is so common nowadays, may be entirely prevented by the use of BURNETT'S COCOAINE.

PHILADELPHIA, April 16th, 1877.

MESSRS. JOSEPH BURNETT & Co.:

Gentlemen—One year ago my hair commenced falling out until I was almost bald. After using your COCOAINE for a few months, I have a thick growth of new hair.

ALEXANDER HENRY,
No. 814 East Girard Ave.

THE continued spread of the yellow fever in the South revives the recollection of the value of A. WERNER & Co.'S "AMERICA" EXTRA DRY CHAMPAGNE in the treatment last year of this and similar fatal epidemics. In many Southern cities "America" was used with perfect success in fortifying the system to resist the attacks of disease and in warding off the approach of fevers and malaria. Its action is always mild, healthful and certain; so much so that many physicians prescribe "America" regularly for their patients. In many cases a gentle tonic is all the system requires, and in every respect the results, immediate and permanent, are more satisfactory than those obtained by the more powerful remedies.

THE greatest nourishing tonic, appetizer, strengthener and curative on earth—Hop Bitters.

WHEN the ST. NICHOLAS hotel was opened, many years ago, New York and the whole country were deeply interested in this most superb of hostelries. Other formidable rivals have since sprung up, but still the ST. NICHOLAS stands in its pristine dignity. Excellence of *cuisinière*, superb apartments, and all the modern conveniences, make this hotel, at $3.50 per day, the most moderate-priced in the country.

IT is impossible to remain long sick or out of health where Hop Bitters are used.

FINANCIAL.

THE well-known banking-house of EVARTS, HARNES & Co., of 24 Broad Street, New York, have recently brought to the notice of the public a plan for operating in stocks that is well worthy of attention. It consists in combining many small orders into one large syndicate with which to operate. The total amount is then used for thirty days in buying and selling stocks as judgment and experience may dictate, and at the expiration of this time the profits are divided among the shareholders *pro rata*. We understand that their customers are realizing very large profits on their investments under this system, which is really the safest possible way to deal in stocks.

THE pleasure of bathing is greatly increased by mixing in the tub half or even a quarter of a bottle of MURRAY & LANMAN'S FLORIDA WATER. Instantly the whole atmosphere of the bathroom is as fragrant as a blooming flower-garden, the mind becomes buoyant, and the body emerges refreshed and strengthened.

ALL mineral waters that are dangerous irritants may be known by an acid after-taste.

HALFORD'S LEICESTERSHIRE TABLE SAUCE is capital for dyspeptics; gives tone to the stomach. Physicians recommend it.

The Genuine Asbestos Roofing forms the lightest and most economical roof in use. It can be easily applied by any one. H. W. JOHNS' MANUFACTURING Co., 87 Maiden Lane, New York, sole manufacturers.

Commonwealth Distribution Co.—Next Monthly Drawing, August 30th.—Unprecedented success of the new and original feature of allowing any ticket-holder present the privilege of calling out his number and seeing it placed in the wheel.—The last drawing of the Commonwealth Distribution Co., in Louisville, Ky., was the grandest success of all. Macauley's Theatre was filled to overflowing, and many persons called out the numbers of their tickets, which were readily shown them and placed in the wheel. The numbers representing all the tickets, from 1 to 100,000, are accurately printed by machinery, spread out on a table, and so arranged in packages of 100 that it is only the work of a moment to pick out any number. *If one is there* all must be there, as it is impossible to know what numbers will be called for. This is a sure prevention against fraud or favoritism. The next Grand Drawing will be conducted in the same manner, and the same splendid scheme presented, viz.: 1,960 prizes, amounting to $122,400. Orders are pouring in from all parts of the country, so great is the confidence in the integrity of the Company. Tickets are only $2; halves, $1. See advertisement. Address, T. J. COMMERFORD, Sec'y, Courier-Journal Building, Louisville, Ky.; or same at No. 163 Broadway, N. Y.

$10 to $1,000 Invested in Wall St. Stocks makes fortunes every month. Book sent free explaining everything. Address, BAXTER & CO., Bankers, 17 Wall St., N. Y.

A perfect Time-Keeper, Hunting-Case and Heavy Plated Chain, latest style. We warrant it for 5 years to denote time as correctly as a $100 Chronometer Watch, and will give the correct time to any part of the world. Besides, it also contains a First-Class Compass, which is alone worth the price we charge for the timepiece. For Men, Boys, School-Teachers, Travelers, Mechanics, and Farmers, it is indispensable. They are as good as a high priced watch and in many cases more reliable. Just think of it! A Hunting Case Watch and Chain for $1.00! The Solargraph Watch is used by the Principal of the Charlestown High School, and is being fast introduced into all the schools throughout the United States, and is destined to become the most useful Time-Keeper ever invented. The Solargraph Watch received a Medal at the Mechanics' Fair, Boston, in 1878. This is no toy, but is made on scientific principles, and every one is warranted to be accurate and reliable. We have made the price very low simply to introduce them at once, after which the price will be raised. The Solargraph Watch and Chain is put up in a neat outside case, and sent to any address for $1.00. We have made the price so low, please send two stamps, if convenient, to help pay postage. This offer is good for sixty days only, and will appear but once. But two watches sent to one person. Name this paper.
E. G. CRAMER, 20 N. Ann St., Chicago, Ill.

WITH
FIVE DOLLARS
YOU CAN BUY A WHOLE
IMPERIAL AUSTRIAN
100 Florins Government Bond,
ISSUED IN 1864,
Which bonds are issued and secured by the Government, and are redeemed in drawings

TARRANT'S SELTZER APERIENT

There are martyrs to headache who might be cured by using

Tarrant's Seltzer Aperient.

The stomach, overburdened until its recuperative power is weakened, revenges itself upon the poor head, which it makes to ache and torture the offender. The use of this aperient will carry off naturally, and almost imperceptibly, the offending cause. The disease is removed, and the head ceases to ache.

FRANK LESLIE, EDITOR AND PUBLISHER.

NEW YORK, SEPTEMBER 6, 1879.

CAUTION.

Subscribers, in ordering our publications, should be careful to write the name of FRANK LESLIE *in full, and direct their letters to 53, 55 and 57 Park Place, New York, from which address all our publications are issued.*

THE LINES DRAWN.

WE are not at all in the habit of looking to Mr. Wendell Phillips for wise counsel in politics or in public economy, but when two antagonisms in either are placed at issue he may be safely taken to represent one of them in its most aggravated and, at the same time, in its most logical form. Having convinced himself that the ends proposed by the Greenback Party are just and proper, this Thersites of the hustings is as swift and fluent in his denunciations of the Republican and Democratic Parties as he is bold and defiant in his championship of the cause to which he lends his brilliant but unscrupulous eloquence. As if to show that his pen is as bitter as his tongue, he has, as before stated, addressed a letter to his political confederates in Maine, in which, with even more than his usual virulence, he rails at the Republican leaders as the "swindlers" and "Peckaniffs" of American politics, who, he says, for the last fifteen years have been fleecing labor in the interest of capital; and equally distrusting the Democratic leaders as being openly pledged to "Southern assassins" and secretly bound to "Northern capitalists," he reaches the useful conclusion that the "Nationals" are the "only party whose wise claims have been honestly urged and bravely pressed," and the only party which to-day stands before the people "vindicated by events," with all its past measures adopted as at once the presage and "sheet anchor of future success."

In evidence that the Greenback Party has been thus far "uniformly victorious," and has gained everything for which it asked, he holds the following language:

"1. That party demanded the remonetization of silver. It is done, and the step is not likely to be reversed.

"2. We claimed that the greenback should not be destroyed, but reissued. The Secretary of the Treasury, who was in his usual chronic state of perplexity and bewilderment, gladly submitted to this compulsion—indeed, welcomed our victory. Thus the derided 'rag'—the 'dishonored rag'—is the national currency to-day, and is very likely to remain so.

"3. We asserted that, if the greenbacks were made receivable at the Custom House and for all debts due the Government, coin and greenbacks would be equal in ninety days, and that this was the proper step to be taken.

"For this we begged, argued and petitioned three years ago. Then we got no attention. Now the Secretary, without law or authority, has ordered this step to be taken, and Congress is about to sanction what he illegally did. Without this step resumption would be impossible, or extremely dangerous if possible. Without this help resumption would be a failure.

"With these three victories behind us, we now advance to the next outwork of the enemy. The next point to attack is bank issues of currency. Put only one line on our flag: 'No State or national banks of issue. Let the Government issue all the currency the nation uses.'"

We place these arrogant claims before our readers in order to point the moral we sought to enforce a few weeks ago, when we commented on the vacillations, hesitations and fictitious issues which impair the energy and obscure the vision of the Republican and Democratic leaders in the present financial crisis. Confiding in some happy-go-lucky turn of affairs which is to rescue the country from the logical outcome of its present financial tendencies, the Republican orator claims the confidence and support of the people on the ground of the great achievement accomplished by his party in bringing about a "resumption of specie payments," or at least what passes for it in the political parlance of the hour; and the Democratic orator, unable to dispute this pretension of his rival, waxes wroth in contemplation of the financial "wreck and ruin" through which, as he claims, this grand desideratum of the capitalists has been reached at the expense of the labor and productive industry of the country.

It is the dead past and not the living present or the pregnant future with which these professional politicians are willing to concern themselves. If the obscurity of their vision sprang from ignorance it would be sufficiently a source of reproach to these blind guides of the people, but it becomes doubly a source of reproach when we reflect that it springs from cowardice as well. And in politics nothing betrays like cowardice.

The Republican who hopes that he can conciliate and reclaim the Greenback fanatic by honeyed phrases descriptive of his devotion to the "battle-born and blood-stained" currency of the war, is likely to evoke nothing but contempt by his motion. The Democrat who hopes that the result of the Ohio election will clarify opinion on the topic, and who meanwhile "sits on the fence," has already forfeited his right to a respectful audience. In the presence of men who palter in a double sense, who have no definite opinions on the subject, or who, if they have opinions, have not the courage of them, the rant of the Greenbacker wins a readier way to the ear of a credulous public.

The friend of hard money and the advocate of resumption *in the future* as well as the past may, therefore, confess his obligations to Mr. Wendell Phillips for so distinctly drawing the lines between the party he favors and the parties he opposes. There is too much ground for the claim he sets up in boasting over the past "victories" of the Greenback Party. The "remonetization of silver," in the shape of a depreciated silver dollar, is a Greenback "triumph," and a triumph of such evil omen, that it threatens the future of resumption with overthrow, or, at the best, with degradation from a gold standard of value. The permanent incorporation of the greenbacks into our currency is a Greenback "triumph" which sprang as much from the craven paltering of the hard-money men as from the audacity of the soft-money zealots, and it is this surrender which has not only falsified the pledges of the Republican statesmen who first launched this currency on the country in the hour of its agony and bloody sweat, but even now emboldens the Warners and De La Matyrs of finance to brood over new schemes of boundless inflation in the future.

It ought to be apparent now to the most timid of politicians and to the most astute of trimmers that there is no middle ground between those who would withdraw and cancel the whole greenback circulation and those who favor its permanent retention and its substitution for every other kind of money. It is with these three past victories behind them that the Greenbackers, as Mr. Phillips exultingly proclaims, are now advancing on "the next outwork of the enemy"—the national banks—which they purpose to wipe out of existence, that the whole volume of our currency may be determined from time to time according to the gusts of public opinion as represented in Congress. The story of the French *assignats* is to be translated into English and printed in the statutes-at-large.

And *this* is the issue which is now presented to the people of Ohio and Maine. It is the issue forced upon public attention by the loud clamors of the Greenback Party; and the men who evade it or who stuff cotton in their ears that they may not hear the full extent of the Greenback challenge are men who should seek for their exemplar in that Mr. Ready-to-halt whom Bunyan has portrayed in his matchless allegory.

THE FISHERIES AGAIN.

ONE of the last special acts of Minister Welsh, before quitting England, was to deposit with the British authorities a demand for $103,000 damages for injuries done to the property of American fishermen a year and a half ago, while fishing in Fortune Bay. It will be remembered that, on the pretense that the Americans were fishing in defiance of local laws, a mob of from 100 to 200 Newfoundland fishermen set upon them, destroyed their seines, let out the fish, and in some cases carried away the nets which they had seized. The claim that this outrage was justifiable because the American fishermen were violating a local law of Newfoundland was promptly disputed by Secretary Evarts, who, in a letter to Lord Salisbury, insisted that, having paid an exorbitant sum for the right of fishing within three miles of the shore, and remitted also several hundred thousand dollars in duties on Canadian fish annually, "the fishery rights of the United States, conceded by the treaty of Washington, are to be exercised wholly free from the restraints and regulations of the statutes of Newfoundland, now set up as authority over our fishermen, and from any other regulations of fishing now in force or that may hereafter be enacted by that Government." This initial statement of the American view has been followed by a somewhat elaborate correspondence on the subject, but apparently without any concession on the part of Great Britain. Our claim, therefore, now takes on a definite and substantial form in the demand for specific damages, and this it will be necessary for Great Britain to meet in one way or another. The London *Times*, speaking of the demand, says the point is a technical one, but it is evident, at the same time, that the *Times* regards the reopening of the whole Fishery question as a possibility of the near future. Thus it expresses the belief that "an international convention on the subject would not meet with serious objections either on the part of the Imperial or the Colonial Governments, provided the question was dealt with in its entirety and not merely a revision of the recent arbitration at Halifax attempted." Whatever may be the disposition of Great Britain, it is quite certain that our Government will not abandon the just position it has taken. The new Minister to the British Court, whoever he may be, will no doubt go out with instructions to bring the whole matter to an early determination. Statistics as to the extent and position of American interests in the inshore fisheries of the Dominion are now being gathered by officials representing the State Department, and, supplied with these, it is believed that our case will be capable of such strong presentation as to compel either a radical change of the principle of settlement upon which the whole question rests or an absolute abrogation of the existing treaty.

THE ADVANCEMENT OF SCIENCE.

THE twenty-eighth meeting of the American Association for the Advancement of Science will be held at Saratoga during the present week. The headquarters of the Association are at the United States Hotel, and the general sessions are held at the Town Hall. The coming together of so large a number of the representative scientific men of the country cannot fail to draw to the meeting the interest and sympathy of the whole community. We have here a thousand men who have consecrated their lives to the promotion of science in all its branches, and we recognize on the list of members the names of every professor and teacher of note in the entire Union. They do not come together for selfish purposes—they do not seek to establish, govern or overthrow any political party—but they look to the higher education of the people as offering the best safeguard in a republic, and the popularization of science is to them a matter of primary importance. In order to facilitate the transaction of business the association is divided into two sections—the first devoted to mathematics, astronomy, physics, chemistry and mineralogy; the second, to geology, zoology, botany and anthropology. For the further convenience of experts sub-sections on special subjects are formed, and thus at the same time papers are being read in different rooms, where the audience is small and limited, to the select few who can understand what is going on. The entire body meets together in the morning for the transaction of business or to listen to a lecture upon a topic of general interest, and there is an evident desire on the part of the more experienced members to seek to make scientific themes popular by evening lectures which the public can freely attend during each session.

At a former meeting a committee was appointed to study the relation of science to the industrial arts, of which Professor Thurston, of the Stevens Institute, Hoboken, is chairman. It is expected that this committee will be prepared to make a preliminary report. It is a constant complaint on the part of manufacturers, metallurgists, mining and civil engineers, and business men generally, that our schools fail to give an education best fitted to the pursuit the student is expected to follow. This is so far true that they prefer to take boys and train them in their own way. In order to ascertain where the difficulty lies, the committee has issued a circular inviting persons interested to suggest such improvements in the matter and methods of instruction as may occur to them. The committee will embody the results of these inquiries in their report, and we may expect an interesting discussion when the subject comes up for consideration.

The importance of reform in the teaching of science in our public schools has also attracted the notice of members, and a committee has been appointed to report upon it. It is claimed by many that our system of education ought to be made to conform to the prevailing sentiment of the age; that we must be more practical and less procrustean in our methods; that we must adapt our education to the abilities as well as probable wants of the pupil. When the Duke of Wellington said of a certain peer, "It was a pity his education had been so far too much for his abilities," he gave a hint which teachers would do well to bear in mind. We do not all have gifts alike, and our training may sometimes be shaped accordingly. The celebrated astronomer and mathematician Gauss was nearly turned out of school because he would not submit to the stereotyped method of the teacher. He sat on a bench, with his feet dangling in the air, listening to the sums which the teacher gave the boys and which it was expected that each one would work out on his slate, with much perspiration and wriggling. The little Gauss answered every question as fast as it could be put without taking his eye from the teacher. This was too much for the patience of the master, and he boxed the boy's ears, dismissed him from the school for insubordination, and, if it had not been for the intervention of one of the directors, the future astronomer would have been apprenticed to a mason, and we should never have heard of him again.

In an assembly such as is now convened in Saratoga, there will necessarily be conflicting views in matters of practical detail, but there will certainly be unanimity in the opinion that scientific studies have been too much crowded out of our public schools, and, as the guardians of science, it will be the duty of the members to act upon public opinion until the needed reform has taken place.

Unusual interest attaches to the Saratoga meeting on account of the sterling ability and high reputation of the officers from whom addresses are expected. The retiring president, Professor O. C. Marsh, of New Haven, speaks with authority on all matters of geology; the actual president, Professor George F. Barker, of Philadelphia, has already established an enviable reputation in the department of physics, and his summary of progress will be sure to be very complete. The vice-presidents of sections to whom the public will lend a willing ear are Professor Langley, of Allegheny, Major Powell, of Washington, Professor Remsen, of Baltimore, and Mr. Morley, of Hudson, Ohio. From all of these special addresses may be expected, and thus the interest of the Saratoga meeting is certain to be equal to that of any which has been held during the nearly thirty years since the association was organized.

SHOT-GUN POLITICS.

IS there never to be an end of murderous bulldozing in Mississippi? It is only a fortnight ago that Mr. Henry M. Dixon, who had dared to announce himself as an independent candidate for Sheriff of Yazoo County, was compelled by a mob to withdraw from the canvass under penalty of death, and this was followed by similar menaces of independent candidates in Rankin County. Subsequently, under legal advice, Mr. Dixon re-entered the canvass, and, on August 20th, he was deliberately assassinated—shot in the back and killed—by a prominent Democratic politician and candidate on the "regular" ticket. And, so far as appears, neither the Democratic leaders nor the influential party organs of the State have a single word of condemnation for these deeds of lawlessness and violence; on the contrary, some prominent officials and a number of journals have actually applauded the "manly and timely example of the gallant Democracy of Yazoo."

There is one thing in connection with this business which is as certain as sunrise, and that is, that unless the representative men of the South *do*, promptly and emphatically, speak out against lawlessness, intimidation and murder, the country will be forced to accept the conclusion that Mississippi civilization at least is little better than savage barbarism. The *Herald* says truly of these representative men, "Their silence makes them the partisans and accomplices of assassins"; and the *World* expresses the feeling of every right thinking citizen in the land when it says:

"Mr. Dixon, from the best accounts, seems to have been one of Carlyle's men, more ready to smite than to argue, and it may not be an unmitigated calamity to the community to be rid of his emphasis and his eccentricities. But all that has nothing to do with the question whether the good people of Mississippi can or cannot maintain order in their own State and secure even to Dixons the right to seek the suffrages of the people without being put in peril of their lives or threatened with exile. That is a question which behooves the good people of Mississippi to answer in no uncertain fashion and at no distant day. It is no concern of theirs whether Massachusetts is or is not willing to secure to mill operatives the right to vote uncoerced by mill-owners. It is their concern to clear their State and section of such scandals as that which has culminated now in the taking off of Mr. Dixon, and which will be deepened and made more dangerous if they fail to investigate that taking off thoroughly and to bring its perpetrators to justice."

It is said that, as one result of the assassination, a full independent ticket has been nominated in Yazoo County. The country will watch with profound interest the course of the conflict which this movement in behalf of a free suffrage is sure to precipitate.

ARCHBISHOP PURCELL'S DEBTS.

A CINCINNATI bank, in which $8,000 contributed for the relief of Archbishop Purcell had been deposited by the treasurer of the relief committee, failed last week, and the money, it is feared, may be lost to the creditors of the venerable prelate, though the possibility of such a result is denied in some quarters. It will strike the public with surprise that, after all the efforts made in the East and elsewhere to raise a fund in aid of the Archbishop, only the paltry sum of $8,000 has been realized. We cannot say, however, that we have ever had a great deal of confidence in the promises of help which were so profusely made some time ago. We should rejoice, not so much, we confess, on account of the Archbishop himself, as on account of the poor people who confided in him, and who by their over-confidence in him

Digitized by Google

have lost their money. If the anticipations apparently entertained by him should be realized, and if, with the help of the churches, all obligations should be honorably met. But we do not see that a more favorable opportunity is ever likely to arise than that which has gone past. If nothing could be done by the assembled bishops in the exciting circumstances connected with the opening of the new Cathedral, we are afraid that it will be dangerous to lean with too much confidence on the promised circular of the Cardinal-archbishop and the pledged co-operation of the bishops. The simple truth is, there is no money to give away. New York has enough and more than enough to do to take care of her own great interests; so have Buffalo, Boston, Philadelphia and other cities. What some of the bishops dread is that the fate of Archbishop Purcell may befall themselves. They have most of them been playing the same game; and it is good fortune, quite as much as good management, which has prevented not a few of them from falling into a like difficulty. To keep their own houses in order the bishops, one and all, need their own money at home.

It will be, indeed, a sad enough affair for all concerned, if something substantial is not done to relieve the Cincinnati diocese, and to save the honor of the venerable prelate at its head; but so dire a calamity will not have happened in vain, if it shall have the effect of teaching the clergy of the Roman Catholic Church, and, indeed, the clergy of all denominations, that their proper business is not to take care of the people's money, but to take care of the people's souls. In all the Churches there has been too much extravagance; and as a natural result the spiritual is being overlaid and extinguished by the material. It is high time for a new departure—for a return to more primitive models and to greater gospel simplicity.

FOREIGN EVENTS.

IT is quite apparent that the announcement of the practical capitulation of Cetewayo, and the termination of the war in Zululand, was altogether premature. At the last accounts, the savage King was still successfully evading the British, while a tribe of British subjects had been twice attacked by hostile Zulu tribes, showing a prevalent unrest and enmity by no means favorable to an early peace. Meanwhile, the British troops are suffering from sickness and climatic disorders, and should Cetewayo be able to hold out two or three months longer, the invading column may be so diminished as to make considerable reinforcements necessary. Sir Garnet Wolseley, however, appears to be making every possible preparation to strike a decisive blow, and to that end has enlisted 10,000 Swazies to fight in the British interest. On the other hand, it is said the Boers have determined to fight unless their independence is restored; the Pondoes are showing fresh signs of hostility, and the situation all around is becoming, for the British, more and more complicated. It may be stated in this connection that the findings of the court-martial in the case of Lieutenant Carey, so unjustly censured in connection with the death of the Prince Imperial, have been quashed by the British authorities, and the lieutenant, who has arrived in England, will accordingly retain his rank. He has authorized the statement.

The commissioners on the Greek frontier commenced their sittings at Constantinople on the 21st. The commissioners are given full authority as to the rectification of the frontier, and the question has reached a stage where further delay by the Porte will be impossible. Meanwhile, a royal decree in Greece calls out 8,000 men of the second class of the territorial army, and the popular enthusiasm in support of the demands of the Government is growing every day more intense. The Porte has appointed a commission to introduce and supervise reforms in Asia Minor. The Government is in the greatest straits for money, and one of the commanders of the Turkish troops in Syria has been obliged to make requisitions upon the villages in order to save his army from starvation.

The rumors ascribing unfriendly intentions towards Germany and Austria on the part of Russia are renewed. The strengthening of the fortifications of the latter Power on its western frontier is to be followed by the construction of those of Germany at Thorn immediately, instead of leisurely, as until recently contemplated. The finances of Russia are greatly embarrassed; the national interest-bearing debt is becoming enormous, and there is now in circulation 1,132,165,125 rubles in paper money, but the work of enlarging the military establishment still goes on, and contracts, also, are said to have been made for the construction in this country of a number of cruisers at a very considerable cost.

Great Britain was last week visited by storms of unusual severity, the rainfall being the heaviest known since 1872. Immense damage was done to the crops, and hundreds of cattle and sheep were drowned. While British farmers are emigrating to Canada and the United States, British colliers are emigrating to New Zealand—a colony of two hundred having sailed on Friday last. There is scarcely a trade or occupation in Great Britain whose overfull ranks are not being depleted by movements of this character. There are some indications, however, of an improved feeling in certain branches of industry at Sheffield, Manchester and elsewhere.

In France the Ferry Educational Bill is still agitating the popular mind. A total of sixteen million signatures to a protest against its passage has been secured, but many of these are declared to be fraudulent. Of course, the priests and clericals have been active in furthering the hostile demonstration. It is significant that the Premier, M. Waddington, in a recent address, defended the Bill with great energy. He announced on the same occasion that the Government will resist any attempt to reopen the question of amnesty, and, as to internal affairs, said that important reductions in taxation would probably be made next year. There is a notable decline of Bonapartism in the provinces.

After several delays, occasioned by unfavorable weather, the foundation-stone of the new Eddystone Lighthouse was laid by H.R.H. the Duke of Edinburgh, Admiral in the British Navy, at noon on August 19th. A small but quite a distinguished party witnessed the ceremonies. The new tower, which will be the fourth erected on the reefs in Plymouth Sound, will rise on the South Rock, at a point 120 feet south of the present crumbling structure, to a height of 130 feet above the level of any Spring tide, and, it is expected, will be completed in four years, at a cost of from $300,000 to $350,000. The first Eddystone Lighthouse was built in 1700, and destroyed in a storm three years later. A second, of wood, was put up in 1709, and burned in 1755. The third or existing one was finished in 1759, and has withstood the storms of 120 years. The new light will have a range of seventeen and a half miles.

A dispute has arisen between the Russian and English Commissioners relative to the delimitation of the Russo-Turkish frontier in Asia, each disputing the accuracy of the other's map. Lord Dufferin, the British Ambassador at St. Petersburg, has suspended temporarily the negotiations on the subject which were in progress at that point; but it is not likely that any more serious result will follow.—The determination of Count Andrassy to resign the Austro-Hungarian Premiership remains unalterable.—The trials of Nihilists by the military tribunal at Odessa terminated on the 17th of August. Five of the accused persons were sentenced to be hanged, one woman to exile to Siberia, and twenty-two other prisoners were sentenced to ten years' penal servitude.—The subject of the proposed reforms in Cuba will be taken up in the Spanish Cortez at an early day, and, if Martinez Campos can have his way, the reforms will certainly be agreed upon.—The Pope is declared to be in perfect health, all statements to the contrary notwithstanding.

THE Post Office Department is said to be favorably disposed to the adoption of the Postal Savings Bank system. The latest proposal is to receive small deposits, interchangeable into low interest-bearing bonds. The eagerness with which the four-per-cent. refunding certificates were taken demonstrated the demand for a safe investment for the small earnings of the laboring classes, and it is believed that the Postal Savings Bank affords the best opportunity.

THE yellow fever continues its ravages in Memphis, with little sign of abatement, and the Howard Association will be compelled to appeal to the charity of the country for funds to enable them to care for the sick and dying. The various relief societies are doing everything in their power to mitigate the horrors of the situation, but with the spread of the fever the provision for the comfort of the victims is not at all likely to exceed the demand.

DURING the fiscal year just closed, the customs receipts at this port show an increase of $6,000,000, with a decrease in the cost of collection of nearly $200,000. At Philadelphia the collections were increased over $2,000,000, but the cost of collection was also increased nearly $11,000. At Boston there was a decrease in the cost of collection of $22,000, with an increase of $700,000 in the receipts. New York, it thus appears, makes a better showing than any other port.

EX-SENATOR HENDRICKS of Indiana declares that he "will not, under any circumstances, run again for Vice-President." As to the Democratic nominee for President, Mr. Hendricks says he must be a man "whose record it is not necessary to disown or explain away;" and he adds, "with such a candidate, for whom there is no need to apologize, we will win, and not otherwise." It would be interesting to know just who Mr. Hendricks had in view when he used this language.

GOVERNOR TALBOT of Massachusetts has published a letter formally declining a renomination, for reasons of a purely personal character. Governor Talbot's administration has been marked by a purity and conscientious fidelity to the pledges upon which he was nominated which have commanded for it the cordial approval of the best men of all parties, and it will be matter for regret that he feels constrained to withdraw from an office which he has filled so worthily and profitably to the State.

M. DE LESSEPS's game of brag in the matter of the Panama Canal scheme has not proved by any means a winning one. After proclaiming at every opportunity and at every available point that he had the promise of all the capital he could possibly desire for the consummation of the great enterprise, he is now compelled to admit that the subscriptions of stock have not been sufficient to enable the company to organize successfully, and that the undertaking will, therefore, be suspended for the present. Meanwhile, De Lesseps announces that he will visit this country, possibly for the purpose of utilizing the "American aid" which he has persisted in declaring he could command whenever desired!

THERE are indications that Jefferson Davis will be elected United States Senator from Mississippi. The dominant party in that State evidently does not stop to consider the consequences of "firing the Northern heart" by thus reviving resentments and passions which it is the effort of all patriotic men to allay. It is bad enough that the party leaders should hold their peace in the presence of such outrages as that at Yazoo, but when they presume to insult the whole loyal people by proposing to send the unrepentant and still arrogant chief of the rebellion to the National Senate, from which he withdrew with menace and defiance to play the part of a traitor, they take a step which the most complacent and charitably-minded will resent with vehement indignation.

THERE seems to be a revival of Nihilism in Russia. The repressive measures adopted by the Government have entirely failed to eradicate the malady engendered by administrative despotism and corruption. While many leading Nihilists fled the country, the great majority remained at home and have defied the most vigilant scrutiny of the secret police. The managing committees meet as before, but never twice in the same place; their incendiary documents are distributed everywhere, and it even appears that a new printing office has recently been established which defies all attempts at discovery. That the Government still regards the situation with grave alarm and distrust is shown by the fact that the censorship of the press has been turned over to military men; that the professors of the universities (which are to be removed from the cities to secluded villages) are to be appointed directly by the Government hereafter, instead of being elected by the faculties; and that a secret order has been issued, in compliance with which all army officers under the grade of major-general and all civil officers under that of State Councilor are now subjected to a thorough search before being admitted to the presence of the Czar.

THE "Sunday question," so called, is likely to get into the Maryland courts. Recently, the police authorities of Baltimore directed the City Marshal to prevent the departure from the city of all excursion trains of cars or steamboats on Sunday, without regard to their purpose or destination. The Western Maryland Railroad Company had placed a Sunday camp-meeting excursion train on its regular schedule, and in spite of the police prohibition insisted on running the train as advertised. The engineer was thereupon arrested, and the question will now go to the courts for a decision of the whole general question of the right of the company to operate its road on the Sabbath under the existing State laws. The same question as to what may or may not be done on the Sabbath—whether, for instance, beer-gardens may be kept open and entertainments given in them, whether the traffic in intoxicating drinks may be carried on, etc.—is agitating Connecticut, New Jersey, and other States, and the indications are that it will be forced into politics in a good many localities by the vehemence of the anti-Sunday party. It will be settled at last by a sound public sentiment, on the basis of the public order and in the interest of the public morals.

AMERICANS who have faith in self-government and cherish a preference for republican institutions have very generally failed to join in the British paroxysms of grief over the death of the young Prince Imperial. The truth is that Prince Louis, in going to Zululand and asking for "an adventure," took all the hazards of a battle in a savage country, and he was slain as savages slay. He was dear to his mother and his friends, of course, and they have properly mourned him; but the world at large has no more reason to lament his loss than that of the young peasant soldiers who perished in the grass at his side. Indeed, the human race is probably a gainer from his death. He was living on money filched from the industrious millions of France, and his only object in life was to commit an imperial burglary and vault to power above the ruins of self-government. His removal has made the republic stronger and has weakened every throne in Europe. It is well known that the sympathy of Victoria for Eugénie was very cordial and deep, and that she hoped to live to see the French Republic upset and the Empire re-established, with Louis as the royal brother of Albert Edward; but there would seem to be no reason why any Americans, except snobs and flunkies of an extreme type, should wish this wicked conspiracy to succeed.

NEWS OF THE WEEK.

Domestic.

BUSHNG & Co., bankers, Cincinnati, have failed; liabilities, $100,000.

TWO cases of yellow fever were reported at New Orleans, August 22d.

THE cigar-makers and stove-molders of St. Louis have struck for higher wages.

A DECIDED increase in the building of steam vessels is reported in official quarters.

THE Mississippi River Improvement Commission has perfected a plan for completing the survey of that river.

THE ninth annual convention of the superintendents of the poor will be held at Congress Hall, Saratoga, on Tuesday, September 12th.

THE centennial anniversary of the battle of Paulus Hook was celebrated at Jersey City, August 19th, with imposing demonstrations.

HON. HENRY L. PIERCE has consented to allow his name to go before the Massachusetts Republican Convention as a candidate for Governor.

SECRETARIES SHERMAN and Schurz last week addressed Republican mass meetings at Cincinnati, Columbus, Cleveland, and other points in Ohio.

THE great coal companies are discussing the propriety of a temporary suspension of production, which is said to be beyond the needs of the market.

THE total number of deaths from yellow fever in Memphis, up to August 21st, was 202, and the whole number of cases 880. On the 22d there were eleven additional deaths.

THE New York Assembly Railroad Committee was in session at Saratoga last week, and examined William H. Vanderbilt and others as to railway charges, discrimination, etc.

ALL claims under the Arrears of Pensions Act will be paid by the middle of October. The amount already disbursed is nearly $12,000,000, leaving $13,000,000 to be paid.

FIVE men bound a policeman at Long Branch early on the morning of August 20th, and attempted to rob the bank there, but were frightened away before they had opened the safe-door of the vault.

THE Surf House at Rehoboth, Del., was burned August 22d. Sixty persons were in the house at the time, but all escaped, one woman only being slightly injured. The guests lost all their baggage.

THE perpetrators of the murder of Mr. Frye, of Boston, have been arrested, and upon their own confession committed for trial. Two Italian barbers did the killing, but they had outside accomplices.

LETTERS received at Washington from colored men in various parts of the South show that the migration to the North still continues, and promises to assume larger proportions as soon as the crops are gathered.

IMPEACHMENT proceedings in the case of W. L. Goldsmith, Comptroller General of Georgia, commenced August 21st, before the State Senate, acting as a high court. He is charged with bribery and fraud in office.

THE American Bar Association, in session at Saratoga last week, elected Hon. B. H. Bristow as president, and a vice-president from each State. It was resolved to take measures for having uniform laws for marriages and divorces passed in the several States.

A CONVENTION of Western distillers, held at Peoria, Ill., last week, resulted in the formation of a national association for the purpose of encouraging the foreign trade in alcohol, collecting statistics, ascertaining the consumption and needs of the domestic market.

GREAT damage was done by the storm of August 18th. The velocity of the wind at some points was very great, and the rainfall almost without precedent. On the Virginia coast the damage to the crops is reported at $500,000. Vessels at sea suffered severely, and several schooners were driven ashore, with loss of life. On long Island and the coast of New Jersey the injury to property was very great.

AMONG recent deaths are those of John D. Wright, the President and founder of the New York Society for the Prevention of Cruelty to Children, aged 50 years; Dr. Jerome Van C. Smith, President of the Polytechnic Branch of the American Institute, aged 79; Noah F. Sprague, for many years connected with the lake interests of Buffalo, aged 60; R. B. Woodward, proprietor of Woodward's Garden, a popular natural history resort in San Francisco.

Foreign.

LORD CHELMSFORD has been knighted.

THE Grand Hotel of Paris has been sold at auction for $4,272,000.

THE Russian maize crop has failed and breadstuffs are not plenty.

M. DE LESSEPS states that he will sail for America in September or October.

THE American cricket-team won the international match at Ottawa, August 20th.

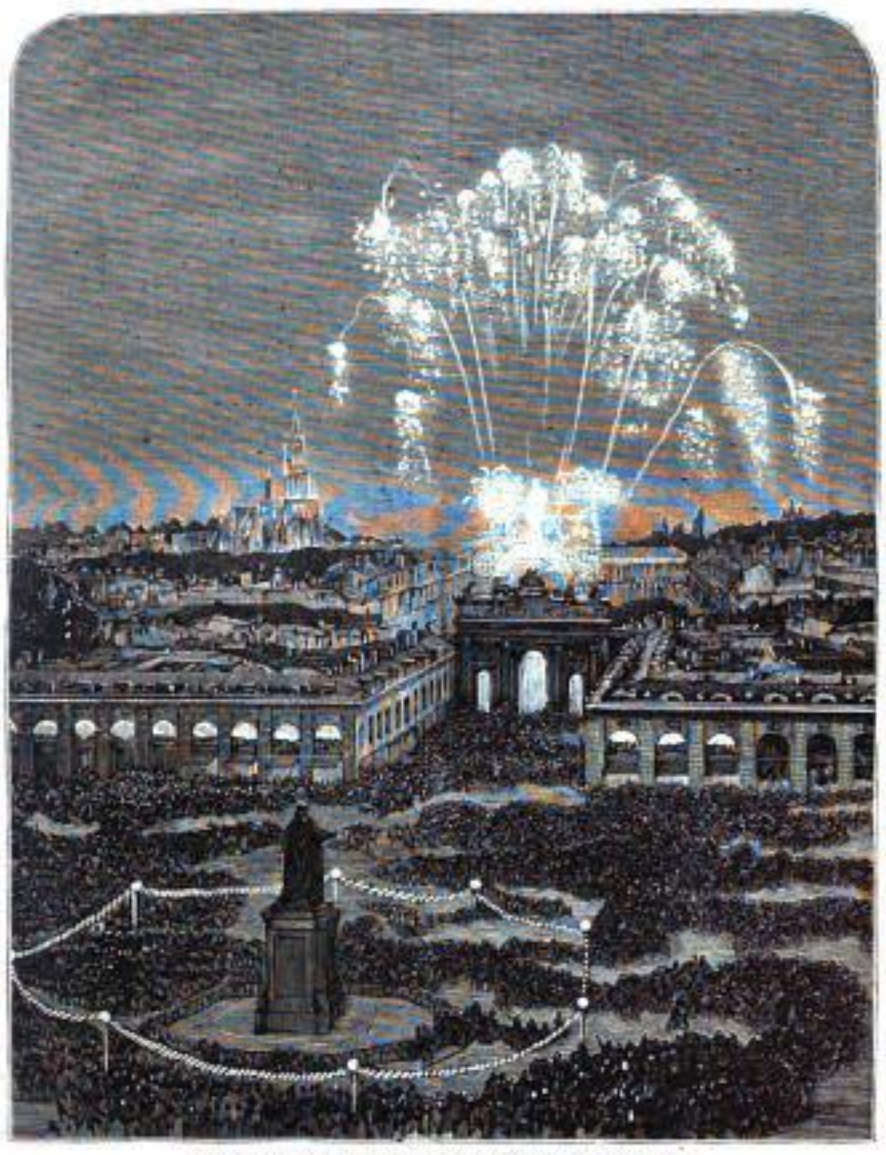
A NEW Egyptian Ministry, composed of Pashas of whom little is known, has been formed.

THE King of Saxony has pardoned offenders who were in prison for insults to the name of Emperor William.

THE Hon. John Welsh, late United States Minister to England, and his daughter, sailed from Liverpool August 20th, for Philadelphia.

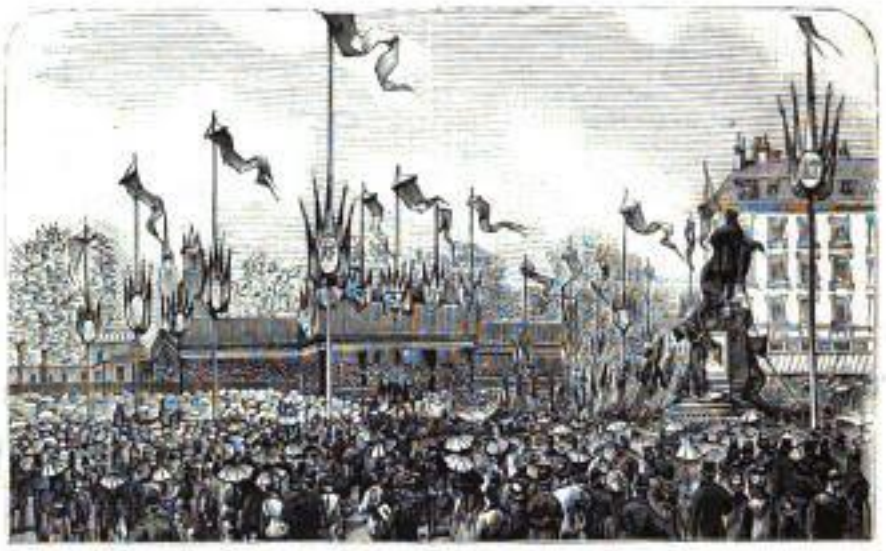
IT is reported that Sir Edward Bulwer-Lytton will shortly retire from the Viceroyalty of India, and be succeeded by Lord Dufferin, the present British Ambassador at St. Petersburg.

PRESIDENT DIAZ has resolved to expel foreigners engaged in intrigues in Mexico. The popular feeling in favor of Diaz's re-election is deepening, but he refuses to serve beyond his present term.



THE Chinese Legation, which visited Spain to make a treaty in relation to the coolie traffic, have left the country, and will go to Peru and Mexico in a few weeks, to negotiate with regard to coolie immigration.

DELEPIERRE, the Belgian historian and antiquary and writer on Macaronic literature, Lord Gordon, one of the English Judges of Appeals, and Sir John George Shaw Lefevre, Vice-Chancelor of the University of London, are dead.



INTELLIGENCE has been received of the capture of three large merchant vessels laden with coal and copper, and of the Chilian transport *Rimac*, with an entire regiment of cavalry on board, by the Peruvian ram *Huascar* and the sloop-of-war *Union*. It is also announced that the blockade of the Peruvian port of Iquique has been suspended.

THE SPIRAL DESCENSOR FOR SAVING LIFE AT FIRES.

AN ingenious fire-escape, which has been in operation in France for three years, and also for some time in England and Germany, was tested in front of *The Tribune* building on August 22d, in the presence of a large crowd of spectators. The descents were made from the windows above the tower-balcony, the distance being 162 feet. The apparatus carried on its first journey one man, on its second a man and a dog, and on the third two men. It includes enough rope, rendered incombustible by a chemical process, to reach to the ground, a woven belt two yards long, bearing an iron hook on its end, and the spiral descensor, which is a cylindrical instrument of iron, nickel-plated, consisting of a spiral of two threads with a capped top and bottom. On the side of either capping is fastened a stationary hook, and on its face is a ring fitted for the reception of the hook of the belt. When everything is ready for use the rope is passed through a perforation in the upper capping around the spirals, and is allowed to pass out through a similar perforation in the lower capping. The end of the rope on which the spiral descensor is fixed is secured firmly in the room, and the other end is dropped to the ground. The belt is placed around the person desiring to descend, one band around the waist and the other below the seat. The hook on its extremity is fastened in the ring on the capping of the spiral descensor, the hands grasp the rope so as to keep the head upwards, and the descent is made by the rope slipping around the spiral thread. The rate of descent can be regulated by pulling with the hands on the rope; the more tightly the rope is grasped the friction on the spiral is made greater, and thus the speed is decreased. By holding the rope for an instant and twisting it around the hook on the side of the capping the descent can be arrested altogether. The spiral descensor is not more than six inches long and about two inches in diameter, and, containing no delicate machinery, cannot get out of order. It is said to be able to carry as many as five persons, and can be run from the roof of a six-story building in less than a minute. Costing only $8, the spiral descensor apparatus is an indispensable necessity for hotels and tenement houses, and may be the means of saving the lives of thousands of helpless women and children. In the Summer hotels, overcrowded and highly combustible as many are, the spiral descensor would be invaluable. Messrs. De Lamotte & Marchand, analytical chemists and mining engineers, of No. 240 Broadway, are the proprietors of the descensor.

THE WEBB-BOYTON SWIM.

IN accordance with the terms of an agreement made between Captains Matthew Webb and Paul Boyton, these swimmers entered the water at Newport, R. I., at three o'clock on the morning of August 22d, to contest for a purse of $1,000, offered by James Gordon Bennett, and stakes of $1,000 more. The conditions were that Captain Boyton should give five miles to Captain Webb in the race, thus making Captain Webb swim twenty miles to Captain Boyton's twenty-five miles, and that Captain Boyton should be allowed to wear his life-saving dress and to use his paddles only; and that Captain Webb should use bathing tights only, covering his loins.

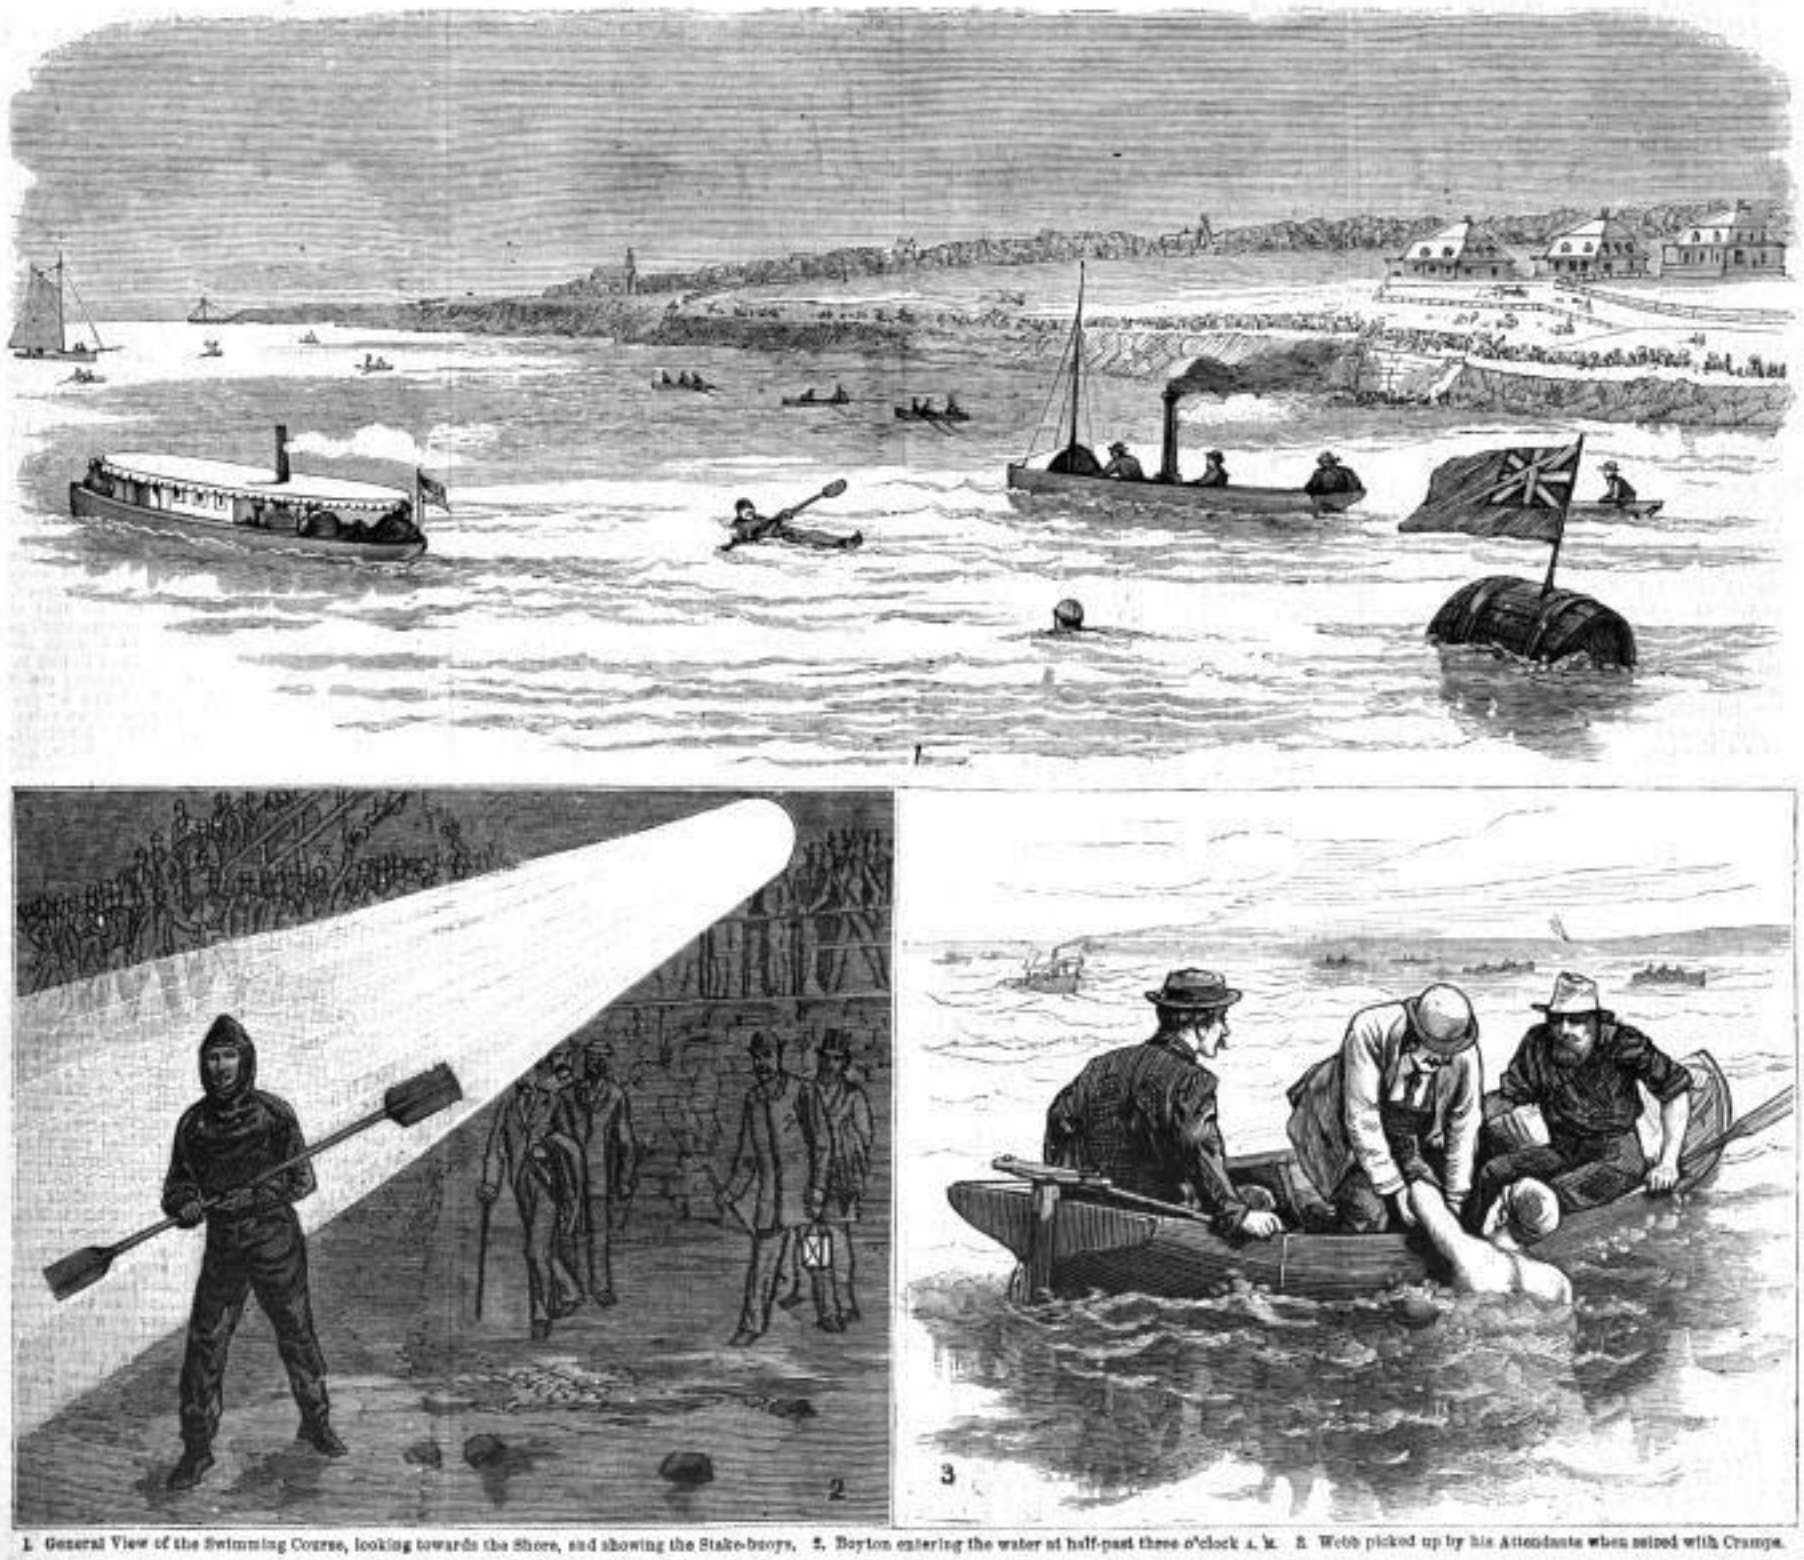
The buoys around which the men swam in mile courses were placed as follows: First, near the west side of the beach, almost directly opposite the Chandler Villa, which is occupied by Mr. James Gordon Bennett; second, nearly opposite the Forty Steps at the foot of Narragansett Avenue. Thus the swimming was in plain view of great crowds assembled on the beach and along the cliffs.

NEW YORK CITY.—EXHIBITION OF THE SPIRAL DESCENSOR, A PATENT FIRE-ESCAPE, AUGUST 22D.

At ten o'clock Boyton had covered ten miles and Webb eight and a half. At that time Captain Webb called for assistance, and the steam-launch which was attending the men over the course went to his assistance. He had been seized with cramps in the calves of his legs, and asked to be taken from the water. He suffered much pain in his legs and stomach, but after proper treatment he recovered.

At six o'clock Boyton had made nineteen miles, and was looking somewhat tired from the labor of the day. At seven o'clock he had made his twentieth mile and was feeling his way along slowly. Heavy bets were made that he would not cover twenty-five miles by twelve o'clock. Boyton, however, finished his race at 11:07 P. M. The first person to meet and congratulate him upon his success was James Gordon Bennett. In accordance with the articles of agreement, Webb was out of the race the moment he left the water to go on board the yacht.

NEW WEATHER THEORY.



A NEW weather theory is promulgated by Henry Roe, F.R.S., in a letter to the London *Times*, in which he says: I would like to place on record one or two results of careful observations I have made, extending over nearly thirty Summers. The first of these results is that dry and wet periods succeed one another in alternate waves of nearly equal length. Not that this equality of duration is quite absolute, or that the wave of one period is exactly the *fac-simile* of that of a corresponding period at an earlier or later time, but there is enough of regularity and uniformity about the waves to make the family likeness clearly discernible to the eye that looks for it. These periods extend over three whole years for each, and the following simple rules will enable any one to work out the several cycles of years for himself:

1. When the number representing any given year is even and exactly divisible by three, that year is the middle one of the three cold and wet Summers.

2. When the number representing the year is odd and divisible by three, then that year is the middle of a triad of dry and hot Summers.

Taking now a range of twenty-seven years, over which my own personal observations extend, and applying the rules just given, the wet and cold triads were 1853–55, 1859–61, 1865–67, 1871–73 and 1877–79, while the dry and hot triads were 1856–58, 1862–64, 1868–70 and 1874–76; and without claiming that no single year broke loose from this very simple order of season, I fearlessly maintain that all the markedly wet or dry Summers of the past twenty-seven years fall accurately within some wet or dry period as given above; so that no very wet year falls in what should have been a dry period, nor any very dry year in what hypothetically was a wet period. This hypothesis receives considerable confirmation from an examination of the average prices of corn during the years already referred to. Ordinarily, after a dry Summer the next year's averages ought to be high, and after a wet Summer the reverse. Now, it is a fact that high averages prevailed from 1854 to 1856, and low from 1857 to 1859; they were up again during 1860–62, down in 1863–65, up in 1866–68, down in 1869–72, up in 1873–74, and down in 1875–77.

How far these cycles may be shown to coincide with the greater cycle of eleven or twelve years, which is observed in the maxima and minima of spots on the sun's surface, is more than I have time now to inquire; but my good neighbors at Sherborne know that for some two or three years past I have been pointing out to them, in public lectures, most of the things I have spoken of in this letter, and I have been more than borne out by the facts.

1. General View of the Swimming Course, looking towards the Shore, and showing the Stake-buoys. 2. Boyton entering the water at half-past three o'clock A. M. 3. Webb picked up by his Attendants when seized with Cramps.

RHODE ISLAND.—SWIMMING CONTEST BETWEEN CAPTAINS MATTHEW WEBB AND PAUL BOYTON, AT NEWPORT, AUGUST 22D.—FROM SKETCHES BY OUR SPECIAL ARTIST.

Digitized by Google

So much for chronicle. Now for one word of prediction. The number 1881 is odd and divisible by 3, and if there is anything in my theory, that year ought to be the middle one in a triad of hot and dry Summers. I am looking forward, therefore, with much confidence to a good Summer in 1880, followed by two similarly good ones in 1881 and 1882, and for the sake of every interest in the country I earnestly hope my expectation may not be disappointed.

FROM ALTAR TO HALTER.

CHAPTER III.

STRANGE to say Ada seemed from the moment of her husband's committal to be a different woman. She no longer needed sympathy and support, but became in will and energy a man. What that woman thought and worked out at that time was something marvelous. She was the only woman I ever worshiped—and my devotion dates from the moment when she dropped half her womanhood.

It was a strange thing, too—a thing inexplicable to all but herself at first, that Ada should have retained possession of their rooms in the hotel at Scarboro. For Ben was removed to an assize town fifty or sixty miles distant, and she visited him every day. Still more singular was it that she should continue to sleep in that bedroom—the first she had ever shared with Ben, and should come and go between this and the distant prison. Or, more strange yet, that she should sit alone, by candle-light, in the crimson sitting-room, thinking and scheming by the hour together.

But her time was not all wasted in dreaming. During the days she paid frequent visits to Ben's lawyer. It would, in fact, be fair to say, she drew the brief for the defense. And she raised up evidence to combat the suspicion of jealousy, and to support the theory of suicide—for she really believed that Timms had destroyed his own life.

Day after day Ada comforted Ben as well as she could, told him what she was doing, what she thought, what she intended, and buoyed him up with hopes built, many of them, upon grounds more shadowy than she dare acknowledge even to herself; for no solution of the mystery, nor clue to solution, had yet been found.

The first day of the assize came, and was spent in the usual formulæ.

The second morning came, and with it early came Ada to her husband.

How the woman was altered! She looked ten years older than on the day she changed her name, but twenty times more beautiful. The courage of that woman, too!

"Dear Ben," she said, on this morning, "do not despair. *I* do not. There is yet hope of clear acquittal. You may be called into court to-day, and many things may happen; but do not in any event yield to despair. Search me out, for I shall be there, and let my presence remind you that there is, *after all*, great hope. I dreamt again last night the dream I had and related to you on that dreadful night—just exactly the same. I found myself in the same room, with its crimson walls and floor and drapery, and poor Timms just as at first. I roused myself and did as I had previously determined: I went down to the sitting-room and sat in it, waiting, till daybreak. But nothing new occurred. I saw nothing, heard nothing—only waited there. You smile and shake your head. You think me foolish and superstitious, do you not? But I shall fathom the mystery yet. My dream, thrice repeated—always the same—means something. I shall see you free and happy yet. I know it. Something tells me so, quite plainly. Take heart, and—and—don't mind *whatever* occurs to-day."

The great trial of the day—Ben's trial—came on early. Nobody who had known Ben when he married Miss Carmeen so recently, would have identified him in the broken, haggard man who stood there at the dock.

As soon as the dizziness passed away, and he could distinguish faces in the great court-room, Ben sought the face of his wife. She was soon found. She sat near the prisoner's counsel, looking like a piece of fine statuary, dressed—Ben observed this—just as she had been on the morning when they two walked upon the beach and met poor Timms at Scarboro. She looked wistfully at him again and again during the trial; he seldom moved his eyes from her face.

It seemed a long day. It seemed a short day.

When the court adjourned for luncheon, Ada joined her husband in the prisoner's room, and found him in low spirits. The witnesses for the prosecution had all been examined, and all their evidence, with the exception of the watery chambermaid's, had been given and maintained as before—in fact, the case against the prisoner was stronger than ever—and nothing had been won for the defense. Ada, no doubt, foresaw that her worst fears would be realized; but, though her hopes of an acquittal began to vanish, she allowed no admission of the fact to escape her. Indeed, her hope of ultimate deliverance never so much as wavered, and she tried to communicate that hope to poor Ben.

The case proceeded, was closed, defense and all. The judge summed up. The jury retired to consider their verdict.

After a very short absence the jury returned, and the foreman announced their decision.

"Guilty of willful murder!"—that was the verdict. The sentence—death.

No recommendation to mercy on any ground, no mention of such a thing.

The judge assumed the black cap; Ben stood up, looking haggard and ghastly; the awful sentence was pronounced. Benjamin Smethick Bowden had been found guilty upon clear evidence, and after patient and impartial trial, of the willful murder of Harry Timms under circumstances of so-and-so (all so awfully wide of the mark), and would be taken back to the place from whence he came, thence to the place of execution, there to be hanged by the neck till he be dead; and might God have mercy on his soul!

Now the awful silence was broken. Spectators took their last look at the condemned, and began to filter out. Lawyers began to stuff their bags, ready for off. That was the last case for the day.

Well, Ada had covered her face when the jury brought in their verdict, and during all subsequent proceedings she had not made a sign. But when the judge ceased to speak she rose up, and in a clear and distinct voice exclaimed:

"He is innocent, my lord, he is innocent. And God is too merciful to be unjust!"

CHAPTER IV.

ADA was carried from the assize court to an adjacent hotel, and there passed another sleepless night. They were all sleepless nights now.

In the morning she went back to Scarboro—to the hotel—to the crimson sitting-room in which she passed the day alone. Was she mad? Possibly; but there was "method in her madness."

Meanwhile Ben sat in his cell, listening for footfalls he would never hear there again. Night, day; night again, and still she came not.

Ada rose on the second morning, and went down to the sitting-room to ruminate. Even yet she had a lingering hope that, surrounded by the realities shadowed forth in her dream, some hidden truth would reveal itself to her, would rise spirit-like, and by its light dissipate the thick darkness in which Ben was enveloped. Fruitless, hopeless waiting! Then she crossed the room, looked at the window, at the curtains, at every article of furniture. Alas!

But what was that? Something touched her! Only a dog; one that had often followed Ben and her in their walks; only a poodle. Yet she was alone, and she was a woman; she took up the dog, fondled it, wept over it, then put it down and threw herself on the couch. Her brain was becoming fevered; her mind could scarcely grasp and connect two thoughts. She was breaking down.

Hope requires to be fed or it must die, ultimately, and Ada's hope had sought sustenance in vain all this time, in all this trial. She would go back to Ben and try to comfort him. What other could she do? No—yes—no. (Hope was dying but not quite dead.) *What* should she do?

Ugh! Look!

There, just where poor Timms had lain white and dead, there lay the poodle dead or dying!

An oppressive feeling came over her, but she battled with it bravely, and she was able, by-and-by, to touch the dog and to assure herself that it was real and that it was dead. As she knelt there she saw, close by the dog's head, a cigar.

The cigar had not so much as been lighted; The end had been nipped, and the dog had mouthed it—that was all.

Ada's spirits revived. After a moment's consideration she rose up, locked the door—leaving the dog and everything just as it was—went to the nearest telegraph-office, and wired to Ben's solicitor:

"Come here instantly.—Mystery solved."

The lawyer was there by two o'clock, and then Ada laid before him the cigar. He looked at it, and at the dog; and then at Ada.

"Take that cigar and find out the secret," Ada said.

The lawyer had understood that the mystery had been solved, and he didn't like this. However, he took the cigar to an analyst. There was just a little arsenic in the end of it; presumably there had been more.

Ada directed every movement now. The physician who had examined Timms was sent for, and so was the police-officer who had had charge of the case. The cigar, the dog, Ada's opinion—these were laid before them. Well, after going through this new evidence, the precious three could only conclude that it was by means of arsenic, concealed in the nib of the cigar, that Timms had been poisoned—murdered, the police-officer said, and the word cost him dear. Ada never struck a man before, in the face, but she did it this once, properly. And then, poor thing, she broke down.

Poor Ben! Poor Ada! Their sufferings were above description. To him the few days' absence of his wife seemed an age; yet the same few days, bringing him so near the awful morning appointed for his execution, were moments only. To her, the fever into which she had fallen was worse than many deaths. She would start up in the night and run over the old dream, "Blood-red, all blood-red! Poor Timms! Poor Ben!" Then she would throw up her hands and repeat in awfully solemn tones, "He is innocent, my lord, he is innocent, and God will be just!" Thus she would travel over the whole of that dark history even to the end—the end; that was worst of all, for she reached the very gallows-foot. The last delirious outburst was fearful to witness. She sprang out of bed, and, seizing her attendant by the knees, exclaimed, her voice rising fearfully the while:

"Hold! Oh, he is innocent! He is! *Oh, hold, hold!* Ah, my poor, poor Ben!" quietly, now, and with her eyes upon the floor—on Ben's corpse, no doubt.

After she had seen the last of Ben, in her delirium, Ada fell into a long sleep. Her face now was as beautiful as it had recently been awful to see. And there she lay for days and days. Then the delirium left her and she came back to life, and all her trouble seemed forgotten. For a time no allusion was made to her husband, none whatever, by her or to her.

What of Uncle Ben? Poor fellow, Ada never came to him, and all the days that were so long and yet so short wore on, till at length the awful morning came—as how could it miss?—and still Ada had not visited him.

Suffer innocently? Yes, quite so—all that trouble and trial, and ruin and suspense. The hanging was all he escaped.

Yes, he escaped that. God *is* too merciful to be unjust, and it did not suit His purpose, as it sometimes does, to seem unjust.

The way the whole thing worked itself out was this:

The physician whom Ada had called in was moved by pure sympathy and by Ada's persistent faith to believe that after all Ben might be innocent. Yet the discovery of the cigar seemed at first only to point out the means by which the murder had been accomplished. However, he took the matter up like a man, and he and the lawyer sifted everything. The police held aloof, or, rather, were held off. They had worked out *their* theory and cleared up the mystery to their own perfect satisfaction.

The result of much thinking and searching, and consulting between physician and lawyer and condemned, was that the following facts were laid before the Home Secretary and the judge who had sentenced Ben:

Ben recollected that late on the fatal night when he had proposed bed and had called for lights, Timms opened a fresh subject for conversation, and offered him a cigar from his (T.'s) own case, had pressed it on him, but Ben had very properly insisted that *his* cigars should be smoked. That was all he could tell, for he had fallen asleep shortly afterwards. To test the truth of Ben's statement, the cigars which were in his pocket-case were compared with the poisoned one, and were found to be of a different kind. Timms's case was examined next. There was but one cigar remaining in it and that one corresponded with the poisoned one. Closer examination revealed the fact that arsenic was concealed in the nib of *that* cigar. Nothing further could be or ever was discovered. Timms's pocket-book showed that he had visited several towns in Yorkshire and Durham on business (in any of which he might have purchased poison or cigars) before running down to Scarboro.

Now, clear it up for yourself. All I've got to say is, Ben was innocent; if anybody sold or gave Timms the cigars ready poisoned, may God have mercy on his soul; and if—*if* Timms meditated both murder and suicide, he succeeded in executing the most desirable part of his design.

The physician to whom Ben was already so deeply indebted did more than I have yet related. (Bless the man! I'm a rough customer, but I tell you I could just hug him or his wife either!)

Whilst the network about Ben was being cut through, and the Queen's gracious pardon (for Ben's having left off honeymooning so abruptly, I suppose) was being prepared, Doctor Phillips was clearing away all traces of the blood and mud and trouble in which Ben and Ada had been floundering so long.

He tended Ada carefully through all her illness, and seeing that her long sleep had dimmed the recollection of the terrible time which had passed between the wedding-day and the present, he determined to persuade her that she had only had a dream—a long, rambling, delirious dream. He did it very well and effectually, taking care that nothing should defeat his purpose. When she asked how she had fallen ill, he said something very plausible about an attack of sunstroke on the beach.

Ah, then that accounted for the beginning of her dream—about the meeting with Timms on the sands. But *where was Ben?* Gone down to Hambro, and would be back in the morning, the doctor told her.

And Ben was there on the morrow. He had been well drilled, but it was difficult to act his part, and to abstain from squeezing the life out of the emaciated form of his devoted wife—difficult to keep from thanking her for the many things she had done with superhuman skill and love, but he did it. He came there smiling and jolly, dressed as he was on the ever-memorable morning when Timms turned up. And when Ada repeated the whole narrative you and I know, Ben laughed like a very Jove, and declared he should seriously be jealous of Timms if she dreamed, or thought, or spoke of him again; and the physician, closely questioned as to the part *he* had played, in what still seemed awfully real to her, laughed right heartily. Of course, he said, he could not nurse her, and tend her, as he had done, without entering into her dreams. He had, however, bargained with her husband that they should come to his house on Cliffside, and he would like now to bargain with her for the assignment of a pleasanter rôle, if any, in her future dreams.

So as soon as Ada was strong enough to be removed, they left the hotel and went over to Doctor Phillips's. But Ada could not pass out of the hotel without looking into every corner of the crimson sitting-room. Her husband smiled when she turned in there, and she blushingly confessed that her dream—it seemed to be a lot of dreams, all in one—had made so deep an impression on her mind, that she could not help looking for Timms's cigar and the poodle (which she was assured had gone away since she fell ill, with its mistress).

Ada never recovered. The tenderness and skill of the Doctor and Mrs. Phillips sustained her for some time, indeed her health was considerably improved and her complete recovery was hoped for, but she lived only a year or so from the date of Ben's "free pardon." They never left Scarboro, but became near neighbors to Doctor Phillips, and were as happy as love could make them while Ada lived.

When *this* rough old soldier went over to see the couple during that year, Ada related to me the old story, dwelling particularly on my own part in it, which seemed to amuse her greatly.

"Well, my dear madam," says I, in my boisterous fashion, "if I *did* swear 'like a trooper' at the police—assuming that you in your dream had not done the force great injustice—if I *did* swear like a trooper under such impossible circumstances, pray how could you wonder, seeing that I am a trooper? Are you quite sure (for of course I don't remember) that I didn't hurt any of 'em? I must have been almost too much exasperated to swear."

At another time she hinted that she often wondered if Timms ever thought of her, or if he were still living. She did not like to mention him to Ben, because the mere mention of the name seemed to make him unhappy. And Ben was so patient and good, she told me, more indulgent now and more gentle than ever. I advised her to banish all thoughts of her illness, with its delirious dreams, and of her old flame, as I called Timms. I told her I had heard quite recently that Timms had married a widow (for I could lie like a trooper, too, you see) and says I:

"Try to be happy, my dear Ada, for," says I, "that illness of yours eclipsed the (honey) moon quite long enough, *I* think. In my opinion," says I, determined to make her laugh merrily like her former self (as she did; it was the last time I ever saw her, and I can see her laughing now, poor thing), "in my opinion," says I, "the origin of your malady was never perfectly defined; it was no sunstroke, it was moonstroke—honeymoon stroke—or you never would have conceived a dream so preposterous as that in which you sent your husband, by so short a cut, from altar to halter."

NEWPORT.

ITS SUMMER VISITORS AND ATTRACTIONS.

A NOTABLE CLAMBAKE.

NEWPORT is now at its best—in the full flush of its loveliness, its gayety, its abandon. What cottages, clasped by passionate vines! what villas caressed by blushing, entwining convolvuli! Wit, wealth, beauty, rank and fashion indolently vegetating behind interlaced greenery. Avenues traversed by teams that even in Rotten Row would create murmurs of admiring comment. Inlets studded with fancy-looking craft, rich in gleaming spars and sails white as the driven snow. Beaches thronged with bathers, tossing, leaping, whirling, waltzing in the sparkling foam. Quaint streets, with seventeenth-century cross-beamed houses, bravely breasting for two hundred years and more "the current of a downward age," displaying bric-à-brac in delapidated stores to the curious gaze of nineteenth-century wife, widow and maid. Venerable trees that have shaded Washington and Lafayette, surrounded by Norman-capped nurses and tiny toddlers, arrayed in toilets such as might be the priceless gifts of fairy godmothers! Fishermen, brown, ruddy, sun-kissed, in cognes of vantage, engaged in mending nets interminable as Penelope's web. Tourists in hideous dusters, guide-book in hand, prowling like uncaged animals, staring at the Old Stone Mill which has puzzled antiquarians, and petrified archæologists; gazing at the Royal Crown, *absit omen*, upon the spire of Trinity Church; gazing at the organ given by Dean Berkley and the bells presented by Queen Anne; gazing at the State House, from the steps of which the Declaration of a Nation's Independence was thundered forth upon a glorious July day in the memorable year of grace, 1776; gazing at the famous portrait of George Washington in the Senate chamber; at Abraham Touro's synagogue; at the sapling Liberty Tree; at the Forty Steps and on the beetling cliffs; gazing at the Spouting Cave; at Fort Adams; gazing at Lawton's Valley and the fern-caressed ravine through which the gallant Major Barlow led his intrepid little band to steal away the British commander; gazing at the Polo; at fox hunts; at swimming matches; at games of La Crosse; or driving out along the Ocean Road in a long caravan like a life-boat on wheels, to where Brenton's Lightship rocks on the booming Atlantic.

Such is Newport at this hour of writing. On the sea, and yet not of the sea; rock-bound, yet teeming with a vegetation almost Hibernian in its green, almost tropical in its glow; its climate that of Malta or the *tierra frio* of Mexico, its surroundings a strange but delightful mixture of English impassiveness, French coquettishness, and Italian insolence. The avennes at Newport remind me of the delightful roads in the Isle of Wight, each "cottage" being the proud possessor of a green velvet lawn upon which the tennis-nets stretch invitingly, of trees *ad libitum*, of rainbow ribbon-borders, and of a low wall or fence inclosing the entire "thousand-guinea acre." The architecture of the "cottages" affords a series of enchanting surprises—many of these coquettish dwellings being all corners and angles and gables, like an old cocked hat; many after the fashion of the good Queen Anne. Her defunct Majesty's order of architecture is still in the ascendant, and Mr. Caswell's cottage is so perfect in every detail of that period, that I stood at the gateway expecting to behold hoops, patches and powder, and Ramillies wigs, swords and ruffles upon the red-bricked terrace. Who is it that has set the cottagers crazy upon red paint? I see it everywhere, one entire villa being done to death in this sanguinary hue, while the roof and eaves are green as the keys of Mr. Burne Jones's extra æsthetic piano. What do you think of pure white from topknot to shoe-rosette, with a blood-red umbrella, for a morning toilet? This is the correct thing at Newport, and Anne Catherick, of Mr. Wilkie Collins's thrilling romance, was never more snowily attired than the "priceless, peerless femininity" at this paradise of watering-places. All the "howling swells" are here, and would seem to be entirely in their element. At Newport they are distinct—their cottages, their equipages, their dresses—while in New York, Boston or Philadelphia they are more or less lost, save to their order. Here the *oi polloi*, the wanderers who seek refuge in the arms of the Ocean House, or Aquidneck, can stare, and stare, and stare again at the salt of the earth, and, as Goldsmith says, "no matter how beggarly our own condition may be, we like to take a peep into the doings of those who are better off," so do the cottageless, equipageless people who throng the hotels, find tid-bits for the eyes and a whole Winter's gossip for the tongue, in a week's sojourn at Newport.

Amongst last week's sensations at this Harrits, cum Trouville, cum Ventnor corner of the world may be reckoned the visit of the Civil Service Retrenchment Committee, of which Senator M. C. Butler of South Carolina is chairman. The committee held its sittings at the Ocean House, and, having concluded its labors on Tuesday, were invited to a genuine Rhode Island clambake at Squantum, on

Digitized by Google

Narragansett Bay, by Senators Anthony and Burnside. The special correspondent of FRANK LESLIE'S ILLUSTRATED NEWSPAPER, together with one of the art staff, was favored with an invitation, and 6 A. M. on Wednesday found us hailed, 7 A. M. breakfasted, and 8 A. M. on board the revenue cutter *Dexter*, commanded by Captain J. G. Baker, U. S. R. M. What a glorious morning that was as we slowly steamed out of the picturesque harbor, studded with the stately schooners of the New York Yacht Club; with cat-boats, their sails resembling those of the *felucca*; with row-boats fit for the embarkation of Little Buttercup; with steamers, their white coats glittering in the sheen of the morning sunlight; while as a background stood quaint fishing-houses, topped by the red-roofed dwellings of the town as it rises up the hill, with the spire of old Trinity—a white needle, ready to patch any rent that might appear in the keen, full blue sky—and a hundred domes, cupolas and pert gables peeping from behind the interlacing foliage of old elms that were young enough when the British war-ships appeared in the distant offing. Away behind us lay Fort Adams—in front of us the Dumplings, while Narragansett Bay served as a mirror for old King Sol, its wooded shores glinting in golden haze. The party consisted of Senator M. C. Butler, South Carolina; Senator George H. Pendleton, Ohio; Senator James B. Beck and wife, Kentucky; Senator Z. Chandler, Michigan; Senator Rollins, New Hampshire; and E. P. Corvazier, Deputy Sergeant-at-Arms. In addition to these swells, we had Colonel Gralton and wife, of Washington; Colonel N. A. Thompson, Virginia; Mr. Edward Atkinson, Boston, Mass.; Mr. R. S. Murphy, Washington; and Colonel J. M. Morgan, South Carolina. The *Dexter* is 200 tons burden, and on this occasion was engaged in making her bi-monthly bay inspection, a chance which the party gladly availed themselves of—and it was a merry party. Senator Chandler told stories fruity and dry as Amontillado—especially comments on the cartoon that appeared in FRANK LESLIE'S ILLUSTRATED NEWSPAPER of December 2d, 1876, where he, the Senator, is represented as standing upon a high rock and holding by the tail, by both hands, the Republican elephant that is hanging over the precipice. Near the Senator on the rock is his hat, while suspiciously peeping forth is a whisky-bottle. "It was too bad," he laughed, "for the artist not to have left one of my hands free!" Senator Beck, in stout lowland Scotch, declared against Jacobitism and in favor of his maternal ancestor, the most famous cattle-riever and "doure deevil" on the Scotch border—Johnny Armstrong—a great pet of Sir Walter Scott's. Senator Butler's silver tongue, reminding me ever so much of Mr. Gladstone's, turned on art, and the genial Sergeant-at-Arms spoke learnedly and lusciously upon the subject of dining, and in a manner that would have made him a constant guest at the Neapolis villa of the great Lucullus despite the *demerit*. After we had passed the islands of Patience and Prudence, the spires of the ancient City of Bristol appeared on our right, while on our left Rocky Point—where between seven and eight thousand people a day are clam-fed—stood clear and white against the blue sky. Presently from the direction of Bristol came a long, narrow steam-launch, cleaving through the water like an arrow, and flinging up diamond foam from her saucy cutwater.

"It's Burnside," was the general cry, and opera-glasses, greedily pounced upon, revealed the gallant Senator standing like a gigantic figure-head in front of the smoke-stack, waving his white hat till it appeared to be a part of the propelling power of the boat. The hearty greeting which he got and gave told its own tale, and somehow or other the prospect seemed all the brighter that this cheery, courteous and excellent host had—like Black-eyed Susan—"come aboard." Clearing out of Bristol inlet we steamed for Squantum, passing Silver Spring and sighting Providence, that lay dreaming in a golden sheen three short miles away. And now for a word about the most charming bit of club-land I have ever put my foot upon.

Imagine three acres of deeply indented gray rock idly flung into the blue sea, within a stone's throw of *terra firma*. Imagine every available portion of the rock planted with daintiest green, and with ribbon borders that would have driven the late Sir Joseph Paxton crazy from sheer envy. Imagine walks laid out in fine white sand—walks leading to bowling-alleys, billiard-rooms, and bowers fit for modern courtship in its most idyllic and æsthetic form. Imagine the pinnacle of this enchanted isle surmounted by a building, part Swiss chalet, part Norwegian satyr, part Chinese pagoda, with a blood-red roof and walls whitewashed to a dazzle. Imagine lower down on the rock and hanging right over the murmuring sea, a dinner-room all window, all balcony, all brightness—a dinner-room wholly, solely and entirely devoted to the consumption of succulent clambakes! In a snug nook among the rocks is the kitchen, presided over by an expert, a cordon bleu, who was going to eat my head off when I suggested any fish but salmon as part of a bake. "The Squantum bake is clams, potatoes, oysters, salmon and green corn," he flung at me from over the edge of a gigantic stewpan; "I wouldn't use any fish but salmon, salmon, salmon!"

We were saluted from the club by a gun—the only gun, by-the-way, saved from the battle of Bull Run, and inscribed to that effect, with the addition of the motto, "Don't give up your guns." We landed in a miniature creek and climbed to the club-house, perched on its lofty pinnacle. At the porch, a tangle of honeysuckle, we were met by Senator Anthony, who bade us welcome to Squantum, or "The Heap of Rocks," as the Indians called it, and beside him the respected vice-president and secretary of the club, Mr. George W. Hall, whose interest in the institution is as earnest as it is practical, his word being its unwritten law. We passed through the club room, a spacious apartment of stained pine with an asphalt floor; beyond it a large balcony canopied by an awning. A list of the members hangs in this room; a bulletin; two pictures after Girard representing culinary mishaps; a printed document, bearing date 1770, of a procession held in Providence, and, reverentially framed; a set of verses in praise of the clam, composed by a member of the club, now alas! gone over to the great majority, whereof the last is worth recording here:

> "And may your griefs, and toils, and cares,
> Become as airy shams;
> And may your lives as tranquil be
> And happy, as a clam's!"

Peace be to the ashes of the man who wished his neighbors thusly!

After having duly registered our names in the visitors' book, we were led by nods, becks and wreathed smiles into a snuggery giving off the club-room, where Senator Anthony presided over a gigantic punch-bowl, from out of which he ladled the famous Squantum punch, a beverage reflecting the highest credit upon the talents of its compounder, Mr. Durlee, who secretly informed me that it consisted of Santa Cruz rum, brandy, claret, and other mysterious compounds too numerous to mention. We were then taken over the three acres of club by Mr. Hall, and subsequently led into the dining-room, where a luncheon fit for a bench of bishops was served up—clam-cakes being the *pièce de résistance*. The members of the Squantum Club are not the over-dressed, languid, crutch-and-toothpick youths one meets in club-land. No, no! the Squantums are men who have arrived at that condition of life when the best of everything is just about good enough for them—fat, florid, jolly old boys of from fifty to a hundred and fifty; rosy as to gills, full bottomed as to waistcoat, and wearing that bland and beatific expression begotten of the expectancy of an assured and consoling clambake. It is refreshing to behold the Squantums leaning over the balcony of the club house, and gazing affectionately at the preparations for the bake, much as the fat boy in "Pickwick" gazed at the codfish and oysters *en route* to Dingly Dell; it is sublime to behold them solemnly preparing to partake of that culinary ecstasy, loved so wisely and loved so well. There are lady's days, too, as the worthy dames of Providence, whose husbands are members of the club insist upon "Woman's Rights" to the three acres. Squantum is, therefore, no island of St. Senanus. The club motto should be not *Quandoque sufficit*, but *Squantum sufficit*.

The lines of the guests of Senators Anthony and Burnside fell in pleasant places on this glorious August day, for, in addition to the attractions of Squantum, the Commercial Club of Providence, who were extending munificent hospitalities to the Commercial Club and to the Merchants' Club of Boston, at Silou Spring, graciously strolled the distinguished outsiders, and at one o'clock about 250 gentlemen stepped on board the *Bay State*, and in a few minutes were doing eighteen knots down the lovely Narragansett Bay, to the mad, merry music of "Pinafore," discoursed by the celebrated American Band. "Boneless fish" became the order of the day; and, lest the uninitiated might be led to imagine that this designation bore reference to some well-known specimens of the finny tribe, I give the official *menu* as handed me by Governor Lippitt: "Punch, Hope Club; Brandy, W. H. Feamey's Blackcap; Whisky, Old Maryland Rye; Rum, very old St. Croix; Bitters, Angostura; Appollinaris water, lemonade, cigars." So much for "boneless fish." We flashed past the Dumplings, rounded Beaver Tail Light, ran in under Fort Adams, scudded by Newport, and at 4:30 found ourselves once more on *terra firma*, with wolfish appetites for the genuine Rhode Island clambake. Senators Chandler, Butler, Beck, Mayor Prince of Boston and other swells, being desirous of beholding the veil torn aside that concealed the charms of the bake, were conducted by Royal C. Taft, the President of the C. C. Club of Providence, and N. W. Aldrich, the Vice-President, to the altar whereon the all-succulent clam was being sacrificed, and on a given signal the tarpaulin was dexterously removed by an attendant as agile as Leotard. Oh, the fragrance of the perfume that instantly assailed our nostrils! Talk of the odors of Araby. Bah! there was more bouquet in that single whiff of—let me call it that attar of clams—than in all the scents ever manufactured by Rammel or Piesse et Lubin. Several brands, *alias* clams, were snatched from the burning and handed to curious Senators, who, after a coy taste, like Oliver Twist, cried for more; and, after a little preliminary toothing, we repaired to the dining-hall, a vast, airy apartment, draped with the Stars and Stripes elegantly. Before I give the list of those who were present I shall set forth what they sat down to dispose of, and this is the *menu* that met our enraptured gaze: Clams, Oysters, Quahaugs, Crabs, Lobsters, Sweet corn, Sweet potatoes and Early Rose potatoes. This was the bake, washed down by champagne—Souverain extra dry.

The following gentlemen were present: Royal C. Taft, John W. Chandler, Governor C. C. Van Zandt, Hon. James B. Beck, Hon. Latimer W. Ballon, John W. Doane, E. C. Fitz, Hon. T. A. Doyle, Hon. F. O. Prince, Hon. M. C. Butler, Lieutenant-Governor A. C. Howard, Hon. Zachariah Chandler, Hon. Henry B. Anthony, Hon. E. H. Rollins, Hon. A. E. Burnside, Hon. Levi P. Morton, Collector A. W. Beard, Edward D. Pearce, Charles H. Allen, William F. Milliken, Harvey E. Wellman, Hon. Joseph Brown, Charles O. Gage, Dutee Wilcox, Jerome Jones, Edward Kemble, Hiram B. Aylsworth, John P. Spaulding, F. A. Turner, Henry A. Hidden, John T. Clark, George H. Payson, Daniel Day, John E. Weeden, George P. Denny, William B. Weeden, Hon. Joshua M. Addeman, Ex-Governor Henry Lippett, C. M. Clapp, Hon. Nelson W. Aldrich, Edward W. Kingsley, Captain John R. Bartlett, Henry W. Gardner, A. D. S. Bell, Edward T. Russell, Gorham P. Pomroy, Francis F. Emery, C. V. Whitten, N. W. Rice, Henry Mason, Addison Q. Fisher, Joseph F. Paul, Edwin G. Angell, F. J. Doe, Charles Morris Smith, Richard Briggs, Edward E. Hale, Dr. Augustine Shurtleff, Ex-Governor Henry Howard, John Cummings, Alexander Farnum, Asa P. Potter, Jesse Metcalf, W. D. Hobbs, Isaac T. Burr, Benjamin A. Jackson, Benjamin Cahoon, Edward C. Ames, D. Webster King, George A. Wadley, Isaac Fenno, John T. Clark, Captain Richard Waterman, F. N. Thayer, William Ames, E. W. Converse, John L. Bremer, Colonel R. H. I. Goddard, John C. Potter, Chester W. Guild, Eugene W. Mason, Thomas Dana, Joshua Wilbour, Charles B. Perkins, Jonas H. French, Charles D. Owen, R. O. Fuller, J. C. Bayley, C. A. Richards, Frederick M. Sackett, W. S. Swan, C. E. Moody, Henry C. Cranston, Joseph Azarain, John B. Anthony, Albert Thompson, Edward Sands, S. M. Noyes, Hon. Amos C. Barstow, M. P. Kennard, Frederick W. Lincoln, Amos D. Lockwood, William Henry Allen, T. W. Deland, Francis W. Carpenter, Phineas Pearce, A. A. Folsom, Eugene H. Sampson, George K. Guild, Charles E. Paine, Henry R. Reed, William S. Hayward, Louis H. Humphrey, W. H. Lincoln, W. O. Taylor, Thomas E. Proctor, James R. Osgood, J. Herbert Shedd, Fred. Reed, Charles Warren Lippitt, W. P. Hunt, William A. Haskell, Oliver Dotson, C. B. Farnsworth, R. B. Fuller, Samuel P. Mendall, Henry C. Morse, J. H. Freeland, Charles U. Cotting, B. F. Guild, John W. Cummings, Herbert W. Ladd, Caleb G. Burrows, D. N. Skillings, George W. Whitford, Henry W. Chatford, William S. Eaton, Frederick Grinnell, Edward Atkinson.

Several speeches full of excellent merriment having been made, the steam whistle from the *Dexter* gave note of departure, and the Senatorial party reembarked amid waving of handkerchiefs, the Squantum gun again booming a salute, gallantly responded to by our captain. It was half-past ten o'clock when we reached Newport; and if the sunny recollections of this charming day fade from out the memories of those who were present—well, call me a clam.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

The Thiers Commemoration at Nancy, France.

Nancy devoted the 24 and 31 of August to the inauguration of the statue of the late M. Thiers, proud of the President of the Republic, diplomatist and historian. The widow of the great man was received with every mark of honor; a representative of President Grévy, five of the Ministers now directing the Government, Senators and officers, came to join the Nancy in the honors to be paid to Thiers. The first day was marked by the opening of the new waterworks, and at night the public places and the whole city was illuminated. The next day a distribution of alms to the poor opened the ceremonies. At one o'clock the grand ceremonial of the inauguration of the statue took place. It stands on the Place de la Gare, now known as Thiers Place. Societies and municipal bodies came in procession, bearing wreaths and bouquets to lay at the feet of the statue. Opposite it, on a platform, were gathered all the notables. The address of the day was appropriately delivered, and in the evening a grand display of fireworks took place at the Arc de Triomphe, and the statue of the honored statesman was enveloped in light.

Sisters of Charity Bathing Scrofulous Children.

We hear of the great French watering-places and of the gay life of the fashionable coteries who frequent them, but we must not think that all in France is mere butterfly life, or that the claims of the poor and weak are overlooked, and that children's sanitariums are unknown. On the shores of the British Channel, benevolence has its resort, and we picture a scene for our readers. It is curious and by no means without its charm. It is the beach of Berck-sur-Mer, near Dunes, in the Department of Pas de Calais, where the Sisters have under their care an hospital founded for scrofulous children, and generally containing six hundred little patients. Here the good Sisters are plunging into these health-giving waters the feeble and diseased children under their care, some able to walk alone, others using crutches, but all encouraged by the Sisters who, in their full dress, guide and encourage their young charges to sport about and thus obtain all the medical advantage desired.

The Zulu War.

The Zulus possess in perfection the savage art of creeping unobserved through bushes and long grass, and hence alarms (which usually proved to be unfounded) were not unfrequent in the British camps. On such an occasion as this all sorts of ludicrous scenes took place. One warrior rushed out, nightcap on head and with bare legs, with a pistol in one hand, and his nether integuments beneath his arm; while another, in his hurry to get out of his tent, knocked the pole down, and was seen wriggling hopelessly under a heap of canvas. Almost from the outset of the campaign there was a party in Zululand anxious to make terms with the English, and this party has naturally increased in numbers as Cetewayo's arms have encountered sundry reverses. From time to time various indunas, or chiefs, have come in and tendered their submission, and one of the most important of these deserters from the royal cause has been Oham, Cetewayo's brother, an interview between whom and Colonel Rudolph took place at Utrecht, as in the sketch now before us. The difficulties in the South African colonies have been increased by the rising of the Basutos, and the immense trouble in dislodging them from their stronghold, known as Moirosi's Mountain. This stronghold is well fortified by strongly-built stone walls, thrown across the only accessible part of the mountain in three tiers, each tier being covered by flanking walls strongly constructed of stone, and arranged with great skill. All, or nearly all, of these walls are pierced with double rows of loopholes, one row at the base of the wall, the other about two feet from the top. From this it will be readily seen how difficult was the task to dislodge the rebels from their retreat, and the only way to succeed was by investment. Our engraving illustrates an incident which occurred shortly after this investment, when a party of a hundred surrendered after an attack was made upon that part of the mountain held by them. They were attacked by shot and shell, and, taking refuge in caves, were smoked out, the very process which, being adopted by the French in Algeria, excited the indignation of all English people.

The Russian Socialists.

That a reign of terror exists in Russia there can be no doubt. Everybody is a spy upon his fellow; and still the Socialist organs appear regularly, arrests are made hourly, and the disaffection, instead of subsiding, increases daily. In the sketch before us the police have made an important capture, not only in the man himself, but in the form of a secret printing press, the various portions of which are lying about the room. The young lady on the chair is a female student who was found in his company. The man in the long fur cloak holding back the student is the Dvornik, or house-porter, who is also a species of house-policeman, bound to watch over the doings of the tenants. The Revolutionary Society, however, cares little for such a seizure as this; for, despite half a dozen such descents, its organ is found everywhere, being laid by unseen hands on the master's table, unexpectedly discovered among the banker's registers; the Imperial Chancellor is astonished to find it among his papers; it is slipped furtively between the sheets of Conservative journals—in a word, it finds its way, as if by enchantment, on the tables of the *cafés* and into private houses of rich and poor.

SIGNIFICANT STRAWS.

PREPARATIONS are making for a direct steamship line between New Orleans and Havre.

CHICAGO has twenty-seven brass foundries, and twenty-five of them are in full operation this Summer.

AFTER remaining idle for five years the Swedes' iron furnace, near Norristown, Pa., has gone into blast.

COAL mining in Iowa is now so brisk that 32,000 men and boys are employed, and work could be found for many more.

THE first month of the new fiscal year will show a balance of trade in favor of this country of about $13,000,000.

THE present, the largest and most valuable, wheat crop ever raised in Illinois, amounts to 42,041,252 bushels, worth $37,286,151.

FOURTEEN business firms from Memphis are opening whole blocks of stores in St. Louis, and stocking them with fresh Eastern goods.

MR. COX, in his address at the Bankers' Convention, said that all the signs of the times point to a change of commercial empire from the Old World to the New.

DURING the seven months ending July 31st, the exports from San Francisco were valued at $16,457,177, against $13,462,635 during the same period last year.

THE Wabash Iron Company, of Terre Haute, Ind., are running their works to the utmost capacity day and night, and are putting up three new puddling furnaces.

BEING two months behind their orders, the Northwestern Smelting Works, at Cleveland, Ohio, will at once enlarge their capacity by the addition of three new furnaces.

THE increase of the customs collections at the port of New York was more than $6,000,000 for the last fiscal year, while the decrease in the cost of collection was almost $200,000.

REPORTS show that the amount of merchant and bar iron manufactured at the Cumberland, Md., rolling mill during July last, was greater than ever before known at that place.

QUITE an industry has sprung up recently in Mifflin County, near Lewiston, Pa., in the preparation of oak lumber for use in the interior of cars. Large quantities of timbering land have been leased and sawmills erected thereon.

IN Nebraska wheat is somewhat damaged, but is a fair crop, average six to twenty bushels to the acre. Oats very heavy, near fifty bushels per acre. Corn immense, the finest crop ever known in the State. All small grain secured in good condition.

SOME enterprising young man in Idaho have organized a company for the canning of the famed redfish of Wallowa Lake. This redfish is met with nowhere else in America or in the world. It will live only in the ice-cold water of the mountain lakes, and can be caught only in August.

A CHATTANOOGA paper asserts that there has not been a time since the war when the prospects for railway bars were brighter. There never was a season, except some of the feverish years from 1869 to 1872, when so much capital was being put into iron manufacturing, in the South especially.

TRAFFIC in petroleum has been heavier this year than in 1877 even, when it was enormously greater than ever before. The exports for the first seven months of this year have been 30 per cent. greater than last year, and 43½ per cent. greater than in 1877. The number of gallons exported in seven months of this year is 201,958,813.

THE number of bushels of shell oysters taken this year from Virginia waters will be three million, and more than one-third of this amount is now handled by the packers of Norfolk and Portsmouth. The average value of oysters is about thirty-five cents a bushel, which would make the value of the oysters handled in Norfolk yearly reach $350,000.

THE total tonnage of anthracite coal from all the regions for the week ending August 9th amounted to 556,429 tons, against 510,001 in the corresponding week last year, an increase of 46,428 tons. The total amount of anthracite mined for the year is 14,186,076 tons, against 9,256,635 tons for the same period last year, an increase of 5,929,441 tons.

AT HOME AND ABROAD.

—TEXAS has over 2,600 miles of railway—more than any other Southern State.

—IT is asserted that there are in San Francisco nine organized Chinese lotteries, with drawings twice a day.

—THE Japanese Government has just ordered eleven pianos from a firm in New York. This is the first shipment ever sent to that country.

—A PARIS dispatch says the Edison Company have obtained permission from the Government to establish telephonic communication between the various quarters of Paris.

—IN ninety years the number of post-offices in the United States has increased from seventy-five to 40,876. The number has doubled since 1852. This gives a faint idea of the growth of the postal service.

—THE second congress of Austrian wine-growers will be held at Vienna on September 22d-25th, and will be accompanied by an exhibition of all products, apparatus and implements connected with viticulture.

—THE Spanish Government has appointed a commission to recommend fiscal and political reforms in Cuba, and to devise means for keeping up the labor supply on the plantations. Several Cuban representatives are on the commission, and the planter element predominates.

—A NEW tramp law, which has just gone into effect in Pennsylvania, punishes ordinary vagrancy by imprisonment in the jail or workhouse for not more than twelve months. The dangerous class of tramps, who manifest a lawless disregard of personal and property rights, are made liable to imprisonment for three years.

—THE special committee appointed by the International Meteorological Congress at Rome, for the promotion of expeditions to the Arctic seas, charged with making synchronous meteorological and magnetic observations, will meet at Hamburg on October 1st next, in order to arrange details and to discuss the means of arriving at the object aimed at.

—NEVER before has there been so much corn stored at Odessa as at the present time, as no orders arrive from abroad. The corn in store already amounts to 2,100,000 chetverts, and every day there arrive from 100 to 150 carloads. Between the experts of America and the protectionism of Germany, a rather gloomy prospect awaits the early future of Russian agriculture and commerce.

—IT is proposed to hold an exhibition of ecclesiastical art in London (the Albert Hall being named for the purpose) during May and June, 1880. The exhibition will be open to British and foreign art, and will comprise a loan collection of medieval and modern ecclesiastical art, a division for architects, artists and others who exhibit original work, and another for works of manufacturers.

—A NORMAL college, organized upon the plan of that in New York City, has been opened in Bankok, Siam, by the Rev. Samuel G. McFarland, a Presbyterian missionary, at the direct instigation of the King. Arrangements were made for the accommodation of eighty pupils, but about 130 presented themselves, among whom were twelve Princes of the realm, and the prospects of the success of the college are very encouraging.

—INDIA expends about £70,000 a year on purely naval purposes. Her military expenditure is about £17,000,000 annually. The army of that dependency numbers, natives and all, about 200,000 men. This, say the officials, is kept up to overawe the armies which the independent princes are allowed to keep on foot, and which amounts to 300,000 soldiers. The united revenues of these puissant sovereigns are estimated at about £12,000,000, all told.

—AN exhibition of the national and colonial industry of Holland is opened at Arnheim, and will remain open till October 15th. Judging from photographs of the building and its arrangements, which include a Javanese orchestra contributed by a Javanese Prince, the exhibition should be highly attractive and instructive to all interested in the multifarious products and various peculiar industries and machinery of Holland and her great dependencies and colonies.

—PROFESSOR OTTO STRUVE, the eminent astronomer in charge of the Russian Observatory at Pulkowa, near St. Petersburg, accompanied by his son, Hermann, has arrived in Washington for the purpose of inspecting the United States Naval Observatory and testing the power of the great equatorial telescope. The object of his visit to the United States is to make arrangements for the construction of a telescope, for the Russian Observatory, the disk of which shall be up to the very limit of vision and as large as the firm of Alvan Clark & Co., of Cambridge, Mass., can make, it being the desire of the Russian Government to mount an instrument which will not only put the Pulkowa Observatory at the head of astronomical institutions, but which will enable it to maintain this position for all future time.

WEAVING THE WEB.

"THIS more I will weave my web," she said,
As she stood by the loom in the rosy light,
And her young eyes, hopefully glad and clear,
Followed afar the swallow's flight.
"As soon as the day's first tasks are done,
While yet I am fresh and strong," said she,
"I will hasten to weave the beautiful web
Whose pattern is known to none but me.

"I will weave it fine, I will weave it fair,
And ah! how the colors will glow!" she said,
"So indolent and strong will I weave my web,
That perhaps it will live after I am dead."
But the morning hours sped on apace;
The air grew sweet with the breath of June;
And young Love, hid by the waiting loom,
Tangled the threads as he hummed a tune.

"Ah! life is so rich and full," she cried,
"And morn is so short, though the days are long!
This noon I will weave my beautiful web—
I will weave it carefully, fine and strong."
But the sun rode high in the cloudless sky;
The burden and heat of the day she bore;
And hither and thither she came and went,
While the loom stood still as it stood before.

"Ah! life is too busy at noon," she said;
"My web must wait till the even-tide,
Till the common work of the day is done,
And my heart grows calm in the silence wide!"
So, one by one, the hours passed on
Till the creeping shadows had longer grown;
Till the house was still, and the breezes slept,
And her singing birds to their nests had flown.

"And now I will weave my web," she said,
As she turned to her loom ere set of sun,
And laid her hands on the shining threads
To set them in order, one by one.
But hand was tired and heart was weak,
"I am not as strong as I was," sighed she,
"That the pattern is blurred, and the colors rare
Are not so bright or so fair to see!

"I must wait, I think, till another morn;
I must go to my rest with my work undone;
It is growing too dark to weave," she cried,
As lower and lower sank the sun.
She dropped the shuttle, the loom stood still;
The weaver slept in the twilight gray.
Dear heart! Will she weave her beautiful web
In the golden light of a longer day?

BLUE EYES AND GOLDEN HAIR.

By ANNIE THOMAS.

CHAPTER I.

A SOFT western wind is breathing rapturously over everything, extracting as it passes the full sweetness from the myriad flowers of June. At the summit of the slope of the hill-pasture there is a gate, dividing it from the adjoining wood. In front of this gate there is stretched a huge tawny mastiff, half sleeping, only refraining from doing so wholly out of a sense of duty towards his young mistress, who is perched on the gate-post above him. Her lap is full of flowers—of hair-grasses and bluebells, wild geraniums and St.-John's-wort, poppies and celandine. But amidst all these bright beautiful flowers of June, there is not one so blue as her eyes, not one so golden as her hair. A huge bouquet, a mass of harmoniously-blended tints, is growing rapidly in her skillful hands, and she is perfectly absorbed in her pretty task. Presently she is startled and interrupted by a voice, which says:

"Will you be good enough to make that horrible dog of yours move, Miss Eldon?"

"With pleasure. Tartar, dear, get up," the girl answers, bowing her head courteously towards a large lady, who is standing close by, breathing hard, partly with annoyance at the dog being in her path, and partly with the exertion of having breasted the hill. The obedient dog rises unwillingly enough; the lady has a tussle with the gate, and, failing to open it, is fain to have recourse again to Miss Eldon.

"Do you think you could manage this for me? It's so stiff, I can't move it."

"I'll try," the girl says, springing lightly down and swinging the gate open in a moment. She stands back in an attitude of utter unconcern for the lady to pass through, but rather to her surprise Mrs. Granville pauses, puts out her hand in a half-hearted kind of way, and says:

"I am sorry to have disturbed you; your occupation is a very pretty and pleasing one. But, my dear Miss Eldon, don't you think you could find something better to do with your time than to spend it in wandering about with a nasty dog, and in gathering wild flowers?"

The girl listens to this exordium with the sweetest patience and the sunniest smile that girlhood has ever expressed. At its conclusion she remounts her gate-post, and from that vantage ground she speaks:

"You are very kind to trouble yourself about the disposition of my time. If you will shut the gate, Tartar can lie down again."

Mrs. Granville does not shut the gate; she bangs it, and walks away without a word of farewell to the young lady who is seated on its post. Mrs. Granville is the wife of the squire of the parish, the greatest landowner and richest commoner in the county. She has ridden roughshod over the necks of all who have come in contact with her locally, up to the period of Daisy Eldon marking an epoch in local life. It is a serious crumple in Mrs. Granville's roseleaf in these days that Daisy Eldon should have put, not so much a full stop to her triumphant career, as a note of interrogation as to why she should pursue it.

These are glebe-lands over which Mrs. Granville is passing now, and so she cannot order Daisy, the rector's daughter, off them. But the "time will come, my young lady—the time will come, when you'll be sorry that you didn't show me a little more attention," she thinks, as she gets herself out of the sunny fields into her own well-kept shady gardens.

Luncheon is on the table by the time Mrs. Granville gets home, and her husband is there to partake of it with her.

"You look tired, my dear," he says, putting his perception of her hot flustered appearance into the most agreeable form of words his complacent mind can conceive.

"Tired! I should think so!" she retorts; and then she goes on garrulously to state that she has been on a mission of mercy to the village among "her poor" this morning, and that she has had a serious annoyance in coming home through the glebe-path.

"It seems that Daisy opened the gate for you," her husband expostulates. "She can't help the latches being in bad order, you know."

Mr. Granville has a human weakness for Daisy's beauty and goodness; her sweet blue eyes and her mastiff Tartar are not hateful to him as they are to his wife. Therefore he nerves himself to the task of offering this faint apology for her; but the fact of his doing so rouses his wife's wrath.

"How can you defend such idleness and wicked neglect, Mr. Granville? The girl had no business there at that time of day, and the gate-latch ought to be mended. Her father is a negligent, thriftless man, and her mother is not one whit better. If they kept their children at home and made them useful, perhaps they would be able to afford to mend their gates. I blushed, I positively blushed, this morning when I thought of a woman—a mother—allowing her daughter to fritter away her time as Mrs. Eldon allows Daisy to fritter hers away. The girl will be a by-word and a scorn to the neighborhood. Fancy her sitting at twelve in the morning on a gate-post with a dog!"

"She might have done worse, and sat there with a man," Mr. Granville chuckles; but the ill-timed frivolity simply drives Mrs. Granville to do more doughty deeds against the offending Daisy.

"I don't like joking about serious matters," she says, severely, "and even you will admit that the Eldons' case is a very serious one. They are positively not living like gentle people. How can *one* servant do the work of that huge house for that huge family? And they owe money to every tradesman in the neighborhood."

"I pity them with my whole heart," Mr. Granville says, with emotion; "and I'd gladly pull in for a year or two, and pay off all Eldon's liabilities, if he would only let me. It breaks my heart when I think of the way in which he works himself to death in the parish, and then of the home he has to go to. A scholar and gentleman, a man of culture and refinement, to have come to this—that he is scouted by a set of people who ought to feel honored by his knowing them. It breaks my heart!"

"If he is a scholar, why doesn't he turn his scholarship to account? If he is a gentleman, why doesn't he pay his debts as a gentleman? I should. If he has refinement and culture, why does he live in all that wretched muddle and misery that they do live in at the rectory? My dear John, depend upon it, that if he were all you say he is, he wouldn't be in the plight he is in now."

Mrs. Granville is so pleased with her own rhetoric that she does not require any answer from her husband, and he is equally well pleased at not being required to make one. His partisanship for Mr. Eldon is of the flimsiest order, after all; it shrivels up and becomes mere nothingness whenever her tongue of flame shoots out at it.

Meantime Daisy has descended from her gate-post and gone home. The glebe-fields are on the other side of the village from the rectory. And so it comes about that Daisy passes through the village street just at that noontide hour when all business is suspended, and the inhabitants are at liberty to disport themselves on their respective thresholds. The butcher fronts her on his door-step with a gory white apron on, and as she stops for Tartar to receive his customary tribute in the shape of a bit of paunch, she finds that well-known appalling red and greasy-looking book slipped into her hand.

"I've had no settlement for a many months, Miss Daisy," the man says, apologetically. "If you could get your pa to attend to it, I should be that obliged to you——"

He stops abruptly, checked in his righteous endeavor to get his own by the supreme beauty and the misery expressed in Daisy's young face as she bends it listeningly towards him. Her slim hand was closed on the terrible book, or he would take it from her and beg her "not to trouble herself about it." As it is, he feels as if he had boxed with a lamb or wrestled with a kitten when she says:

"I'll show it to papa, Mr. Grimes—not that showing it will do much good, I fear. It's terrible that you should have to go without your money. Would you like to have Tartar?"

The tears spring into the bluest eyes that have ever opened upon the world as she says this, for in offering Tartar she makes the grandest voluntary self-sacrifice that it is in her power to make, or in her imagination to conceive. Daisy and Tartar have been friends and comrades since the puppyhood of the latter, six years ago, and Daisy shrinks from meeting Tartar's eyes now as she offers him to a butcher in payment of her father's bill.

"I wouldn't take Tartar from you, Miss Daisy—no, not if I was sure I should never see a penny of your pa's money," Grimes says, ecstatically; and Tartar, who knows that he is being discussed, expresses his satisfaction at the turn the conversation has taken by frowning heavily, slobbering, and vigorously wagging his large, plump tail. That he incidentally helps himself to a loin-chop off the open shop-board as Grimes retires into his emporium, and Daisy pursues her homeward path, is nothing to Tartar's discredit. He comes of a race who avowedly "take whene'er they have the power"; and as their power is vast, it is an act of grace on the part of this scion of the stock that he contents himself with one chop on this occasion instead of taking the run of his teeth on a prime young lamb that is hanging up well within his reach.

"You wicked thief, you dear, unprincipled old dog!" Daisy says, as he trots up to her side just as she enters the ill-kept rectory grounds, "isn't it a dreadful thing to need food and raiment, Tartar, when one can't pay for either? Oh Tartar, Tartar, I've no business to enjoy the sun and flowers and you, in idleness, while all the others are working."

She does not loiter along sentimentally as she says this to her dog. She runs briskly up the drive, taking especially keen note as she goes of the weeds that relieve its surface. "How they do flourish and grow apace!" she remarks to herself and to Tartar. "It's very odd that the same soil and form of culture shouldn't suit the flowers that agrees so wonderfully well with the constitution of the weeds."

The house itself is a pleasant enough object at this time of the year. It is a long, low, rambling, old two-storied building, with latticed windows, and a veranda running round the front and one end of it. The lattice windows glimmer out from amidst masses of foliage now, and the pillars of the veranda are wreathed with cluster-roses, with jasmine and clematis and ivy-leafed geraniums. Outside the house there is an atmosphere of sweetness and refinement that is very congenial to Daisy. We shall see presently how it is over the threshold. The porch-door is open, and she passes into the hall, which runs through to the back of the house, where another door gives upon the croquet-lawn. This is also open, and through it Daisy sees five or six of her brothers and sisters knocking the balls about. She is about to join them when her mother's voice arrests her, and Daisy turns into the dining-room, where a graceful, harrassed-looking woman is striving to make an obtuse servant understand the directions given for the hundredth time as to the arrangement of the table.

"Mamma dear, don't exert yourself. I ought to have been in before to see to all this; but I relied on one of the others helping you." Daisy says, apologetically.

Daisy has not yet learnt the lesson which her younger sisters are assiduously endeavoring to teach her—that it is worse than vain on her part to rely upon them to relieve their overstrained mother in any household emergency. They are affectionate, unselfish, and willing enough to "help mamma" in the abstract. But they are young, full of bright, untamed spirits, and happily indifferent as yet to the daily round of confusion which is run in the household. Daisy, the eldest daughter and flower of as fine-looking a flock as there is in the county, is also, as Mrs. Eldon declares emphatically, "her mother's right hand." And Daisy is more than this. She is chief counselor in all family complications, chief sympathizer in all family sorrows, chief smoother of all family difficulties. Daisy's clear blue eyes always beam hopeful promise of assistance upon her mother; and in some way or other the promise is always fulfilled.

Twenty-one years ago, when the Rev. Thomas Eldon married Miss Bertram, prognostications had been uttered freely as to the match being the making of him. The Bertrams were a power in the county, and it was quite an accepted fact that they would in time do "something very good" for the husband of the daughter of their house. But time passed on; Mrs. Eldon's brother ascended the throne in place of his father, and Mr. Eldon still struggled on at Burnsleigh on three hundred and fifty pounds a year.

This income had been sufficient, and but barely sufficient, in the days when their family had been smaller and younger. But now, with eight daughters and two sons, it barely enables them to live at all. The parish is large, struggling and poor, and the priest of it cannot shut his eyes to the needs, or steel his heart to the distress, of those who are even worse off than himself. He does "what he can," everybody admits; and, little as that something is, it still seriously cripples his very small resources. There are times when Mrs. Eldon thinks with something like bitterness of the manner of life which is lived by her kith and kin over at Bertram Court, and of the solitary sumptuous state which her only sister, Miss Bertram, keeps in London. Long ago this lady reaped the reward of years of interested devotion to a wealthy old uncle by being left his sole heiress. From which time she has kept aloof considerably from her sister and her sister's family out of a wholesome dread she has that "they may think she ought to do something for them." Miss Bertram has never been tempted to the folly of making a love-match herself. Naturally she is rather severe on those who not only have been guilty of the enormity, but who, having failed in correctly counting the cost of it, stretch forth appealing hands to others, who have been wiser in their generation, for aid and succor. Mrs. Eldon has never asked her rich unmarried sister for so much as one of the crumbs that fall from the latter's well-ordered and plenteous table. But still that sister cannot quite stultify her conscience, nor can she utterly forget that they are daughters of one house, and loved each other well when they were little children. Mrs. Eldon's poverty and generally overweighted condition is a sore trial to Miss Bertram; so she thinks as little about it as she possibly can, and tries to persuade herself that her callousness to their condition is merely a just reminder to her brother-in-law and sister of their extreme imprudence in having brought themselves and their children to this pass. If Mr. Eldon would make his name ring as a Broad Church theologian, or as an eloquent and heart-stirring expounder of evangelical traditions, Miss Bertram would feel something like sisterly affection for his wife. But he is absolutely unknown and unimportant beyond the boundaries of his own parish. He is merely a hard-working, good, conscientious, highly-educated gentleman, and as such he does not redound to Miss Bertram's credit in any way in her London set.

But latterly Miss Bertram has begun to take an interest in Daisy—an interest that does not show itself in doing anything definitely good for the girl, but that is eager to collect all the information that can be got about her. For two or three months of the London season Mrs. Granville occupies the adjoining house to that in which Miss Bertram holds solitary state in Wimpole Street; and there is a good deal of intercourse of the severely social order between the two ladies. That is to say, they give each other the tips of their fingers when the exigencies of society thrust them together, and they dine at each other's houses two or three times, and wag their heads at each other when they meet in the park, and are altogether quite "on terms." It is quite pleasant to Mrs. Granville, who was a girl in the same county set with the "Bertram girls" when they were all young, to be able to tone down Miss Bertram's pride in her present position every now and then by judicious and patronizing mention of the Eldons. Mrs. Granville has more than once goaded Miss Bertram into a state that would have made her verbally dangerous, had not the "social bonds which bind us from the living truth" restrained her. There have been moments when Mrs. Granville's well-modulated laments over the manner in which "matters seem to grow worse and worse with the poor Eldons" have robbed Miss Bertram of much of that serenely selfish satisfaction with a world which has dealt so kindly with herself, and which is her normal condition. "People ought to know better than to make poverty-stricken marriages; they make them for the gratification of their own idle fancies, and then punish people who have been more provident by either perpetually asking for assistance, or by living in such a beggarly way that one blushes to own them." This Miss Bertram has said to herself over and over again when smarting under the Granville lash. But this year she has found that there is balm in Gilead after all. Mrs. Granville sits in the seat of the scornful, as of old, about the Eldons. But Mr. Granville tells Miss Bertram, with yearning, hearty gladness and satisfaction, that her "niece Daisy is the loveliest girl in the county."

"She's a girl the sight of whom makes an old man young again," he tells Daisy's aunt; "a sweet young creature, the sunshine of the parish!"

"When I saw her some years ago she was rather a pretty little child; still, I'm surprised at your account of her—quite surprised!"

Miss Bertram says this guardedly and rather coldly, for she is conscious that Mrs. Granville is closely observant of her manner of hearing tidings of the "poor Eldons."

"She really is a nice-looking girl; at least if you like that yellow hair, you would call her nice-looking," Mrs. Granville says; "but she has not been well brought up—left to run wild; quite like a village lassie, you know. I assure you I was quite shocked last week, when I had occasion to cross some fields on my way home from my poor, to see Miss Eldon sitting on a gate-post, wasting her time with a lot of trumpery wild flowers. It was not the thing at all for a girl in her position to be doing at that hour in the morning. And she had a great wild beast of a dog with her, that I really wonder at her father permitting her to keep, considering the extremely unpleasant state of his circumstances."

Miss Bertram blushes angrily as she listens. The sword enters into her spirit as Mrs. Granville thus triumphantly dares to pity, condemn and depreciate the Eldon family. But a timely recollection of the undeniable ugliness of Mrs. Granville's own daughters, and of what has just been said relative to Daisy's loveliness, revives the fainting spirit of Daisy's aunt. She has been struck by Mrs. Granville, and she will not hesitate now to give a counter-thrust. Accordingly, she unsheathes her weapon and says, suavely:

"I have been almost forgetting that Daisy is a grown-up young lady now. I must have her up with me for a few weeks, and give her the chance that her beauty deserves. There is a great deal of pleasure in taking a lovely girl into society, especially when she belongs to one."

Mrs. Granville feels the stab, but she will not suffer herself to wince.

"It's very kind and generous of you to think of giving this treat to your niece, my dear Miss Bertram; but do you think that it's quite wise? Life, as they live it at Burnsleigh, will seem a very unendurable thing to Daisy Eldon after an experience, however brief, of your clique. I have often refrained from asking her to my house for fear of unfitting her for her own home."

"I have no doubt but that you have been all that is thoughtful and considerate in the way of keeping Daisy back." Miss Bertram says, bitterly; "but if she's all your husband says she is, and she *pleases me*, there shall be no more painful contrasts in her life."

CHAPTER II.

JUST about the time that Daisy's prospects are under discussion between her almost unknown aunt and Mrs. Granville, Daisy hears tidings that seem very good and joyful to her. They are brought home by her father, who has gathered them from the best authority this morning.

"Lincoln tells me that Harry Poynter is coming home very soon, and he has had orders to see about doing the old place up at once," Mr. Eldon tells them.

Now Lincoln is the steward of the Glenholme property, and the Glenholme property belongs to Harry Poynter, who has been abroad for many years, and who has only re-

Digitized by Google

cently attained his majority. Some six years ago he visited Burnsleigh, but Glenholme was let to strangers then, and Harry had made his headquarters at the rectory. He had come accompanied by a big mastiff puppy, and when he left them again the puppy, Tartar, remained behind with Daisy. This episode has been the sole bit of romance in Daisy's life. What wonder that she recalls it vividly and tenderly now when she hears that the young heir of Glenholme is coming back to his own again?

"Harry was a dear boy when he was here last, that time when he gave me Tartar," she remarks meditatively, when her father has brought his communication respecting Mr. Poynter to a close. "I wonder if he will have grown too big a man for us now."

"He'll have grown too big a man to swing with you in the garden or roast chestnuts with you in the harness-room; and as we have no other form of entertainment to offer him, we need not trouble our heads about him, I think, Daisy," Mrs. Eldon says, in a tone that is indicative of a desire to crush out the dawning interest in the "coming man" from her daughter's heart.

"Now, mamma, it's not like you to be ungracious to big men, any more than to little boys," Daisy says, coaxingly. "We gave Harry a greeting when he was a hobbledehoy, and we wanted no return for it. We'll give him a greeting again now that he has grown out of hobbledehoyhood, and there let it end—we shall want no return for that either."

"Why, Daisy, how seriously you speak!" Daisy's next sister, Ethel, says inquiringly.

"Not seriously—savagely, I'm afraid!" Daisy cries, rousing herself from her unwontedly serious mood. "For a minute I felt all awry with everything. Mamma dear, you are right: a young man about whose coming home a fuss is made, and paid for, is too big a man for us."

"That's just one of the nonsensical notions you girls take up," Daisy's elder brother remarks, lounging into the room with the air of one who is quite competent to put them all in the straight path that shall surely lead them to a right judgment. He is a year or two older than Daisy, and he too, like his old friend, Henry Poynter, Esq., of Glenholme, has just attained his majority. But his majority has not brought him anything particularly good, saving the knowledge that he has to look out for himself in the future, and that if he wants bread-and-butter he must work for it. Willie is a clever, sweet-natured, true-hearted young fellow, full of a queer mixture of village simplicity and University audacity; for Mr. Eldon has made a mighty effort, crippling himself and the others horribly to do it. He has sent Willie to Oxford, and the boy has done well there, both as regards work and the making of friends. It is settled that in the course of a week or two he shall take his place as tutor to Lord Gerald Deane, the second son of the Marquis of Beauton, whose eldest son, Lord St. Briac, has been a college-friend of Willie's. Altogether, it is gossiped in the village that the fortunes of the Eldon family are looking up a little just at this juncture; for almost simultaneously with the report of Willie's having obtained this tutorship, another rumor arises to the effect that "Miss Daisy's rich aunt has asked her on a visit to London."

That this is true soon becomes an ascertained fact. Daisy's departure causes more commotion in Burnsleigh than the coming home of the young owner of Glenholme. Everybody knows the girl with the big blue, black-lashed eyes, and everybody likes her well. They have seen her grow up in their midst; this one has given her a ride on his horse; that one has given her the great delight of feeding his poultry and chasing his pigs. The farmers one and all pay their tithes more willingly to Mr. Eldon than they would to any other man, simply because he is "Miss Daisy's father"; and as for the poor people (to whom she has but little to give, poor child, but a few stray pence at times, and an unceasingly kind interest), they would sacrifice Mrs. Granville and her ill-favored daughters at any given moment in cold blood for the sake of Daisy Eldon.

(*To be continued.*)

SUMMER LIFE AT SARATOGA.

SIX O'CLOCK! and it is "correct form" to be en route to the lake. The road in some places is literally blocked with vehicles of all sorts, shapes, sizes and descriptions, from the stately drag, tooled by four "bits o' blood," to the dumpy basket-phaeton attached to a pony not much bigger than a Mount St. Bernard mastiff. To stand on the top of the hill and gaze into the dip in the road is a sight worthy the seeing, while it conveys a wholesome idea of the wealth, magnificence and luxury of the sojourners at fair Saratoga. As far as the eye can reach, carriages roll onward, while equestrians in the horsiest of pantaloons, and *equestriennes* in the sauciest of hats, enjoy the fierce fascination of the gallop, or the bland beatitude of the amble. The horsefish is "all there," and the display of satin coats, dainty limbs, tossing heads, and the glittering paraphernalia attached to the realm of the stable is worthy of Newmarket at its best, or even of the road to Royal Ascot.

The drive to the lake in the glowing amber of sunset possesses an irresistible charm—the tender greenery, the placid waters, the overarching trees, and the delicious cool that comes when King Sol has made his best bow to the pale and throbbing evening star. Everybody meets everybody else on the drive. Everybody feels bound to take it, as invalids take the Congress water. The new Fountain Hall is a thing of beauty. Its walls are fretted and arabesqued, and inlaid and dadoed after the most æsthetic fashion. Stained glass windows pour floods of varied rainbow hues on the tiled floor; the counters make one feel as if the elbows were specially constructed for leaning upon them; tables and chairs of elaborate and "high art" pattern are scattered here and there, while baskets of flowers hang suspended from every available carved beam in the groined roof. Languid humanity, overdone by matinées, dinners, theatres, concerts and balls, repairs hither to "tone," and if gruesome faces are made as the healing waters are tasted, do not tonics always partake of a soupçon of the bitter cup? Everybody comes here to drain what Artemus Ward called "the flowin' bole," the water being drawn by elaborate pulleys from the well, and served up *au naturel*. This is the very refinement of health-imbibing.

The facilities for reaching Saratoga from New York were never so good as during the present season, the fast express trains of the New York Central Railroad supplying just the accommodations needed for quick and easy transit.

NEW JERSEY GRAND ARMY REPUBLIC ENCAMPMENT.

THE four days' annual encampment of the G.A.R., Department of New Jersey, which began August 26th, at Skillman Station, on the line of the Philadelphia and Bound Brook Railroad, about forty-five miles from New York, had been anticipated with great interest by the veterans of that State, and the success of the opening day afforded them the liveliest gratification. The camp, located in a beautiful pastoral region, amid smiling orchards and fertile fields, presented a picture full of spectacular effects, while the strict maintenance of military regulations and discipline gave a peculiarly realistic air to the whole scene. The tents, pitched on the southeasterly side of the grounds, were sheltered by a belt of woods; close at hand an ample parade-ground afforded facilities for drills, reviews, etc., while within easy reach, commissary structures supplied everything needed by the crowds of visitors or by the veterans themselves. The programme included a review and dress parade, a Gatling gun battery drill, a sham battle, addresses by distinguished guests, etc. Our illustrations present a view of the camp and of the arrival of the veterans and the military at Skillman Station, and depict also some of the incidents of the opening day, showing especially the activity of the average young lady in evading camp regulations, and the industry of the "hot-corn man" and traveling photographer in making the most of their opportunities.

POLITICAL TRAGEDY IN SAN FRANCISCO.

SAN FRANCISCO was startled, August 24th, by a political tragedy. The Rev. I. S. Kalloch, the workingmen's candidate for Mayor, at a public meeting on the evening previous, uttered a disgraceful charge against the aged mother of Mr. Charles De Young, the principal proprietor of the San Francisco *Chronicle*. The cause of this public assault is found in articles of a defamatory character, recently published in Mr. De Young's newspaper. On the morning of the 24th Mr. De Young drove in a coupé to Mr. Kalloch's office and called out the latter. On his approach Mr. De Young fired a revolver at him twice, one bullet piercing his left lung and the other his thigh. A mob immediately set upon Mr. De Young, who, with great difficulty and much risk, was conveyed to the City Hall Prison. The mob then threatened to take him out and hang him, but were deterred from so doing, first by the prompt action of the police and the military, and, secondly, by the moderate words of Denis Kearney. Intense excitement prevailed in San Francisco and all the California towns, and an outbreak would have certainly resulted in bloodshed and waste of property. At last accounts Mr. Kalloch was still alive.

The Production of Precious Metals.

Some very interesting figures on the production of precious metals have been given by Dr. Adolph Soetbeer. It is estimated by good authorities that prior to 1492 there were no more than $165,000,000 of specie in Europe available for exchange. Since that time and to 1878 the production of gold is put at $6,612,193,087, and of silver at $7,976,429,920. It is interesting to note the production of each century since the discovery of America. Before that time the yield of all the mines of the world was less than the requirements of trade. The modern history of gold and silver begins with the unlocking of the stores of the New World by Columbus. The total production in the 108 years from 1493 to 1600 amounted to $561,493,345 gold, an average of $4,645,307 per annum, and $979,024,900 in silver, an average of $9,065,045. For the 100 years from 1601 to 1700 it amounted to $806,314,580 gold, an average of $8,063,145 per annum, and $1,596,407,750 silver, an average of $15,964,077. In the 100 years, 1701 to 1800, the production aggregated $1,263,806,400 gold, an average of $12,638,064 per annum, and $2,445,371,337 silver, an average of $24,453,718 per annum. In the 78 years, 1801 to 1878, the yield was $4,278,038,135 gold, an average of $54,846,642 per annum, and $2,969,306,915 silver, an average of $38,068,037 per annum. It is during the past twenty-eight years that the production of the precious metals has been most surprising, as the following table, giving the returns by decades, will show:

	Gold.	Silver.
1801 to 1810.....	$17,519,258	$18,236,681
1811 to 1820.....	7,606,147	23,185,313
1821 to 1830.....	9,447,958	19,746,510
1831 to 1840.....	13,494,099	25,272,793
1841 to 1850.....	30,292,833	32,460,293
1851 to 1860.....	134,107,307	38,296,813
1861 to 1870.....	125,294,743	51,312,537
1871 to 1878.....	132,063,628	82,400,000

Royalty in Lisbon.

THE King of Portugal, Dom Luis I., is a young man in the fortieth year of his age, second cousin to the Prince of Wales, who is three years his junior, and between whom there is a marked resemblance. The Queen is the youngest sister of the present King of Italy. The King's father is Prince Ferdinand of Saxe-Coburg, cousin of the late Prince Consort of England. His first wife, the mother of the King, died many years since. His second wife, now living, is an American lady from Boston, named Hensler, and is called the Countess d'Edla. One of the King's sisters is wife to the second son of the King of Saxony, the other wife to Prince Leopold of Hohenzollern-Sigmaringen, whose election to the throne of Spain by Prim was one of the causes of the war between Germany and France. In the way of revenue the King is paid $405,000 a year, and the Queen $66,500. The eldest son, heir-apparent, is now fifteen years old, and $22,200 is his salary. The second son is only thirteen years old, and receives $11,000. The King's father is paid $111,000 annually, and his brother, a young man of thirty one, is a general in the army, and has a salary of $17,750 per annum. When you add the King's great-aunt, an old lady of seventy-seven, who is paid $22,200, you have the whole royal family, with their incomes, amounting in the aggregate to something over $1,000,000 a year.

SCIENTIFIC INTELLIGENCE.

Portable Gas is sold and delivered in England like milk. People in the country and in villages receive it in copper vessels from large cities.

A Russian Physician, struck by the commonness of near sight among literary men, proposes to print books with white ink on black paper as a remedy.

The Working of the deposits of sulphur in Geldbringa Syssel, Iceland, in the southwestern corner of the island, is being actively prosecuted with satisfactory results.

The Austrian Government, on the reassembling of the Reichsrath, intends to introduce a Bill for uniting the Austrian and Swiss railways by a tunnel through the Arlberg.

Chinese Galls.—A new kind of Chinese galls have been lately introduced. They are the size of a plum, bent over at the point, and contain seventy-two per cent. of tannin.

Hydrous Zinc Sulphide and silver chlorids are readily and completely transformed into silver sulphide and zinc chlorids. The amount of chlorine present is then ascertained by Volhard's titration process with silver, and the zinc is thus calculated.

Professor Bechi has detected traces of boron in the marls and limestones of Italy, in the basalts and lavas of Etna, and in trachytes from Tuscany. The same element has been discovered in the ashes of plants and in albumen of ox-blood. He has found vanadium in argillaceous limestones, in shales, sands, and the ashes of plants.

A Special Exhibition of every variety of soap and of the machinery, apparatus and material used in its manufacture, is to take place in Hamburg, Germany, between the 21st and 24th of August. It is the first time that an exhibition of this kind has been undertaken, and, as a large number of manufacturers have applied for space, the success of the enterprise appears to be already assured.

The Authorities of Owens College, Manchester, and of the Yorkshire College of Science, Leeds, have already taken the initiatory steps for preparing a constitution of the new University for the North of England, for which a charter has recently been granted. The Victoria University, as the new institution is to be called, will have authority to confer degrees upon women, and especial care has been taken to secure a proper representation of the graduates and the teaching staff upon the Board of Governors.

The Hollway Invention is the application of the Bessemer blast to the treatment of pyrites, and is pronounced by the Council of the Society of Arts as being the most important metallurgical contribution of the year. So many ores can be advantageously treated by it that its field of operation will be very extensive, and there are perhaps a larger number of persons interested in it than in Bessemer steel. "Bessemer copper" seems likely to become as familiarly known before many years as "Bessemer steel."

The Iodide of Starch has been found to be very efficacious in cases of poisoning by sulphuretted hydrogen, by alkaloids, and the alkaline sulphates, by caustic alkalis, by ammonia, and chiefly by alkaloids with which the iodine forms insoluble compounds. It is preferable to the tincture of iodine for this purpose. It also assists in the elimination of the poison produced by salts of lead and mercury. In acute cases of poisoning an administration of an emetic is recommended before having recourse to the iodide of starch.

The Werdermann Electric Light consists of a hollow metal tube, through which the carbon pencil is gradually fed up as consumed, being kept just short of contact with a carbon disk; the latter is balanced so as to fall down in case the pencil should not, from any cause, be fed up sufficiently to the disk. In this case, contact is made with the other pole, so that the current ceases to pass through that particular carbon, thus calling attention to the defect. Four inches of carbon are consumed in an hour, at a cost of 6d. for twenty inches, and nine lights can be furnished by a four and a half horse-power engine.

Mr. Bickman, American Minister at Bogota, in a dispatch to the Department of State, reports that on the evening of the 11th of July, 1879, two severe shocks of earthquake occurred in Bogota. The first, at about nine o'clock, lasted about ten seconds, and the second, at about eleven o'clock, lasted thirty seconds. It appeared to be a wave motion, accompanied by a slight rumbling noise. The course was from southwest to northeast. Many people were greatly alarmed and rushed into the streets, imploring the protection of the saints. The damage to property was not large. It may have been more serious in other places.

It is Remarkable that, notwithstanding the enormous deposit of pyrites and the exhaustless supply of salt in the United States, no company has succeeded in manufacturing sulphuric acid, soda ash and bleaching powders at a sufficiently low price to enable them to compete with the English alkali works. The former manager of the Tyne Alkali Works, Professor Runge, now of Zurich, has published an admirable treatise covering the whole subject, which ought to be studied by our salt producers with a view of introducing this important industry in our country. With such an abundant supply of raw material as is found in the United States, it would seem as though the manufacture of sulphuric acid and alkali with the collateral branches ought to succeed among a people so ingenious as we claim to be.

The Geological and Topographical Survey of the Western States and Territories, under the direction of Mr. Clarence King, has been fully organized, and is now at work in the field. Hitherto the surveys have been conducted in a somewhat desultory manner, and, although much good work has been accomplished, there has been a great want of unity of plan and of systematic organization, and consequently much overlapping and duplication has occurred. By putting the whole business under one bureau, a great saving of time will result and more accurate results can be obtained. Mr. King is assisted by the most accomplished available geologists of the country, and his own extensive experience in the office and in the field will prove of great value in enabling him to superintend and direct the work to be done.

Respecting the colorless preservative solution with which Cleopatra's Needle has been covered, a correspondent recently wrote to the *Times*, "In operating upon the granite, Mr. Browning first gave it a thorough cleansing, removing all the sooty and greasy matters from the surface, and then infiltrated it with his invisible preservative solution. The effect has been to give a freshness to the granite as if only just chiseled from the rock, retaining the original color, disclosing the several veins, the white spar shining in the sun's rays like crystals, and exhibiting the polished portions as they formerly existed. The solution soaks well into the pores of the granite, and the best authorities consider that it will have the effect of thoroughly preserving the monolith. Mr. Henry Browning has personally superintended the operations."

PERSONAL GOSSIP.

SIR WILLIAM JENNER, the distinguished English physician, has been forced by an attack of whooping-cough to leave London.

M. DE LESSEPS, the promoter of the Panama Canal scheme, is preparing for his journey to the United States. His wife will accompany him.

EX-GOVERNOR SEYMOUR lately invited to his farm at Utica the Sisters of Charity from the Asylum, with the orphans under their charge, and, with his family, spent the whole day entertaining them.

IT is reported from Rome that the Countess Lambertini intends applying to the Court of Appeals for a revocation of the decision in the Cardinal Antonelli case, basing her plea upon new evidence, revealing her mother's name.

A RECENT marriage in high life in England is that of Lord Edmund Talbot, youngest son of the Duke of Norfolk, with the Hon. Mary Caroline Bertie, eldest daughter of Lord Norreys. The ceremony was performed by Cardinal Manning.

IT is believed in London that Lord Lytton will be offered an earldom. Whether, with his moderate family property, he will care to accept it, is another matter. The offer of an earldom to an Indian Viceroy is tantamount to a request to resign.

THE Hon. W. Taylour Thompson, C. B., British Minister at Teheran, will be the bearer of a handsome present from Victoria to the Shah of Persia. It consists of a very fine specimen of modern English coach-building in the shape of a park barouche, painted in brilliant amber and crimson colors.

THE Rev. Moses How, a Methodist Episcopal clergyman of Portsmouth, N. H., is said to be the oldest preacher of any denomination in New England. He is ninety years old, and began to preach sixty-five years ago. He is hearty and well, and preached extemporaneously at Portsmouth last Sunday, speaking with a strong, smooth and pleasant voice.

MLLE. SARAH BERNHARDT, during a six weeks' visit to London, has earned upwards of $5,000 by private performances, and upwards of $10,000 by her paintings. The presents she has received from the highest in the land, from the Prince of Wales downwards, have been very valuable. Her pay from the Comédie Française during this period has been about $750.

THE new Papal Nuncio at Paris does not belong, as has been customary, to the Italian clergy. The selection has fallen upon Count Wladimer Czacki, who by birth belongs to the highest nobility of Poland. He is a distinguished linguist, a great reader of current literature and a natural politician. He is an indefatigable worker, and personally one of the most agreeable men in the world.

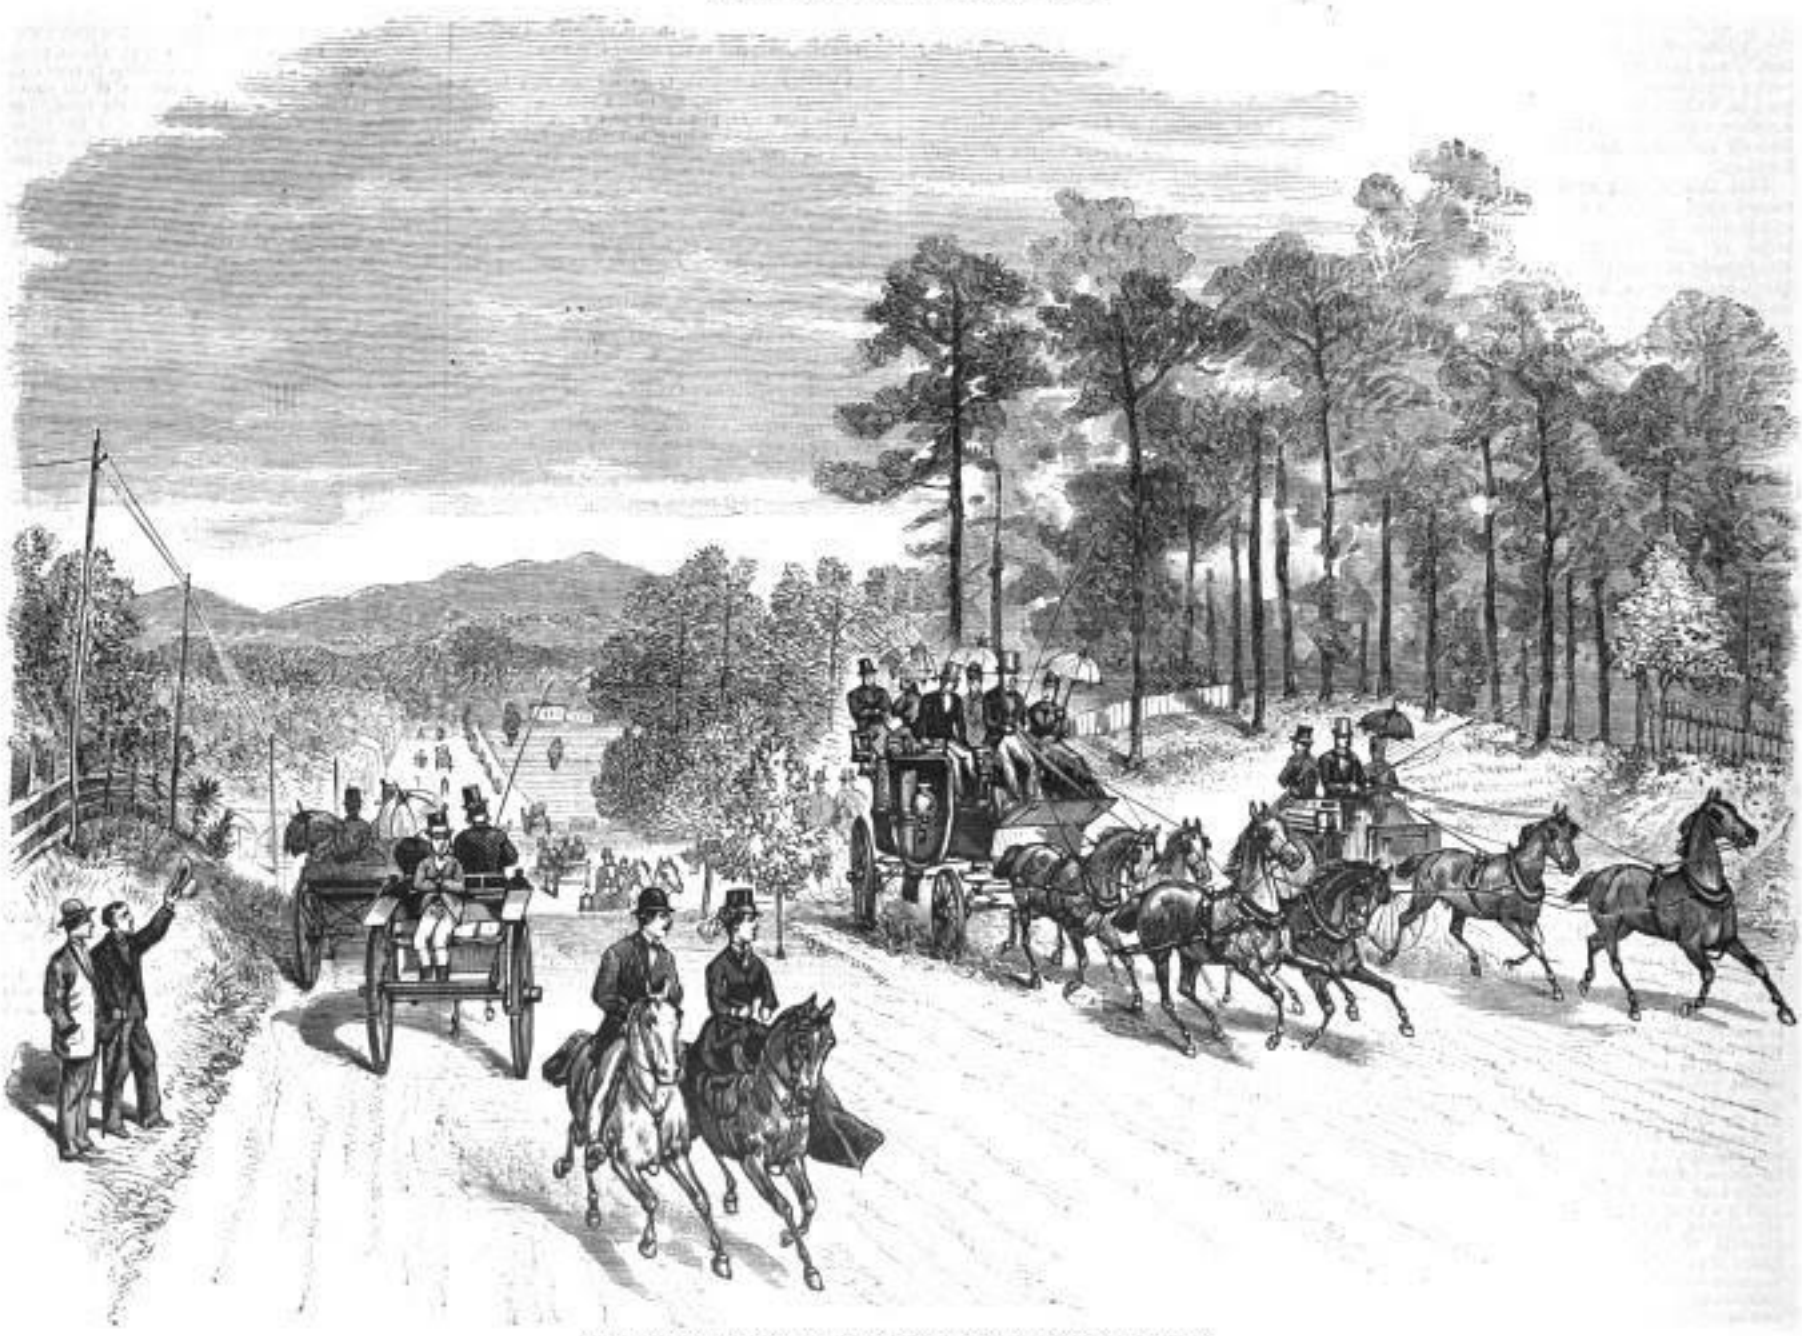
DR. C. P. MCDONALD, Superintendent of the Money-Order System, Post-Office Department, has been appointed a Special Commissioner to visit Europe to confer with the postal administrations of England and Germany in regard to modifications in existing conventions for the exchange of money-orders between those countries and the United States. He will be accompanied by Special Agent Harrison as assistant.

THE late Duke of Brunswick provided in his will for a mausoleum at Geneva, to be constructed on the model of the La Scala monument at Verona, and with statues of six of his ancestors standing around his stone coffin. These figures have been placed. On the sarcophagus will repose a full-length statue of the late duke, a lion couchant at his feet, and at each angle will be placed the figure of a winged angel. The total cost will be $200,000.

HON. JOHN STARIN was presented with an elegantly engraved series of resolutions, on August 26th, passed in acknowledgment of his kindness in providing boats and barges to carry the members of the Grand Army of the Republic who took part in the ceremonies of Decoration Day and their families on an excursion. The resolutions were in a rich gold and black frame, about four feet by three, and were presented by General Tremain, chairman of the committee.

HON. GEORGE BANCROFT, the historian, will be seventy-nine the 3d of October next, but he seems to be as robust and capable of severe intellectual labor as ever. He is very young in feeling, and is quite noted for his sentiment and gallantry. He is very fond of the society of young women, and exhorts them, it is said, to call him "George," which is an indication of extreme freshheartedness in a man on the eve of octogenarianism. He has never had any children, though he has been twice married. He has been a tutor, an amateur preacher, a regular school-teacher, a writer of poetry, a politician, an office-holder. He has been Collector of Boston and Secretary of the Navy; an orator, an excellent dinner-giver, and a shining member of society.

THE Archduchess Marie Christine of Austria, who is about to become the bride of King Alfonso of Spain, is the crowned and mitred abbess of the noble chapter of Prague. She has twelve canonesses under her jurisdiction, and at great ceremonials may be seen bearing the insignia of her high office, and wearing a tall headdress which reminds one of the episcopal mitre. Her situation under the statutes fixed by Marie-Thérèse brings her 20,000 florins a year. The canonesses have a prebend of 1,200 florins, and special degrees of nobility are required for the attainment of the position, just as the title of archduchess is necessary for the dignity of an abbess in the chapter of Prague. The office would, however, remain long vacant should the princess become Queen of Spain.



THE principal officers of the corporation of London are paid as follows: The recorder (as judge at Central Criminal Court and at Lord Mayor's Court), $15,000; registrar of Mayor's Court, who is also assistant judge, $13,175; the common sergeant, $12,750; judge of the City of London Court, who is also commissioner, $12,825; chamberlain, $12,500; comptroller and prothonotary, $10,500; city solicitor, $10,000; chief commissioner of police, $9,000; remembrancer, $7,500; architect and surveyor, $7,500; town clerk, $7,500; head master of City of London School, $5,000; registrar of coal duties and inspector of fruit-meage, $5,000; solicitor to commissioners of sewers, $5,000. The Lord Mayor is voted an annual sum of $50,000, free of income tax, to maintain his position; and in addition to this he has his robes voted to him, and has the Mansion House, free of rent, to live in.

"A COLLECTOR of religions," one Rosenheim, the son of a wealthy Hebrew of Galicia, has just died at Czernowitz. His father died after giving him a good education, leaving him an ample fortune. The young man from Hebrew turned atheist, then became a regular attendant at the Lutheran Church, went to Geneva and was converted to uncompromising Calvinism; next formally went over to the Roman Catholic Church; after some time visited Turkey, embraced the creed of Islam, and made a pilgrimage to Mecca; soon afterwards crossed the Atlantic and tried Mormonism; and after passing through the further religious stages of Sun Worship and Buddhism died, having, as he repeatedly stated before his death, been actuated in so frequently changing his creed by an earnest desire to become acquainted with every sort of belief influencing humanity, and having satisfied himself that, on the whole, one was as good as another.

NEW YORK CITY.—THE HIGH BRIDGE OVER THE HARLEM RIVER, SUPPORTING THE CROTON AQUEDUCT.

CALIFORNIA.—THE WATT MONUMENT AT GRASS VALLEY.

THE HIGH BRIDGE OVER HARLEM RIVER.

WE give on this page an illustration of the High Bridge across Harlem River, erected for the purpose of supporting the Croton Aqueduct. The bridge is 1,460 feet long, with eight arches in the river having a span of eighty feet, resting on piers, and seven others on the banks of fifty feet span. The height of the bridge above high-water mark is 116 feet. The aqueduct is carried across the bridge in two cast-iron pipes of three feet diameter, and one wrought-iron pipe seven feet six inches in diameter. The width of the river at the point where the aqueduct here crosses it is 620 feet at ordinary high-water mark. The shore on the southern side is a bold rock rising from the water's edge at an angle of about thirty degrees to a height of 220 feet. On the northern side a strip of table-land forms the shore, extending back from the river 400 feet to the foot of a rocky eminence which runs at an angle of about twenty degrees to a few feet above the level of the aqueduct. The beautiful and massive proportions of the bridge are justly themes of admiration with the thousands of persons who annually visit this romantic location. The thoroughfares leading to the bridge, on pleasant Summer afternoons are often thronged with equestrians and carriages, while the little steamers plying between that point and the city carry daily hundreds of women and children, who find in the scenery at the terminus and along the route a constant source of enjoyment. New York affords perhaps no more enjoyable sail than that from Fulton Ferry to High Bridge and return.

With the rapid extension of the Metropolitan Elevated Railway system in that direction, the tendency of population thitherward will, of course, be vastly augmented, and the day is not distant when all that region will be crowded with pleasant and comfortable homes.

MINERS' TRIBUTE TO A MINERS' FRIEND.

THE late William Watt, known throughout California as the "Miners' Friend," was born near Edinburgh, Scotland, July 14th, 1826, and in early life became a practical machinist. In 1852 he came to the United States and settled in California, engaging at once in quartz mining. His judgment and industry were rewarded with immense returns, which enabled him to dispense benefits with a generosity seldom if ever equaled by any one person on the Pacific Slope. He died in 1878, and an association of miners was at once formed, under the presidency of Judge A. B. Dibble, for the purpose of erecting a monument to his memory. The project was fully carried out, and the shaft, shown in our engraving, was unveiled with fitting ceremonies early in May last. It stands in the Masonic Cemetery at Grass Valley, and is of granite taken from a quarry in Placer County. The shaft, which towers to a height of thirty-six feet, is surmounted by an urn of polished black granite, with tastefully arranged drapery. On one side appears the name "William Watt," and just below the words, "Friendship's Memorial." On the day of the dedication there were over 5,000 miners and other friends of the deceased present.

ST. PETER'S P. E. CHURCH, WESTCHESTER, N. Y.

THE fourth church which has been built for the venerable parish of St. Peter's, in Westchester, N. Y., is constructed of a local stone of a warm gray color, rock-faced, and scarcely any wrought stone is used. The plan is a vestibule, flanked by a porch and a tower, crowned with a slated spire, a nave of four bays with transepts and a seven-sided apse, of which the ridge is on the same level with that of the nave. The material and its use, the simple disposition and the simple treatment of the parts, with the unmolded arches and the low windows of the clerestory, give the outside of the church, which is set in an ample churchyard, an aspect of homely picturesqueness which is very pleasant, but which scarcely foretells the elaborate and finished beauty of the interior. At once upon entering the church the eye is drawn along the nave and through the large arches of the transept to the richly decorated chancel and the lights which stream through the windows high above the altar. The four bays of the nave are formed by columns of polished red granite on stilted marble bases, and with marble capitals slightly stained with warm color to take away the cold and glaring effect of white masses in a work of color. The steeply-pointed arches which these columns support are simply molded, are formed of alternate voussoirs of Ohio sandstone and the buff New Jersey bricks, and are defined by a narrow label of red brick. The spandrels above them, to the sill course of the clerestory, are decorated with large buff bricks, set on edge and molded in diaper on the exposed faces. The ground is filled alternately with vermilion and

Digitized by Google

ultramarine, and the projections of the ornament are touched with gold. The design and the decoration of the church combine to produce an effect of spaciousness, though the church is not a large one, and of mellow and harmonious richness.

The woodwork of the church is of solid oak, and comprises a beautiful and richly carved pulpit. The case of the organ is also carved in oak, though the most elaborate of the carving upon it is placed so low that it can scarcely be seen and cannot be at all appreciated from the body of the church. The altar is in Caen stone, and close inspection shows that it contains much delicate work.

The first church of the parish was built in 1700, the trustees deciding that "Richard Ward shall build the meeting-house twenty-eight feet square, with a turret on the top, for £40." George III. granted a royal charter to it in 1762, and the New York Legislature incorporated it in 1788. The contract for the erection of a second and larger building was made in 1789, and the cost was £336. This structure stood until 1855, when the third St. Peter's, a stone building, of which the foundations serve in great part for the fourth church, was built. Externally it resembled the new church, except that it lacked a clerestory, that the apse was some ten feet shorter, and that the roof was of a lower pitch. This third church caught fire in January, 1877. The woodwork which formed the whole interior construction was destroyed, and the walls so injured that it was necessary to take them down to the sill courses. Efforts were at once made to rebuild, and the result is the beautiful structure shown in our engraving.

Bank of England Notes.

A VAST amount of labor and ingenuity is expended on the production of Bank of England notes. According to official report, these notes are made from pure white linen cuttings, never from rags that have been worn. They have been manufactured for nearly two hundred years by the same family, the Portals, Protestant refugees. So carefully is the paper prepared that even the number of dips into the pulp made by each workman is registered on a dial by machinery, and the sheets are carefully counted and booked to each person through whose hands they pass. The printing is done by a most curious process in a department within the bank building. There is an elaborate arrangement for securing that no note shall be exactly like any other in existence. Consequently there never was a duplicate of a Bank of England note except by forgery. According to the *City Press* the stock of paid notes of seven years is about 94,000,000 in number, and they fill 18,000 boxes, which if placed side by side would reach three miles. The notes placed in a pile would be eight miles high; or if joined end to end would form a ribbon 15,000 miles long; their superficial extent is more than that of Hyde Park; their original value was over $15,000,000,000 and their weight over one hundred and twelve tons.

The Coldest Town in the World.

IT may relieve us, when the mercury has crept up into the nineties, to think of a town which Humboldt and other travelers have pronounced the coldest on the globe. This is Jakutsk (or Yakootsk), chief town of the province of that name of Eastern Siberia, on the left bank of the River Lena, latitude 62 degrees 1 minute north, longitude 119 degrees 44 minutes east, and distance from St. Petersburg 5,751 miles. The ground remains continually frozen to the depth of 300 feet, except in midsummer, when it thaws three feet at the surface. During ten days in August the thermometer marks 85 degrees, but from November to February it ranges from 42 to 68 degrees below zero, and the river is solid ice for nine months out of twelve. The entire industry of the place—population about 5,000—is comprised in candle-works, and yet it is the principal market of Eastern Siberia for traffic with the hunting tribes of the Jakuts and Buriats. The former, mostly nomadic, having large herds of cattle and horses, bring to market butter, which is sent on horseback to the port of Okhotsk. The Buriats, also nomadic, bring quantities of skins of sables, foxes, martens, hares, squirrels, bears, and the like, and many of them are sold at the great fair in June, which, with MAY, is the active period of the year. In May the collected goods are conveyed to the seaports, whence they are sent in every direction. The merchandise, chiefly furs and mammoth tusks, sold at the fair amount in value to 400,000 roubles ($300,000).

Insanity in England.

IT is remarkable that the increase of insanity in England has occurred during the operation of a new and improved system of treatment. No one would return to the manacles and fetters of a former age; but it was expected that early admission to asylum treatment would produce more rapid recovery, and thereby diminish instead of increase the number of incurables. In expectation of speedier cure from this cause, vast sums have been expended on construction of English asylums. A return recently published shows that during twenty years more than £6,000,000 have been thus employed. The repairs and extras may bring the sum to not much under £8,000,000; and, taking into account the annual interest on capital, the maintenance of lunatics must cost the country at least £2,000,000 per annum. It is true that the worth of the expenditure is not to be reckoned by the money value alone. If, when the cost is highest, the cure and the care of lunatics is greatest, that system is the best. But when the cost is highest, and the cure and care lowest, the public has a right to complain. For the past thirty years the Earl of Shaftesbury and the Lunacy Commissioners have had entire control; their recommendations have been carried out—their appeals to the humanity and liberality of the public have been complied with. All that money could yield, and that architecture could bestow, in obedience to the orders of the Government or the suggestions of the medical profession, has been freely, even lavishly, executed. Although the proportion of recoveries in all institutions, calculated on the admissions, has fallen, between 1859 and 1877, from 35.12 per cent. to 30.15 per cent., and although the recoveries calculated on admissions to country and borough asylums show no improvement, remaining at 39 per cent., while those calculated in each year upon the total number under treatment have fallen from 9.6 per cent. in 1859 to 7.9 per cent. in 1877—yet the Commissioners in Lunacy appear perfectly satisfied with the results obtained. Thus, while expenditure increases and lunacy advances, they are content to see cure not merely stationary, but retrograde.

FUN.

THE idea that fishes swim is all wrong. Who hasn't seen salmon roe?

BUS-DRIVER (to rival conductor with inflamed visage, in the course of recrimination)—"I b'lieve yer mother must 'a nu'sed yer for a month upside down!"

"How came these holes in your elbows?" said the Widow Smith to the irrepressible small boy. "Oh, mother, I hid behind the sofa when little Jack Horner was sayin' to our Jule that he'd take her, even if you had to be thrown in; and he didn't know I was there, and so I held in and laughed in my sleeves till I bust 'em."

IRISH LANDLORD (to his new secretary)—"Doyle, d'ye hear? I want you to send a telegram—at once, mind—to O'Brian, ordering him to quit the farm." *Doyle* (after a moment's reflection)—"Sor, might I ask your honor to write out the tiligram? Shure, if I wrote it myself that owld O'Brian would know me handwriting, and I'd be shot dead as blazes, sor."

A NEW YORK lady writes, "If I could have my way, every smoker should marry a smoker or live alone forever." Now, do you know that would be rather a nice idea—matrimonial smoke, as it were—one pipe with but a single blast, two siems that smoke as one. Smoking girls desirous of getting married will please mention the particular brand of tobacco they effect.

A BEGGAR is sitting at a certain corner with a placard on his breast, and a dog tied to a string. On the placard is written, "Pity the blind." A stranger passes by and gives a Spanish silver coin, whereupon the beggar calls after him: "I say, this won't pass here." Astonishment of the stranger. "Why, you can see, can you?" "See, of course I can." "Then, why are you begging? Why this placard?" "For my dog—he's the blind one."

MR. POTTER, the member of Parliament for Rochdale, England, who is soon to visit this country, has always had a great desire to visit the United States, with whose institutions he has a strong political sympathy. Speaking enthusiastically of this one evening, he exclaimed: "I would give anything to be able to visit the United States one hundred years hence." "Yes," said Mr. Bright, who was present, "I have no doubt that about that time Potter would give all he possessed to change his quarters."

PERTINENT QUERIES.—What does billet doux? What check did counter sign? Who ever saw a hood wink? Who ever saw a pig iron? What does egg plant? Why did the thunder bolt? Who ever heard a foot ball? Why did the dew drop? Where does clock work? What did plow share? Who ever saw a wheel wright? For whom did penny weight? Who did tin foil? What did brandy smash? What did grass plot? What was it grape shot? What did the pick pocket? Who did the goose berry? Is it jokes that Jim cracks?

THE RAVAGES OF CONSUMPTION.

THE fearful death-roll, covering from a fourth to a third of the number in nearly every published bill of mortality, shows how vainly the medical profession is contending with this cruel enemy of our race. Every one feels that some new agent of relief and cure is the imperative demand of the age. That such an agent, acting in perfect harmony with science and the laws of physiology, has been discovered in "COMPOUND OXYGEN," we confidently declare. Some of the most brilliant cures which have been made during the past twelve years by this new treatment have been in Consumption. The amplest information will be found in our "Treatise on Compound Oxygen." It is sent free. Address, DRS. STARKEY & PALEN, 1,112 Girard Street, Philadelphia, Pa.

Frank Leslie's Sunday Magazine.

FRANK LESLIE'S SUNDAY MAGAZINE for September is out in advance of all rivals. It is, as usual, filled with good reading for the family, and is most copiously illustrated. It maintains its own capitally, and is a publication every way adapted to a moral or Christian home. It contains matter well adapted both to general and Sunday reading. Dr. Deems, the editor, is doing faithful and beneficial work, and we hope that its circulation is steadily increasing. It is well printed, contains a great deal of matter, and is cheaper than any other monthly in this country. Price $3 a year.—*Wilmington (N. C.) Star.*

CUTICURA REMEDIES.

CUTICURA RESOLVENT is the most powerful blood-purifier and liver-stimulant ever compounded.

CUTICURA is the great external remedy for all humors of the scalp and skin, ulcers and old sores.

CUTICURA SOAP is an elegant toilet and medicinal assistant to Cuticura for all external affections.

Prepared by WEEKS & POTTER, chemists and druggists, 360 Washington Street, and for sale by all druggists. Price of Cuticura, small boxes, 50 cents; large boxes, containing two and one-half times the quantity of small, $1; Resolvent, $1 per bottle; Cuticura Soap, 25 cents; by mail, 30 cents; three cakes, 75 cents.

BURNETT'S COCOAINE is the best and cheapest Hair Dressing in the world. It kills dandruff, allays irritation, and promotes a vigorous growth of the hair.

CHICAGO, May 12 h, 1871.

Since the recent use of your COCOAINE, my previously bald head has been covered by a luxuriant growth of hair. I had always esteemed your preparation as a dressing, knowing many persons who regarded it very highly as such, but never before knew how valuable it was as a restorative.

J. G. LEWIS.

THE date fixed for the opening of the Standard Theatre, with Mr. and Mrs. Bandmann, is Wednesday evening, September 10th. The new costumes and properties imported by Mr. Bandmann are of great elegance and beauty, and the scenery will also be of a novel and brilliant character. Mrs. Bandmann will play *Doresquisault*, and Miss Bella Murdock the *Pompadour*. A ballet divertissement will be introduced in the piece.

NO MATTER what your feelings or ailment is, Hop Bitters will do you good. Prove it.

WORRALL'S FRUIT-PRESERVING POWDER, advertised in this issue, has been on the market for ten years, and many testimonials expressing perfect satisfaction with it have been received from people who have used it in all sections of the country. The powder obviates entirely the expensive and laborious use of air-tight cans, and is well worth a trial.

HALFORD TABLE SAUCE, best relish in use. For family use preferable to all others.

IT is generally admitted that there cannot be anything more exquisitely delicate for perfuming the handkerchief than MURRAY & LANMAN'S FLORIDA WATER; but its great and distinctive property is its adaptability to the uses of the bath. It is the only perfume that we know of especially and particularly suited to use in this way. The power it has of imparting to the waters of the bath great soothing, refreshing, and invigorating effects, is peculiar to itself.

MERCHANTS visiting New York this Fall will find the ST. NICHOLAS hotel admirably situated for both business and pleasure. This is proven by an immense commercial patronage. In every respect the ST. NICHOLAS appeals to the favor of the public, for table, apartments, and all the accommodations of the model hotel are not to be surpassed anywhere. In accordance with the times, rates have been reduced to the old standard.

WHY do Hop Bitters cure so much? Because they give good digestion, rich blood and healthy action of all the organs.

ALL mineral waters that are dangerous irritants may be known by an acid after-taste.

The Secret Key to Health.—"The Science of Life, or *Self-Preservation*," 300 pages; price, only $1. Contains fifty valuable prescriptions, either one of which is worth more than ten times the price of the book. Illustrated sample sent on receipt of six cents for postage. Address, DR. W. H. PARKER, 4 Bulfinch Street, Boston, Mass.

$10 to $1,000 Invested in Wall St. Stocks makes fortunes every month. Book sent free explaining everything. Address, BAXTER & CO., Bankers, 17 Wall St., N. Y.

THE VENERABLE PETER COOPER.

I cheerfully testify that I have been to the COLTON DENTAL ASSOCIATION, 19 Cooper Institute, and had two teeth extracted while under the influence of Laughing Gas. I felt no pain whatever, and the gas produced no injurious or even unpleasant effects. PETER COOPER.

Brother and successors of John B. Martinez, deceased.

JOHN HOLLAND'S Patent Record GOLD PEN
Patented Oct. 2, 1872.
Is the highest achievement in the manufacture of Gold Pens and the result of experiments for more than twenty years. The "RECORD" Pen is produced by a skillful combination of the two precious and non-corrosive metals: *16 kt. Gold* and *Platinum*, while the ordinary gold pen contains an alloy of copper, reducing its fineness without yielding that elasticity, density and steel like temper which the costly *Platinum* supplies. The "RECORD" Gold Pen *Points* are of the best *Iridium*, (Diamonds,) indestructible with fair treatment, and polished to glass like smoothness.
Steel pen writers have now every objection to gold fairly overcome, and every requirement is a Pen which will endure and not oxidize, squarely met. The "RECORD" Gold Pen is guaranteed to possess Durability, Permanency of Spring and Perfection of Point. Price, $2.50, sold by all Jewelers and Stationers in the United States. If not found order direct from *JOHN HOLLAND, Manufacturer, 19 W. 4th St., Cincinnati.*

Common Sense Chairs and Rockers.
A lady writes: "The only objection to your Common Sense Rocker is, we all want it." Send stamp for Illustrated Catalogue to

DR. M. W. CASE'S CARBOLATE OF TAR INHALANT
FOR CATARRH, ASTHMA, CONSUMPTION, BRONCHITIS & DEAFNESS.
Circulars, Etc., Sent Free.

It does not require ten minutes to demonstrate the value of **Carbolate of Tar**, the most healing remedial agent known to science. Balsams and cordials of the most healing and soothing properties are so combined with Pine Tree Tar, that the mere breathing converts them into a dense smoke or vapor. This is inhaled—taken right to the diseased parts. **No heat, no hot water**, simply inhaling or breathing it, and you feel its healing power **at once.** This treatment is endorsed by physicians everywhere, and highly commended by thousands, who have used it with perfect satisfaction. **FULL TREATMENT sent. Satisfaction always guaranteed.**
When writing for circular, name this paper.
Address,
Dr. M. W. CASE,
933 Arch St., Philadelphia, Pa.

American Fruit-Preserving Powder
AND LIQUID is the Cheapest, Most Reliable, and Best Known Method of preserving all kinds of **Fruit, Tomatoes, etc. Strawberries, Raspberries,** and all high colored Fruits retain their rich color, as well as flavor. One ounce of it (costing 3 cents) is equal to 8 lbs. of sugar in preserving property.
Established over ten years, and endorsed by thousands upon thousands of families. One trial will establish the fact that the **American Fruit-Preserving Powder and Liquid** will effectually prevent fermentation and preserve all kinds of **Fruit, Tomatoes, etc.**, and keep them the year round, or for years, in jars of any kind or size, or in wooden kegs and barrels, *without sealing air-tight.* Simply corked or tied down with a strong paper is all that is needed.
The Fruit will keep *without sugar*, or any quantity of sugar may be added as desired.
Warranted to be an healthful as table salt.
The Fruit, etc., may be cooked little or much, as desired. They will keep without any cooking, or they may be cooked down into sauce. The method is simple and easy. None can fail if the Powder and Liquid is added into the Fruit, etc., in quantity as directed.
One package will preserve 250 pounds of Fruit, Tomatoes, etc. Price **One Dollar** per package.
Give it a trial. If you cannot get it from your Druggist or Grocer, I will send it prepaid to any express office in the United States east of the Mississippi River, upon receipt of the price; or west of the Mississippi River and east of Rocky Mountains, for $1.25 per package. **Local and General Agents Wanted.**

Frank Leslie's
Illustrated Newspaper
Epitomized History of our Times; Current Events (Foreign and Domestic) Pictorially Recorded.

The Contents embrace Illustrations of the prominent events of the day—political, social, scientific, commercial, etc. One of the eight Illustrated pages is devoted to careful reproductions from the ILLUSTRATED FOREIGN PRESS.

Editorials on all subjects of public interest.

Admirable Cartoons, humorously hitting off peculiar incidents, prevailing follies, foibles, etc.

Select Serial and Short Stories, Essays, Poetry, Biographies, Musical and Dramatic News, Personal Gossip, Foreign and Domestic Anecdotes, and a highly amusing and instructive Miscellany.

Double Page Supplements are frequently given without extra charge, illustrating events of more than usual interest.

This Popular Weekly has now reached its Forty-seventh Volume, and has afforded the public a complete review of the events of each week during the past twenty-two years, and is, therefore, a veritable library of reference.

"FRANK LESLIE'S ILLUSTRATED NEWSPAPER is one of the most favorably known and highly-esteemed journals in the illustrated newspaper world of America. We are glad to see it prosper and receiving more and more the united support of all classes of society. Ably edited and most superbly illustrated with invariably the latest subjects and events, it is bound to become a favorite with every family, and its large circulation bears evidence to that end. It contains the very best of reading, is not poisonous to the youth, and furnishes all the amusement and edification that is desirable at the trifling cost of ten cents. If you wish to provide your children with first-class reading, get FRANK LESLIE'S ILLUSTRATED NEWSPAPER."—*N. Y. Union.*

THE PICTORIAL HISTORY
OF
Frank Leslie's Transcontinental Trip
has been resumed, and will be continued weekly, completing the series of illustrations of San Francisco, its Harbor, Racecourse, Seal-rocks, etc., etc., with views of Chinese Life and Industries. These will be followed with illustrations portraying the picturesque scenery with which that whole region abounds, the customs and manners of the people, etc., thus forming an admirable Pictorial Exhibit of the most conspicuous attractions of the Golden State.

CONGRESS WATER

Pronounced by Physicians and Connoisseurs to be the **Purest Mineral Water Known.** Contains nothing *Bitter, Acid or Crude*, to *irritate* the *Mucous Membrane*, such as render many foreign and domestic waters dangerous for use. This class of waters may be known by an acid after-taste.

Analysis of Congress Spring Water.

By Prof. C. F. CHANDLER.

LABORATORY OF THE SCHOOL OF MINES, COLUMBIA COLLEGE.

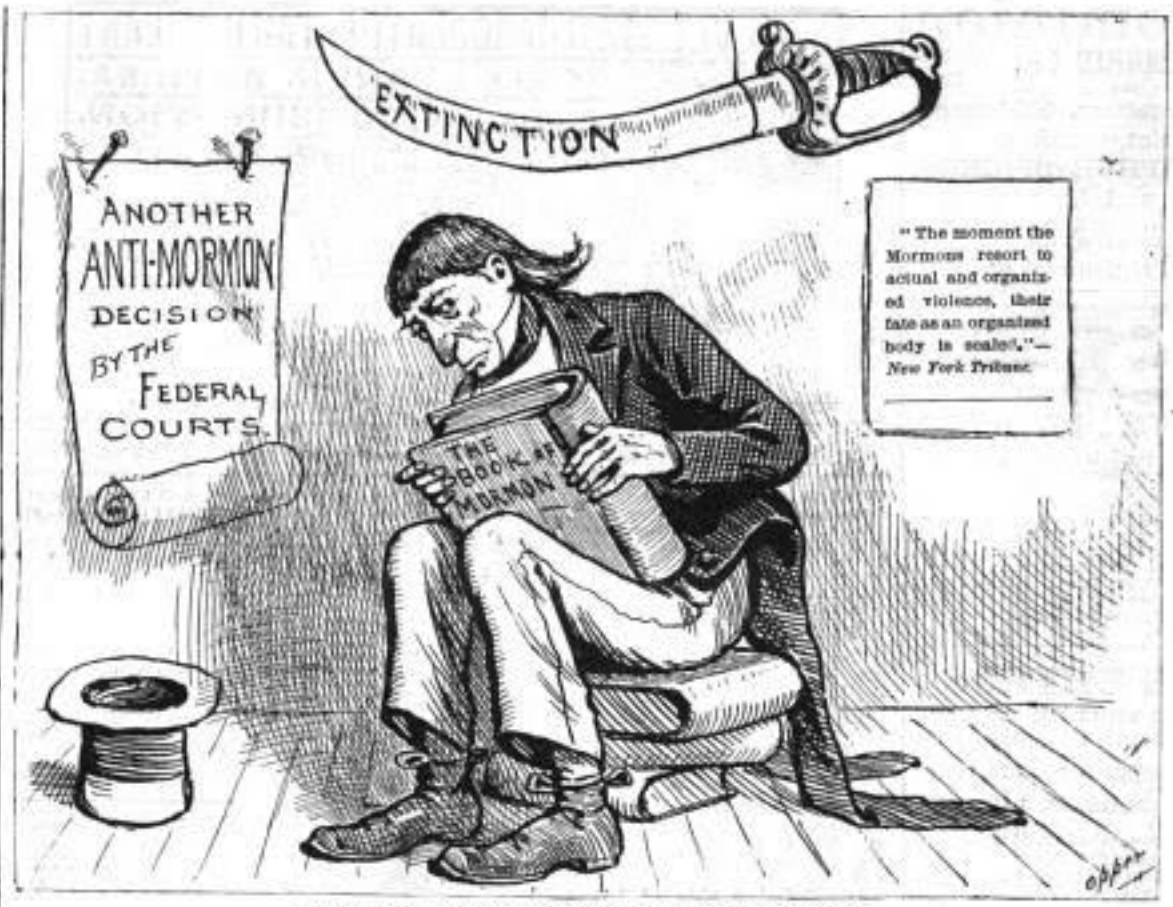
NEW YORK, August 17th, 1871.

The sample of CONGRESS SPRING WATER, taken by me from the Spring, contains, in one United States gallon of 231 cubic inches:

Chloride of Sodium	400.444 grains.
Chloride of Potassium	8.049 "
Bicarbonate of Magnesia	121.757 "
Bicarbonate of Lime	143.399 "
Bicarbonate of Lithia	4.761 "
Bicarbonate of Soda	10.775 "
Bicarbonate of Baryta	0.928 "
Bicarbonate of Iron	0.340 "
Bicarbonate of Strontia	a trace.
Bromide of Sodium	3.359 "
Iodide of Sodium	0.138 "
Sulphate of Potassa	0.889 "
Phosphate of Soda	0.016 "
Silicia	0.849 "
Fluoride of Calcium, Biborate of Soda, Alumina,	each a trace.
Total	706.895 grains.
Carbonic Acid Gas	302.289 cubic inches.

GENTLEMEN: In submitting the above analysis, I take pleasure in saying that a comparison of the same with the analysis made by Dr. JOHN H. STEELE, in 1832, proves that the Congress Water still retains its original strength, and all the virtues which established its well-merited reputation.

Its superior excellence is due to the fact that it contains, in the most desirable proportions, those substances which produce its agreeable flavor and satisfactory medicinal effects—neither holding them in excess nor lacking any constituent to be desired in this class of waters.



As a Cathartic water *its almost entire freedom from iron should recommend it above all others*, many of which contain so much of this ingredient as to seriously impair their usefulness. Respectfully, your obedient servant,

C. F. CHANDLER, Ph. D.

Professor of Analytical and Applied Chemistry.
